Socrates:: Will not the Laws then thus address us? O Socrates, has it not been admitted by us and you, that you should acquiesce in the sentence which the city has passed? If, therefore, we should wonder at the Laws thus speaking, perhaps they would say, Be not surprised, O Socrates, at what we have asserted, but answer, since you are accustomed both to interrogate and reply, For what is the charge against us and the city, for which you endeavor to destroy us? Did we not first beget you? And was it not through us that your father married your mother, and planted you? Tell us, therefore, whether you blame these laws of ours concerning marriage as improper? I should say I do not blame them. But do you blame those laws concerning the nurture and education of children in which you were yourself instructed? Or did not the laws framed for this purpose order in a becoming manner when they commanded your father to instruct you in music and gymnastic? I should say they ordered well. Since then we begot and nourished and educated you, can you deny that both you and your progenitors are our offspring and servants? And if this be the case, do you think that there is an equality of justice between us and you, and that it is just for you to attempt to do those things to us which we endeavor to do to you? Or will you admit that there is no equality of justice between you and your father, or master, if you happen to have either of them so that you are not to return to these any evil you may suffer from them nor, when they reproach you, contradict them nor, when they strike you, strike them again, nor do many other things of a similar nature; but that against your country and the Laws it is lawful for you to act in this manner, so that if we endeavor to destroy you, thinking it to be just, you also should endeavor, as far as you are able, to destroy in return, us the Laws and your country, and should say that in so doing you act justly,—you who in reality make virtue the object of your care? Or, are you so wise as to be ignorant that your country is more honourable, venerable and holy, than your mother and father, and all the rest of your progenitors, and ranks higher both among the Gods and among men endued with intellect? That it is also more necessary for a man to venerate, obey and assent to his country, when conducting itself with severity, than to his father? Likewise that he should be persuaded by it, and do what it orders? That he should quietly suffer, if it orders him to suffer? And that, if it commands him to be beaten, or confined in bonds, or sends him to battle to be wounded or slain, he should do these things, and that it is just to comply? And that he should neither decline nor recede from nor desert his rank; but in war, in a court of justice, and every where, the commands of the city and his country should be obeyed; or he should persuade his country to that which is naturally just; but that it is not holy to offer violence either to a mother or a father, and much less to one’s country?—What shall we say to these things, Crito? Shall we acknowledge that the Laws speak the truth or not?

Crito:: To me it appears that they do.

Socrates:: Consider, therefore, O Socrates, perhaps the Laws will say, whether our assertion is true, that your present attempt against us is unjust. For we are the authors of your birth, we nourished, we educated you, imparting both to you and all the other citizens all the good in our power, at the same time proclaiming, that every Athenian who is willing has the liberty of departing wherever he pleases, with all his property, if after having explored and seen the affairs of the city, and us the Laws, we should not be constituted according to his wishes. Nor does any one of us the Laws impede or forbid any one of you from migrating into some colony, or any other place, with all his property, if we and the city do not please him. But, on the other hand, if any one of you continues to live here after he has seen the manner in which we administer justice, and govern the city in other particulars, we now say, that he in reality acknowledges to us, that he will do such things as we may command. We also say, that he who is not obedient is triply unjust, because he is disobedient to his begetters, and to those by whom he was educated; and because, having promised to be persuaded by us, he is neither persuaded, nor does he persuade us, if we do any thing improperly; though at the same time we only propose, and do not fiercely command him to do what we order, but leave to his choice one of two things, either to persuade us, or to obey our mandates; and yet he does neither of these.

And we say that you also, O Socrates, will be obnoxious to these crimes if you execute what you intend to do; nor will you be the least, but the most obnoxious of all the

Athenians. If, therefore, I should ask them the reason of this, they would perhaps justly reproach me by saying, that I promised to submit to all these conditions beyond the rest of the Athenians. For they would say, This, O Socrates, is a great argument with us, that both we and the city were pleasing to you; that you especially of all the Athenians would never have dwelt in it, if it had not been particularly agreeable to you. For you never left the city for any of the public spectacles except once, when you went to the Isthmian games, nor did you ever go elsewhere, except in your military expeditions. You never went any other journey like other men; nor had you ever any desire of seeing any other city, or becoming acquainted with any other laws; but we and our city were sufficient for you, so exceedingly were you attached to us, and so much did you consent to be governed by our mandates. Besides, you have procreated children in this city, in consequence of being pleased with it. Further still, in this very judicial process, you might have been condemned to exile, if you had been willing, and might then have executed with the consent of the city what you now attempt without it. Then however you carried yourself loftily, as one who would not be indignant, if it were requisite that you should die; but you preferred, as you said, death to exile. But now you are neither ashamed of those assertions, nor do you revere us the Laws, since you endeavor to destroy us. You also do that which the most vile slave would do, by endeavoring to make your escape contrary to the compacts and agreements according to which you consented to become a member of this community. In the first place, therefore, answer us this very thing, whether we speak the truth in asserting, that you consented to be governed by us in reality, and not merely in words? Do we in asserting this speak the truth? What shall we say to these things, Crito? Can we say any thing else than that we assent to them?

Crito:: It is necessary so to do, Socrates.

Socrates:: Do you not then, they will say, violate these compacts and agreements between us; which you consented to neither from necessity nor through deception, nor in consequence of being compelled to deliberate in a short time; but during the space of seventy years, in which you might have departed if you had been dissatisfied with us, and the compacts had appeared to you to be unjust? You however neither preferred Lacedæmon nor Crete, which you are perpetually saying are governed by good laws, nor any other city of the Greeks or Barbarians; but you have been less out of Athens than the lame and the blind, and other mutilated persons. So much did the city and we the Laws please you beyond the rest of the Athenians. For who can be pleased with a city without the laws? But now you do not abide by the compacts. You will however abide by them if you are persuaded by us, Socrates, and do not become ridiculous by escaping from the city.

For consider what advantage can be derived either to yourself or your friends by violating those compacts. For in consequence of your escaping from hence, it is nearly evident that your friends will be exposed to the danger either of banishment, or of the loss of their property. And as for yourself, if you retire to any neighbouring city, whether Thebes or Megara (for both are governed by good laws), you will be considered, Socrates, as an enemy to their polity. And such as have any regard for their country will look upon you as a corrupter of the laws. You will also confirm them in their good opinion of your judges, who will appear to have very properly condemned you. For he who is a corrupter of the laws will very much appear to be a corrupter of youth and of stupid men. Will you then avoid these well-governed cities, and men of the most elegant manners? Supposing you should, will it, therefore, be worth while for you to live? Or, should you go to these cities, will you not blush, Socrates, to discourse about the same things as you did here, viz. that virtue and justice, legal institutes. and the laws, should be objects of the greatest attention to men? And do you not think that this conduct of Socrates would be very indecorous? You must necessarily think so. But perhaps, avoiding these cities, you will go to Thessaly, to the guests of Crito. For there is the greatest disorder and intemperance. And perhaps they will willingly hear you relating how ridiculously you escaped from prison, investing yourself with a certain apparatus, such as a skin, or something else which those that make their escape are accustomed to provide, and thus altering your usual appearance.

Do you think no one will say, that you, though an old man, and likely to live but a very little longer, have dared to desire life with such sordid avidity, and to transgress the greatest laws? Perhaps this will be the case, though you should not have offended any one. But if you should, you will hear, Socrates, many things unworthy of you. You will however live obnoxious, and in subjection to all men. But what will you do in Thessaly besides feasting? having come to Thessaly as to a supper. And where shall we find those discourses concerning justice, and the other virtues?—But do you wish to live for the sake of your children, that you may nurture and instruct them? What then? Bringing them to Thessaly, will you there educate them making them to be stranger guests, that they may also derive this advantage from you? Or, if you should not do this, but should leave them here, will they be better nurtured and educated in your absence? for your friends will take care of them. Do you suppose then that your children will be taken care of by your friends if you go to Thessaly, and that they will be neglected by them if you depart to Hades? If indeed any advantage is to be derived from those that call themselves your friends, it is proper to think that they will not.

But, O Socrates, being persuaded by us your nurses, neither pay more attention to your children, nor to life, nor to any thing else than to justice, that, when you arrive at Hades, you may be able to defend all these particulars to the rulers there. For If, transgressing the laws, you should thus act, it will neither be better, nor more just, nor more holy to yourself, nor to any one of your friends; nor will it be more advantageous to you when you arrive at Hades. But you will depart, if you do depart, not injured by us the Laws, but by men. If however you should so disgracefully escape, returning injury for injury, and evil for evil, transgressing your agreements and compacts with us, and injuring those whom you ought not to injure in the smallest degree, viz. yourself, your friends, your country, and us;—in this case, we shall be indignant with you as long as you live; and in another life, our brothers the Laws who reside in Hades will not benevolently receive you; knowing that you attempted, as far as you was able, to destroy us. Let not Crito, therefore, rather than us, persuade you to do what he says.

Be well assured, my dear friend Crito, that I seem to hear these things, just as those who are agitated with Corybantic fury appear to hear the melody of pipes. And the sound of these words, like the humming of bees, in my ears, renders me incapable of hearing any thing else. You see then what appears to me at present; and if you should say any thing contrary to these things, you will speak in vain. At the same time, if you think that any thing more should be done, tell me.

Crito:: But, Socrates, I have nothing further to say.

Socrates:: Desist, therefore, Crito, and let us adopt this conduct, since Divinity persuades us thus to act.

THE END OF THE CRITO.

## Crito.

Translated by Hugh Tredennich.

CHARACTERS OF THE DIALOGUE.

Socrates. Crito.

---

Socrates:: Here already, Crito? Surely it is still early?

Crito:: Indeed it is.

Socrates:: About what time?

Crito:: Just before dawn.

Socrates:: I wonder that the warder paid any attention to you.

Crito:: He is used to me now, Socrates, because I come here so often. Besides, he is under some small obligation to me.

Socrates:: Have you only just come, or have you been here for long?

Crito:: Fairly long.

Socrates:: Then why didn't you wake me at once, instead of sitting by my bed so quietly?

Crito:: I wouldn't dream of such a thing, Socrates. I only wish I were not so sleepless and depressed myself. I have been wondering at you, because I saw how comfortably you were sleeping, and I deliberately didn't wake you because I wanted you to go on being as comfortable as you could. I have often felt before in the course of my life how fortunate you are in your disposition, but I feel it more than ever now in your present misfortune when I see how easily and placidly you put up with it.

Socrates:: Well, really, Crito, it would be hardly suitable for a man of my age to resent having to die.

Crito:: Other people just as old as you are get involved in these misfortunes, Socrates, but their age doesn't keep them from resenting it when they find themselves in your position.

Socrates:: Quite true. But tell me, why have you come so early?

Crito:: Because I bring bad news, Socrates—not so bad from your point of view, I suppose, but it will be very hard to bear for me and your other friends, and I think that I shall find it hardest of all.

Socrates:: Why, what is this news? Has the boat come in from Delos—the boat which ends my reprieve when it arrives?

Crito:: It hasn't actually come in yet, but I expect that it will be here today, judging from the report of some people who have just arrived from Sunium and left it there. It's quite clear from their account that it will be here today, and so by tomorrow, Socrates, you will have to— to end your life.

Socrates:: Well, Crito, I hope that it may be for the best. If the gods will it so, so be it. All the same, I don't think it will arrive today.

Crito:: What makes you think that?

Socrates:: I will try to explain. I think I am right in saying that I have to die on the day after the boat arrives?

Crito:: That's what the authorities say, at any rate.

Socrates:: Then I don't think it will arrive on this day that is just beginning, but on the day after. I am going by a dream that I had in the night, only a little while ago. It looks as though you were right not to wake me up.

Crito:: Why, what was the dream about?

Socrates:: I thought I saw a gloriously beautiful woman dressed in white robes, who came up to me and addressed me in these words : Socrates, 'To the pleasant land of Phthia on the third day thou shalt come.'

Crito:: Your dream makes no sense, Socrates.

Socrates:: To my mind, Crito, it is perfectly clear.

Crito:: Too clear, apparently. But look here, Socrates, it is still not too late to take my advice and escape. Your death means a double calamity for me. I shall not only lose a friend whom I can never possibly replace, but besides a great many people who don't know you and me very well will be sure to think that I let you down, because I could have saved you if I had been willing to spend the money. And what could be more contemptible than to get a name for thinking more of money than of your friends? Most people will never believe that it was you who refused to leave this place although we tried our hardest to persuade you.

Socrates:: But my dear Crito, why should we pay so much attention to what 'most people' think? The really reasonable people, who have more claim to be considered, will believe that the facts are exactly as they are.

Crito:: You can see for yourself, Socrates, that one has to think of popular opinion as well. Your present position is quite enough to show that the capacity of ordinary people for causing trouble is not confined to petty annoyances, but has hardly any limits if you once get a bad name with them.

Socrates:: I only wish that ordinary people *had* an unlimited capacity for doing harm; then they might have an unlimited power for doing good, which would be a splendid thing, if it were so. Actually they have neither. They cannot make a man wise or stupid; they simply act at random.

Crito:: Have it that way if you like, but tell me this, Socrates. I hope that you aren't worrying about the possible effects on me and the rest of your friends, and thinking that if you escape we shall have trouble with informers for having helped you to get away, and have to forfeit all our property or pay an enormous fine, or even incur some further punishment? If any idea like that is troubling you, you can dismiss it altogether. We are quite entitled to run that risk in saving you, and even worse, if necessary. Take my advice, and be reasonable.

Socrates:: All that you say is very much in my mind, Crito, and a great deal more besides.

Crito:: Very well, then, don't let it distress you. I know some people who are willing to rescue you from here and get you out of the country for quite a moderate sum. And then surely you realize how cheap these informers are to buy off; we shan't need much money to settle them, and I think you've got enough of my money for yourself already. And then even supposing that in your anxiety for my safety you feel that you oughtn't to spend my money, there are these foreign gentlemen staying in Athens who are quite willing to spend theirs. One of them, Simmias of Thebes, has actually brought the money with him for this very purpose, and Cebes and a number of others are quite ready to do the same. So, as I say, you mustn't let any fears on these grounds make you slacken your efforts to escape, and you mustn't feel any misgivings about what you said at your trial—that you wouldn't know what to do with yourself if you left this country. Wherever you go, there are plenty of places where you will find a welcome, and if you choose to go to Thessaly, I have friends there who will make much of you and give you complete protection, so that no one in Thessaly can interfere with you.

Besides, Socrates, I don't even feel that it is right for you to try to do what you are doing, throwing away your life when you might save it. You are doing your best to treat yourself in exactly the same way as your enemies would, or rather did, when they wanted to ruin you. What is more, it seems to me that you are letting your sons down too. You have it in your power to finish their bringing-up and education, and instead of that you are proposing to go off and desert them, and so far as you are concerned they will have to take their chance. And what sort of chance are they likely to get? The sort of thing that usually happens to orphans when they lose their parents. Either one ought not to have children at all, or one ought to see their upbringing and education through to the end. It strikes me that you are taking the line of least resistance, whereas you ought to make the choice of a good man and a brave one, considering that you profess to have made goodness your object all through life. Really, I am ashamed, both on your account and on ours, your friends'. It will look as though we had played something like a coward's part all through this affair of yours. First there was the way you came into court when it was quite unnecessary—that was the first act. Then there was the conduct of the defense—that was the second. And finally, to complete the farce, we get this situation, which makes it appear that we have let you slip out of our hands through some lack of courage and enterprise on our part, because we didn't save you, and you didn't save yourself, when it would have been quite possible and practicable, if we had been any use at all.

There, Socrates, if you aren't careful, besides the suffering there will be all this disgrace for you and us to bear. Come, make up your mind. Really it's too late for that now; you ought to have it made up already. There is no alternative; the whole thing must be carried through during this coming night. If we lose any more time, it can't be done; it will be too late. I appeal to you, Socrates, on every ground; take my advice and please don't be unreasonable!

Socrates:: My dear Crito, I appreciate your warm feelings very much—that is, assuming that they have some justification. If not, the stronger they are, the harder they will be to deal with. Very well, then, we must consider whether we ought to follow your advice or not. You know that this is not a new idea of mine; it has always been my nature never to accept advice from any of my friends unless reflection shows that it is the best course that reason offers. I cannot abandon the principles which I used to hold in the past simply because this accident has happened to me; they seem to me to be much as they were, and I respect and regard the same principles now as before. So unless we can find better principles on this occasion, you can be quite sure that I shall not agree with you—not even if the power of the people conjures up fresh hordes of bogies to terrify our childish minds, by subjecting us to chains and executions and confiscations of our property.

Well, then, how can we consider the question most reasonably? Suppose that we begin by reverting to this view which you hold about people's opinions. Was it always right to argue that some opinions should be taken seriously but not others? Or was it always wrong? Perhaps it was right before the question of my death arose, but now we can see clearly that it was a mistaken persistence in a point of view which was really irresponsible nonsense. I should like very much to inquire into this problem, Crito, with your help, and to see whether the argument will appear in any different light to me now that I am in this position, or whether it will remain the same, and whether we shall dismiss it or accept it.

Serious thinkers, I believe, have always held some such view as the one which I mentioned just now, that some of the opinions which people entertain should be respected, and others should not. Now I ask you, Crito, don’t you think that this is a sound principle? You are safe from the prospect of dying tomorrow, in all human probability, and you are not likely to have your judgment upset by this impending calamity. Consider, then, don’t you think that this is a sound enough principle, that one should not regard all the opinions that people hold, but only some and not others? What do you say? Isn’t that a fair statement?

Crito:: Yes, it is.

Socrates:: In other words, one should regard the good ones and not the bad?

Crito:: Yes.

Socrates:: The opinions of the wise being good, and the opinions of the foolish bad?

Crito:: Naturally.

Socrates:: To pass on, then, what do you think of the sort of illustration that I used to employ? When a man is in training, and taking it seriously, does he pay attention to all praise and criticism and opinion indiscriminately, or only when it comes from the one qualified person, the actual doctor or trainer?

Crito:: Only when it comes from the one qualified person.

Socrates:: Then he should be afraid of the criticism and welcome the praise of the one qualified person, but not those of the general public.

Crito:: Obviously.

Socrates:: So he ought to regulate his actions and exercises and eating and drinking by the judgment of his instructor, who has expert knowledge, rather than by the opinions of the rest of the public.

Crito:: Yes, that is so.

Socrates:: Very well. Now if he disobeys the one man and disregards his opinion and commendations, and pays attention to the advice of the many who have no expert knowledge, surely he will suffer some bad effect?

Crito:: Certainly.

Socrates:: And what is this bad effect? Where is it produced? I mean, in what part of the disobedient person?

Crito:: His body, obviously; that is what suffers.

Socrates:: Very good. Well now, tell me, Crito—we don’t want to go through all the examples one by one—does this apply as a general rule, and above all to the sort of actions which we are trying to decide about, just and unjust, honorable and dishonorable, good and bad? Ought we to be guided and intimidated by the opinion of the many or by that of the one—assuming that there is someone with expert knowledge? Is it true that we ought to respect and fear this person more than all the rest put together, and that if we do not follow his guidance we shall spoil and mutilate that part of us which, as we used to say, is improved by right conduct and destroyed by wrong? Or is this all nonsense?

Crito:: No, I think it is true, Socrates.

Socrates:: Then consider the next step. There is a part of us which is improved by healthy actions and ruined by unhealthy ones. If we spoil it by taking the advice of nonexperts, will life be worth living when this part is once ruined? The part I mean is the body. Do you accept this?

Crito:: Yes.

Socrates:: Well, is life worth living with a body which is worn out and ruined in health?

Crito:: Certainly not.

Socrates:: What about the part of us which is mutilated by wrong actions and benefited by right ones? Is life worth living with this part ruined? Or do we believe that this part of us, whatever it may be, in which right and wrong operate, is of less importance than the body?

Crito:: Certainly not.

Socrates:: It is really more precious?

Crito:: Much more.

Socrates:: In that case, my dear fellow, what we ought to consider is not so much what people in general will say about us but how we stand with the expert in right and wrong, the one authority, who represents the actual truth. So in the first place your proposition is not correct when you say that we should consider popular opinion in questions of what is right and honorable and good, or the opposite. Of course one might object, All the same, the people have the power to put us to death.

Crito:: No doubt about that! Quite true, Socrates. It is a possible objection.

Socrates:: But so far as I can see, my dear fellow, the argument which we have just been through is quite unaffected by it. At the same time I should like you to consider whether we are still satisfied on this point, that the really important thing is not to live, but to live well.

Crito:: Why, yes.

Socrates:: And that to live well means the same thing as to live honorably or rightly?

Crito:: Yes.

Socrates:: Then in the light of this agreement we must consider whether or not it is right for me to try to get away without an official discharge. If it turns out to be right, we must make the attempt; if not, we must let it drop. As for the considerations you raise about expense and reputation and bringing up children, I am afraid, Crito, that they represent the reflections of the ordinary public, who put people to death, and would bring them back to life if they could, with equal indifference to reason. Our real duty, I fancy, since the argument leads that way, is to consider one question only, the one which we raised just now. Shall we be acting rightly in paying money and showing gratitude to these people who are going to rescue me, and in escaping or arranging the escape ourselves, or shall we really be acting wrongly in doing all this? If it becomes clear that such conduct is wrong, I cannot help thinking that the question whether we are sure to die, or to suffer any other ill effect for that matter, if we stand our ground and take no action, ought not to weigh with us at all in comparison with the risk of doing what is wrong.

Crito:: I agree with what you say, Socrates, but I wish you would consider what we ought to *do.*

*Socrates::* Let us look at it together, my dear fellow; and if you can challenge any of my arguments, do so and I will listen to you; but if you can't, be a good fellow and stop telling me over and over again that I ought to leave this place without official permission. I am very anxious to obtain your approval before I adopt the course which I have in mind. I don't want to act against your convictions. Now give your attention to the starting point of this inquiry—I hope that you will be satisfied with my way of stating it—and try to answer my questions to the best of your judgment.

Crito:: Well, I will try.

Socrates:: Do we say that one must never willingly do wrong, or does it depend upon circumstances? Is it true, as we have often agreed before, that there is no sense in which wrongdoing is good or honorable? Or have we jettisoned all our former convictions in these last few days? Can you and I at our age, Crito, have spent all these years in serious discussions without realizing that we were no better than a pair of children? Surely the truth is just what we have always said. Whatever the popular view is, and whether the alternative is pleasanter than the present one or even harder to bear, the fact remains that to do wrong is in every sense bad and dishonorable for the person who does it. Is that our view, or not?

Crito:: Yes, it is.

Socrates:: Then in no circumstances must one do wrong.

Crito:: No.

Socrates:: In that case one must not even do wrong when one is wronged, which most people regard as the natural course.

Crito:: Apparently not.

Socrates:: Tell me another thing, Crito. Ought one to do injuries or not?

Crito:: Surely not, Socrates.

Socrates:: And tell me, is it right to do an injury in retaliation, as most people believe, or not?

Crito:: No, never.

Socrates:: Because, I suppose, there is no difference between injuring people and wronging them.

Crito:: Exactly.

Socrates:: So one ought not to return a wrong or an injury to any person, whatever the provocation is. Now be careful, Crito, that in making these single admissions you do not end by admitting something contrary to your real beliefs. I know that there are and always will be few people who think like this, and consequently between those who do think so and those who do not there can be no agreement on principle; they must always feel contempt when they observe one another's decisions. I want even you to consider very carefully whether you share my views and agree with me, and whether we can proceed with our discussion from the established hypothesis that it is never right to do a wrong or return a wrong or defend oneself against injury by retaliation, or whether you dissociate yourself from any share in this view as a basis for discussion. I have held it for a long time, and still hold it, but if you have formed any other opinion, say so and tell me what it is. If, on the other hand, you stand by what we have said, listen to my next point.

Crito:: Yes, I stand by it and agree with you. Go on.

Socrates:: Well, here is my next point, or rather question. Ought one to fulfill all one's agreements, provided that they are right, or break them?

Crito:: One ought to fulfill them.

Socrates:: Then consider the logical consequence. If we leave this place without first persuading the state to let us go, are we or are we not doing an injury, and doing it in a quarter where it is least justifiable? Are we or are we not abiding by our just agreements?

Crito:: I can't answer your question, Socrates. I am not clear in my mind.

Socrates:: Look at it in this way. Suppose that while we were preparing to run away from here—or however one should describe it—the laws and constitution of Athens were to come and confront us and ask this question;

The State:: Now, Socrates, what are you proposing to do? Can you deny that by this act which you are contemplating you intend, so far as you have the power, to destroy us, the laws, and the whole state as well? Do you imagine that a city can continue to exist and not be turned upside down, if the legal judgments which are pronounced in it have no force but are nullified and destroyed by private persons?

Socrates:: How shall we answer this question, Crito, and others of the same kind? There is much that could be said, especially by a professional advocate, to protest against the invalidation of this law which enacts that judgments once pronounced shall be binding. Shall we say, Yes, I do intend to destroy the laws, because the state wronged me by passing a faulty judgment at my trial? Is this to be our answer, or what?

Crito:: What you have just said, by all means, Socrates.

Socrates:: Then what supposing the laws say;

The State:: Was there provision for this in the agreement between you and us, Socrates? Or did you undertake to abide by whatever judgments the state pronounced?

Socrates:: If we expressed surprise at such language, they would probably say;

The State:: Never mind our language, Socrates, but answer our questions; after all, you are accustomed to the method of question and answer. Come now, what charge do you bring against us and the state, that you are trying to destroy us? Did we not give you life in the first place? Was it not through us that your father married your mother and begot you? Tell us, have you any complaint against those of us laws that deal with marriage?

Socrates:: No, none, I should say.

The State:: Well, have you any against the laws which deal with children's upbringing and education, such as you had yourself? Are you not grateful to those of us laws which were instituted for this end, for requiring your father to give you a cultural and physical education?

Socrates:: Yes, I should say.

The State:: Very good. Then since you have been born and brought up and educated, can you deny, in the first place, that you were our child and servant, both you and your ancestors? And if this is so, do you imagine that what is right for us is equally right for you, and that whatever we try to do to you, you are justified in retaliating? You did not have equality of rights with your father, or your employer—supposing that you had had one—to enable you to retaliate. You were not allowed to answer back when you were scolded or to hit back when you were beaten, or to do a great many other things of the same kind. Do you expect to have such license against your country and its laws that if we try to put you to death in the belief that it is right to do so, you on your part will try your hardest to destroy your country and us its laws in return? And will you, the true devotee of goodness, claim that you are justified in doing so? Are you so wise as to have forgotten that compared with your mother and father and all the rest of your ancestors your country is something far more precious, more venerable, more sacred, and held in greater honor both among gods and among all reasonable men? Do you not realize that you are even more bound to respect and placate the anger of your country than your father's anger? That if you cannot persuade your country you must do whatever it orders, and patiently submit to any punishment that it imposes, whether it be flogging or imprisonment? And if it leads you out to war, to be wounded or killed, you must comply, and it is right that you should do so. You must not give way or retreat or abandon your position. Both in war and in the law courts and everywhere else you must do whatever your city and your country command, or else persuade them in accordance with universal justice, but violence is a sin even against your parents, and it is a far greater sin against your country.

Socrates:: What shall we say to this, Crito—that what the laws say is true, or not?

Crito:: Yes, I think so.

The State:: Consider, then, Socrates;

Socrates:: the laws would probably continue;

The State:: whether it is also true for us to say that what you are now trying to do to us is not right. Although we have brought you into the world and reared you and educated you, and given you and all your fellow citizens a share in all the good things at our disposal, nevertheless by the very fact of granting our permission we openly proclaim this principle, that any Athenian, on attaining to manhood and seeing for himself the political organization of the state and us its laws, is permitted, if he is not satisfied with us, to take his property and go away wherever he likes. If any of you chooses to go to one of our colonies, supposing that he should not be satisfied with us and the state, or to emigrate to any other country, not one of us laws hinders or prevents him from going away wherever he likes, without any loss of property. On the other hand, if any one of you stands his ground when he can see how we administer justice and the rest of our public organization. we hold that by so doing he has in fact undertaken to do anything that we tell him. And we maintain that anyone who disobeys is guilty of doing wrong on three separate counts : first because we are his parents, and secondly because we are his guardians, and thirdly because, after promising obedience, he is neither obeying us nor persuading us to change our decision if we are at fault in any way. And although all our orders are in the form of proposals, not of savage commands, and we give him the choice of either persuading us or doing what we say, he is actually doing neither. These are the charges, Socrates, to which we say that you will be liable if you do what you are contemplating, and you will not be the least culpable of your fellow countrymen, but one of the most guilty.

Socrates:: If I asked why, they would no doubt pounce upon me with perfect justice and point out that there are very few people in Athens who have entered into this agreement with them as explicitly as I have. They would say;

The State:: Socrates, we have substantial evidence that you are satisfied with us and with the state. You would not have been so exceptionally reluctant to cross the borders of your country if you had not been exceptionally attached to it. You have never left the city to attend a festival or for any other purpose, except on some military expedition. You have never traveled abroad as other people do, and you have never felt the impulse to acquaint yourself with another country or constitution. You have been content with us and with our city. You have definitely chosen us, and undertaken to observe us in all your activities as a citizen, and as the crowning proof that you are satisfied with our city, you have begotten children in it. Furthermore, even at the time of your trial you could have proposed the penalty of banishment, if you had chosen to do so—that is, you could have done then with the sanction of the state what you are now trying to do without it. But whereas at that time you made a noble show of indifference if you had to die, and in fact preferred death, as you said, to banishment, now you show no respect for your earlier professions, and no regard for us, the laws, whom you are trying to destroy. You are behaving like the lowest type of menial, trying to run away in spite of the contracts and undertakings by which you agreed to live as a member of our state. Now first answer this question. Are we or are we not speaking the truth when we say that you have undertaken, in deed if not in word, to live your life as a citizen in obedience to us?

Socrates:: What are we to say to that, Crito? Are we not bound to admit it?

Crito:: We cannot help it, Socrates.

Socrates:: It is a fact, then, they would say, that;

The State:: You are breaking covenants and undertakings made with us, although you made them under no compulsion or misunderstanding, and were not compelled to decide in a limited time. You had seventy years in which you could have left the country. if you were not satisfied with us or felt that the agreements were unfair. You did not choose Sparta or Crete—your favorite models of good government—or any other Greek or foreign state. You could not have absented yourself from the city less if you had been lame or blind or decrepit in some other way. It is quite obvious that you stand by yourself above all other Athenians in your affection for this city and for us its laws. Who would care for a city without laws? And now, after all this, are you not going to stand by your agreement? Yes, you are, Socrates, if you will take our advice, and then you will at least escape being laughed at for leaving the city.

We invite you to consider what good you will do to yourself or your friends if you commit this breach of faith and stain your conscience. It is fairly obvious that the risk of being banished and either losing their citizenship or having their property confiscated will extend to your friends as well. As for yourself, if you go to one of the neighboring states, such as Thebes or Megara, which are both well governed, you will enter them as an enemy to their constitution, and all good patriots will eye you with suspicion as a destroyer of law and order. Incidentally you will confirm the opinion of the jurors who tried you that they gave a correct verdict; a destroyer of laws might very well be supposed to have a destructive influence upon young and foolish human beings. Do you intend, then, to avoid well-governed states and the higher forms of human society? And if you do, will life be worth living? Or will you approach these people and have the impudence to converse with them? What arguments will you use, Socrates? The same which you used here, that goodness and integrity, institutions and laws, are the most precious possessions of mankind? Do you not think that Socrates and everything about him will appear in a disreputable light? You certainly ought to think so.

But perhaps you will retire from this part of the world and go to Crito's friends in Thessaly? That is the home of indiscipline and laxity, and no doubt they would enjoy hearing the amusing story of how you managed to run away from prison by arraying yourself in some costume or putting on a shepherd's smock or some other conventional runaway's disguise, and altering your personal appearance. And will no one comment on the fact that an old man of your age, probably with only a short time left to live, should dare to cling so greedily to life, at the price of violating the most stringent laws? Perhaps not, if you avoid irritating anyone. Otherwise, Socrates, you will hear a good many humiliating comments. So you will live as the toady and slave of all the populace, literally 'roistering in Thessaly,' as though you had left this country for Thessaly to attend a banquet there. And where will your discussions about goodness and uprightness be then, we should like to know? But of course you want to live for your children's sake, so that you may be able to bring them up and educate them. Indeed! By first taking them off to Thessaly and making foreigners of them, so that they may have that additional enjoyment? Or if that is not your intention, supposing that they are brought up here with you still alive, will they be better cared for and educated without you, because of course your friends will look after them? Will they look after your children if you go away to Thessaly, and not if you go away to the next world? Surely if those who profess to be your friends are worth anything, you must believe that they would care for them.

No, Socrates, be advised by us your guardians, and do not think more of your children or of your life or of anything else than you think of what is right, so that when you enter the next world you may have all this to plead in your defense before the authorities there. It seems clear that if you do this thing, neither you nor any of your friends will be the better for it or be more upright or have a cleaner conscience here in this world, nor will it be better for you when you reach the next. As it is, you will leave this place, when you do, as the victim of a wrong done not by us, the laws, but by your fellow men. But if you leave in that dishonorable way, returning wrong for wrong and evil for evil, breaking your agreements and covenants with us, and injuring those whom you least ought to injure—yourself, your friends, your country, and us—then you will have to face our anger in your lifetime, and in that place beyond when the laws of the other world know that you have tried, so far as you could, to destroy even us their brothers, they will not receive you with a kindly welcome. Do not take Crito's advice, but follow ours.

Socrates:: That, my dear friend Crito, I do assure you, is what I seem to hear them saying, just as a mystic seems to hear the strains of music, and the sound of their arguments rings so loudly in my head that I cannot hear the other side. I warn you that, as my opinion stands at present, it will be useless to urge a different view. However, if you think that you will do any good by it, say what you like.

Crito:: No, Socrates, I have nothing to say.

Socrates:: Then give it up, Crito, and let us follow this course, since God points out the way.

# Crito.

Translated by Woodhead, W.D. 1953

Crito
Socrates

Socrates:: Why have you come at this time of day, Crito? Is it not still very early?

Crito:: Yes, quite early.

Socrates:: About what time?

Crito:: Just before daybreak.

Socrates:: I am surprised that the prison-warder was willing to answer the door.

Crito:: He is by now well acquainted with me, Socrates, because I am a constant visitor: and besides, I have done him a small kindness.

Socrates:: Have you been here long, or have you just arrived?

Crito:: Pretty long.

Socrates:: Then why did you not wake me at once instead of sitting by me in silence?

Crito:: No indeed, Socrates, I could have wished that I myself were not so wide-awake and sorrowful. But I have long been marvelling to see how sweetly you slumber: and I purposely avoided rousing you, that you might enjoy the sweetest repose. I have often before this, throughout your life, thought you happy in your disposition: but in your present misfortune I do so more than ever: so quietly and calmly do you bear it.

Socrates:: Why, it would be presumptuous on my part to be vexed, at my age, if I have to die.

Crito:: Others at your age, Socrates, are overtaken by similar misfortunes, but their age does not prevent them from resenting their present fate.

Socrates:: That is true. But why have you come so early?

Crito:: To break a piece of news, Socrates, which to you apparently will not seem cruel, but to me and to all your friends is cruel and grievous: and I myself, I think, will take it more to heart than any.

Socrates:: What is it? Has the ship arrived from Delos, at whose coming I must die?

Crito:: It has not yet arrived: but in my opinion it will arrive today, according to the reports of some men who have come from Sunium and left it there. It is clear then from what they say that it will arrive today, and you will have to end your life tomorrow, Socrates.

Socrates:: Well, Crito, may all prove for the best: if such be the will of the gods, so be it. But I do not think the ship will arrive today.

Crito:: What makes you infer that?

Socrates:: I will tell you. I have to die, I believe, on the day after the ship's arrival?

Crito:: That at any rate is what the authorities say.

Socrates:: Then I do not think it will come in the course of today, but to-morrow: and I infer this from a dream that I dreamt a little while ago in the night. And perhaps your failure to wake me was not inopportune.

Crito:: And what was this dream?

Socrates:: I thought that a fair and beautiful woman in white raiment came to me and called out to me saying, 'Socrates, "two days from now you will come to fertile Phthia".'

Crito:: A strange dream, Socrates.

Socrates:: But clear enough in my opinion, Crito.

Crito:: Only too clear, it seems. But, my good Socrates, late as it is, listen to me and save yourself. For if you die, it is not one misfortune alone for me: but apart from my being deprived of such a friend as I shall never find again, many who do not know either of us well will think that, while I might have saved you if I had been willing to spend the money, I neglected the opportunity. And yet what baser reputation could a man incur than that of valuing money more than friends? For the majority of people will never be persuaded that despite our eagerness you yourself were unwilling to escape.

Socrates:: But, bless my heart, Crito, why should we trouble about what most people think? The best folk will think that things took place as they did; and they alone are worthy of consideration.

Crito:: Ah, but you see, Socrates, that we must heed the opinions of the general public also. For it is plain from your present situation that they are able to do, not the least, but almost the greatest mischief, if a man be slandered among them.

Socrates:: If only the public, Crito, were able to do the greatest of mischief!—then they might be able also to do the greatest good, and all would be well. But as it is they can do neither. They cannot make a man sensible or foolish, but what they do is a matter of indifference to them.

Crito:: Well, suppose that may be so: but tell me this, Socrates. Is it for me and your other friends that you are concerned? Are you afraid that if you leave prison blackmailers may make trouble for us by accusing us of stealing you away, and that we may be forced to lose all our property or a large sum of money or to suffer some further penalty? If that is what you fear, you may dismiss it: for surely it is only right that we should run this and even a greater risk in saving you. But listen to me, and do not refuse me.

Socrates:: That is one concern, Crito; that, and many others.

Crito:: Then do not be afraid: there are men who for quite a small sum of money are ready to save you and convey you hence. And then again, do you not see how cheap these blackmailers are, and that we should not need much money to deal with them? And my money is at your disposal and is ample, I believe: and even if, out of regard for me, you think you should not spend my money, there are strangers here who are ready to contribute. One of them, Simmias of Thebes, has for this very purpose brought with him sufficient funds, and Cebes too is ready and quite a number of others. So, as I said, do not throw up the task of saving yourself through fear of this, and do not, as you said in the courtroom, feel any repugnance at the thought that if you escape you would not know what to do with yourself. For wherever you go, you will find many to welcome you with kindness; and if you wish to go to Thessaly, I have friends there who will make much of you and give you a safe refuge, so that no one in Thessaly shall vex you.

And further, Socrates, it seems to me that what you intend to do is not even right. You are betraying yourself when you might be saved, and you are eager to see yourself suffer the very fate which your enemies would be, nay, were eager to see inflicted in their desire to destroy you. Moreover, it seems to me that you are abandoning your own children, and though you might rear and educate them, you will go away and leave them and, as far as you are concerned, it is a matter of indifference what happens to them: and what will happen, in all probability, is the usual experience of orphans in their destitution. Either you ought not to have children, or you should endure throughout the toil of rearing and educating them: but it seems to me that you are choosing the laziest way: whereas you should make the choice of a good man and brave, you who claim that throughout your life you have cared for goodness. I myself feel ashamed both for you and for us who are your friends, and I fear that this whole affair of yours may be thought to have been so managed through some lack of courage on our part—how the case was brought into court when it need never have been, and the way in which it was conducted, and now as a climax, the crowning absurdity of the whole business, it may be thought, I fear, that we lost our opportunity through a base lack of courage: for we did not rescue you nor did you save yourself, though it was quite possible and feasible if we had been of any use whatever. Take heed then, Socrates, lest this conduct prove not only wrong, but also dishonourable to you and to us. But make your plan—or rather there is no longer any time to make it now, it must be made already: and there is but one plan. Everything must be finished by tonight: and if we still insist on waiting, it is impossible and beyond our power. But do listen to me, Socrates, and do not refuse.

Socrates:: My dear Crito, your enthusiasm is invaluable, if your intention be right. But if not, the greater it is, the more dangerous. We must consider then whether we should take such action or not. For my principle both in the past and at this moment has always been the same, to listen to nothing else in me except the rule which on reflexion seems the best. And my utterances of the past I cannot now discard because this fate has befallen me, but I feel very much the same about them; and I respect and honour the same arguments as before. And if we can find nothing better to say at this moment, I can assure you I shall never surrender to you, no! even if the power of the multitude brings yet more hobgoblins to scare us like children, visiting us with imprisonments and deaths and confiscations of property.

How then can we investigate these matters in the fairest possible way? If we take up first of all what you say about opinions. Were we right in saying on various occasions that we should pay heed to some opinions, but not to others? Or was the statement correct before I was doomed to die, whereas it has now become evident that it was mere words, uttered for the sake of talking, but in reality child's-play and nonsense? I am anxious to inquire, Crito, along with you, whether the statement will appear somewhat different to me in my present plight, or the same: and whether we shall dismiss it or accept it. It was observed, I believe, on many occasions by those who fancied they were speaking to the point that, as I said just now, we should attach high value to some of the opinions held by men, but not to others. Tell me, Crito, in heaven's name, do you not think this was a wise saying—for in all human probability you do not face the prospect of dying tomorrow, and the present situation cannot warp your judgment. Consider then: do you think it a satisfactory statement that we should respect some, but not all, of the opinions of men; and not the opinions of all men, but those of some, and not of others? What do you say? Is this a true statement?

Crito:: Yes, it is.

Socrates:: We should, then, respect good opinions, not bad?

Crito:: Yes.

Socrates:: And those of the wise are good, those of the foolish bad?

Crito:: Of course.

Socrates:: Come now, what did we formerly say about such matters as the following? When a man is in training and is making this his present concern, does he listen to the praise and censure and opinion of any and every man, or of the one man who is a doctor or trainer?

Crito:: Of the one man alone.

Socrates:: He should fear, then, the censure and welcome the praise of that one man rather than of the many.

Crito:: That is plain.

Socrates:: And so he must act and exercise, eat and drink with the approval of the one man, the master and expert, rather than as all the others approve?

Crito:: That is so.

Socrates:: Well then: if he disobeys this one man, disregarding his opinion and approval and respecting those of the ignorant multitude, will he not suffer harm?

Crito:: Of course he will.

Socrates:: What harm? What direction will it take, and what part of the disobedient man does it affect?

Crito:: Obviously the body: that is what it ruins.

Socrates:: You are right. And in other matters too, Crito, not to go into detail, is not the same thing true? And specifically in the case of right and wrong, the shameful and the honourable, good and evil, which are now under discussion, should we follow the opinion of the many and fear it, or of the one man (if there are any expert in such matters), whom we ought to fear and respect more than all the others? Since if we refuse to follow him, we shall injure and destroy that which, we saw, is improved by right and ruined by wrong. Or do you not agree?

Crito:: I think you are right, Socrates.

Socrates:: Tell me, then, if by refusing to heed the expert's opinion we ruin that which is improved by health and impaired by sickness, is life worth living when this is ruined? And this is the body, is it not?

Crito:: Yes.

Socrates:: Is life worth living with a crippled, ruined body?

Crito:: By no means.

Socrates:: Then surely life is not worth living with that part of us ruined which wrong injures and right improves. Or do we consider inferior to the body that part of us, whatever it is, which is the sphere of righteousness and injustice?

Crito:: By no means.

Socrates:: But more precious?

Crito:: Far more.

Socrates:: Then, my good friend, we must not pay too much heed to what the many will say about us, but rather to the judgment of the expert in right and wrong, the one man, and to Truth herself. And so you were wrong in proposing that we should take account of the opinion of the multitude in matters of the right, the noble, the good, and their opposites. 'All very well', a man might remark, 'but the many are able to put us to death.'

Crito:: Yes, that is quite plain. You are right, Socrates, that might be said.

Socrates:: But, my strange friend, the argument we have just concluded seems to me at least as valid as ever. And consider further whether it still holds good with us or not that it is not life, but the good life, that we should esteem of the highest importance.

Crito:: It still holds good.

Socrates:: And does it hold good or not that the right, the noble, and the good are one and the same?

Crito:: It holds good.

Socrates:: In the light of these admissions then let us consider whether or not it is right for me to attempt to escape from here without the permission of the Athenians: and if it appears right, let us try: but if not, let us give it up. But as to the considerations you mention about monetary expense and reputation and the rearing of children, perhaps, Crito, these are in reality the reflexions of those who lightly put to death, yes and would bring men to life again without a thought, if they could, your friends the many. We ourselves, however, since our calculations so prove, should perhaps consider nothing but what we were just now discussing—whether we shall be acting aright in paying money and thanks to those who are to spirit us away, and in escaping and forwarding the escape, or whether in truth we shall be doing wrong in so acting. And if it becomes evident that herein we are acting wrongly, we should not take any account of the death we may have to suffer by staying here and remaining quiet, or of anything else except doing wrong.

Crito:: I think what you say is right, Socrates: but consider what we are to do.

Socrates:: Let us examine things together, my good friend, and if you have any objections to offer while I speak, offer them and I will listen: but if not, then at last put an end, my dear fellow, to repeating so often the same story, that I must escape from here without the permission of the Athenians. For I esteem it most important to win your approval in acting as I do, rather than to act against your wishes. But consider now whether you are satisfied with the starting-point of our inquiry, and try to answer my question in accordance with your true convictions.

Crito:: I will try.

Socrates:: Should we in no way whatever do intentional wrong, or may we do it in some ways but not in others? Or is wrong-doing under no circumstances good or honourable, as we have often agreed in the past? Or have all those previous arguments been upset in these few days, and have we for all these years at our time of life, Crito, been talking so seriously together without realising that we were no better than children? Or is what we formerly said true beyond all question—whether the many assent or not, and whether we must experience still harsher measures than now, or gentler either, nevertheless is not wrong-doing an evil and a disgrace in every case to the guilty? Do we agree or not?

Crito:: We agree.

Socrates:: One should never do wrong then?

Crito:: Never.

Socrates:: Even when wronged then we should never retaliate with wrong, as the many think we should, since we must never do wrong.

Crito:: Evidently not.

Socrates:: Well, then, Crito, should we do injury to anyone or not?

Crito:: We should certainly not, Socrates.

Socrates:: And is it right or not to repay injury with injury, as the many think we should?

Crito:: By no means.

Socrates:: For there is no difference between injuring and wronging a man.

Crito:: You are right.

Socrates:: We should not then requite wrong with wrong or injure any man, no matter what he has done to us. And in assenting to this, Crito, mind you do not assent against your real opinion. For I know that but few people hold or will ever hold this view. There can therefore be no common ground of discussion between those who do and those who do not believe this, but they must necessarily despise each other when they view each other's opinions. You too then must consider most seriously whether you share and partake of this opinion and whether we are to make this our starting-point in our deliberations, that it is never right to do wrong or to repay wrong with wrong or to take revenge by returning an injury when we have suffered one, or whether you dissent and reject this starting-point. I have long believed it and believe it still: if you have come to a different decision, inform and instruct me. But if you still hold to our former view, listen to what follows.

Crito:: I do hold to it, and share your view. Say on.

Socrates:: My next point then is this, or rather my next question: should we do what we have agreed with any man to do, provided it be right, or should we play him false?

Crito:: We should do it.

Socrates:: As a consequence of this then, consider whether in leaving the prison without the city's consent we are not doing an injury, and that too to those whom we least ought to injure; and whether or not we are abiding by our just agreement.

Crito:: I cannot answer your question, Socrates, for I do not understand it.

Socrates:: Well, look at it in this way. Supposing, as we were on the point of flitting away or whatever you like to call it, the laws of the city and the commonwealth made their appearance and asked: 'Tell us, Socrates, what do you propose to do? By this act which you contemplate is it not your intention to destroy us, the laws, and the whole city, as far as you can? Do you think it possible for a state still to exist and not be overturned, in which verdicts that are reached have no force but are set at naught and destroyed by private citizens?' What shall we say, Crito, in answer to these and similar questions? For much might be said, especially by an orator, when a law is threatened which prescribes the validity of court verdicts. Shall we reply to the laws: 'The state wronged us and rendered an unjust verdict?' Shall we say that, or what shall we say?

Crito:: Say that, Socrates.

Socrates:: Then what if the laws reply: 'Socrates, was that the agreement reached between you and us, or that you would abide by the decisions of the state?' And if we were astonished at their words, perhaps they would say: 'Socrates, do not marvel at what we say, but answer, since you habitually use the method of question and answer. Tell us what fault you find with us and the city, that you seek to destroy us. Did we not, in the first place, bring you to birth? Was it not through us that your father was wedded to your mother and begot you? Tell us, then, do you censure as faulty those of us concerned with marriage?'

'I do not', I should reply. 'Or those concerned with the nurture of the child, and the education, in which you shared along with others. Did not those of us assigned to this task order things aright in bidding your father educate you in music and gymnastic?'

‘You did’, I should answer. ‘Well then, when you were born and brought up and educated, could you deny in the first place that you were our offspring and our slave—you and your ancestors? And if this is so, do you think that you enjoy equality with us and imagine that you have the right to retaliate in kind, whatever we undertake to do to you? You had no equal rights with your father, or your owner, if you had one, permitting you to repay whatever treatment you received or to render abuse for abuse or blow for blow or other such conduct: will you then have this privilege against your fatherland and the laws, so that if we try to destroy you because we think it right, you to the utmost of your power will endeavor in turn to destroy us, the laws, and your fatherland, and will claim you are right in so acting, you who set up to be the true devotee of goodness? Have you still so little wisdom as to be unaware that your country is more precious than mother and father and all ancestors, and more sacred and majestic and held in higher esteem both by gods and by men of good sense; and that you should revere her and submit to her and conciliate her when she is angry even more than you do your father; and that you should either convert her to your view or do whatever she bids, and passively submit to whatever she commands you to endure, whether stripes or bonds, and if she leads you into battle to suffer wounds or death, you must do your duty? That is the right, and you must not yield or retreat or forsake your post, but in war and at law and everywhere you must obey the orders of the city and fatherland or convert it to your opinion of what is right: but to lay violent hands on your mother or father is impious, and much more so upon your fatherland.’ What shall we say in answer to this, Crito? That the laws are speaking the truth or not?

Crito:: I think they are.

Socrates:: 4 Then consider, Socrates', the laws may say, 'whether we speak the truth in saying that what you are now attempting to do to us is not right. We gave you birth and brought you up and educated you, giving to you and to all other citizens your share in all the blessings we could: nevertheless by the liberty which we grant we proclaim to any Athenian who so wishes that, when once he has reached manhood and seen the government of the city and us, the laws, he may take what is his and go wherever he desires, if he does not like us. And no one of us stands in his way or forbids him to take his property and depart wherever he will, if he dislikes us and the city, whether he wishes to go to a colony or to some other country. But if a man remains here when he has seen the way in which we administer justice and carry on the general government of the state, we assert that he has already by his very action agreed to do our bidding, and the man who disobeys is guilty, we say, of threefold wrong, disobedience to us, his begetters, disobedience to us who nurtured him, and a breach of his covenant to obey us, since he neither obeys us nor wins us over to his view if in any way we are wrong, though we offer him his choice and do not harshly order him to do our bidding. Nay, though we allow him two alternatives, to convert us to his view or to do as we order, he does neither. You too, Socrates, we claim, will be subject to these charges, if you are bent upon doing what you intend, and that too not least, but most of all Athenians.' And if I should ask why, they would, I think, reproach me with justice, insisting that I have made this covenant with them more firmly than most Athenians. 'Socrates', they would say, 'we have abundant proof that you liked us and the city. You would not have remained at home far more than all other Athenians, if you had not been exceptionally fond of us: but you never left the city to see the world, except for one visit to the Isthmus: you never travelled anywhere else except on military service, you made no other journey, as other men do, and felt no desire to know any other city or other laws, but were satisfied with us and our city: so decisively did you choose us and agree to abide by us: and in particular you begot your children here, in proof that you liked the city. Moreover, if you had wished, you might at your trial itself have proposed the penalty of exile, and what you are now attempting without, you might have done with, the city's consent. But at that time you prided yourself on not being vexed at having to die, and said yourself that you preferred death to exile. And now you are not ashamed to face these words, and pay no respect to us, the laws, whom you are trying to destroy: but you are behaving like the meanest of slaves, attempting to run away in defiance of the covenants and agreements by which you bound yourself to live as a citizen. First of all then, answer whether we are speaking the truth or not in claiming that you had consented by deed and not by word alone to live as a citizen in submission to us.' What are we to answer to this, Crito? Must we not acknowledge it?

Crito:: We must, Socrates.

Socrates:: 'You are then transgressing your covenants and agreements with us', they will say, 'though none compelled you to consent nor were you deceived or forced to come to a quick decision, but you had seventy years in which you might have left us if you did not like us or thought that these agreements were unfair. But you did not prefer Lacedaemon or Crete, though you are always saying they are well governed, or any other state, Greek or barbarian, but you departed from this city less than the halt and the blind and other cripples: so much more than any other Athenian were you pleased with the city, yes, and with us, the laws, too: for who could take pleasure in a city apart from its laws? And will you now refuse to abide by your covenants? Not if you take our advice, Socrates: then you will not make a laughing-stock of yourself by leaving the city.

‘For consider, what good will you do yourself or your friends by thus transgressing or committing any such offence? It must be pretty evident that your friends too will be in danger of being exiled and deprived of their country or of losing their property: and as for you, first of all if you go to one of the nearest cities, to Thebes or Megara, which are both well governed, you will arrive, Socrates, as an enemy to their government, and all who care for their own cities will look askance at you, considering you one who destroys the laws: and you will confirm the opinion of the judges, who will consider their verdict justified. For a corrupter of the laws must seem more than likely to be a corrupter of young and thoughtless people. Well then, will you avoid well-governed cities and well-disciplined men? But will life be worth living if you do? Or will you consort with them and have the effrontery to repeat—what kind of discourse, Socrates, the kind you engaged in here—that goodness and righteousness are man’s most precious possessions, and lawful institutions and laws? And do you not think that this will seem shameful behaviour on the part of Socrates? Surely you must. But will you depart from these places and go to visit Crito’s friends in Thessaly? For there you will find abundant disorder and lawlessness, and perhaps they would enjoy hearing the ludicrous conditions under which you ran away from prison, wearing some disguise—a peasant’s cloak or other such dress as runaways are wont to wear—and altering your appearance. But will no one say that you, an old man with probably not much longer to live, stooped to so greedy a passion for life that you transgressed the most sacred laws? Perhaps not, if you do not vex anybody: but if you do, Socrates, you will hear much abuse that will fill you with shame. You will pass your life as a slave obsequious to one and all, and what else will you do but feast in Thessaly, as though you had journeyed thither for the sake of a dinner? And pray what will become of those discourses about justice and goodness in general?

'But it is for your children's sake that you must live on, that you may rear and educate them? What? Will you take them to Thessaly to rear and educate them and make exiles of them, that they may have that too to thank you for? Or, if you will not do that, will they be brought up and educated better here in Athens if you are alive, even though you are not with them? Because your friends will look after them? Will those friends look after them if you depart to Thessaly, but refuse to do so if you depart this life? If those who claim to be your friends are good for anything, you may be sure they will not refuse.

'Then listen to us, Socrates, who nurtured you, and do not hold children or life or anything else of more account than the right; that when you arrive in the other world you may offer all this in your defence to the judges there. For neither in this world does such conduct seem good or righteous or holy for you or for any of your friends, nor will it seem good in you when you have gone to the other world. As it is, if you depart, you are departing the victim of injustice wrought not by us, but by men. But if you make your escape after having so basely repaid injustice with injustice and evil with evil, breaking your agreements and covenants with us and injuring those whom you least should injure, yourself and your friends, your country and ourselves, we shall be angry with you as long as you live, and there our brothers, the laws in the other world, will give you no kindly welcome: for they will know that, to the best of your power, you attempted to destroy us. But do not let Crito persuade you to do what he says, but listen to us.’

This, my dear friend Crito, I assure you, is what I fancy I hear, even as Corybantic worshippers fancy in their frenzy that they hear the music of the flutes: and the sound of these words rings in my ears and makes it impossible for me to hear any others. And you may be certain, according at least to my present opinion, that if you speak in opposition to these words, you will plead in vain. However, if you think that you will achieve any success, say on.

Crito:: No, Socrates, I can say no more.

Socrates:: Then let things be, Crito: let us act as I say, since this is the path along which the god directs us.

## Introduction to Phaedo.

Thursday, April 23, 2020

> See what things are in themselves, dividing them into matter, form and purpose. *The Meditations Of Marcus Aurelius Antoninus*.

> The same thing may have all the kinds of causes, such as the moving cause of a house is the art or the builder, the final cause is the function it fulfils, the matter is earth and stones, and the form is the definition. *Metaphysics* by Aristotle.
>
> But, leaving these arguments, let us insist on this, that it is not the same thing to change in quantity and in quality. Grant that in quantity a thing is not constant; still it is in respect of its form that we know each thing. *Metaphysics* by Aristotle.

Another very well crafted dialog whose topic is the distinction between the two-elements of a thing as denoted in the terms of the perceptible and the intelligible. Commensurate with Plato's very acute intellectual ability, the entire dialog should guide one into the examination of this topic.

For example, let us take those professionals today which claim that different peoples speak different languages. Is this possible? If language is a biological given, and it is, how many languages are possible? Is language an intelligible versus grammars which are perceptible?

The difference between body and mind is the distinction between the perceptible and the intelligible. The body deals with verbs, relative differences, the perceptible. We only know of shapes, forms, definitions, limits, by computation, or the intelligible. The operations upon relative differences are a constant, they never change, they are nouns, so to speak.

Plato is going to use, as intimated in the opening, the format of Aesop to construct a fable; the fable is very perceptible, yet the intelligible behind the fable is something very intelligible. In one respect one can see how to use the elements of a thing to produce arguments to help ease the pain of one’s friends.

Our body knows by the material differences of things, our mind, when functional, knows by the forms, limits, boundaries, definitions, from things. Thus, we have many sense systems, but only one intellect.

# **Phaedo.**

or

The Immortality Of The Soul.

Translated by Henry Cary.

FIRST ECHECRATES, PHÆDO.

THEN SOCRATES, APOLLODORUS, CEBES, SIMMIAS, AND CRITO.

Echecrates:: Were you personally present, Phædo, with Socrates on that day when he drank the poison in prison? or did you hear an account of it from some one else?

Phaedo:: I was there myself, Echecrates.

Echecrates:: What then did he say before his death? and how did he die? for I should be glad to hear: for scarcely any citizen of Phlius ever visits Athens now, nor has any stranger for a long time come from thence, who was able to give us a clear account of the particulars, except that he died from drinking poison; but he was unable to tell us any thing more.

Phaedo:: And did you not hear about the trial how it went off?

Echecrates:: Yes; some one told me this; and I wondered, that as it took place so long ago, he appears to have died long afterwards. What was the reason of this, Phædo?

Phaedo:: An accidental circumstance happened in his favor, Echecrates: for the poop of the ship which the Athenians send to Delos, chanced to be crowned on the day before the trial.

Echecrates:: But what is this ship?

Phaedo:: It is the ship, as the Athenians say, in which Theseus formerly conveyed the fourteen boys and girls to

Crete, and saved both them and himself. They, therefore, made a vow to Apollo on that occasion, as it is said, that if they were saved they would every year dispatch a solemn embassy to Delos; which from that time to the present, they send yearly to the god. When they begin the preparations for this solemn embassy, they have a law that the city shall be purified during this period, and that no public execution shall take place until the ship has reached Delos, and returned to Athens: and this occasionally takes a long time, when the winds happen to impede their passage. The commencement of the embassy is when the priest of Apollo has crowned the poop of the ship. And this was done, as I said, on the day before the trial: on this account Socrates had a long interval in prison between the trial and his death.

Echecrates:: And what, Phaedo, were the circumstances of his death? what was said and done? who of his friends were with him? or would not the magistrates allow them to be present, but did he die destitute of friends?

Phaedo:: By no means; but some, indeed several, were present.

Echecrates:: Take the trouble, then, to relate to me all the particulars as clearly as you can, unless you have any pressing business.

Phaedo:: I am at leisure, and will endeavor to give you a full account: for to call Socrates to mind, whether speaking myself or listening to some one else, is always most delightful to me.

Echecrates:: And indeed, Phaedo, you have others to listen to you who are of the same mind. However, endeavor to relate every thing as accurately as you can.

Phaedo:: I was indeed wonderfully affected by being present, for I was not impressed with a feeling of pity, like one present at the death of a friend; for the man appeared to me to be happy, Echecrates, both from his manner and discourse, so fearlessly and nobly did he meet his death: so much so, that it occurred to me, that in going to Hades he was not going without a divine destiny, but that when he arrived there he would be happy, if any one ever was. For this reason I was entirely uninfluenced by any feeling of pity, as would seem likely to be the case with one present on so mournful an occasion; nor was I affected by pleasure from being engaged in philosophical discussions, as was our custom; for our conversation was of that kind. But an altogether unaccountable feeling possessed me, a kind of unusual mixture compounded of pleasure and pain together, when I considered that he was immediately about to die. And all of us who were present were affected in much the same manner, at one time laughing, at another weeping, one of us especially, Apollodorus, for you know the man and his manner.

Echecrates:: How should I not?

Phaedo:: He, then, was entirely overcome by these emotions; and I too was troubled, as well as the others.

Echecrates:: But who were present, Phaedo?

Phaedo:: Of his fellow-countrymen, this Apollodorus was present, and Critobulus, and his father Crito, moreover Hermogenes, Epigenes, Æschines, and Antisthenes; Ctesippus the Pæanian, Menexenus, and some other of his countrymen were also there: Plato I think was sick.

Echecrates:: Were any strangers present?

Phaedo:: Yes: Simmias the Theban, Cebes, and Phædondes: and from Megara, Euclides and Terpsion.

Echecrates:: But what! were not Aristippus and Cleombrotus present?

Phaedo:: No, for they were said to be at Ægina.

Echecrates:: Was any one else there?

Phaedo:: I think that these were nearly all who were present.

Echecrates:: Well now: what do you say was the subject of conversation?

Phaedo:: I will endeavor to relate the whole to you from the beginning. On the preceding days I and the others were constantly in the habit of visiting Socrates, meeting early in the morning at the court-house where the trial took place, for it was near the prison. Here then we waited every day till the prison was opened, conversing with each other; for it was not opened very early, but, as soon as it was opened we went in to Socrates, and usually spent the day with him. On that occasion however, we met earlier than usual; for on the preceding day, when we left the prison in the evening, we heard that the ship had arrived from Delos. We therefore urged each other to come as early as possible to the accustomed place; accordingly we came, and the porter, who used to admit us, coming out, told us to wait, and not enter until he called us. “For,” he said, “the Eleven are now freeing Socrates from his bonds, and announcing to him that he must die today.” But in no long time he returned, and bade us enter.

When we entered, we found Socrates just freed from his bonds, and Xantippe, you know her, holding his little boy and sitting by him. As soon as Xantippe saw us, she wept aloud and said such things as women usually do on such occasions, as

Xanthippe:: “Socrates, your friends will now converse with you for the last time and you with them.”

Phaedo:: But Socrates, looking towards Crito, said;

Socrates:: “Crito, let some one take her home.”

Phaedo:: Upon which some of Crito's attendants led her away, wailing and beating herself.

But Socrates sitting up in bed, drew up his leg, and rubbed it with his hand, and as he rubbed it, said;

Socrates:: "What an unaccountable thing, my friends, that seems to be, which men call pleasure; and how wonderfully is it related towards that which appears to be its contrary, pain; in that they will not both be present to a man at the same time, yet, if any one pursues and attains the one, he is almost always compelled to receive the other, as if they were both united together from one head.

"And it seems to me, that if Æsop had observed this he would have made a fable from it, how the deity, wishing to reconcile these warring principles, when he could not do so, united their heads together, and from hence whomsoever the one visits the other attends immediately after; as appears to be the case with me, since I suffered pain in my leg before from the chain, but now pleasure seems to have succeeded."

Phaedo:: Hereupon Cebes, interrupting him, said;

Cebes:: "By Jupiter, Socrates, you have done well in reminding me: with respect to the poems which you made, by putting into meter those Fables of Æsop and the hymn to Apollo, several other persons asked me, and especially Evenus recently, with what design you made them after you came here, whereas before you had never made any. If, therefore, you care at all that I should be able to answer Evenus, when he asks me again, for I am sure he will do so, tell me what I must say to him."

Socrates:: "Tell him the truth then, Cebes, that I did not make them from a wish to compete with him, or his poems, for I knew that this would be no easy matter; but that I might discover the meaning of certain dreams, and discharge my conscience, if this should happen to be the music which they have often ordered me to apply myself to. For they were to the following purport: often in my past life the same dream visited me, appearing at different times in different forms, yet always saying the same thing, ‘Socrates’ it said, ‘apply yourself to and practice music.’ And I formerly supposed that it exhorted and encouraged me to continue the pursuit I was engaged in, as those who cheer on racers, so that the dream encouraged me to continue the pursuit I was engaged in, namely, to apply myself to music, since philosophy is the highest music, and I was devoted to it. But now since my trial took place, and the festival of the god retarded my death, it appeared to me that, if by chance the dream so frequently enjoined me to apply myself to popular music, I ought not to disobey it but do so, for that it would be safer for me not to depart hence before I had discharged my conscience by making some poems in obedience to the dream. Thus, then, I first of all composed a hymn to the god whose festival was present, and after the god, considering that a poet, if he means to be a poet, ought to make fables and not discourses, and knowing that I was not skilled in making fables, I therefore put into verse those fables of Æsop, which were at hand, and were known to me, and which first occurred to me.

Tell this then to Evenus, Cebes, and bid him farewell, and, if he is wise, to follow me as soon as he can. But I depart, as it seems, to-day; for so the Athenians order.”

Simmias:: “What is this, Socrates, which you exhort Evenus to do? for I often meet with him; and from what I know of him, I am pretty certain that he will not at all be willing to comply with your advice.”

Socrates:: “What then, is not Evenus a philosopher?”

Simmias:: “To me he seems to be so.”

Socrates:: “Then he will be willing and so will every one who worthily engages in this study; perhaps indeed he will not commit violence on himself, for that they say is not allowable.”

Phaedo:: And as he said this he let down his leg from the bed on the ground, and in this posture continued during the remainder of the discussion.

Cebes:: “What do you mean, Socrates, by saying that it is not lawful to commit violence on one’s-self, but that a philosopher should be willing to follow one who is dying?”

Socrates:: “What, Cebes, have not you and Simmias, who have conversed familiarly with Philolaus on this subject, heard?”

Cebes:: “Nothing very clearly, Socrates.”

Socrates:: “I however speak only from hearsay; what then I have heard I have no scruple in telling. And perhaps it is most becoming for one who is about to travel there, to enquire and speculate about the journey thither, what kind we think it is. What else can one do in the interval before sunset?”

Cebes:: “Why then, Socrates, do they say that it is not allowable to kill one’s-self? for I, as you asked just now, have heard both Philolaus, when he lived with us, and several others say that it was not right to do this; but I never heard any thing clear upon the subject from any one.”

Socrates:: “Then you should consider it attentively, for perhaps you may hear: probably however, it will appear wonderful to you, if this alone of all other things is an universal truth, and it never happens to a man, as is the case in all other things, that at sometimes and to some persons only it is better to die than to live; yet that these men for whom it is better to die—this probably will appear wonderful to you—may not without impiety do this good to themselves, but must await another benefactor."

Phaedo:: Then Cebes, gently smiling, said, speaking in his own dialect;

Cebes:: "Jove be witness."

Socrates:: "And indeed, it would appear to be unreasonable, yet still perhaps it has some reason on its side. The maxim indeed given on this subject in the mystical doctrines, that we men are in a kind of prison, and that we ought not to free ourselves from it and escape, appears to me difficult to be understood, and not easy to penetrate. This however appears to me, Cebes, to be well said, that the gods take care of us, and that we men are one of their possessions. Does it not seem so to you?"

Cebes:: "It does."

Socrates:: "Therefore, if one of your slaves were to kill himself, without your having intimated that you wished him to die, should you not be angry with him, and should you not punish him if you could?"

Cebes:: "Certainly."

Socrates:: "Perhaps then in this point of view, it is not unreasonable to assert, that a man ought not to kill himself before the deity lays him under a necessity of doing so, such as that now laid on me."

Cebes:: "This, indeed, appears to be probable. But what you said just now, Socrates, that philosophers should be very willing to die, appears to be an absurdity, if what we said just now is agreeable to reason, that it is God who takes care of us, and that we are his property. For that the wisest men should not be grieved at leaving that service in which they govern them who are the best of all masters, namely the gods, is not consistent with reason. For surely he cannot think that he will take better care of himself when he has become free: but a foolish man might perhaps think thus, that he should fly from his master, and would not reflect that he ought not to fly from a good one, but should cling to him as much as possible, therefore he would fly against all reason: but a man of sense would desire to be constantly with one better than himself. Thus, Socrates, the contrary of what you just now said is likely to be the case; for it becomes the wise to be grieved at dying, but the foolish to rejoice."

Phaedo:: Socrates, on hearing this, appeared to me to be pleased with the pertinacity of Cebes, and looking towards us, said;

Socrates:: "Cebes, you see, always searches out arguments, and is not at all willing to admit at once any thing one has said."

Simmias:: "But indeed, Socrates, Cebes appears to me, now, to say something to the purpose: for with what design should men really wise fly from masters who are better than themselves, and so readily leave them? And Cebes appears to me to direct his argument against you, because you so easily endure to abandon both us, and those good rulers, as you yourself confess, the gods."

Socrates:: "You speak justly, for I think you mean that I ought to make my defense to this charge, as if I were in a court of justice."

Simmias:: "Certainly."

Socrates:: "Come then, I will endeavor to defend myself more successfully before you than before the judges. For, Simmias and Cebes, if I did not think that I should go first of all amongst other deities who are both wise and good, and, next, amongst men who have departed this life, better than any here, I should be wrong in not grieving at death: but now be assured, I hope to go amongst good men, though I would not positively assert it; that, however, I shall go amongst gods who are perfectly good masters, be assured I can positively assert this, if I can any thing of the kind. So that, on this account, I am not so much troubled, but I entertain a good hope that something awaits those who die, and that, as was said long since, it will be far better for the good than the evil."

Simmias:: "What then, Socrates, would you go away keeping this persuasion to yourself, or would you impart it to us? For this good appears to me to be also common to us; and at the same time it will be an apology for you, if you can persuade us to believe what you say."

Socrates:: "I will endeavor to do so. But first let us attend to Crito here, and see what it is he seems to have for some time wished to say."

Crito:: "What else, Socrates, but what he who is to give you the poison told me some time ago, that I should tell you to speak as little as possible? For he says that men become too much heated by speaking, and that nothing of this kind ought to interfere with the poison, and that otherwise, those who did so were sometimes compelled to drink two or three times."

Socrates:: "Let him alone, and let him attend to his own business, and prepare to give it me twice, or, if occasion requires, even thrice."

Crito:: "I was almost certain what you would say, but he has been some time pestering me."

Socrates:: "Never mind him."

"But now I wish to render an account to you, my judges, of the reason why a man who has really devoted his life to philosophy, when he is about to die, appears to me, on good grounds, to have confidence, and to entertain a firm hope that the greatest good will befall him in the other world, when he has departed this life. How then this comes to pass, Simmias and Cebes, I will endeavor to explain.

“For as many as rightly apply themselves to philosophy seem to have left all others in ignorance, that they aim at nothing else than to die and be dead. If this then is true, it would surely be absurd to be anxious about nothing else than this during their whole life, but, when it arrives, to be grieved at what they have been long anxious about and aimed at.”

Simmias:: “By Jupiter, Socrates, though I am not now at all inclined to smile, you have made me do so; for I think that the multitude, if they heard this, would think it was very well said in reference to philosophers, and that our countrymen particularly would agree with you, that true philosophers do desire death, and that they are by no means ignorant that they deserve to suffer it.”

Socrates:: “And indeed, Simmias, they would speak the truth, except in asserting that they are not ignorant; for they are ignorant of the sense in which true philosophers desire to die, and in what sense they deserve death, and what kind of death. But, let us take leave of them, and speak to one another. Do we think that death is any thing?”

Simmias:: “Certainly.”

Socrates:: “Is it any thing else than the separation of the soul from the body? and is not this to die, for the body to be apart by itself separated from the soul, and for the soul to subsist apart by itself separated from the body? Is death any thing else than this?”

Simmias:: “No, but this.”

Socrates:: “Consider then, my good friend, whether you are of the same opinion as me; for thus I think we shall understand better the subject we are considering. Does it appear to you to be becoming in a philosopher to be anxious about pleasures, as they are called, such as meats and drinks?”

Simmias:: “By no means, Socrates.”

Socrates:: “But what? about the pleasures of love?”

Simmias:: “Not at all.”

Socrates:: “What then? does such a man appear to you to think other bodily indulgences of value? for instance, does he seem to you to value or despise the possession of magnificent garments and sandals, and other ornaments of the body, except so far as necessity compels him to use them?”

Simmias:: “The true philosopher, appears to me to despise them.”

Socrates:: “Does not then, the whole employment of such a man appear to you to be, not about the body, but to separate himself from it as much as possible, and be occupied about his soul?”

Simmias:: “It does.”

Socrates:: “First of all then, in such matters, does not the philosopher, above all other men, evidently free his soul as much as he can from communion with the body?”

Simmias:: “It appears so.”

Socrates:: “And it appears, Simmias, to the generality of men, that he who takes no pleasure in such things, and who does not use them, does not deserve to live; but that he nearly approaches to death who cares nothing for the pleasures that subsist through the body.”

Simmias:: “You speak very truly.”

Socrates:: “But what with respect to the acquisition of wisdom, is the body an impediment or not, if any one takes it with him as a partner in the search? What I mean is this:

Do sight and hearing convey any truth to men, or are they such as the poets constantly sing, who say that we neither hear nor see any thing with accuracy? If however these bodily senses are neither accurate nor clear, much less can the others be so: for they are all far inferior to these. Do they not seem so to you?”

Simmias:: “Certainly.”

Socrates:: “When then, does the soul light on the truth? for, when it attempts to consider any thing in conjunction with the body, it is plain that it is then led astray by it.”

Simmias:: “You say truly.”

Socrates:: “Must it not then be by reasoning, if at all, that any of the things that really are become known to it?”

Simmias:: “Yes.”

Socrates:: “And surely the soul then reasons best when none of these things disturb it, neither hearing, nor sight, nor pain, nor pleasure of any kind, but it retires as much as possible within itself, taking leave of the body, and, as far as it can, not communicating or being in contact with it, it aims at the discovery of that which is.”

Simmias:: “Such is the case.”

Socrates:: “Does not then the soul of the philosopher, in these cases, despise the body, and flee from it, and seek to retire within itself?

Simmias:: “It appears so.”

Socrates:: “But what as to such things as these, Simmias? Do we say that justice itself is something or nothing?”

Simmias:: “We say it is something, by Jupiter.”

Socrates:: “And that beauty and goodness are something?”

Simmias:: “How not?”

Socrates:: “Now then have you ever seen any thing of this kind with your eyes?”

Simmias:: “By no means.”

Socrates:: “Did you ever lay hold of them by any other bodily sense? but I speak generally, as of magnitude, health, strength, and, in a word, of the essence of every thing, that is to say, what each is. Is then the exact truth of these perceived by means of the body, or is it thus, whoever amongst us habituates himself to reflect most deeply and accurately on each several thing about which he is considering, he will make the nearest approach to the knowledge of it?”

Simmias:: “Certainly.”

Socrates:: “Would not he, then, do this with the utmost purity, who should in the highest degree approach each subject by means of the mere mental faculties, neither employing the sight in conjunction with the reflective faculty, nor introducing any other sense together with reasoning; but who, using pure reflection by itself, should attempt to search out each essence purely by itself, freed as much as possible from the eyes and ears, and, in a word, from the whole body, as disturbing the soul, and not suffering it to acquire truth and wisdom, when it is in communion with it. Is not he the person, Simmias, if any one can, who will arrive at the knowledge of that which is?”

Simmias:: “You speak with wonderful truth, Socrates.”

Socrates:: “Wherefore, it necessarily follows from all this, that some such opinion as this should be entertained by genuine philosophers, so that they should speak among themselves as follows: ‘A by-path, as it were, seems to lead us on in our researches undertaken by reason, because as long as we are encumbered with the body, and our soul is contaminated with such an evil, we can never fully attain to what we desire; and this, we say, is truth. For the body subjects us to innumerable hindrances on account of its necessary support, and moreover if any diseases befall us, they impede us in our search after that which is; and it fills us with longings, desires, fears, all kinds of fancies, and a multitude of absurdities, so that, as it is said in real truth, by reason of the body it is never possible for us to make any advances in wisdom. "For nothing else but the body and its desires occasion wars, seditions, and contests; for all wars amongst us arise on account of our desire to acquire wealth: and we are compelled to acquire wealth on account of the body, being enslaved to its service; and consequently on all these accounts we are hindered in the pursuit of philosophy. But the worst of all is, that if it leaves us any leisure, and we apply ourselves to the consideration of any subject, it constantly obtrudes itself in the midst of our researches, and occasions trouble and disturbance, and confounds us so that we are not able by reason of it to discern the truth. It has then in reality been demonstrated to us, that if we are ever to know any thing purely, we must be separated from the body, and contemplate the things themselves by the mere soul. And then, as it seems, we shall obtain that which we desire, and which we profess ourselves to be lovers of, wisdom, when we are dead, as reason shows, but not while we are alive. For if it is not possible to know any thing purely in conjunction with the body, one of these two things must follow, either that we can never acquire knowledge, or only after we are dead; for then the soul will subsist apart by itself, separate from the body, but not before. And while we live, we shall thus, as it seems, approach nearest to knowledge, if we hold no intercourse or communion at all with the body, except what absolute necessity requires, nor suffer ourselves to be polluted by its nature, but purify ourselves from it, until God himself shall release us. And thus being pure, and freed from the folly of body, we shall in all likelihood be with others like ourselves, and shall of ourselves know the whole real essence, and that probably is truth; for it is not allowable for the impure to attain to the pure. Such things, I think, Simmias, all true lovers of wisdom must both think and say to one another. Does it not seem so to you?"

Simmias:: "Most assuredly, Socrates."

Socrates:: "If this then, is true, my friend, there is great hope for one who arrives where I am going, there, if any where, to acquire that in perfection for the sake of which we have taken so much pains during our past life; so that the journey now appointed me is set out upon with good hope, and will be so by any other man who thinks that his mind has been as it were purified."

Simmias:: "Certainly."

Socrates:: "But does not purification consist in this, as was said in a former part of our discourse, in separating as much as possible the soul from the body, and in accustoming it to gather and collect itself by itself on all sides apart from the body, and to dwell, as far as it can, both now and hereafter, alone by itself, delivered as it were from the shackles of the body?"

Simmias:: "Certainly."

Socrates:: "Is this then called death, this deliverance and separation of the soul from the body?"

Simmias:: "Assuredly."

Socrates:: "But, as we affirmed, those who pursue philosophy rightly, are especially and alone desirous to deliver it, and this is the very study of philosophers, the deliverance and separation of the soul from the body, is it not?"

Simmias:: “It appears so.”

Socrates:: “Then, as I said at first, would it not be ridiculous for a man who has endeavored throughout his life to live as near as possible to death, then, when death arrives, to grieve? would not this be ridiculous?”

Simmias:: “How should it not?”

Socrates:: “In reality then, Simmias, those who pursue philosophy rightly study to die; and to them of all men death is least formidable. Judge from this. Since they altogether hate the body and desire to keep the soul by itself, would it not be irrational if, when this comes to pass, they should be afraid and grieve, and not be glad to go to that place, where on their arrival they may hope to obtain that which they longed for throughout life; but they longed for wisdom; and to be freed from association with that which they hated? Have many of their own accord wished to descend into Hades, on account of human objects of affection, their wives and sons, induced by this very hope of there seeing and being with those whom they have loved; and shall one who really loves wisdom, and firmly cherishes this very hope, that he shall no where else attain it in a manner worthy of the name, except in Hades, be grieved at dying, and not gladly go there? We must think that he would gladly go, my friend, if he be in truth a philosopher; for he will be firmly persuaded of this, that he will no where else but there attain wisdom in its purity? and if this be so, would it not be very irrational, as I just now said, if such a man were to be afraid of death?”

Simmias:: “Very much so, by Jupiter.”

Socrates:: “Would not this then, be a sufficient proof to you, with respect to a man whom you should see grieved when about to die, that he was not a lover of wisdom but a lover of his body? and this same person is probably a lover of riches and a lover of honor, one or both of these."

Simmias:: "It certainly is as you say."

Socrates:: "Does not then, that which is called fortitude, Simmias, eminently belong to philosophers?"

Simmias:: "By all means."

Socrates:: "And temperance also, which even the multitude call temperance, and which consists in not being carried away by the passions, but in holding them in contempt, and keeping them in subjection, does not this belong to those only who most despise the body, and live in the study of philosophy?"

Simmias:: "Necessarily so."

Socrates:: "For, if you will consider the fortitude and temperance of others, they will appear to you to be absurd."

Simmias:: "How so, Socrates?"

Socrates:: "Do you know, that all others consider death among the great evils?"

Simmias:: "They do indeed."

Socrates:: "Then do the brave amongst them endure death, when they do endure it, through dread of greater evils?"

Simmias:: "It is so."

Socrates:: "All men, therefore, except philosophers, are brave through being afraid and fear; though it is absurd that any one should be brave through fear and cowardice."

Simmias:: "Certainly."

Socrates:: "But what, are not those amongst them who keep their passions in subjection, affected in the same way? and are they not temperate through a kind of intemperance? and although we may say, perhaps, that this is impossible, nevertheless the manner in which they are affected with respect to this silly temperance resembles this; for, fearing to be deprived of other pleasures, and desiring them, they abstain from some, being mastered by others. And though they call intemperance the being governed by pleasures, yet it happens to them that, by being mastered by some pleasures, they master others; and this is similar to what was just now said, that in a certain manner they become temperate through intemperance."

Simmias:: "So it seems."

Socrates:: "My dear Simmias, consider that this is not a right exchange for virtue, to barter pleasures for pleasures, pains for pains, fear for fear, and the greater for the lesser, like pieces of money; but that that alone is the right coin, for which we ought to barter all these things, wisdom; and for this, and with this every thing is in reality bought and sold, fortitude, temperance, and justice, and, in a word, true virtue subsists with wisdom, whether pleasures and fears, and every thing else of the kind, are present or absent; but when separated from wisdom, and changed one for another, consider whether such virtue is not a mere outline, and in reality servile, possessing neither soundness nor truth; but the really true virtue is a purification from all such things, and temperance, justice, fortitude, and wisdom itself, are a kind of initiatory purification. And those who instituted the mysteries for us appear to have been by no means contemptible, but in reality to have intimated long since that whoever shall arrive in Hades unexpiated and uninitiated shall lie in mud, but he that arrives there purified and initiated, shall dwell with the gods. 'For there are,' say those who preside at the mysteries, 'many wand-bearers, but few inspired.' These last, in my opinion, are no other than those who have pursued philosophy rightly: that I might be of their number, I have, to the utmost of my ability, left no means untried, but have endeavored to the utmost of my power. But whether I have endeavored rightly and have in any respect succeeded, on arriving there I shall know clearly, if it please God, very shortly, as it appears to me.

"Such then, Simmias and Cebes, is the defense I make, for that I, on good grounds, do not repine or grieve at leaving you and my masters here, being persuaded that there, no less than here, I shall meet with good masters and friends. But to the multitude this is incredible. If however I have succeeded better with you in my defense than I did with the Athenian judges, it is well."

Phaedo:: When Socrates had thus spoken, Cebes, taking up the discussion said;

Cebes:: "Socrates, all the rest appears to me to be said rightly, but what you have said respecting the soul will occasion much incredulity in many from the apprehension that, when it is separated from the body, it no longer exists any where, but is destroyed and perishes on the very day in which a man dies, and that immediately it is separated and goes out from the body, it is dispersed and vanishes like breath or smoke, and is no longer any where; since, if it remained any where united in itself, and freed from those evils which you have just now enumerated, there would be an abundant and good hope, Socrates, that what you say is true. But this probably needs no little persuasion and proof, that the soul of a man who dies, exists, and possesses activity and intelligence."

Socrates:: "You say truly, Cebes, but what shall we do? Are you willing that we should converse on these points, whether such is probably the case or not?"

Cebes:: "Indeed, I should gladly hear your opinion on these matters."

Socrates:: “I do not think, that any one who should now hear us, even though he were a comic poet, would say that I am talking idly, or discoursing on subjects that do not concern me. If you please, then, we will examine into it. Let us consider it in this point of view, whether the souls of men who are dead exist in Hades, or not. This is an ancient saying, which we now call to mind, that souls departing hence exist there, and return hither again, and are produced from the dead. And if this is so, that the living are produced again from the dead, can there be any other consequence than that our souls are there? for surely they could not be produced again if they did not exist; and this would be a sufficient proof that these things are so, if it should in reality be evident that the living are produced from no other source than the dead. But, if this is not the case, there will be need of other arguments.”

Cebes:: “Certainly.”

Socrates:: “You must not, then, consider this only with respect to men, if you wish to ascertain it with greater certainty, but also with respect to all animals and plants, and, in a word, with respect to every thing that is subject to generation, let us see whether they are not all so produced, no otherwise than contraries from contraries, wherever they have any such quality, as for instance the honorable is contrary to the base, and the just to the unjust, and so with ten thousand other things. Let us consider this, then, whether it is necessary that all things which have a contrary should be produced from nothing else than their contrary. As for instance, when any thing becomes greater is it not necessary that, from being previously smaller, it afterwards became greater?”

Cebes:: “Yes.”

Socrates:: “And if it becomes smaller, will it not, from being previously greater, afterwards become smaller?”

Cebes:: “It is so.”

Socrates:: “And from stronger, weaker? and from slower, swifter?”

Cebes:: “Certainly.”

Socrates:: “What then? if any thing becomes worse, must it not become so from better? and if more just, from more unjust?”

Cebes:: “How should it not?”

Socrates:: “We have then, sufficiently determined this, that all things are thus produced, contraries from contraries?”

Cebes:: “Certainly.”

Socrates:: “What next? is there also something of this kind in them, for instance, between all two contraries a mutual twofold production, from one to the other, and from that other back again? for between a greater thing and a smaller there is increase and decrease, and do we not accordingly call the one to increase, the other to decrease?”

Cebes:: “Yes.”

Socrates:: “And must not to be separated and commingled, to grow cold and to grow warm, and every thing in the same manner, even though sometimes we have not names to designate them, yet in fact be every where thus circumstanced of necessity, as to be produced from each other, and be subject to a reciprocal generation?”

Cebes:: “Certainly.”

Socrates:: “What then? Has life any contrary, as waking has its contrary, sleeping?”

Cebes:: “Certainly.”

Socrates:: “What?”

Cebes:: “Death.”

Socrates:: “Are not these, then, produced from each other, since they are contraries, and are not the modes by which they are produced twofold, intervening between these two?”

Cebes:: “How should it be otherwise?”

Socrates:: “I then, will describe to you one pair of the contraries which I have just now mentioned, both what it is and its mode of production; and do you describe to me the other. I say that one is to sleep, the other to awake; and from sleeping awaking is produced, and from awaking sleeping, and that the modes of their production are the one to fall asleep, the other to be roused. Have I sufficiently explained this to you or not?”

Cebes:: “Certainly.”

Socrates:: “Do you then, describe to me, in the same manner, with respect to life and death? Do you not say that life is contrary to death?”

Cebes:: “I do.”

Socrates:: “And that they are produced from each other?”

Cebes:: “Yes.”

Socrates:: “What then, is produced from life?”

Cebes:: “Death.”

Socrates:: “What, then, is produced from death?

Cebes:: “I must needs confess, that life is.”

Socrates:: “From the dead, then, O Cebes, living things and living men, are produced.”

Cebes:: “It appears so.”

Socrates:: “Our souls, therefore, exist in Hades.”

Cebes:: “So it seems.”

Socrates:: “With respect, then, to their mode of production, is not one of them very clear? for to die surely is clear? is it not?”

Cebes:: “Certainly.”

Socrates:: “What then shall we do? Shall we not find a corresponding contrary mode of production, or will nature be defective in this? Or must we discover a contrary mode of production to dying?”

Cebes:: “By all means.”

Socrates:: “What is this?”

Cebes:: “To revive.”

Socrates:: “Therefore, if there is such a thing as to revive, will not this reviving be a mode of production from the dead to the living?”

Cebes:: “Certainly.”

Socrates:: “Thus, then, we have agreed, that the living are produced from the dead, no less than the dead from the living: but, this being the case, there appears to me sufficient proof that the souls of the dead must necessarily exist somewhere, from whence they are again produced.”

Cebes:: “It appears to me, Socrates, that this must necessarily follow from what has been admitted.”

Socrates:: “See now, O Cebes, that we have not agreed on these things improperly, as it appears to me: for if one class of things were not constantly given back in the place of another, revolving as it were in a circle, but generation were direct from one thing alone into its opposite, and did not turn round again to the other, or retrace its course, do you know that all things would at length have the same form, be in the same state, and cease to be produced?”

Cebes:: “How say you?”

Socrates:: “It is by no means difficult, to understand what I mean; if, for instance, there should be such a thing as falling asleep, but no reciprocal waking again produced from a state of sleep, you know that at length all things would show the fable of Endymion to be a jest, and it would be thought nothing at all of, because every thing else would be in the same state as him, namely, asleep. And if all things were mingled together, but never separated, that doctrine of Anaxagoras would soon be verified, ‘all things would be together.’ Likewise, my dear Cebes, if all things that partake of life should die, and after they are dead should remain in this state of death, and not revive again, would it not necessarily follow that at length all things should be dead, and nothing alive? for if living beings are produced from other things, and living beings die, what could prevent their being all absorbed in death?”

Cebes:: “Nothing whatever, I think, Socrates, but you appear to me to speak the exact truth.”

Socrates:: “For, Cebes, as it seems to me, such undoubtedly is the case, and we have not admitted these things under a delusion, but it is in reality true that there is a reviving again, that the living are produced from the dead, that the souls of the dead exist, and that the condition of the good is better, and of the evil, worse.”

Cebes:: “And indeed, according to that doctrine, Socrates, which you are frequently in the habit of advancing, if it is true, that our learning is nothing else than reminiscence, according to this it is surely necessary that we must at some former time have learned what we now remember. But this is impossible, unless our soul existed somewhere before it came into this human form; so that from hence also the soul appears to be something immortal.”

Simmias:: “But, Cebes, what proofs are there of these things? remind me of them, for I do not very well remember them at present.”

Cebes:: “It is proved, by one argument, and that a most beautiful one, that men, when questioned, if one questions them properly, of themselves describe all things as they are: however, if they had not innate knowledge and right reason, they would never be able to do this. Moreover, if one leads them to diagrams, or any thing else of the kind, it is then most clearly apparent that this is the case.”

Socrates:: “But if you are not persuaded in this way, Simmias, see if you will agree with us on considering the matter thus. For do you doubt how that which is called learning is reminiscence?”

Simmias:: “I do not doubt, but I require this very thing of which we are speaking, to be reminded; and indeed, from what Cebes has begun to say, I almost now remember, and am persuaded; nevertheless, however, I should like to hear now how you would attempt to prove it.”

Socrates:: “I do it thus, we admit surely that if any one be reminded of any thing, he must needs have known that thing at some time or other before.”

Simmias:: “Certainly.”

Socrates:: “Do we then admit this also, that when knowledge comes in a certain manner it is reminiscence? But the manner I mean is this; if any one, upon seeing or hearing, or perceiving through the medium of any other sense, some particular thing, should not only know that, but also form an idea of something else, of which the knowledge is not the same, but different, should we not justly say, that he remembered that of which he received the idea?”

Simmias:: “How mean you?”

Socrates:: “For instance; the knowledge of a man is different from that of a lyre.”

Simmias:: “How not?”

Socrates:: “Do you not know, then, that lovers when they see a lyre, or a garment, or any thing else which their favorite is accustomed to use, are thus affected; they both recognize the lyre, and receive in their minds the form of the person to whom the lyre belonged? This is reminiscence: just as any one, seeing Simmias, is often reminded of Cebes, and so in an infinite number of similar instances.”

Simmias:: “An infinite number indeed, by Jupiter.”

Socrates:: “Is not then, something of this sort a kind of reminiscence? especially when one is thus affected with respect to things which, from lapse of time, and not thinking of them, one has now forgotten?”

Simmias:: “Certainly.”

Socrates:: “But what? Does it happen, that when one sees a painted horse or a painted lyre, one is reminded of a man, and that when one sees a picture of Simmias one is reminded of Cebes!”

Simmias:: “Certainly.”

Socrates:: “And does it not also happen, that on seeing a picture of Simmias one is reminded of Simmias himself?”

Simmias:: “It does indeed.”

Socrates:: “Does it not happen, then, according to all this, that reminiscence arises partly from things like, and partly from things unlike?”

Simmias:: “It does.”

Socrates:: “But when one is reminded by things like, is it not necessary that one should be thus further affected, so as to perceive whether, as regards likeness, this falls short or not of the thing of which one has been reminded?”

Simmias:: “It is necessary.”

Socrates:: “Consider, then, if the case is thus. Do we allow that there is such a thing as equality? I do not mean of one log with another, nor one stone with another, nor any thing else of this kind, but something altogether different from all these, abstract equality; do we allow that there is any such thing or not?”

Simmias:: “By Jupiter, we most assuredly do allow it.”

Socrates:: “And do we know what it is itself?”

Simmias:: “Certainly.”

Socrates:: “Whence have we derived the knowledge of it? Is it not from the things we have just now mentioned, and that from seeing logs, or stones, or other things of the kind, equal, we have from these formed an idea of that which is different from these? for does it not appear to you to be different? Consider the matter thus. Do not stones that are equal, and logs sometimes that are the same, appear at one time equal, and at another not?”

Simmias:: “Certainly.”

Socrates:: “But what? does abstract equality ever appear to you unequal? or equality inequality?”

Simmias:: “Never, Socrates, at any time.”

Socrates:: “These equal things, then, and abstract equality, are not the same?”

Simmias:: “By no means, Socrates, as it appears.”

Socrates:: “However, from these equal things, which are different from that abstract equality, have you not formed your idea and derived your knowledge of it?”

Simmias:: “You speak most truly.”

Socrates:: “Is it not, therefore, from its being like or unlike them?”

Simmias:: “Certainly.”

Socrates:: “But it makes no difference. When, therefore, on seeing one thing, you form, from the sight of it, the notion of another, whether like or unlike, this, must necessarily be reminiscence.”

Simmias:: “Certainly.”

Socrates:: “What, then, as to this? Are we affected in any such way with regard to logs and the equal things we have just now spoken of? and do they appear to us to be equal in the same manner as abstract equality itself is, or do they fall short in some degree, or not at all, of being such as equality itself is?”

Simmias:: “They fall far short.”

Socrates:: “Do we admit, then, that when one, on beholding some particular thing, perceives that it aims, as that which I now see, at being like something else that exists, but falls short of it, and cannot become such as that is, but is inferior to it, do we admit that he who perceives this must necessarily have had a previous knowledge of that which he says it resembles, though imperfectly?”

Simmias:: “It is necessary.”

Socrates:: “What then? are we affected in some such way, or not, with respect to things equal and abstract equality itself?”

Simmias:: “Assuredly.”

Socrates:: “It is necessary, therefore, that we must have known abstract equality before the time when on first seeing equal things, we perceived that they all aimed at resembling equality, but failed in doing so.”

Simmias:: “Such is the case.”

Socrates:: “Moreover, we admit this too, that we perceived this, and could not possibly perceive it by any other means than the sight, or touch, or some other of the senses: for I say the same of them all.”

Simmias:: “For they are the same, Socrates, so far as our argument is concerned.”

Socrates:: “However, we must perceive by means of the senses, that all things which come under the senses aim at that abstract equality, and yet fall short of it: or how shall we say it is?”

Simmias:: “Even so.”

Socrates:: “Before, then, we began to see, and hear, and use our other senses, we must have had a knowledge of equality itself, what it is, if we were to refer to it those equal things that come under the senses, and observe that all such things aim at resembling that, but fall far short of it.”

Simmias:: “This necessarily follows, Socrates, from what has been already said.”

Socrates:: “But did we not, as soon as we were born, see and hear, and possess our other senses?”

Simmias:: “Certainly.”

Socrates:: “But, we have said, before we possessed these, we must have had a knowledge of abstract equality?”

Simmias:: “Yes.”

Socrates:: ‘We must have had it, then, as it seems, before we were born.”

Simmias:: “It seems so.”

Socrates:: “If, therefore, having this before we were born, we were born possessing it, we knew both before we were born, and as soon as we were born, not only the equal and the greater and smaller, but all things of the kind; for our present discussion is not more respecting equality than the beautiful itself, the good, the just, and the holy, and in one word, respecting every thing which we mark with the seal of existence, both in the questions we ask, and the answers we give. So that we must necessarily have had a knowledge of all these before we were born."

Simmias:: "Such is the case."

Socrates:: "And if, having once had it, we did not constantly forget it, we should always be born with this knowledge, and should always retain it through life: for to know is this, when one has got a knowledge of any thing, to retain and not lose it; for do we not call this oblivion, Simmias, the loss of knowledge?"

Simmias:: "Assuredly, Socrates."

Socrates:: "But if, having had it before we were born, we lose it at our birth, and afterwards, through exercising the senses about these things, we recover the knowledge which we once before possessed, would not that which we call learning be a recovery of our own knowledge? and in saying that this is to remember should we not say rightly?"

Simmias:: "Certainly."

Socrates:: "For this appeared to be possible, for one having perceived any thing, either by seeing or hearing, or employing any other sense, to form an idea of something different from this, which he had forgotten, and with which this was connected by being unlike or like. So that, as I said, one of these two things must follow, either we are all born with this knowledge, and we retain it through life, or those whom we say learn afterwards do nothing else but remember, and this learning will be reminiscence,"

Simmias:: "Such certainly is the case, Socrates."

Socrates:: "Which, then, do you choose, Simmias: that we are born with knowledge, or that we afterwards remember what we had formerly known?"

Simmias:: “At present, Socrates, I am unable to choose?”

Socrates:: “But what? are you able to choose in this case, and what do you think about it? Can a man, who possesses knowledge, give a reason for the things that he knows, or not?”

Simmias:: “He needs must be able to do so, Socrates.”

Socrates:: “And do all men appear to you, to be able to give a reason for the things of which we have just now been speaking?”

Simmias:: “I wish they could, but I am much more afraid, that at this time to-morrow, there will no longer be any one able to do this properly.”

Socrates:: “Do not all men then, Simmias, seem to you to know these things?”

Simmias:: “By no means.”

Socrates:: “Do they remember, then, what they once learned?”

Simmias:: “Necessarily so.”

Socrates:: “When did our souls receive this knowledge? not surely, since we were born into the world.”

Simmias:: “Assuredly not.”

Socrates:: “Before then.”

Simmias:: “Yes.”

Socrates:: “Our souls therefore, Simmias, existed before they were in a human form, separate from bodies, and possessed intelligence.”

Simmias:: “Unless, Socrates, we receive this knowledge at our birth, for this period yet remains.”

Socrates:: “Be it so, my friend. But at what other time do we lose it? for we are not born with it, as we have just now admitted. Do we lose it then at the very time in which we receive it? Or can you mention any other time?”

Simmias:: “By no means, Socrates: I was not aware that I was saying nothing to the purpose.”

Socrates:: “Does the case then stand thus with us, Simmias. If those things which we are continually talking about really exist, the beautiful, the good, and every such essence, and to this we refer all things that come under the senses, as finding it to have a prior existence, and to be our own, and if we compare these things to it, it necessarily follows, that as these exist, so likewise our soul exists even before we are born; but if these do not exist this discussion will have been undertaken in vain. Is it not so? and is there not an equal necessity, both that these things should exist, and our souls also before we are born, and if not the former neither the latter?”

Simmias:: “Most assuredly, Socrates, there appears to me to be the same necessity, and the argument admirably tends to prove that our souls exist before we are born; just as that essence does which you have now mentioned. For I hold nothing so clear to me as this, that all such things most certainly exist, as the beautiful, the good, and all the rest that you just now spoke of; and as far as I am concerned the case is sufficiently demonstrated.”

Socrates:: “But how does it appear to Cebes, for it is necessary to persuade Cebes too.”

Simmias:: “He is sufficiently persuaded, I think. Although he is the most pertinacious of men in distrusting arguments. Yet I think he is sufficiently persuaded of this, that our soul existed before we were born. But whether when we are dead, it will still exist, does not appear to me to have been demonstrated, Socrates, but that popular doubt, which Cebes just now mentioned, still stands in our way, whether, when a man dies, the soul is not dispersed, and this is the end of its existence. For what hinders its being born, and formed from some other source, and existing before it came into a human body, and yet when it has come, and is separated from this body, its then also dying itself, and being destroyed?"

Cebes:: "You say well, Simmias; for it appears that only one half of what is necessary has been demonstrated, namely, that our soul existed before we were born: but it is necessary to demonstrate further, that when we are dead, it will exist no less than before we were born, if the demonstration is to be made complete."

Socrates:: "This has been even now demonstrated, Simmias and Cebes, if you will only connect this last argument with that which we before assented to, that every thing living is produced from that which is dead. For if the soul exists before, and it is necessary for it when it enters into life, and is born, to be produced from nothing else than death, and from being dead, how is it not necessary for it also to exist after death, since it must needs be produced again? What you require then, has been already demonstrated. However, both you and Simmias appear to me as if you wished to sift this argument more thoroughly, and to be afraid like children, lest on the soul's departure from the body the winds should blow it away and disperse it, especially if one should happen to die not in a calm, but in a violent storm."

Phaedo:: Upon this Cebes smiling said;

Cebes:: "Endeavor to teach us better, Socrates, as if we were afraid, or rather not as if we were afraid, though perhaps there is some boy within us, who has such a dread. Let us then endeavor to persuade him not to be afraid of death, as of hobgoblins."

Socrates:: "But you must charm him every day, until you have quieted his fears."

Cebes:: “But whence, Socrates, can we procure a skilful charmer for such a case, now that you are about to leave us?”

Socrates:: “Greece is wide, Cebes. And in it surely there are skilful men, there are also many barbarous nations, all of which you should search through, seeking such a charmer, sparing neither money nor toil, as there is nothing on which you can more seasonably spend your money. You should also seek for him among yourselves; for perhaps you could not easily find any more competent than yourselves to do this.”

Cebes:: “This shall be done, but, if it is agreeable to you, let us return to the point from whence we digressed.”

Socrates:: “It will be agreeable to me, for how should it not?”

Cebes:: “You say well.”

Socrates:: “We ought then, to ask ourselves some such question as this, to what kind of thing it appertains to be thus affected, namely to be dispersed, and for what we ought to fear, lest it should be so affected, and for what not. And after this, we should consider which of the two the soul is; and in the result should either be confident or fearful for our soul.”

Cebes:: "‘You speak truly.”

Socrates:: “Does it not, then, appertain to that which is formed by composition, and is naturally compounded, to be thus affected, to be dissolved in the same manner as that in which it was compounded; and if there is any thing not compounded, does it not appertain to this alone, if to any thing, not to be thus affected?”

Cebes:: “It appears to me to be so.”

Socrates:: “Is it not most probable then that things which are always the same, and in the same state, are uncompounded, but that things which are constantly changing, and are never in the same state, are compounded?"

Cebes:: "To me it appears so."

Socrates:: "Let us return then, to the subjects on which we before discoursed. Whether is essence itself, of which we gave this account that it exists, both in our questions and answers, always the same, or does it sometimes change? Does equality itself, the beautiful itself, and each several thing which is, ever undergo any change, however small? Or does each of them which exists, being an unmixed essence by itself, continue always the same, and in the same state, and never undergo any variation at all under any circumstances?"

Cebes:: "They must of necessity continue the same and in the same state, Socrates."

Socrates:: "But what shall we say of the many beautiful things, such as men, horses, garments, or other things of the kind, whether equal, or beautiful, or of all things synonymous with them? Do they continue the same, or, quite contrary to the former, are they never at any time, so to say, the same, either with respect to themselves or one another?"

Cebes:: "These on the other hand, never continue the same."

Socrates:: "These then you can touch, or see, or perceive by the other senses; but those that continue the same, you cannot apprehend in any other way than by the exercise of thought; for such things are invisible, and are not seen?"

Cebes:: "You say what is strictly true."

Socrates:: "We may assume then, if you please, that there are two species of things, the one visible, the other invisible?"

Cebes:: “We may.”

Socrates:: “And the invisible always continuing the same, but the visible never the same?”

Cebes:: “This too, we may assume.”

Socrates:: “Come then, is there any thing else belonging to us, than on the one hand body, and on the other soul?”

Cebes:: “Nothing else.”

Socrates:: “To which species, then, shall we say the body is more like, and more nearly allied?”

Cebes:: “It is clear to every one, that it is to the visible.”

Socrates:: “But what of the soul? Is it visible or invisible?”

Cebes:: “It is not visible to men, Socrates.”

Socrates:: “But we speak of things which are visible or not so to the nature of men: or to some other nature, think you?”

Cebes:: “To that of men.”

Socrates:: “What then shall we say of the soul, that it is visible, or not visible?”

Cebes:: “Not visible.”

Socrates:: “Is it then invisible?”

Cebes:: “Yes.”

Socrates:: “The soul then is more like the invisible than the body, and the body, the visible?”

Cebes:: “It must needs be so, Socrates.”

Socrates:: “And did we not some time since say this too, that the soul, when it employs the body to examine any thing, either by means of the sight or hearing, or any other sense, for to examine any thing by means of the body is to do so by the senses, is then drawn by the body to things that never continue the same, and wanders and is confused, and reels as if intoxicated through coming into contact with things of this kind?"

Cebes:: "Certainly."

Socrates:: "But when it examines any thing by itself, does it approach that which is pure, eternal, immortal, and unchangeable, and, as being allied to it, continue constantly with it, so long as it subsists by itself, and has the power, and does it cease from its wandering, and constantly continue the same with respect to those things, through coming into contact with things of this kind? and is this affection of the soul called wisdom?"

Cebes:: "You speak, in every respect, well and truly, Socrates."

Socrates:: "To which species of the two, then, both from what was before, and now said, does the soul appear to you to be more like and more nearly allied?"

Cebes:: "Every one, I think, would allow, Socrates, even the dullest person, from this method of reasoning that the soul is in every respect more like that which continues constantly the same, than that which does not so."

Socrates:: "But what as to the body?"

Cebes:: "It is more like the other."

Socrates:: "Consider it also thus, that, when soul and body are together, nature enjoins the latter to be subservient and obey, the former to rule and exercise dominion. And in this way, which of the two appears to you to be like the divine, and which the mortal? Does it not appear to you to be natural that the divine should rule and command, but the mortal obey and be subservient?"

Cebes:: "To me it does so."

Socrates:: "Which then, does the soul resemble?"

Cebes:: “It is clear, Socrates, that the soul resembles the divine, but the body, the mortal.”

Socrates:: “Consider then, Cebes, whether, from all that has been said, these conclusions follow, that the soul is most like that which is divine, immortal, intelligent, uniform, indissoluble, and which always continues in the same state, but that the body on the other hand is most like that which is human, mortal, unintelligent, multiform, dissoluble, and which never continues in the same state. Can we say any thing against this, my dear Cebes, to show that it is not so?”

Cebes:: “We cannot.”

Socrates:: “What then? Since these things are so, does it not appertain to the body to be quickly dissolved, but to the soul, on the contrary, to be altogether indissoluble, or nearly so?”

Cebes:: “How not?”

Socrates:: “You perceive, however, that when a man dies, the visible part of him, the body, which is exposed to sight, and which we call a corpse, to which it appertains to be dissolved, to fall asunder and be dispersed, does not immediately undergo any of these affections, but remains for a considerable time, and especially so if any one should die with his body in full vigor, and at a corresponding age; for when the body has collapsed and been embalmed, as those that are embalmed in Egypt, it remains almost entire for an incredible length of time; and some parts of the body, even though it does decay, such as the bones and nerves, and every thing of that kind, are nevertheless, as one may say, immortal. Is it not so?”

Cebes:: “Yes.”

Socrates:: “Can the soul, then, which is invisible, and which goes to another place like itself, excellent, pure, and invisible, and therefore truly called the invisible world, to the presence of a good and wise God, whither if God will, my soul also must shortly go, can this soul of ours, I ask, being such and of such a nature, when separated from the body be immediately dispersed and destroyed, as most men assert? Far from it, my dear Cebes and Simmias. But the case is much rather thus; if it is separated in a pure state, taking nothing of the body with it, as not having willingly communicated with it in the present life, but having shunned it and gathered itself within itself, as constantly studying this; but this is nothing else than to pursue philosophy aright, and in reality to study how to die easily; would not this be to study how to die?"

Cebes:: "Most assuredly."

Socrates:: "Does not the soul, then, when in this state, depart to that which resembles itself, the invisible, the divine, immortal, and wise? and on its arrival there, is it not its lot to be happy, free from error, ignorance, fears, wild passions, and all the other evils to which human nature is subject, and, as is said of the initiated, does it not in truth pass the rest of its time with the gods? Must we affirm that it is so, Cebes, or otherwise?"

Cebes:: "So, by Jupiter."

Socrates:: "But, I think, if it departs from the body polluted and impure, as having constantly held communion with the body, and having served and loved it, and been bewitched by it, through desires and pleasures, so as to think that there is nothing real except what is corporeal, which one can touch and see, and drink and eat, and employ for sensual purposes; but what is dark and invisible to the eyes, which is intellectual and apprehended by philosophy, having been accustomed to hate, fear, and shun this, do you think that a soul thus affected can depart from the body by itself, and uncontaminated?”

Cebes:: “By no means whatever.”

Socrates:: “But I think it will be impressed with that which is corporeal, which the intercourse and communion of the body, through constant association and great attention, have made natural to it.”

Cebes:: “Certainly.”

Socrates:: “We must think, my dear Cebes, that this is ponderous and heavy, earthly and visible, by possessing which such a soul is weighed down, and drawn again into the visible world through dread of the invisible and of Hades, wandering, as it is said, amongst monuments and tombs, about which, indeed, certain shadowy phantoms of souls have been seen, being such images as those souls produced which have not departed pure from the body, but which partake of the visible, on which account also they are visible.”

Cebes:: “That is probable, Socrates.”

Socrates:: “Probable indeed, Cebes; and not that these are the souls of the good, but of the wicked, which are compelled to wander about such places, paying the penalty of their former conduct, which was evil; and they wander about so long, until, through the desire of the corporeal nature that accompanies them, they are again united to a body; and they are united, as is probable, to animals having the same habits as those they have given themselves up to during life.”

Cebes:: “But what do you say these are, Socrates?”

Socrates:: “For instance, those who have given themselves up to gluttony, wantonness, and drinking, and have put no restraint on themselves, will probably be clothed in the form of asses and brutes of that kind. Do you not think so?"

Cebes:: "You say what is very probable."

Socrates:: "And that such as have set great value on injustice, tyranny, and rapine, will be clothed in the species of wolves, hawks, and kites? Where else can we say such souls go?"

Cebes:: "Without doubt, into such as these."

Socrates:: "Is it not then evident, as to the rest, whither each will go, according to the resemblances of their several pursuits?"

Cebes:: "It is evident, how not?"

Socrates:: "Of these, then, Are not they the most happy, and do they not go to the best place, who have practiced that social and civilized virtue, which they call temperance and justice, and which is produced from habit and exercise, without philosophy and reflection?"

Cebes:: "In what respect are these the most happy?"

Socrates:: "Because it is probable that these should again migrate into a corresponding civilized and peaceable kind of animals, such as bees perhaps, or wasps, or ants, or even into the same human species again, and from these become moderate men."

Cebes:: "It is probable."

Socrates:: "But it is not lawful for any one, who has not studied philosophy and departed this life perfectly pure, to pass into the rank of gods, but only for the true lover of wisdom. And on this account, my friends Simmias and Cebes, those who philosophize rightly abstain from all bodily desires, and persevere in doing so, and do not give themselves up to them, not fearing the loss of property and poverty, as the generality of men and the lovers of wealth;

nor again dreading disgrace and ignominy like those who are lovers of power and honor, do they then abstain from them."

Cebes:: "For it would not become them to do so, Socrates."

Socrates:: "It would not, by Jupiter. Wherefore, Cebes, they who care at all for their soul, and do not spend their lives in the culture of their bodies, despising all these, proceed not in the same way with them, as being ignorant whither they are going, but being convinced that they ought not to act contrary to philosophy, but in accordance with the freedom and purification she affords, they give themselves up to her direction, following her wherever she leads."

Cebes:: "How, Socrates?"

Socrates:: "I will tell you. The lovers of wisdom know, that philosophy receiving their soul plainly bound and glued to the body, and compelled to view things through this, as through a prison, and not directly by herself, and sunk in utter ignorance, and perceiving too the strength of the prison, that it arises from desire, so that he that is bound as much as possible assists in binding himself. I say, then, the lovers of wisdom know that philosophy, receiving their soul in this state, gently exhorts it, and endeavors to free it, by showing that the view of things by means of the eyes is full of deception, "as also is that through the ears and the other senses, persuading an abandonment of these so far as it is not absolutely necessary to use them, and advising the soul to be collected and concentrated within itself, and to believe nothing else but herself, with respect to what she herself understands of things that have a real subsistence, and to consider nothing true which she views through the medium of others, and which differ under different aspects; for that a thing of this kind is sensible and visible, but that what she herself perceives is intelligible and invisible. The soul of the true philosopher, therefore, thinking that she ought not to oppose this deliverance, accordingly abstains as much as possible from pleasures and desires, griefs and fears, considering that when any one is exceedingly delighted or alarmed, grieved or influenced by desire, he does not merely suffer such evil from these things as one might suppose, such as either being sick or wasting his property, through indulging his desires; but that which is the greatest evil, and the worst of all, this he suffers and is not conscious of it."

Cebes:: "But what is this evil, Socrates?"

Socrates:: "That the soul of every man is compelled to be either vehemently delighted or grieved about some particular thing, and at the same time to consider that the thing about which it is thus strongly affected is most real and most true, though it is not so. But these are chiefly visible objects; are they not?"

Cebes:: "Certainly."

Socrates:: "In this state of affection, then, is not the soul especially shackled by the body?"

Cebes:: "How so?"

Socrates:: "Because each pleasure and pain, having a nail as it were, nails the soul to the body, and fastens it to it, and causes it to become corporeal, deeming those things to be true whatever the body asserts to be so. For, in consequence of its forming the same opinions with the body, and delighting in the same things, it is compelled, I think, to possess similar manners, and to be similarly nourished, so that it can never pass into Hades in a pure state, but must ever depart polluted by the body, and so quickly falls again into another body, and grows up as if it were sown, and consequently is deprived of all association with that which is divine, and pure, and uniform."

Cebes:: "You speak most truly, Socrates."

Socrates:: "For these reasons, therefore, Cebes, those who are truly lovers of wisdom are moderate and resolute, and not for the reasons that most people say. Do you think as they do?"

Cebes:: "Assuredly not."

Socrates:: "No, truly. But the soul of a philosopher would reason thus, and would not think that philosophy ought to set it free, and that when it is freed it should give itself up again to pleasures and pains, to bind it down again, and make her work void, weaving a kind of Penelope's web the reverse way. On the contrary, effecting a calm of the passions, and following the guidance of reason, and being always intent on this, contemplating that which is true and divine, and not subject to opinion, and being nourished by it, it thinks that it ought to live in this manner as long as it does live, and that when it dies it shall go to a kindred essence, and one like itself, and shall be freed from human evils. From such a regimen as this the soul has no occasion to fear, Simmias and Cebes, while it strictly attends to these things, lest being torn to pieces at its departure from the body it should be blown about and dissipated by the winds, and no longer have an existence any where."

Phaedo:: When Socrates had thus spoken, a long silence ensued; and Socrates himself was pondering upon what had been said, as he appeared, and so did most of us: but Cebes and Simmias were conversing a little while with each other. At length Socrates perceiving them, said;

Socrates:: “What think you of what has been said? does it appear to you to have been proved sufficiently? for many doubts and objections still remain if any one will examine them thoroughly. If, then, you are considering some other subject, I have nothing to say; but if you are doubting about this, do not hesitate both yourselves to speak and express your opinion, if it appears to you in any respect that it might have been argued better, and to call me in again to your assistance, if you think you can be at all benefited by my help.”

Simmias:: “Indeed, Socrates, I will tell you the truth: for some time each of us, being in doubt, has been urging and exhorting the other to question you, from a desire to hear our doubts solved, but we were afraid of giving you trouble, lest it should be disagreeable to you in your present circumstances.”

Phaedo:: But he, upon hearing this, gently smiled, and said;

Socrates:: “Bless me, Simmias; with difficulty indeed, could I persuade other men that I do not consider my present condition a calamity, since I am not able to persuade even you; but you are afraid lest I should be more morose now than during the former part of my life. And, as it seems, I appear to you to be inferior to swans with respect to divination, who, when they perceive that they must needs die, though they have been used to sing before, sing then more than ever, rejoicing that they are about to depart to that deity whose servants they are. But men, through their own fear of death, belie the swans too, and say that, they lamenting their death, sing their last song through grief, and they do not consider that no bird sings when it is hungry or cold, or is afflicted with any other pain, not even the nightingale, or swallow, or the hoopoes, which they say sing lamenting through grief. But neither do these birds appear to me to sing through sorrow, nor yet do swans; but in my opinion, belonging to Apollo, they are prophetic, and foreseeing the blessings of Hades, they sing and rejoice on that day more excellently than at any preceding time. But I too consider myself to be a fellow-servant of the swans, and sacred to the same god, and that I have received the power of divination from our common master no less than they, and that I do not depart from this life with less spirits than they. On this account, therefore, it is right that you should both speak and ask whatever you please, as long as the Athenian Eleven permit."

Simmias:: "You say well, and both I will tell you what are my doubts, and he in turn how far he does not assent to what has been said. For it appears to me, Socrates, probably as it does to you with respect to these matters, that to know them clearly in the present life is either impossible, or very difficult: on the other hand, however, not to test what has been said of them in every possible way, so as not to desist until on examining them in every point of view, one has exhausted every effort, is the part of a very weak man. For we ought with respect to these things, either to learn from others how they stand, or to discover them for one's-self, or, if both these are impossible, then, taking the best of human reasonings and that which is the most difficult to be confuted, and embarking on this, as one who risks himself on a raft, so to sail through life, unless one could be carried more safely, and with less risk, on a surer conveyance or some divine reason. I, therefore, shall not now be ashamed to question you, since you bid me do so, nor shall I blame myself hereafter, for not having now told you what I think; for to me, Socrates, when I consider the matter, both with myself and with Cebes, what has been said does not appear to have been sufficiently proved.”

Socrates:: “Perhaps, my friend, you have the truth on your side; but tell me in what respect it was not sufficiently proved.”

Simmias:: “In this, because any one might use the same argument with respect to harmony, and a lyre, and its chords, that harmony is something invisible and incorporeal, very beautiful and divine, in a well-modulated lyre: but the lyre and its chords are bodies, and of corporeal form, compounded and earthly, and akin to that which is mortal. When any one, then, has either broken the lyre, or cut or burst the chords, he might maintain from the same reasoning as yours, that it is necessary the harmony should still exist and not be destroyed; for there could be no possibility that the lyre should subsist any longer when the chords are burst, and that the chords which are of a mortal nature should subsist, but that the harmony, which is of the same nature and akin to that which is divine and immortal, should become extinct, and perish before that which is mortal; but he might say that the harmony must needs subsist somewhere, and that the wood and chords must decay, before it can undergo any change. For I think, Socrates, that you yourself have arrived at this conclusion, that we consider the soul to be pretty much of this kind, namely, that our body being compacted and held together by heat and cold, dryness and moisture, and other such qualities, our soul is the fusion and harmony of these, when they are well and duly combined with each other. If then, the soul is a kind of harmony, it is evident that when our body is unduly relaxed or strained through diseases and other maladies, the soul must of necessity immediately perish, although it is most divine, just as other harmonies which subsist in sounds or in the various works of artisans, but that the remains of the body of each person last for a long time, till they are either burnt or decayed. Consider then what we shall say to this reasoning, if any one should maintain that the soul being a fusion of the several qualities in the body, perishes first in that which is called death.”

Phaedo:: Socrates, therefore, looking steadfastly at us, as he was generally accustomed to do, and smiling, said;

Simmias:: “Simmias indeed speaks justly. If then, any one of you is more prompt than I am, why does he not answer? for he seems to have handled my argument not badly. It appears to me, however, that before we make our reply we should first hear from Cebes, what he too objects to our argument, in order that, some time intervening, we may consider what we shall say, and then when we have heard them, we may give up to them, if they appear to speak agreeably to truth, or if not, we may then uphold our own argument. Come then, Cebes, say what it is that disturbs you, so as to cause your unbelief.”

Cebes:: “I will tell you; the argument seems to me to rest where it was, and to be liable to the same objection that we mentioned before. For, that our soul existed even before it came into this present form, I do not deny has been very elegantly, and, if it is not too much to say so, very fully demonstrated: but that it still exists any where when we are dead, does not appear to me to have been clearly proved; nor do I give in to the objection of Simmias, that the soul is not stronger and more durable than the body, for it appears to me to excel very far all things of this kind. ‘Why then,’ reason might say, ‘do you still disbelieve? for, since you see that when a man dies his weaker part still exists, does it not appear to you to be necessary that the more durable part should still be preserved during this period?’ Consider then, whether I say any thing to the purpose in reply to this. For I too, as well as Simmias, as it seems, stand in need of an illustration: for the argument appears to me to have been put thus, as if any one should advance this argument about an aged weaver who had died, that the man has not yet perished, but perhaps still exists somewhere; and as a proof, should exhibit the garment which he wore and had woven himself, that it is entire and has not perished; and if any one should disbelieve him he would ask, whether of the two is the more durable, the species of a man or of a garment, that is constantly in use and being worn; then should any one answer, that the species of man is much more durable, he would think it demonstrated, that beyond all question the man is preserved, since that which is less durable has not perished. But I do not think, Simmias, that this is the case, and do you consider what I say, for every one must think that he who argues thus argues foolishly. For this weaver, having worn and woven many such garments, perished after almost all of them, but before the last I suppose, and yet it does not on this account follow any the more that a man is inferior to or weaker than a garment. And I think the soul might admit this same illustration with respect to the body, and he who should say the same things concerning them would appear to me to speak correctly, that the soul is more durable, but the body weaker and less durable; for he would say that each soul wears out many bodies, especially if it lives many years; for, if the body wastes and is dissolved while the man still lives, but the soul continually weaves anew what is worn out, it must necessarily follow that when the soul is dissolved it must then have on its last garment, and perish before this alone; but when the soul has perished the body would show the weakness of its nature, and quickly rot and vanish. So that it is not by any means right to place implicit reliance on this argument, and to believe that when we die our soul still exists somewhere. For, if any one should concede to him who admits even more than you do, and should grant to him that not only did our soul exist before we were born, but that even when we die nothing hinders the souls of some of us from still existing, and continuing to exist hereafter, and from being often born, and dying again; for so strong is it by nature, that it can hold out against repeated births; if he granted this, he would not yet concede that it does not exhaust itself in its many births, and at length perish altogether in some one of the deaths. But he would say that no one knows this death and dissolution of the body, which brings destruction to the soul; for it is impossible for any one of us to perceive it. If however, this be the case, it follows that every one who is confident at the approach of death is foolishly confident, unless he is able to prove that the soul is absolutely immortal and imperishable: otherwise it necessarily follows that he who is about to die must be alarmed for his soul, lest in its present disunion from the body it should entirely perish."

Phaedo:: Upon this, all of us who had heard them speaking were disagreeably affected, as we afterwards mentioned to each other; because, after we had been fully persuaded by the former arguments, they seemed to disturb us anew, and to cast us into a distrust, not only of the arguments already adduced, but of such as might afterwards be urged, for fear lest we should not be fit judges of any thing, or lest the things themselves should be incredible.

Echecrates:: By the gods, Phædo, I can readily excuse you: for, while I am now hearing you, it occurs to me to ask myself some such question as this, What arguments can we any longer believe? since the argument which Socrates advanced, and which was exceedingly credible, has now fallen into discredit. For this argument, that our soul is a kind of harmony, produces a wonderful impression on me, both now and always, and in being mentioned, it has reminded me, as it were, that I too was formerly of the same opinion: so that I stand in need again, as if from the very beginning, of some other argument which may persuade me that the soul of one who dies does not die with the body. Tell me therefore, by Jupiter, how Socrates followed up the argument; and whether he too, as you confess was the case with yourselves, seemed disconcerted at all, or not, but calmly maintained his position; and maintained it sufficiently, or defectively. Relate every thing to me as accurately as you can.

Phaedo:: Indeed, Echecrates, though I have often admired Socrates, I was never more delighted than at being with him on that occasion. That he should be able to say something is perhaps not at all surprising; but I especially admired this in him, first of all that he listened to the argument of the young men so sweetly, affably, and approvingly; in the next place, that he so quickly perceived how we were affected by their arguments; and lastly, that he cured us so well and recalled us, when we were put to flight as it were and vanquished, and encouraged us to accompany him, and consider the argument with him.

Echecrates:: How was that?

Phaedo:: I will tell you: I happened to be sitting at his right hand, near the bed, upon a low seat, but he himself sat much higher than I. Stroking my head, then, and laying hold of the hair that hung on my neck, for he used, often, to play with my hairs;

Socrates:: “To-morrow, perhaps, Phædo, you will cut off these beautiful locks?”

Phaedo:: “It seems likely, Socrates.”

Socrates:: “Not if you are persuaded by me.”

Phaedo:: “Why so?”

Socrates:: “To-day, both I ought to cut off mine and you yours, if our argument must die, and we are unable to revive it. And I, if I were you, and the arguments were to escape me, would take an oath, as the Argives do, not to suffer my hair to grow until I had renewed the contest, and vanquished the arguments of Simmias and Cebes.”

Phaedo:: “But, even Hercules himself is said not to have been a match for two.”

Socrates:: “Call upon me, then, as your Iolaus, while it is yet day.”

Phaedo:: “I do call on you, then, not as Hercules upon Iolaus, but as Iolaus upon Hercules.”

Socrates:: “It will make no difference. But first of all we must beware lest we meet with some mischance.”

Phaedo:: “What?”

Socrates:: “That we do not become, haters of reasoning as some become haters of men; for no greater evil can happen to any one than to hate reasoning. But hatred of reasoning and hatred of mankind both spring from the same source. For hatred of mankind is produced in us from having placed too great reliance on some one without sufficient knowledge of him, and from having considered him to be a man altogether true, sincere, and faithful, and then after a little while finding him depraved and unfaithful, and after him another. And when a man has often experienced this, and especially from those whom he considered his most intimate and best friends, at length, having frequently stumbled, he hates all men, and thinks that there is no soundness at all in any of them. Have you not perceived that this happens so?”

Phaedo:: “Certainly.”

Socrates:: “Is it not a shame? And is it not evident that such a one attempts to deal with men, without sufficient knowledge of human affairs? For if he had dealt with them with competent knowledge, as the case really is, so he would have considered that the good and the bad are each very few in number, and that those between both are most numerous.”

Phaedo:: “How say you?”

Socrates:: “In the same manner, as with things very little and very large. Do you think that any thing is more rare than to find a very large or a very little man, or dog, or any thing else? and again swift or slow, beautiful or ugly, white or black? Do you not perceive that of all such things the extremes are rare and few, but that the intermediate are abundant and numerous?”

Phaedo:: “Certainly.”

Socrates:: “Do you not think, then, that if a contest in wickedness were proposed, even here very few would be found pre-eminent?”

Phaedo:: It is probable.”

Socrates:: “It is so; but in this respect reasonings do not resemble men, for I was just now following you as my leader, but in this they do resemble them, when any one believes in any argument as true without being skilled in the art of reasoning, and then shortly afterwards it appears to him to be false, at one time being so and at another time not, and so on with one after another; and especially they who devote themselves to controversial arguments, you are aware at length think they have become very wise, and have alone discovered that there is nothing sound and stable either in things or reasonings, but that all things that exist, as is the case with the Euripus, are in a constant state of flux and reflux, and never continue in any one condition for any length of time."

Phaedo:: "You speak perfectly true."

Socrates:: "Would it not then, Phædo, be a sad thing if, when there is a true and sound reasoning, and such as one can understand, one should then, through lighting upon such arguments as appear to be at one time true, and at another false, not blame one's-self and one's own want of skill, but at length through grief should anxiously transfer the blame from one's-self to the arguments, and thereupon pass the rest of one's life in hating and reviling arguments, and so be deprived of the truth and knowledge of things that exist?"

Phaedo:: "By Jupiter, it would be sad indeed."

Socrates:: "In the first place, then, let us beware of this, and let us not admit into our souls the notion, that there appears to be nothing sound in reasoning, but much rather that we are not yet in a sound condition, and that we ought vigorously and strenuously to endeavor to become sound, you and the others, on account of your whole future life, but I, on account of my death, since I am in danger at the present time, of not behaving as becomes a philosopher, with respect to this very subject, but as a wrangler like those who are utterly uninformed. For they, when they dispute about any thing, care nothing at all for the subject about which the discussion is, but are anxious about this, that what they have themselves advanced shall appear true to the persons present. And I seem to myself on the present occasion to differ from them only in this respect; for I shall not be anxious to make what I say appear true to those who are present, except that may happen by the way, but that it may appear certainly to be so to myself. For I thus reason, my dear friend, and observe how interestedly, if what I say be true, it is well to be persuaded of it: but if nothing remains to one that is dead, I shall at least during the interval before death, be less disagreeable to those present by my lamentations. But this ignorance of mine will not continue long, for that would be bad, but will shortly be put an end to. Thus prepared then, Simmias and Cebes, I now proceed to my argument. Do you however, if you will be persuaded by me, pay little attention to Socrates, but much more to the truth, and if I appear to you to say any thing true, assent to it, but if not, oppose me with all your might, taking good care that in my zeal I do not deceive both myself and you, and like a bee depart leaving my sting behind."

"But let us proceed; first of all, remind me of what you said, if I should appear to have forgotten it. For Simmias, as I think, is in doubt and fears lest the soul, though more divine and beautiful than the body, should perish before it, as being a species of harmony. But Cebes appeared to me to grant me this, that the soul is more durable than the body, but he argued that it is uncertain to every one, whether when the soul has worn out many bodies, and that repeatedly, it does not, on leaving the last body, itself also perish, so that this very thing is death, the destruction of the soul, since the body never ceases decaying. Are not these the things, Simmias and Cebes, which we have to enquire into?"

Phaedo:: They both agreed that they were.

Socrates:: "Whether, then, do you reject all our former arguments, or some of them only, and not others?"

Simmias:: "Some we do. And others not."

Socrates:: "What then do you say about that argument, in which we asserted that knowledge is reminiscence, and that, this being the case, our soul must necessarily have existed somewhere before it was enclosed in the body?”

Cebes:: “I, indeed, was both then wonderfully persuaded by it, and now persist in it, as in no other argument.”

Simmias:: “And I too, am of the same mind, and should very much wonder if I should ever think otherwise on that point.”

Socrates:: “Then, you must needs think otherwise, my Theban friend, if this opinion holds good, that harmony is "something compounded, and that the soul is a kind of harmony that results from the parts compacted together in the body. For surely you will not allow yourself to say that harmony was composed prior to the things from which it required to be composed. Would you allow this?”

Simmias:: “By no means Socrates.”

Socrates:: “Do you perceive then, that this results from what you say, when you assert that the soul existed before it came into a human form and body, but that it was composed from things that did not yet exist? For harmony is not such as that to which you compare it; but first the lyre, and the chords, and the sounds yet unharmonized, exist, and last of all harmony is produced, and first perishes. How then will this argument accord with that?”

Simmias:: “Not at all.”

Socrates:: “And yet, if in any argument, there ought to be an accordance in one respecting harmony.”

Simmias:: “There ought.”

Socrates:: “This of yours however, is not in accordance. Consider then, which of these two statements do you prefer, that knowledge is reminiscence, or the soul harmony?”

Simmias:: “The former, by far, Socrates, for the latter occurred to me without demonstration, through a certain probability and speciousness whence most men derive their opinions. But I am well aware that arguments which draw their demonstrations from probabilities are idle; and unless one is on one’s guard against them, they are very deceptive, both in geometry and all other subjects. But the argument respecting reminiscence and knowledge may be said to have been demonstrated by a satisfactory hypothesis. For in this way it was said that our soul existed before it came into the body, because the essence that bears the appellation of ‘that which is,’ belongs to it. But of this, as I persuade myself, I am fully and rightly convinced. It is therefore necessary, as it seems, that I should neither allow myself nor any one else to maintain that the soul is harmony.”

Socrates:: “But what, Simmias, if you consider it thus? Does it appear to you to appertain to harmony, or to any other composition, to subsist in any other way than the very things do of which it is composed?”

Simmias:: “By no means.”

Socrates:: “And indeed, as I think, neither to do any thing, nor suffer any thing else, besides what they do or suffer.”

Phaedo:: He agreed.

Socrates:: “It does not, therefore, appertain to harmony to take the lead of the things of which it is composed, but to follow them.”

Phaedo:: He assented.

Socrates:: “It is then far from being the case that harmony is moved or sends forth sounds contrariwise, or is in any other respect opposed to its parts?”

Simmias:: “Far indeed.”

Socrates:: “What then? is not every harmony naturally harmony, so far as it has been made to accord?”

Simmias:: “I do not understand you.”

Socrates:: “Whether, if it should be in a greater degree and more fully made to accord, supposing that were possible, would the harmony be greater and more full, but if in a less degree and less fully, then would it be inferior and less full?”

Simmias:: “Certainly.”

Socrates:: “Is this then the case with the soul, that, even in the smallest extent, one soul is more fully and in a greater degree, or less fully and in a less degree this very thing, a soul, than another?”

Simmias:: “In no respect whatever.”

Socrates:: “Well then, by Jupiter, is one soul said to possess intelligence and virtue, and to be good, and another folly and vice, and to be bad? and is this said with truth?”

Simmias:: “With truth, certainly.”

Socrates:: “Of those, then, who maintain that the soul is harmony, what will any one say that these things are in the soul, virtue and vice? Will he call them another kind of harmony and discord? and say that the one, the good soul, is harmonized, and, being harmony, contains within itself another harmony, but that the other is discordant, and does not contain within itself another harmony?”

Simmias:: “I am unable to say, but it is clear that he who maintains that opinion would say something of the kind.”

Socrates:: “But it has been already granted, that one soul is not more or less a soul than another; and this is an admission that one harmony is not to a greater degree or more fully, or to a less degree or less fully, a harmony, than another: is it not so?"

Simmias:: "Certainly."

Socrates:: "And that that which is neither more nor less harmony, is neither more nor less harmonized: is it so?"

Simmias:: "It is."

Socrates:: "But does that which is neither more nor less harmonized partake of more or less harmony, or an equal amount?"

Simmias:: "An equal amount."

Socrates:: "A soul, therefore, since it is not more or less this very thing, a soul, than another, is not more or less harmonized?"

Simmias:: "Even so."

Socrates:: "Such then being its condition, it cannot partake of a greater degree of discord or harmony?"

Simmias:: "Certainly not."

Socrates:: "And again, such being its condition, can one soul partake of a greater degree of vice or virtue than another, if vice be discord, and virtue harmony?"

Simmias:: "It cannot."

Socrates:: "Or rather, surely, Simmias, according to right reason, no soul will partake of vice, if it is harmony: for doubtless harmony, which is perfectly such, can never partake of discord?"

Simmias:: "Certainly not."

Socrates:: "Neither, therefore, can a soul, which is perfectly a soul, partake of vice."

Simmias:: "How can it, from what has been already said?"

Socrates:: “From this reasoning, then, all souls of all animals will be equally good, if at least they are by nature equally this very thing, souls?”

Simmias:: “It appears so to me, Socrates.”

Socrates:: “And does it appear to you, to have been thus rightly argued, and that the argument would lead to this result, if the hypothesis were correct, that the soul is harmony?”

Simmias:: “On no account whatever.”

Socrates:: “But what of all the things that are in man, is there any thing else that you say bears rule except the soul, especially if it be wise?”

Simmias:: “I should say not.”

Socrates:: “Whether by yielding to the passions in the body, or by opposing them? My meaning is this, for instance, when heat and thirst are present, by drawing it the contrary way, so as to hinder it from drinking, and when hunger is present, by hindering it from eating; and in ten thousand other instances we see the soul opposing the desires of the body. Do we not?”

Simmias:: “Certainly.”

Socrates:: “But have we not before allowed that if the soul were harmony, it would never utter a sound contrary to the tension, relaxation, vibration, or any other affection to which its component parts are subject, but would follow, and never govern them?”

Simmias:: “We did allow it, for how could we do otherwise?”

Socrates:: “What, then, does not the soul now appear to act quite the contrary, ruling over all the parts, from which any one might say it subsists, and resisting almost all of them through the whole of life, and exercising dominion over them in all manner of ways, punishing some more severely even with pain, both by gymnastics and medicine, and others more mildly, partly threatening, and partly admonishing the desires, angers, and fears, as if, being itself of a different nature, it were conversing with something quite different? Just as Homer has done in the Odyssey, where he speaks of Ulysses: ‘Having struck his breast, he chid his heart in the following words, Bear up, my heart; ere this thou hast borne far worse.’ Do you think that he composed this in the belief that the soul was harmony, and capable of being led by the passions of the body, and not rather that it was able to lead and govern them, as being something much more divine than to be compared with harmony?”

Simmias:: “By Jupiter, Socrates, it appears so to me.”

Socrates:: “Therefore, my excellent friend, it is on no account correct for us to say that the soul is a kind of harmony; for as it appears, we should neither agree with Homer, that divine poet, nor with ourselves.”

Simmias:: “Such is the case.”

Socrates:: “Be it so, then, we have already, as it seems, sufficiently appeased this Theban harmony. But how, Cebes, and by what arguments shall we appease this Cadmus?”

Cebes:: “You appear to me, to be likely to find out; for you have made out this argument against harmony wonderfully beyond my expectation. For when Simmias was saying what his doubts were, I wondered very much whether any one would be able to answer his reasoning. It therefore appeared to me unaccountable that he did not withstand the very first onset of your argument. I should not, therefore, be surprised if the arguments of Cadmus met with the same fate.”

Socrates:: “My good friend, do not speak so boastfully, lest some envious power should overthrow the argument that is about to be urged. These things, however, will be cared for by the deity, but let us, meeting hand to hand, in the manner of Homer, try whether you say any thing to the purpose. This, then, is the sum of what you enquire: you require it to be proved that our soul is imperishable and immortal; if a philosopher that is about to die, full of confidence and hope that after death he shall be far happier than if he had died after leading a different kind of life, shall not entertain this confidence foolishly and vainly. But to show that the soul is something strong and divine, and that it existed before we men were born, you say not at all hinders, but that all these things may evince, not its immortality, but that the soul is durable, and existed an immense space of time before, and knew and did many things. But that, for all this, it was not at all the more immortal, but that its very entrance into the body of a man was the beginning of its destruction, as if it were a disease, so that it passes through this life in wretchedness, and at last perishes in that which is called death. But you say that it is of no consequence whether it comes into a body once or often, with respect to our occasion of fear: for it is right he should be afraid, unless he is foolish, who does not know, and cannot give a reason to prove, that the soul is immortal. Such, I think, Cebes, is the sum of what you say; and I purposely repeat it often, that nothing may escape us, and, if you please, you may add to or take from it.”

Cebes:: “I do not wish at present either to take from or add to it; that is what I mean.”

Phaedo:: Socrates, then, having paused for some time, and considered something within himself, said;

Socrates:: “You enquire into no easy matter, Cebes; for it is absolutely necessary to discuss the whole question of generation and corruption. If you please, then, I will relate to you what happened to me with reference to them; and afterwards, if any thing that I shall say shall appear to you useful, towards producing conviction on the subject you are now treating of, make use of it."

Cebes:: "I do indeed wish it."

Socrates:: "Hear my relation then. When I was a young man, Cebes, I was wonderfully desirous of that wisdom which they call a history of nature: for it appeared to me to be a very sublime thing to know the causes of every thing, why each thing is generated, why it perishes, and why it exists. And I often tossed myself upwards and downwards, considering first such things as these, whether when heat and cold have undergone a certain corruption, as some say, then animals are formed; and whether the blood is that by means of which we think, or air, or fire, or none of these, but that it is the brain that produces the perceptions of hearing, seeing, and smelling, and that from these come memory and opinion, and from memory and opinion, when in a state of rest, in the same way knowledge is produced? And again considering the corruptions of these, and the affections incidental to the heavens and the earth, I at length appeared to myself so unskillful in these speculations, that nothing could be more so. But I will give you a sufficient proof of this: for I then became, by these very speculations, so very blind with respect to things which I knew clearly before, as it appeared to myself and others, that I unlearnt even the things which I thought I knew before, both on many other subjects and also this, why a man grows. For before I thought this was evident to every one, that it proceeds from eating and drinking; for that, when, from the food, flesh is added to flesh, bone to bone, and so on in the same proportion, what is proper to them is added to the several other parts, then the bulk which was small becomes afterwards large, and thus that a little man becomes a big one. Such was my opinion at that time: does it appear to you correct?”

Cebes:: “To me it does.”

Socrates:: “Consider this further. I thought that I had formed a right opinion, when on seeing a tall man standing by a short one, I judged that he was taller by the head, and in like manner one horse than another: and still more clearly than this, ten appeared to me to be more than eight, by two being added to them, and that two cubits are greater than one cubit, by exceeding it a half.”

Cebes:: “But now, what think you of these matters?”

Socrates:: “By Jupiter, I am far from thinking that I know the cause of these, for that I cannot even persuade myself of this, when a person has added one to one, whether the one to which the addition has been made has become two, or whether that which has been added, and that to which the addition has been made, have become two by the addition of the one to the other. For I wonder, if when each of these was separate from the other, each was one, and they were not yet two, but when they have approached nearer each other, this should be the cause of their becoming two, namely, the union by which they have been placed nearer one another. Nor yet, if any person should divide one, am I able to persuade myself that this, their division, is the cause of its becoming two. For this cause is the contrary to the former one of their becoming two; for then it was because they were brought nearer to each other, and the one was added to the other; but now it is, because one is removed and separated from the other. Nor do I yet persuade myself, that I know why one is one, nor, in a word, why any thing else is produced or perishes, or exists, according to this method of proceeding; but I mix up another method of my own at random, for this I can on no account give in to.

"But having once heard a person reading from a book, written, as he said, by Anaxagoras, and which said that it is intelligence that sets in order and is the cause of all things, I was delighted with this cause, and it appeared to me in a manner to be well that intelligence should be the cause of all things, and I considered with myself, if this is so, that the regulating intelligence orders all things, and disposes each in such way as will be best for it. If any one, then, should desire to discover the cause of every thing, in what way it is produced, or perishes, or exists, he must discover this respecting it, in what way it is best for it either to exist, or to suffer, or do any thing else; from this mode of reasoning, then, it is proper that a man should consider nothing else, both with respect to himself and others, than what is most excellent and best: and it necessarily follows that this same person must also know that which is worst, for that the knowledge of both of them is the same. Thus reasoning with myself, I was delighted to think I had found in Anaxagoras a preceptor who would instruct me in the causes of things, agreeably to my own mind, and that he would inform me, first, whether the earth is flat or round, and when he had informed me, would moreover explain the cause and necessity of its being so, arguing on the principle of the better, and showing that it is better for it to be such as it is, and if he should say that it is in the middle, that he would moreover explain how it is better for it to be in the middle; and if he should make all this clear to me, I was prepared no longer to require any other species of cause. I was in like manner prepared to enquire respecting the sun, and moon, and the other stars, with respect to their velocities in reference to each other and their revolutions, and other conditions, in what way it is better for both to act and be affected as it does and is. For I never thought that after he had said that these things were set in order by intelligence, he would introduce any other cause for them than that it is best for them to be as they are: hence, I thought, that in assigning the cause to each of them, and to all in common, he would explain that which is best for each, and the common good of all. And I would not have given up my hopes for a good deal, but having taken up his books with great eagerness, I read through them as quickly as I could, that I might as soon as possible know the best, and the worst.

"From this wonderful hope, however, my friend, I was speedily thrown down, when, as I advance and read over his works, I meet with a man who makes no use of intelligence, nor assigns any causes for the ordering of all things, but makes the causes to consist of air, ether, and water, and many other things equally absurd. And he appeared to me to be very like one who should say, that whatever Socrates does he does by intelligence, and then, attempting to describe the causes of each particular action, should say, first of all, that for this reason I am now sitting here, because my body is composed of bones and sinews, and that the bones are hard, and have joints separate from each other, but that the sinews, being capable of tension and contraction, cover the bones, together with the flesh and skin which contains them. The bones, therefore, being suspended in their sockets, the nerves relaxing and tightening enable me to bend my limbs as I now do, and from this cause I sit here bent up. And if again, he should assign other similar causes for my conversing with you, assigning as causes voice, and air, and hearing, and ten thousand other things of the kind, omitting to mention the real causes, that since it appeared better to the Athenians to condemn me, I therefore thought it better to sit here, and more just to remain and submit to the punishment which they have ordered; for, by the dog, I think these sinews and bones would have been long ago either in Megara or Boeotia, borne thither by an opinion of that which is best, if I had not thought it more just and honorable to submit to whatever sentence the city might order, than to flee and run stealthily away. But to call such things causes is too absurd. But if any one should say that without possessing such things as bones and sinews, and whatever else I have, I could not do what I pleased, he would speak the truth; but to say that I do as I do through them, and that I act thus by intelligence, and not from the choice of what is best, would be a great and extreme disregard of reason. For this would be not to be able to distinguish that the real cause is one thing, and that another without which a cause could not be a cause: which indeed the generality of men appear to me to do, fumbling as it were in the dark, and making use of strange names, so as to denominate them as the very cause. Wherefore one encompassing the earth with a vortex from heaven, makes the earth remain fixed; but another, as if it were a broad trough, rests it upon the air as its base: but the power by which these things are now so disposed that they may be placed in the best manner possible, this they neither enquire into, nor do they think that it requires any superhuman strength; but they think they will some time or other find out an Atlas stronger and more immortal than this, and more capable of containing all things, and in reality, the good, and that which ought to hold them together and contain them, they take no account of at all. I then should most gladly have become the disciple of any one who would teach me of such a cause, in what way it is. But when I was disappointed of this, and was neither able to discover it myself, nor to learn it from another, do you wish, Cebes, that I should show you in what way I set out upon a second voyage in search of the cause?"

Cebes:: "I wish it exceedingly."

Socrates:: "It appeared to me then, after this, when I was wearied with considering things that exist, that I ought to beware lest I should suffer in the same way as they do who look at and examine an eclipse of the sun, for some lose the sight of their eyes, unless they behold its image in water, or some similar medium. And I was affected with a similar feeling, and was afraid lest I should be utterly blinded in my soul through beholding things with the eyes, and endeavoring to grasp them by means of the several senses. It seemed to me, therefore, that I ought to have recourse to reasons, and to consider in them the truth of things. Perhaps, however, this similitude of mine may in some respect be incorrect; for I do not altogether admit that he who considers things in their reasons considers them in their images, more than he does who views them in their effects. However, I proceeded thus, and on each occasion laying down the reason, which I deem to be the strongest, whatever things appear to me to accord with this I regard as true, both with respect to the cause and every thing else, but such as do not accord I regard as not true. But I wish to explain my meaning to you in a clearer manner; for I think that you do not yet understand me."

Cebes:: "No, by Jupiter, not well."

Socrates:: "However, I am now saying nothing new, but what I have always at other times, and in a former part of this discussion, never ceased to say. I proceed then to attempt to explain to you that species of cause which I have busied myself about, and return again to those well-known subjects, and set out from them, laying down as an hypothesis, that there is a certain abstract beauty, and goodness, and magnitude, and so of all other things; which if you grant me, and allow that they do exist, I hope that I shall be able from these to explain the cause to you, and to discover that the soul is immortal."

Cebes:: "But, since I grant you this, you may draw your conclusion at once."

Socrates:: "But consider, what follows from thence, and see if you can agree with me. For it appears to me, that if there be any thing else beautiful, besides beauty itself, it is not beautiful for any other reason than because it partakes of that abstract beauty; and I say the same of every thing. Do you admit such a cause?"

Cebes:: "I do admit it."

Socrates:: "I do not yet understand, nor am I able to conceive, those other wise causes; but if any one should tell me why any thing is beautiful, either because it has a blooming florid color, or figure, or any thing else of the kind, I dismiss all other reasons, for I am confounded by them all; but I simply, wholly, and perhaps foolishly, confine myself to this, that nothing else causes it to be beautiful, except either the presence or communication of that abstract beauty, by whatever means and in whatever way communicated: for I cannot yet affirm this with certainty, but only that by means of beauty all beautiful things become beautiful. For this appears to me the safest answer to give both to myself and others, and adhering to this, I think that I shall never fall, but that it is a safe answer both for me and any one else to give, that by means of beauty beautiful things become beautiful. Does it not also seem so to you?"

Cebes:: "It does."

Socrates:: “And that by magnitude great things become great, and greater things, greater; and by littleness less things become less?”

Cebes:: “Yes.”

Socrates:: “You would not then approve of it, if any one said that one person is greater than another by the head, and that the less is less by the very same thing, but you would maintain that you mean nothing else than that every thing that is greater than another is greater by nothing else than magnitude, and that it is greater on this account, that is on account of magnitude, and that the less is less by nothing else than littleness, and on this account less, that is, on account of littleness, being afraid, I think, lest some opposite argument should meet you if you should say that any one is greater and less by the head; as first, that the greater is greater, and the less less, by the very same thing; and next, that the greater is greater by the head, which is small; and that it is monstrous to suppose that any one is great through something small. Should you not be afraid of this?”

Cebes:: “Indeed I should.”

Socrates:: “Should you not, then, be afraid to say that ten is more than eight by two, and for this cause exceeds it, and not by number, and on account of number? and that two cubits are greater than one cubit by half, and not by magnitude? for the fear is surely the same.”

Cebes:: “Certainly.”

Socrates:: “What then? when one has been added to one, would you not beware of saying that the addition is the cause of its being two, or division when it has been divided; and would you not loudly assert that you know no other way in which each thing subsists, than by partaking of the peculiar essence of each of which it partakes, and that in these cases you can assign no other cause of its becoming two than its partaking of duality; and that such things as are to become two must needs partake of this, and what is to become one, of unity; but these divisions and additions, and other such subtleties, you would dismiss, leaving them to be given as answers by persons wiser than yourself: whereas you, fearing, as it is said, your own shadow and inexperience, would adhere to this safe hypothesis, and answer accordingly? But if any one should assail this hypothesis of yours, would you not dismiss him and refrain from answering him till you had considered the consequences resulting from it, whether in your opinion they agree with or differ from each other? But when it should be necessary for you to give a reason for it, would you give one in a similar way, by again laying down another hypothesis, which should appear the best of higher principles, until you arrived at something satisfactory, but at the same time you would avoid making confusion, as disputants do, in treating of the first principle and the results arising from it, if you really desire to arrive at the truth of things. For they, perhaps, make no account at all of this, nor pay any attention to it, for they are able, through their wisdom, to mingle all things together, and at the same time please themselves. But you, if you are a philosopher, would act, I think, as I now describe."

Simmias:: "You speak most truly."

Cebes:: "You speak most truly."

Echecrates:: By Jupiter, Phædo, they said so with good reason: for he appears to me to have explained these things with wonderful clearness, even to one endued with a small degree of intelligence.

Phaedo:: Certainly, Echecrates, and so it appeared to all who were present.

Echecrates:: And so it appears to me, who was absent, and now hear it related. But what was said after this?

Phaedo:: As well as I remember, when these things had been granted him, and it was allowed that each several idea exists of itself, and that other things partaking of them receive their denomination from them, he next asked:

Socrates:: “If then, you admit that these things are so, whether, when you say that Simmias is greater than Socrates, but less than Phædo, do you not then say that magnitude and littleness are both in Simmias?”

Cebes:: “I do.”

Socrates:: “And yet, you must confess that Simmias’s exceeding Socrates is not actually true in the manner in which the words express it; for Simmias does not naturally exceed Socrates, in that he is Simmias, but in consequence of the magnitude which he happens to have; nor, again, does he exceed Socrates, because Socrates is Socrates, but because Socrates possesses littleness in comparison with his magnitude?”

Cebes:: “True.”

Socrates:: “Nor, again, is Simmias exceeded by Phædo, because Phædo is Phædo, but because Phædo possesses magnitude in comparison with Simmias’s littleness?”

Cebes:: “It is so.”

Socrates:: “Thus, then, Simmias has the appellation of being both little and great, being between both, by exceeding the littleness of one through his own magnitude, and to the other yielding a magnitude that exceeds his own littleness.”

Phaedo:: And at the same time, smiling, he said;

Socrates:: “I seem to speak with the precision of a short-hand writer; however, it is as I say.”

Phaedo:: He allowed it.

Socrates:: “But I say it for this reason, wishing you to be of the same opinion as myself. For it appears to me, not only that magnitude itself is never disposed to be at the same time great and little, but that magnitude in us never admits the little, nor is disposed to be exceeded, but one of two things, either to flee and withdraw when its contrary, the little, approaches it, or when it has actually come, to perish; but that it is not disposed, by sustaining and receiving littleness, to be different from what it was. Just as I, having received and sustained littleness, and still continuing the same person that I am, am this same little person: but that, while it is great, never endures to be little. And in like manner the little that is in us is not disposed at any time to become or to be great, nor is any thing else among contraries, while it continues what it was, at the same time disposed to become and to be its contrary; but in this contingency it either departs or perishes.”

Cebes:: “It appears so to me, in every respect.”

Phaedo:: But some one of those present, on hearing this, I do not clearly remember who he was, said;

Someone:: “By the gods, was not the very contrary of what is now asserted admitted in the former part of our discussion, that the greater is produced from the less, and the less from the greater, and in a word, that the very production of contraries is from contraries? But now it appears to me to be asserted that this can never be the case.”

Phaedo:: Upon this Socrates, having leant his head forward and listened, said;

Socrates:: “You have reminded me in a manly way; you do not, however, perceive the difference between what is now and what was then asserted. For then it was said, that a contrary thing is produced from a contrary; but now, that a contrary can never become contrary to itself, neither that which is in us, nor that which is in nature. For then, my friend, we spoke of things that have contraries, calling them by the appellation of those things; but now we are speaking of those very things, from the presence of which things so called receive their appellation, and of these very things we say that they are never disposed to admit of production from each other."

Phaedo:: And, at the same time looking at Cebes;

Socrates:: "Has any thing that has been said, Cebes, disturbed you?"

Cebes:: "Indeed, I am not at all so disposed; however, I by no means say that there are not many things that disturb me."

Socrates:: "Then, we have quite agreed to this, that a contrary can never be contrary to itself."

Cebes:: "Most certainly."

Socrates:: "But further, consider whether you will agree with me in this also. Do you call heat and cold any thing?"

Cebes:: "I do."

Socrates:: "The same as snow and fire?

Cebes:: "By Jupiter, I do not."

Socrates:: "But heat is something different from fire, and cold something different from snow?"

Cebes:: "Yes."

Socrates:: "But this, I think, is apparent to you, that snow, while it is snow, can never, when it has admitted heat, as we said before, continue to be what it was, snow and hot, but, on the approach of heat, it must either withdraw or perish?"

Cebes:: "Certainly."

Socrates:: “And again, that fire, when cold approaches it, must either depart or perish; but that it will never endure, when it has admitted coldness, to continue what it was, fire and cold?”

Cebes:: “You speak truly.”

Socrates:: “It happens then, with respect to some of such things, that not only is the idea itself always thought worthy of the same appellation, but likewise something else which is not indeed that idea itself but constantly retains its form so long as it exists. What I mean will perhaps be clearer in the following examples. The odd in number must always possess the name by which we now call it; must it not?

Cebes:: “Certainly.”

Socrates:: “Must it alone of all things, for this I ask, or is there any thing else, which is not the same as the odd, but yet which we must always call odd, together with its own name, because it is so constituted by nature, that it can never be without the odd? But this I say is the case with the number three, and many others. For consider with respect to the number three; does it not appear to you that it must always be called by its own name, as well as by that of the odd, which is not the same as the number three? Yet such is the nature of the number three, five, and the entire half of number, that though they are not the same as the odd, yet each of them is always odd. And again, two and four, and the whole other series of number, though not the same as the even, are nevertheless each of them always even: do you admit this or not?

Cebes:: “How should I not?”

Socrates:: “Observe then, what I wish to prove. It is this, that it appears, not only that these contraries do not admit each other, but that even such things as are not contrary to each other, and yet always possess contraries, do not appear to admit that idea which is contrary to the idea that exists in themselves, but, when it approaches, perish or depart. Shall we not allow that the number three would first perish, and suffer any thing whatever, rather than endure, while it is still three, to become even?”

Cebes:: “Most certainly.”

Socrates:: “And yet, the number two is not contrary to three.”

Cebes:: “Surely not.”

Socrates:: “Not only, then, do ideas that are contrary never allow the approach of each other, but some other things also do not allow the approach of contraries.”

Cebes:: “You say very truly.”

Socrates:: “Do you wish, then, that, if we are able, we should define what these things are?”

Cebes:: “Certainly.”

Socrates:: “Would they not then, Cebes, be such things as whatever they occupy, compel that thing not only to retain its own idea, but also that of something which is always a contrary?

Cebes:: “How do you mean?”

Socrates:: “As we just now said. For you know surely, that whatever things the idea of three occupies must of necessity not only be three, but also odd?”

Cebes:: “Certainly.”

Socrates:: “To such a thing, then, we assert, that the idea contrary to that form which constitutes this can never come.”

Cebes:: “It cannot.”

Socrates:: “But did the odd make it so?”

Cebes:: “Yes.”

Socrates:: “And is the contrary to this the idea of the even?”

Cebes:: “Yes.”

Socrates:: “The idea of the even, then, will never come to the three?”

Cebes:: “No surely.”

Socrates:: “Three, then, has no part in the even?”

Cebes:: “None whatever.”

Socrates:: “The number three is uneven?”

Cebes:: “Yes.”

Socrates:: “What therefore I said should be defined, namely, what things they are which, though not contrary to some particular thing, yet do not admit of the contrary itself, as in the present instance, the number three though not contrary to the even, does not any the more admit it, for it always brings the contrary with it, just as the number two does to the odd, fire to cold, and many other particulars, consider then, whether you would thus define, not only that a contrary does not admit a contrary, but also that that which brings with it a contrary to that to which it approaches, will never admit the contrary of that which it brings with it. But call it to mind again, for it will not be useless to hear it often repeated. Five will not admit the idea of the even, nor ten, its double, that of the odd. This double then, though it is itself contrary to something else, yet will not admit the idea of the odd; nor will half as much again, nor other things of the kind, such as the half and the third part admit the idea of the whole, if you follow me and agree with me that it is so.”

Cebes:: “I entirely agree with you, And follow you.”

Socrates:: “Tell me again, then, from the beginning; and do not answer me in the terms in which I put the question, but in different ones, imitating my example. For I say this because, besides that safe mode of answering, which I mentioned at first, from what has now been said, I see another no less safe one. For if you should ask me what that is, which if it be in the body will cause it to be hot, I should not give you that safe but unlearned answer, that it is heat, but one more elegant, from what we have just now said, that it is fire: nor, if you should ask me what that is, which if it be in the body, will cause it to be diseased, should I say that it is disease, but fever; nor, if you should ask what that is, which if it be in number, will cause it to be odd, should I say that it is unevenness, but unity, and so with other things. But consider whether you sufficiently understand what I mean."

Cebes:: "Perfectly so."

Socrates:: "Answer me then, what that is, which when it is in the body, the body will be alive?"

Cebes:: "Soul."

Socrates:: "Is not this, then, always the case?"

Cebes:: "How should it not be?"

Socrates:: "Does the soul, then, always bring life to whatever it occupies?"

Cebes:: "It does indeed."

Socrates:: "Whether, then, is there any thing contrary to life or not?"

Cebes:: "There is."

Socrates:: "What?"

Cebes:: "Death."

Socrates:: "The soul, then, will never admit the contrary of that which it brings with it, as has been already allowed?"

Cebes:: "Most assuredly."

Socrates:: “What then? How do we denominate that which does not admit the idea of the even?”

Cebes:: “Uneven.”

Socrates:: “And that which does not admit the just, nor the musical?”

Cebes:: “Unmusical, and unjust.”

Socrates:: “Be it so. But what do we call that which does not admit death?”

Cebes:: “Immortal.”

Socrates:: “Therefore does not the soul admit death?”

Cebes:: “No.”

Socrates:: “Is the soul, then, immortal?”

Cebes:: “Immortal.”

Socrates:: “Be it so. Shall we say then, that this has been now demonstrated? or how think you?”

Cebes:: “Most completely, Socrates.”

Socrates:: “What then, Cebes, if it were necessary for the uneven to be imperishable, would the number three be otherwise than imperishable?”

Cebes:: “How should it not?”

Socrates:: “If, therefore, it were also necessary that what is without heat should be imperishable, when any one should introduce heat to snow, would not the snow withdraw itself, safe and unmelted? For it would not perish; nor yet would it stay and admit the heat.”

Cebes:: “You say truly.”

Socrates:: “In like manner, I think, if that which is insusceptible of cold were imperishable, that when any thing cold approached the fire, it would neither be extinguished nor perish, but would depart quite safe.”

Cebes:: “Of necessity.”

Socrates:: “Must we not then of necessity speak thus of that which is immortal? if that which is immortal is imperishable, it is impossible for the soul to perish, when death approaches it. For, from what has been said already, it will not admit death, nor will ever be dead, just as we said that three will never be even, nor again will the odd, nor will fire be cold, nor yet the heat that is in fire. But some one may say, what hinders, though the odd can never become even by the approach of the even, as we have allowed, yet, when the odd is destroyed, that the even should succeed in its place? We could not contend with him who should make this objection, that it is not destroyed; for the uneven is not imperishable; since, if this were granted us, we might easily have contended, that on the approach of the even the odd and the three depart; and we might have contended in the same way with respect to fire, heat, and the rest; might we not?”

Cebes:: “Certainly.”

Socrates:: “Wherefore, with respect to the immortal, if we have allowed that it is imperishable, the soul, in addition to its being immortal, must also be imperishable; if not, there will be need of other arguments.”

Cebes:: “But there is no need, as far as that is concerned; for scarcely could any thing not admit of corruption, if that which is immortal and eternal is liable to it.”

Socrates:: “The deity, indeed, I think, and the idea itself of life, and if any thing else is immortal, must be allowed by all beings to be incapable of dissolution.”

Cebes:: “By Jupiter, by all men indeed, and still more, as I think, by the gods.”

Socrates:: “Since, then, that which is immortal is also incorruptible, can the soul, since it is immortal, be any thing else than imperishable?”

Cebes:: “It must of necessity be so.”

Socrates:: “When, therefore, death approaches a man, the mortal part of him, as it appears, dies, but the immortal part departs safe and uncorrupted, having withdrawn itself from death?”

Cebes:: “It appears so.”

Socrates:: “The soul, therefore, Cebes, is most certainly immortal and imperishable, and our souls will really exist in Hades.”

Cebes:: “Therefore, Socrates, I have nothing further to say against this, nor any reason for doubting your arguments. But if Simmias here or any one else has any thing to say, it were well for him not to be silent: for I know not to what other opportunity beyond the present any one can defer it, who wishes either to speak or hear about these things.”

Simmias:: “But indeed, neither have I any reason to doubt what has been urged; yet from the magnitude of the subject discussed, and from my low opinion of human weakness, I am compelled still to retain a doubt within myself with respect to what has been said.”

Socrates:: “Not only so, Simmias, but you say this well, and moreover the first hypotheses, even though they are credible to you, should nevertheless be examined more carefully; and if you should investigate them sufficiently, I think you will follow my reasoning as far as it is possible for man to do so; and if this very point becomes clear, you will enquire no further.”

Simmias:: “You speak truly.”

Socrates:: “But it is right, my friends, that we should consider this, that if the soul is immortal, it requires our care not only for the present time, which we call life, but for all time; and the danger would now appear to be dreadful, if one should neglect it. For if death were a deliverance from every thing, it would be a great gain for the wicked, when they die, to be delivered at the same time from the body, and from their vices together with the soul: but now, since it appears to be immortal, it can have no other refuge from evils, nor safety, except by becoming as good and wise as possible. For the soul goes to Hades, possessing nothing else but its discipline and education, which are said to be of the greatest advantage or detriment to the dead, on the very beginning of his journey thither. For thus it is said; that each person’s demon who was assigned to him while living, when he dies conducts him to some place, where they that are assembled together must receive sentence and then proceed to Hades with that guide, who has been ordered to conduct them from hence thither. But there having received their deserts, and having remained the appointed time, another guide brings them back hither again, after many and long revolutions of time. The journey, then, is not such as the Telephus of Æschylus describes it. For he says that a simple path leads to Hades; but it appears to me to be neither simple nor one: for there would be no need of guides, nor could any one ever miss the way, if there were but one. But now it appears to have many divisions and windings; and this I conjecture from our religious and funeral rites. The well-ordered and wise soul, then, both follows, and is not ignorant of its present condition; but that which through passion clings to the body, as I said before, having longingly fluttered about it for a long time, and about its visible place, after vehement resistance and great suffering, is forcibly and with great difficulty led away by its appointed demon. And when it arrives at the place where the others are, impure and having done any such thing as the committal of unrighteous murders or other similar actions, which are kindred to these, and are the deeds of kindred souls, every one shuns it and turns away from it, and will neither be its fellow-traveler or guide, but it wanders about, oppressed with every kind of helplessness until certain periods have elapsed: and when these are completed, it is carried of necessity to an abode suitable to it; but the soul which has passed through life with purity and moderation, having obtained the gods for its fellow-travelers and guides, settles each in the place suited to it. There are indeed many and wonderful places in the earth, and it is itself neither of such a kind, nor of such a magnitude, as is supposed by those who are accustomed to speak of the earth, as I have been persuaded by a certain person."

Simmias:: "How mean you, Socrates? For I too have heard many things about the earth, not however those things which have obtained your belief: I would therefore gladly hear them."

Socrates:: "Indeed, Simmias, the art of Glaucus does not seem to me to be required to relate what these things are; that they are true however, appears to me more than the art of Glaucus can prove, and besides, I should probably not be able to do it, and even if I did know how, what remains to me of life, Simmias, seems insufficient for the length of the subject. However, the form of the earth, such as I am persuaded it is, and the different places in it, nothing hinders me from telling."

Simmias:: "But that will be enough."

Socrates:: "I am persuaded, then, in the first place, that, if the earth is in the middle of the heavens, and is of a spherical form, it has no need of air, nor of any other similar force, to prevent it from falling, but that the similarity of the heavens to themselves on every side, and the equilibrium of the earth itself, are sufficient to support it; for a thing in a state of equilibrium when placed in the middle of something that presses it equally on all sides cannot incline more or less on any side, but being equally affected all around remains unmoved. In the first place then, I am persuaded of this.”

Simmias:: “And very properly so.”

Socrates:: “Yet further, that it is very large, and that we who inhabit some small portion of it, from the river Phasis to the pillars of Hercules, dwell about the sea, like ants or frogs about a marsh, and that many others elsewhere dwell in many similar places, for that there are every where about the earth many hollows of various forms and sizes into which there is a confluence of water, mist, and air; but that the earth itself, being pure, is situated in the pure heavens, in which are the stars, and which most persons who are accustomed to speak about such things call ether; of which these things are the sediment and are continually flowing into the hollow parts of the earth. That we are ignorant, then, that we are dwelling in its hollows, and imagine that we inhabit the upper parts of the earth, just as if any one dwelling in the bottom of the sea, should think that he dwelt on the sea, and, beholding the sun and the other stars through the water, should imagine that the sea was the heavens, but through sloth and weakness should never have reached the surface of the sea, nor, having emerged and risen up from the sea to this region, have seen how much more pure and more beautiful it is than the place where he is, nor has heard of it from any one else who has seen it. This then is the very condition in which we are; for, dwelling in some hollow of the earth, we think that we dwell on the surface of it, and call the air heaven, as if the stars moved through this, being heaven itself. But this is because by reason of our weakness and sloth, we are unable to reach to the summit of the air. Since, if any one could arrive at its summit, or, becoming winged, could fly up thither, or emerging from hence, he would see,—just as with us, fishes emerging from the sea, behold what is here,—so any one would behold the things there, and if his nature were able to endure the contemplation, he would know that that is the true heaven, and the true light, and the true earth. For this earth and these stones, and the whole region here, are decayed and corroded, as things in the sea by the saltness; for nothing of any value grows in the sea, nor, in a word, does it contain any thing perfect, but there are caverns and sand, and mud in abundance, and filth, in whatever parts of the sea there is earth, nor are they at all worthy to be compared with the beautiful things with us. But on the other hand, those things in the upper regions of the earth would appear far more to excel the things with us. For, if we may tell a beautiful fable, it is well worth hearing, Simmias, what kind the things are on the earth beneath the heavens."

Simmias:: "Indeed, Socrates, we should be very glad to hear that fable."

Socrates:: "First of all then, my friend, this earth, if any one should survey it from above, is said to have the appearance of balls covered with twelve different pieces of leather, variegated and distinguished with colors, of which the colors found here, and which painters use, are as it were copies. But there the whole earth is composed of such, and far more brilliant and pure than these; for one part of it is purple, and of wonderful beauty, part of a golden color, and part of white, more white than chalk or snow, and in like manner composed of other colors, and those more in number and more beautiful than any we have ever beheld. And those very hollow parts of the earth, though filled with water and air, exhibit a certain species of color, shining among the variety of other colors, so that one continually variegated aspect presents itself to the view. In this earth, being such, all things that grow, grow in a manner proportioned to its nature, trees, flowers, and fruits; and again, in like manner, its mountains and stones possess, in the same proportion, smoothness and transparency, and more beautiful colors; of which the well-known stones here that are so highly prized are but fragments, such as sardin-stones, jaspers, and emeralds, and all of that kind. But there, there is nothing subsists that is not of this character, and even more beautiful than these. But the reason of this is, because the stones there are pure, and not eaten up and decayed, like those here, by rottenness and saltness, which flow down hither together, and which produce deformity and disease in the stones and the earth, and in other things, even animals and plants. But that earth is adorned with all these, and moreover with gold and silver, and other things of the kind: for they are naturally conspicuous, being numerous and large, and in all parts of the earth; so that to behold it is a sight for the blessed. There are also many other animals and men upon it, some dwelling in mid-earth, others about the air, as we do about the sea, and others in islands which the air flows round, and which are near the continent: and in one word, what water and the sea are to us, for our necessities, the air is to them; and what air is to us, that ether is to them. But their seasons are of such a temperament that they are free from disease, and live for a much longer time than those here, and surpass us in sight, hearing, and smelling, and every thing of this kind, as much as air excels water, and ether air, in purity. Moreover, they have abodes and temples of the gods, in which gods really dwell, and voices and oracles, and sensible visions of the gods, and such-like intercourse with them; the sun too, and moon, and stars, are seen by them such as they really are, and their felicity in other respects is correspondent with these things.

"And such indeed is the nature of the whole earth, and the parts about the earth; but there are many places all round it throughout its cavities, some deeper and more open than that in which we dwell: but others that are deeper, have a less chasm than our region, and others are shallower in depth than it is here and broader. But all these are in many places perforated one into another under the earth, some with narrower and some with wider channels, and have passages through, by which a great quantity of water flows from one into another, as into basins, and there are immense bulks of ever-flowing rivers under the earth, both of hot and cold water, and a great quantity of fire, and mighty rivers of fire, and many of liquid mire, some purer, and some more miry, as in Sicily there are rivers of mud that flow before the lava, and the lava itself, and from these the several places are filled, according as the overflow from time to time happens to come to each of them. But all these move up and down as it were by a certain oscillation existing in the earth. And this oscillation proceeds from such natural cause as this: one of the chasms of the earth is exceedingly large, and perforated through the entire earth, and is that which Homer speaks of, 'very far off, where is the most profound abyss beneath the earth.' which elsewhere both he and many other poets have called Tartarus. For into this chasm all rivers flow together, and from it flow out again: but they severally derive their character from the earth through which they flow. And the reason why all streams flow out from thence, and flow into it, is because this liquid has neither bottom nor base. Therefore it oscillates and fluctuates up and down, and the air and the wind around it do the same; for they accompany it both when it rushes to those parts of the earth, and when to these. And as in respiration the flowing breath is continually breathed out and drawn in, so there the wind oscillating with the liquid, causes certain vehement and irresistible winds both as it enters and goes out. When, therefore, the water rushing in descends to the place which we call the lower region, it flows through the earth into the streams there and fills them, just as men pump up water. But when again it leaves those regions and rushes hither, it again fills the rivers here, and these, when filled, flow through channels and through the earth, and having severally reached the several places to which they are journeying, they make seas, lakes, rivers, and fountains. Then sinking again from thence beneath the earth, some of them having gone round longer and more numerous places, and others round fewer and shorter, they again discharge themselves into Tartarus, some much lower than they were drawn up, others only a little so, but all of them flow in again beneath the point at which they flowed out. And some issue out directly opposite the place by which they flow in, others on the same side: there are also some which having gone round altogether in a circle, folding themselves once or several times round the earth, like serpents, when they had descended as low as possible, discharge themselves again: and it is possible for them to descend on either side as far as the middle, but not beyond; for in each direction there is an acclivity to the streams both ways.

"Now there are many other large and various streams, but among this great number there are four certain streams, of which the largest, and that which flows most outwardly round the earth, is called Ocean, but directly opposite this, and flowing in a contrary direction, is Acheron, which flows through other desert places, and moreover passing under the earth, reaches the Acherusian lake, where the souls of most who die arrive, and having remained there for certain destined periods, some longer and some shorter, are again sent forth into the generations of animals. A third river issues midway between these, and near its source falls into a vast region, burning with abundance of fire, and forms a lake larger than our sea, boiling with water and mud; from hence it proceeds in a circle, turbulent and muddy, and folding itself round it reaches both other places and the extremity of the Acherusian lake, but does not mingle with its water; but folding itself oftentimes beneath the earth, it discharges itself into the lower parts of Tartarus. And this is the river which they call Pyriphlegethon, whose burning streams emit dissevered fragments in whatever part of the earth they happen to be. Opposite to this again the fourth river first falls into a place dreadful and savage, as it is said, having its whole color like cyanus: this they call Stygian, and the lake, which the river forms by its discharge, Styx. This river having fallen in here, and received awful power in the water, sinking beneath the earth, proceeds, folding itself round, in an opposite course to Pyriphlegethon, and meets it in the Acherusian lake from a contrary direction. Neither does the water of this river mingle with any other, but it too, having gone round in a circle, discharges itself into Tartarus, opposite to Pyriphlegethon. Its name, as the poets say, is Cocytus.

"These things being thus constituted, when the dead arrive at the place to which their demon leads them severally, first of all they are judged, as well those who have lived well and piously, as those who have not. And those who appear to have passed a middle kind of life, proceeding to Acheron, and embarking in the vessels they have, on these arrive at the lake, and there dwell, and when they are purified, and have suffered punishment for the iniquities they may have committed, they are set free, and each receives the reward of his good deeds, according to his deserts: but those who appear to be incurable, through the magnitude of their offences, either from having committed many and great sacrileges, or many unjust and lawless murders, or other similar crimes, these a suitable destiny hurls into Tartarus, whence they never come forth.

But those who appear to have been guilty of curable, yet great offences, such as those who through anger have committed any violence against father or mother, and have lived the remainder of their life in a state of penitence, or they who have become homicides in a similar manner, these must of necessity fall into Tartarus, but after they have fallen, and have been there for a year, the wave casts them forth, the homicides into Cocytus, but the parricides and matricides into Pyriphlegethon: but when, being borne along, they arrive at the Acherusian lake, there they cry out to and invoke, some those whom they slew, others those whom they injured, and invoking them, they entreat and implore them to suffer them to go out into the lake, and to receive them, and if they persuade them, they go out, and are freed from their sufferings, but if not, they are borne back to Tartarus, and thence again to the rivers, and they do not cease from suffering this until they have persuaded those whom they have injured, for this sentence was imposed on them by the judges. But those who are found to have lived an eminently holy life, these are they, who, being freed and set at large from these regions in the earth, as from a prison, arrive at the pure abode above, and dwell on the upper parts of the earth. And among these, they who have sufficiently purified themselves by philosophy shall live without bodies, throughout all future time, and shall arrive at habitations yet more beautiful than these, which it is neither easy to describe, nor at present is there sufficient time for the purpose.

"But for the sake of these things which we have described, we should use every endeavor, Simmias, so as to acquire virtue and wisdom in this life; for the reward is noble, and the hope great.

"To affirm positively, indeed, that these things are exactly as I have described them, does not become a man of sense; that however either this, or something of the kind, takes place with respect to our souls and their habitations—since our soul is certainly immortal—this appears to me most fitting to be believed, and worthy the hazard for one who trusts in its reality; for the hazard is noble, and it is right to allure ourselves with such things, as with enchantments; for which reason I have prolonged my story to such a length. On account of these things, then, a man ought to be confident about his soul, who during this life has disregarded all the pleasures and ornaments of the body as foreign from his nature, and who, having thought that they do more harm than good, has zealously applied himself to the acquirement of knowledge, and who having adorned his soul not with a foreign but its own proper ornament, temperance, justice, fortitude, freedom, and truth, thus waits for his passage to Hades, as one who is ready to depart whenever destiny shall summon him. You then, Simmias and Cebes, and the rest, will each of you depart at some future time; but now destiny summons me, as a tragic writer would say, and it is nearly time for me to betake myself to the bath; for it appears to me to be better to drink the poison after I have bathed myself, and not to trouble the women with washing my dead body."

Phaedo:: When he had thus spoken, Crito said;

Crito:: "So be it, Socrates, but what commands have you to give to these or to me, either respecting your children, or any other matter, in attending to which we can most oblige you?"

Socrates:: "What I always say, Crito, nothing new; that by taking care of yourselves you will oblige both me and mine, and yourselves, whatever you do, though you should not now promise it; but if you neglect yourselves, and will not live as it were in the footsteps of what has been now and formerly said, even though you should promise much at present, and that earnestly, you will do no good at all."

Crito:: "We will endeavor then so to do; but how shall we bury you?"

Socrates:: "Just as you please, if only you can catch me, and I do not escape from you."

Phaedo:: And at the same time smiling gently, and looking round on us, he said;

Socrates:: "I cannot persuade Crito, my friends, that I am that Socrates who is now conversing with you, and who methodizes each part of the discourse; but he thinks that I am he whom he will shortly behold dead, and asks how he should bury me. But that which I some time since argued at length, that when I have drunk the poison I shall no longer remain with you, but shall depart to some happy state of the blessed, this I seem to have urged to him in vain, though I meant at the same time to console both you and myself. Be ye then my sureties to Crito, in an obligation contrary to that which he made to the judges; for he undertook that I should remain; but do you be sureties that, when I die, I shall not remain, but shall depart, that

Crito may more easily bear it, and when he sees my body either burnt or buried, may not be afflicted for me, as if I suffered some dreadful thing, nor say at my interment that Socrates is laid out, or is carried out, or is buried. For be well assured, most excellent Crito, that to speak improperly is not only culpable as to the thing itself, but likewise occasions some injury to our souls. You must have a good courage then, and say that you bury my body, and bury it in such a manner as is pleasing to you, and as you think is most agreeable to our laws."

Phaedo:: When he had said thus he rose, and went into a chamber to bathe, and Crito followed him, but he directed us to wait for him. We waited, therefore, conversing among ourselves about what had been said, and considering it again, and sometimes speaking about our calamity, how severe it would be to us, sincerely thinking that, like those who are deprived of a father, we should pass the rest of our life as orphans. When he had bathed, and his children were brought to him, for he had two little sons and one grown up, and the women belonging to his family were come, having conversed with them in the presence of Crito, and given them such injunctions as he wished, he directed the women and children to go away, and then returned to us. And it was now near sun-set; for he spent a considerable time within. But when he came from bathing he sat down, and did not speak much afterwards; then the officer of the Eleven came in, and standing near him, said;

Jailer:: "Socrates, I shall not have to find that fault with you that I do with others, that they are angry with me, and curse me, when, by order of the archons, I bid them drink the poison. But you, on all other occasions during the time you have been here, I have found to be the most noble, meek, and excellent man of all that ever came into this place: and, therefore, I am now well convinced that you will not be angry with me, for you know who are to blame, but with them. Now, then, for you know what I came to announce to you, farewell, and endeavor to bear what is inevitable as easily as possible."

Phaedo:: And at the same time, bursting into tears, he turned away and withdrew.

And Socrates, looking after him, said;

Socrates:: "And thou, too, farewell, we will do as you direct."

Phaedo:: At the same time turning to us, he said;

Socrates:: "How courteous the man is; during the whole time I have been here he has visited me, and conversed with me sometimes, and proved the worthiest of men; and now how generously he weeps for me. But come, Crito, let us obey him, and let some one bring the poison, if it is ready pounded, but if not, let the man pound it."

Crito:: "But I think, Socrates, that the sun is still on the mountains, and has not yet set. Besides, I know that others have drunk the poison very late, after it had been announced to them, and have supped and drunk freely, and some even have enjoyed the objects of their love. Do not hasten then, for there is yet time."

Socrates:: "These men whom you mention, Crito, do these things with good reason, for they think they shall gain by so doing, and I too with good reason shall not do so; for I think I shall gain nothing by drinking a little later, except to become ridiculous to myself, in being so fond of life, and sparing of it when none any longer remains. Go then, obey, and do not resist."

Phaedo:: Crito having heard this, nodded to the boy that stood near. And the boy having gone out, and staid for some time, came, bringing with him the man that was to administer the poison, who brought it ready pounded in a cup. And Socrates, on seeing the man, said;

Socrates:: "Well, my good friend, as you are skilled in these matters, what must I do?"

Jailer:: "Nothing else, than when you have drunk it walk about, until there is a heaviness in your legs, then lie down; thus it will do its purpose."

Phaedo:: And at the same time he held out the cup to Socrates. And he having received it very cheerfully, Echecrates, neither trembling, nor changing at all in color or countenance, but, as he was wont, looking steadfastly at the man, said;

Socrates:: "What say you of this potion, with respect to making a libation to any one, is it lawful or not?"

Jailer:: "We only pound so much, Socrates, as we think sufficient to drink."

Socrates:: "I understand you, but it is certainly both lawful and right to pray to the gods, that my departure hence thither may be happy; which therefore I pray, and so may it be."

Phaedo:: And as he said this he drank it off readily and calmly. Thus far, most of us were with difficulty able to restrain ourselves from weeping, but when we saw him drinking, and having finished the draught, we could do so no longer; but in spite of myself the tears came in full torrent, so that, covering my face, I wept for myself, for I did not weep for him, but for my own fortune, in being deprived of such a friend. But Crito, even before me, when he could not restrain his tears, had risen up. But Apollodorus even before this had not ceased weeping, and then bursting into an agony of grief, weeping and lamenting, he pierced the heart of every one present, except Socrates himself.

Socrates:: “What are you doing, my admirable friends? I indeed, for this reason chiefly, sent away the women, that they might not commit any folly of this kind. For I have heard that it is right to die with good omens. Be quiet, therefore, and bear up.”

Phaedo:: When we heard this we were ashamed, and restrained our tears. But he, having walked about, when he said that his legs were growing heavy, laid down on his back; for the man so directed him. And at the same time he who gave him the poison, taking hold of him, after a short interval examined his feet and legs; and then having pressed his foot hard, he asked if he felt it: he said that he did not. And after this he pressed his thighs; and thus going higher, he showed us that he was growing cold and stiff. Then Socrates touched himself, and said, that when the poison reached his heart he should then depart. But now the parts around the lower belly were almost cold; when uncovering himself, for he had been covered over, he said, and they were his last words;

Socrates:: “Crito, we owe a cock to Æsculapius; pay it, therefore, and do not neglect it.”

Crito:: “It shall be done, but consider whether you have any thing else to say.”

Phaedo:: To this question he gave no reply; but shortly after he gave a convulsive movement, and the man covered him, and his eyes were fixed; and Crito, perceiving it, closed his mouth and eyes.

This, Echecrates, was the end of our friend, a man, as we may say, the best of all of his time that we have known, and moreover, the most wise and just.

# **Phaedo.**

Translated by Church, F. J.

CHARACTERS OF THE DIALOGUE.

Echecrates. Socrates. Cebes.
Simmias. Apollodorus. Crito.
The Servant of the Eleven.

SCENE. First Phlius, then the Prison of Socrates.

Echecrates:: Were you with Socrates yourself, Phaedo, on that day when he drank the poison in the prison, or did you hear the story from some one else?

Phaedo:: I was there myself, Echecrates.

Echecrates:: Then what was it that our master said before his death, and how did he die? I should be very glad if you would tell me. None of our citizens go very much to Athens now; and no stranger has come from there for a long time, who could give us any definite account of these things, except that he drank the poison and died. We could learn nothing beyond that.

Phaedo:: Then have you not heard about the trial either, how that went?

Echecrates:: Yes, we were told of that: and we were rather surprised to find that he did not die till so long after the trial. Why was that, Phaedo?

Phaedo:: It was an accident, Echecrates. The stern of the ship, which the Athenians send to Delos, happened to have been crowned on the day before the trial.

Echecrates:: And what is this ship?

Phaedo:: It is the ship, as the Athenians say, in which Theseus took the seven youths and the seven maidens to Crete, and saved them from death, and himself was saved. The Athenians made a vow then to Apollo, the story goes, to send a sacred mission to Delos every year, if they should be saved; and from that time to this they have always sent it to the god, every year. They have a law to keep the city pure as soon as the mission begins, and not to execute any sentence of death until the ship has returned from Delos; and sometimes, when it is detained by contrary winds, that is a long while. The sacred mission begins when the priest of Apollo crowns the stern of the ship: and, as I said, this happened to have been done on the day before the trial. That was why Socrates lay so long in prison between his trial and his death.

Echecrates:: But tell me about his death, Phaedo. What was said and done, and which of his friends were with our master? Or would not the authorities let them be there? Did he die alone?

Phaedo:: Oh, no: some of them were there, indeed several.

Echecrates:: It would be very good of you, if you are not busy, to tell us the whole story as exactly as you can.

Phaedo:: No: I have nothing to do and I will try to relate it. Nothing is more pleasant to me than to recall Socrates to my mind, whether by speaking of him myself, or by listening to others.

Echecrates:: Indeed, Phaedo, you will have an audience like yourself. But try to tell us everything that happened as precisely as you can.

Phaedo:: Well, I myself was strangely moved on that day. I did not feel that I was being present at the death of a dear friend: I did not pity him, for he seemed to me happy, Echecrates, both in his bearing and in his words, so fearlessly and nobly did he die. I could not help thinking that the gods would watch over him still on his journey to the other world, and that when he arrived there it would be well with him, if it was ever well with any man. Therefore I had scarcely any feeling of pity, as you would expect at such a mournful time. Neither did I feel the pleasure which I usually felt at our philosophical discussions; for our talk was of philosophy. A very singular feeling came over me, a strange mixture of pleasure and of pain when I remembered that he was presently to die. All of us who were there were in much the same state, laughing and crying by turns; particularly Apollodorus. I think you know the man and his ways.

Echecrates:: Of course I do.

Phaedo:: Well, he did not restrain himself at all; and I myself and the others were greatly agitated too.

Echecrates:: Who were there, Phaedo?

Phaedo:: Of native Athenians, there was this Apollodorus, and Critobulus, and his father Crito, and Hermogenes, and Epigenes, and Aeschines, and Antisthenes. Then there was Ctesippus the Paeanian, and Menexenus, and some other Athenians. Plato, I believe was ill.

Echecrates:: Were any strangers there?

Phaedo:: Yes, there was Simmias of Thebes, and Cebes, and Phaedondes; and Eucleides and Terpsion from Megara.

Echecrates:: But Aristippus and Cleombrotus? were they present?

Phaedo:: No, they were not. They were said to be in Egina.

Echecrates:: Was any one else there?

Phaedo:: No, I think that these were all.

Echecrates:: Then tell us about your conversation.

Phaedo:: I will try to relate the whole story to you from the beginning. On the previous days I and the others had always met in the morning at the court where the trial was held, which was close to the prison; and then we had gone in to Socrates. We used to wait each morning until the prison was opened, conversing: for it was not opened early. When it was opened we used to go in to Socrates, and we generally spent the whole day with him. But on that morning we met earlier than usual; for the evening before we had learnt, on leaving the prison, that the ship had arrived from Delos. So we arranged to be at the usual place as early as possible. When we reached the prison the porter, who generally let us in, came out to us and bade us wait a little, and not to go in until he summoned us himself; for the Eleven, he said, are releasing Socrates from his fetters, and giving directions for his death to-day. In no great while he returned and bade us enter. So we went in and found Socrates just released, and Xanthippe—you know her—sitting by him, holding his child in her arms. When Xanthippe saw us, she wailed aloud, and cried, in her woman's way;

Xanthippe:: This is the last time, Socrates, that you will talk with your friends, or they with you.

Phaedo:: And Socrates glanced at Crito, and said;

Socrates:: Crito, let her be taken home.

Phaedo:: So some of Crito's servants led her away, weeping bitterly and beating her breast. But Socrates sat up on the bed, and bent his leg and rubbed it with his hand, and while he was rubbing it said to us;

Socrates:: How strange a thing is what men call pleasure! How wonderful is its relation to pain, which seems to be the opposite of it! They will not come to a man together: but if he pursues the one and gains it, he is almost forced to take the other also, as if they were two distinct things united at one end. And I think, that if Esop had noticed them he would have composed a fable about them, to the effect that God had wished to reconcile them when they were quarrelling, and that, when he could not do that, he joined their ends together; and that therefore whenever the one comes to a man, the other is sure to follow. That is just the case with me. There was pain in my leg caused by the chains: and now, it seems, pleasure is come following the pain.

Phaedo:: Cebes interrupted him and said;

Cebes:: By the bye Socrates, I am glad that you reminded me. Several people have been inquiring about your poems, the hymn to Apollo, and Esops fables which you have put into meter, and only a day or two ago Evenus asked me what was your reason for writing poetry on coming here, when you had never written a line before. So if you wish me to be able to answer him when he asks me again, as I know that he will, tell me what to say.

Socrates:: Then tell him the truth, Cebes. Say that it was from no wish to pose as a rival to him, or to his poems. I knew that it would not be easy to do that. I was only testing the meaning of certain dreams, and acquitting my conscience about them, in case they should be bidding me make this kind of music. The fact is this. The same dream used often to come to me in my past life, appearing in different forms at different times, but always saying the same words, Socrates, work at music and compose it. Formerly I used to think that the dream was encouraging me and cheering me on in what was already the work of my life, just as the spectators cheer on different runners in a race. I supposed that the dream was encouraging me to create the music at which I was working already: for I thought that philosophy was the highest music, and my life was spent in philosophy. But then, after the trial, when the feast of the god delayed my death, it occurred to me that the dream might possibly be bidding me create music in the popular sense, and that in that case I ought to do so, and not to disobey: I thought that it would be safer to acquit my conscience by creating poetry in obedience to the dream before I departed. So first I composed a hymn to the god whose feast it was. And then I turned such fables of Esop as I knew, and had ready to my hand, into verse, taking those which came first: for I reflected that a man who means to be a poet has to use fiction and not facts for his poems; and I could not invent fiction myself.

Tell Evenus this, Cebes, and bid him farewell from me; and tell him to follow me as quickly as he can, if he is wise. I, it seems, shall depart to-day, for that is the will of the Athenians.

Phaedo:: And Simmias said;

Simmias:: What strange advice to give Evenus, Socrates! I have often met him, and from what I have seen of him, I think that he is certainly not at all the man to take it, if he can help it.

Socrates:: What, is not Evenus a philosopher?

Simmias:: Yes, I suppose so.

Socrates:: Then Evenus will wish to die, and so will every man who is worthy of having any part in this study. But he will not lay violent hands on himself; for that, they say, is wrong.

Phaedo:: And as he spoke he put his legs off the bed on to the ground, and remained sitting thus for the rest of the conversation.

Then Cebes asked him;

Cebes:: What do you mean, Socrates, by saying that it is wrong for a man to lay violent hands on himself, but that the philosopher will wish to follow the dying man?

Socrates:: What, Cebes? Have you and Simmias been with Philolaus, and not heard about these things?

Cebes:: Nothing very definite, Socrates.

Socrates:: Well, I myself only speak of them from hearsay: yet there is no reason why I should not tell you what I have heard. Indeed, as I am setting out on a journey to the other world, what could be more fitting for me than to talk about my journey, and to consider what we imagine to be its nature? How could we better employ the interval between this and sunset?

Cebes:: Then what is their reason for saying that it is wrong for a man to kill himself, Socrates? It is quite true that I have heard Philolaus say, when he was living at Thebes, that it is not right; and I have heard the same thing from others too: but I never heard anything definite on the subject from any of them.

Socrates:: You must be of good cheer, possibly you will hear something some day. But perhaps you will be surprised if I say that this law, unlike every other law to which mankind are subject, is absolute and without exception; and that it is not true that death is better than life only for some persons and at some times. And perhaps you will be surprised if I tell you that these men, for whom it would be better to die, may not do themselves a service, but that they must await a benefactor from without.

Phaedo:: Cebes, laughing quietly, and speaking in his native dialect, said;

Cebes:: Oh indeed;

Socrates:: Indeed, so stated it may seem strange: and yet perhaps a reason may be given for it. The reason which the secret teaching gives, that man is in a kind of prison, and that he may not set himself free, nor escape from it, seems to me rather profound and not easy to fathom. But I do think, Cebes, that it is true that the gods are our guardians, and that we men are a part of their property. Do you not think so?

Cebes:: I do.

Socrates:: Well then, if one of your possessions were to kill itself, though you had not signified that you wished it to die, should you not be angry with it? Should you not punish it, if punishment were possible?

Cebes:: Certainly.

Socrates:: Then in this way perhaps it is not unreasonable to hold that no man has a right to take his own life, but that he must wait until God sends some necessity upon him, as has now been sent upon me.

Cebes:: Yes, that does seem natural. But you were saying just now that the philosopher will desire to die. Is not that a paradox, Socrates, if what we have just been saying, that God is our guardian and that we are his property, be true. It is not reasonable to say that the wise man will be content to depart from this service, in which the gods, who are the best of all rulers, rule him. He will hardly think that when he becomes free he will take better care of himself than the gods take of him.

A fool perhaps might think so, and say that he would do well to run away from his master: he might not consider that he ought not to run away from a good master, but that he ought to remain with him as long as possible, and so in his thoughtlessness he might run away. But the wise man will surely desire to remain always with one who is better than himself. But if this be true, Socrates, the reverse of what you said just now seems to follow. The wise man should grieve to die, and the fool should rejoice.

Phaedo:: I thought Socrates was pleased with Cebes insistence. He looked at us, and said;

Socrates:: Cebes is always examining arguments. He will not be convinced at once by anything that one says.

Simmias:: Yes, Socrates, but I do think that now there is something in what Cebes says. Why should really wise men want to run away from masters who are better than themselves, and lightly quit their service? And I think Cebes is aiming his argument at you, because you are so ready to leave us, and the gods, who are good rulers, as you yourself admit.

Socrates:: You are right. I suppose you mean that I must defend myself against your charge, as if I were in a court of justice.

Simmias:: That is just our meaning.

Socrates:: Well then, let me try to make a more successful defense to you than I did to the judges at my trial. I should be wrong, Cebes and Simmias, not to grieve at death, if I did not think that I was going to live both with other gods who are good and wise, and with men who have died, and who are better than the men of this world. But you must know that I hope that I am going to live among good men, though I am not quite sure of that. But I am as sure as I can be in such matters that I am going to live with gods who are very good masters. And therefore I am not so much grieved at death. I am confident that the dead have some kind of existence, and, as has been said of old, an existence that is far better for the good than for the wicked.

Simmias:: Well, Socrates, do you mean to go away and keep this belief to yourself, or will you let us share it with you? It seems to me that we too have an interest in this good. And it will also serve as your defense, if you can convince us of what you say.

Socrates:: I will try. But I think Crito has been wanting to speak to me. Let us first hear what he has to say.

Crito:: Only, Socrates, that the man who is going to give you the poison has been telling me to warn you not to talk much. He says that talking heats people, and that the action of the poison must not be counteracted by heat. Those who excite themselves sometimes have to drink it two or three times.

Socrates:: Let him be, let him mind his own business, and be prepared to give me the poison twice, or, if need be, thrice.

Crito:: I knew that would be your answer, but the man has been importunate.

Socrates:: Never mind him. But I wish now to explain to you, my judges, why it seems to me that a man who has really spent his life in philosophy has reason to be of good cheer when he is about to die, and may well hope after death to gain in the other world the greatest good. I will try to show you, Simmias and Cebes, how this may be.

The world, perhaps, does not see that those who rightly engage in philosophy, study only dying and death. And, if this be true, it would be surely strange for a man all through his life to desire only death, and then, when death comes to him, to be vexed at it, when it has been his study and his desire for so long.

Phaedo:: Simmias laughed, and said.

Simmias:: Indeed, Socrates, you make me laugh, though I am scarcely in a laughing humor now. If the multitude heard that, I fancy they would think that what you say of philosophers is quite true; and my countrymen would entirely agree with you that philosophers are indeed eager to die, and they would say that they know full well that philosophers deserve to be put to death.

Socrates:: And they would be right, Simmias, except in saying that they know it. They do not know in what sense the true philosopher is eager to die, or what kind of death he deserves, or in what sense he deserves it. Let us dismiss them from our thoughts, and converse by ourselves. Do we believe death to be anything?

Simmias:: We do.

Socrates:: And do we not believe it to be the separation of the soul from the body? Does not death mean that the body comes to exist by itself, separated from the soul, and that the soul exists by herself, separated from the body? What is death but that?

Simmias:: It is that.

Socrates:: Now consider, my good friend, if you and I are agreed on another point which I think will help us to understand the question better. Do you think that a philosopher will care very much about what are called pleasures, such as the pleasures of eating and drinking?

Simmias:: Certainly not, Socrates.

Socrates:: Or about the pleasures of sexual passion?

Simmias:: Indeed, no.

Socrates:: And, do you think that he holds the remaining cares of the body in high esteem? Will he think much of getting fine clothes, and sandals, and other bodily adornments, or will he despise them, except so far as he is absolutely forced to meddle with them?

Simmias:: The real philosopher, I think, will despise them.

Socrates:: In short, you think that his studies are not concerned with the body? He stands aloof from it, as far as he can, and turns towards the soul?

Simmias:: I do.

Socrates:: Well then, in these matters, first, it is clear that the philosopher releases his soul from communion with the body, so far as he can, beyond all other men?

Simmias:: It is.

Socrates:: And does not the world think, Simmias, that if a man has no pleasure in such things, and does not take his share in them, his life is not worth living? Do not they hold that he who thinks nothing of bodily pleasures is almost as good as dead?

Simmias:: Indeed you are right.

Socrates:: But what about the actual acquisition of wisdom? If the body is taken as a companion in the search for wisdom, is it a hindrance or not? For example, do sight and hearing convey any real truth to men? Are not the very poets for ever telling us that we neither hear nor see anything accurately? But if these senses of the body are not accurate or clear, the others will hardly be so, for they are all less perfect than these, are they not?

Simmias:: Yes, I think so, certainly.

Socrates:: Then when does the soul attain truth? We see that, as often as she seeks to investigate anything in company with the body, the body leads her astray.

Simmias:: True.

Socrates:: Is it not by reasoning, if at all, that any real truth becomes manifest to her?

Simmias:: Yes.

Socrates:: And she reasons best, I suppose, when none of the senses, whether hearing, or sight, or pain, or pleasure, harasses her. when she has dismissed the body, and released herself as far as she can from all intercourse or contact with it, and so, coming to be as much alone with herself as is possible, strives after real truth.

Simmias:: That is so.

Socrates:: And here too the soul of the philosopher very greatly despises the body, and flies from it, and seeks to be alone by herself, does she not?

Simmias:: Clearly.

Socrates:: And what do you say to the next point, Simmias? Do we say that there is such a thing as absolute justice, or not?

Simmias:: Indeed we do.

Socrates:: And absolute beauty, and absolute good?

Simmias:: Of course.

Socrates:: Have you ever seen any of them with your eyes?

Simmias:: Indeed, I have not.

Socrates:: Did you ever grasp them with any bodily sense? I am speaking of all absolutes, whether size, or health, or strength; in a word of the essence or real being of everything. Is the very truth of things contemplated by the body? Is it not rather the case that the man, who prepares himself most carefully to apprehend by his intellect the essence of each thing which he examines, will come nearest to the knowledge of it?

Simmias:: Certainly.

Socrates:: And will not a man attain to this pure thought most completely, if he goes to each thing, as far as he can, with his mind alone, taking neither sight, nor any other sense along with his reason in the process of thought, to be an encumbrance? In every case he will pursue pure and absolute being, with his pure intellect alone. He will be set free as far as possible from the eye, and the ear, and, in short, from the whole body, because intercourse with the body troubles the soul, and hinders her from gaining truth and wisdom. Is it not he who will attain the knowledge of real being, if any man will?

Simmias:: Your words are admirably true, Socrates.

Socrates:: And, must not all this cause real philosophers to reflect, and make them say to each other, It seems that there is a narrow path which will bring us safely to our journeys end, with reason as our guide. As long as we have this body, and an evil of that sort is mingled with our souls, we shall never fully gain what we desire; and that is truth. For the body is for ever taking up our time with the care which it needs. and, besides, whenever diseases attack it, they hinder us in our pursuit of real being. It fills us with passions, and desires, and fears, and all manner of phantoms, and much foolishness. and so, as the saying goes, in very truth we can never think at all for it. It alone, and its desires, cause wars and factions and battles, for the origin of all wars is the pursuit of wealth, and we are forced to pursue wealth because we live in slavery to the cares of the body. And therefore, for all these reasons, we have no leisure for philosophy. And last of all, if we ever are free from the body for a time, and then turn to examine some matter, it falls in our way at every step of the inquiry, and causes confusion and trouble and panic, so that we cannot see the truth for it. Verily we have learnt that if we are to have any pure knowledge at all, we must be freed from the body; the soul by herself must behold things as they are. Then, it seems, after we are dead, we shall gain the wisdom which we desire, and for which we say we have a passion, but not while we are alive, as the argument shows. For if it be not possible to have pure knowledge while the body is with us, one of two things must be true. either we cannot gain knowledge at all, or we can gain it only after death. For then, and not till then, will the soul exist by herself, separate from the body. And while we live, we shall come nearest to knowledge, if we have no communion or intercourse with the body beyond what is absolutely necessary, and if we are not defiled with its nature. We must live pure from it until God himself releases us. And when we are thus pure and released from its follies, we shall dwell, I suppose, with others who are pure like ourselves, and we shall of ourselves know all that is pure; and that may be the truth. For I think that the impure is not allowed to attain to the pure. Such, Simmias, fancy must needs be the language and the reflections of the true lovers of knowledge. Do you not agree with me?

Simmias:: Most assuredly I do, Socrates.

Socrates:: And, my friend, if this be true, I have good hope that, when I reach the place whither I am going, I shall there, if anywhere, gain fully that which we have sought so earnestly in the past. And so I shall set forth cheerfully on the journey that is appointed me to-day, and so may every man who thinks that his mind is prepared and purified.

Simmias:: That is quite true.

Socrates:: And does not the purification consist, as we have said, in separating the soul from the body, as far as is possible, and in accustoming her to collect and rally herself together from the body on every side, and to dwell alone by herself as much as she can both now and hereafter, released from the bondage of the body?

Simmias:: Yes, certainly.

Socrates:: Is not what we call death a release and separation of the soul from the body?

Simmias:: Undoubtedly.

Socrates:: And the true philosopher, we hold, is alone in his constant desire to set his soul free? His study is simply the release and separation of the soul from the body, is it not?

Simmias:: Clearly.

Socrates:: Would it not be absurd then, as I began by saying, for a man to complain at death coming to him, when in his life he has been preparing himself to live as nearly in a state of death as he could? Would not that be absurd?

Simmias:: Yes, indeed.

Socrates:: In truth, then, Simmias, the true philosopher studies to die, and to him of all men is death least terrible. Now look at the matter in this way. In everything he is at enmity with his body, and he longs to possess his soul alone. Would it not then be most unreasonable, if he were to fear and complain when he has his desire, instead of rejoicing to go to the place where he hopes to gain the wisdom that he has passionately longed for all his life, and to be released from the company of his enemy? Many a man has willingly gone to the other world, when a human love, or wife or son has died, in the hope of seeing there those whom he longed for, and of being with them. and will a man who has a real passion for wisdom, and a firm hope of really finding wisdom in the other world and nowhere else, grieve at death, and not depart rejoicing? Nay, my friend, you ought not to think that, if he be truly a philosopher. He will be firmly convinced that there and nowhere else will he meet with wisdom in its purity. And if this be so, would it not, I repeat, be very unreasonable for such a man to fear death?

Simmias:: Yes, indeed, it would.

Socrates:: Does not this show clearly, that any man whom you see grieving at the approach of death, is after all no lover of wisdom, but a lover of his body? He is also, most likely, a lover either of wealth, or of honor, or, it may be, of both.

Simmias:: Yes, it is as you say.

Socrates:: Well then, Simmias, does not what is called courage belong especially to the philosopher?

Simmias:: Certainly I think so.

Socrates:: And does not temperance, the quality which even the world calls temperance, and which means to despise and control and govern the passions—does not temperance belong only to such men as most despise the body, and pass their lives in philosophy?

Simmias:: Of necessity.

Socrates:: For if you will consider the courage and the temperance of other men, you will find that they are strange things.

Simmias:: How so, Socrates?

Socrates:: You know, that all other men regard death as one of the great evils to which mankind are subject?

Simmias:: Indeed they do.

Socrates:: And when the brave men of them submit to death, do not they do so from a fear of still greater evils?

Simmias:: Yes.

Socrates:: Then all men but the philosopher are brave from fear and because they are afraid. Yet it is rather a strange thing for a man to be brave out of fear and cowardice.

Simmias:: Indeed it is.

Socrates:: And are not the orderly men of them in exactly the same case? Are not they temperate from a kind of intemperance? We should say that this cannot be. but in them this state of foolish temperance comes to that. They desire certain pleasures, and fear to lose them; and so they abstain from other pleasures because they are mastered by these. Intemperance is defined to mean being under the dominion of pleasure. yet they only master certain pleasures because they are mastered by others. But that is exactly what I said just now, that, in a way, they are made temperate from intemperance.

Simmias:: It seems to be so.

Socrates:: My dear Simmias, I fear that virtue is not really to be bought in this way, by bartering pleasure for pleasure, and pain for pain, and fear for fear, and the greater for the less, like coins. There is only one sterling coin for which all these things ought to be exchanged, and that is wisdom. All that is bought and sold for this and with this, whether courage, or temperance, or justice, is real. in one word true virtue cannot be without wisdom, and it matters nothing whether pleasure, and fear, and all other such things, are present or absent. But I think that the virtue which is composed of pleasures and fears bartered with one another, and severed from wisdom, is only a shadow of true virtue, and that it has no freedom, nor health, nor truth. True virtue in reality is a kind of purifying from all these things. and temperance, and justice, and courage, and wisdom itself, are the purification. And I fancy that the men who established our mysteries had a very real meaning. in truth they have been telling us in parables all the time that whosoever comes to Hades uninitiated and profane, will lie in the mire; while he that has been purified and initiated shall dwell with the gods. For ‘the thyrsus-bearers are many,’ as they say in the mysteries, ‘but the inspired few.’ And by these last, I believe, are meant only the true philosophers. And I in my life have striven as hard as I was able, and have left nothing undone that I might become one of them. Whether I have striven in the right way, and whether I have succeeded or not, I suppose that I shall learn in a little while, when I reach the other world, if it be the will of God.

That is my defense, Simmias and Cebes, to show that I have reason for not being angry or grieved at leaving you and my masters here. I believe that in the next world, no less than in this, I shall meet with good masters and friends, though the multitude are incredulous of it. And if I have been more successful with you in my defense than I was with my Athenian judges, it is well.

Phaedo:: When Socrates had finished. Cebes replied to him, and said;

Cebes:: I think that for the most part you are right, Socrates. But men are very incredulous of what you have said of the soul. They fear that she will no longer exist anywhere when she has left the body, but that she will be destroyed and perish on the very day of death. They think that the moment that she is released and leaves the body, she will be dissolved and vanish away like breath or smoke, and thenceforward cease to exist at all. If she were to exist somewhere as a whole, released from the evils which you enumerated just now, we should have good reason to hope, Socrates, that what you say is true. But it will need no little persuasion and assurance to show that the soul exists after death, and continues to possess any power or wisdom.

Socrates:: True, Cebes; but what are we to do? Do you wish to converse about these matters and see if what I say is probable?

Cebes:: I for one, should gladly hear your opinion about them.

Socrates:: I think, that no one who heard me now, even if he were a comic poet, would say that I am an idle talker about things which do not concern me. So, if you wish it, let us examine this question.

Let us consider whether or no the souls of men exist in the next world after death, thus. There is an ancient belief, which we remember, that on leaving this world they exist there, and that they return hither and are born again from the dead. But if it be true that the living are born from the dead, our souls must exist in the other world. otherwise they could not be born again. It will be a sufficient proof that this is so if we can really prove that the living are born only from the dead. But if this is not so, we shall have to find some other argument.

Cebes:: Exactly.

Socrates:: Well, the easiest way of answering the question will be to consider it not in relation to men only, but also in relation to all animals and plants, and in short to all things that are generated. Is it the case that everything, which has an opposite, is generated only from its opposite. By opposites I mean, the honorable and the base, the just and the unjust, and so on in a thousand other instances. Let us consider then whether it is necessary for everything that has an opposite to be generated only from its own opposite. For instance, when anything becomes greater, I suppose it must first have been less and then become greater?

Cebes:: Yes.

Socrates:: And if a thing becomes less, it must have been greater, and afterwards become less?

Cebes:: That is so.

Socrates:: And further, the weaker is generated from the stronger, and the swifter from the slower?

Cebes:: Certainly.

Socrates:: And the worse is generated from the better, and the more just from the more unjust?

Cebes:: Of course.

Socrates:: Then it is sufficiently clear to us that all things are generated in this way, opposites from opposites?

Cebes:: Quite so.

Socrates:: And in every pair of opposites, are there not two generations between the two members of the pair, from the one to the other, and then back again from the other to the first? Between the greater and the less are growth and diminution, and we say that the one grows and the other diminishes, do we not?

Cebes:: Yes.

Socrates:: And there is division and composition, and cold and hot, and so on. In fact is it not a universal law, even though we do hot always express it in so many words, that opposites are generated always from one another, and that there is a process of generation from one to the other?

Cebes:: It is.

Socrates:: Well, is there an opposite to life, in the same way that sleep is the opposite of being awake?

Cebes:: Certainly.

Socrates:: What is it?

Cebes:: Death.

Socrates:: Then if life and death are opposites, they are generated the one from the other. they are two, and between them there are two generations. Is it not so?

Cebes:: Of course.

Socrates:: Now, I will explain to you one of the two pairs of opposites of which I spoke just now, and its generations, and you shall explain to me the other. Sleep is the opposite of waking. From sleep is produced the state of waking. and from the state of waking is produced sleep. Their generations are, first, to fall asleep; secondly, to awake. Is that clear?

Cebes:: Yes, quite.

Socrates:: Now then, do you tell me about life and death. Death is the opposite of life, is it not?

Cebes:: It is.

Socrates:: And they are generated the one from the other?

Cebes:: Yes.

Socrates:: Then what is that which is generated from the living?

Cebes:: The dead.

Socrates:: And what is generated from the dead?

Cebes:: I must admit that it is the living.

Socrates:: Then living things and living men are generated from the dead, Cebes?

Cebes:: Clearly.

Socrates:: Then our souls exist in the other world?

Cebes:: Apparently.

Socrates:: Now of these two generations the one is certain? Death I suppose is certain enough, is it not?

Cebes:: Yes, quite.

Socrates:: What then shall we do? Shall we not assign an opposite generation to correspond? Or is nature imperfect here? Must we not assign some opposite generation to dying?

Cebes:: I think so, certainly.

Socrates:: And what must it be?

Cebes:: To come to life again.

Socrates:: And if there be such a thing as a return to life, it will be a generation from the dead to the living, will it not?

Cebes:: It will, certainly.

Socrates:: Then we are agreed on this point. namely, that the living are generated from the dead no less than the dead from the living. But we agreed that, if this be so, it is a sufficient proof that the souls of the dead must exist somewhere, whence they come into being again.

Cebes:: I think, Socrates, that that is the necessary result of our premises.

Socrates:: And I think, Cebes, that our conclusion has not been an unfair one. For if opposites did not always correspond with opposites as they are generated, moving as it were round in a circle, and there were generation in a straight line forward from one opposite only, with no turning or return to the other, then, you know, all things would come at length to have the same form and be in the same state, and would cease to be generated at all.

Cebes:: What do you mean?

Socrates:: It is not at all hard to understand my meaning. If, for example, the one opposite, to go to sleep, existed, without the corresponding opposite, to wake up, which is generated from the first, then all nature would at last make the tale of Endymion meaningless, and he would no longer be conspicuous; for everything else would be in the same state of sleep that he was in. And if all things were compounded together and never separated, the Chaos of Anaxagoras would soon be realized. Just in the same way, my dear Cebes, if all things, in which there is any life, were to die, and when they were dead were to remain in that form and not come to life again, would not the necessary result be that everything at last would be dead, and nothing alive? For if living things were generated from other sources than death, and were to die, the result is inevitable that all things would be consumed by death. Is it not so?

Cebes:: It is indeed, I think, Socrates; I think that what you say is perfectly true.

Socrates:: Yes, Cebes, I think it is certainly so. We are not misled into this conclusion. The dead do come to life again, and the living are generated from them, and the souls of the dead exist; and with the souls of the good it is well, and with the souls of the evil it is evil.

Cebes:: And besides, Socrates, if the doctrine which you are fond of stating, that our learning is only a process of recollection, be true, then I suppose we must have learnt at some former time what we recollect now. And that would be impossible unless our souls had existed somewhere before they came into this human form. So that is another reason for believing the soul immortal.

Simmias:: But, Cebes, what are the proofs of that? Recall them to me. I am not very clear about them at present.

Cebes:: One argument, and the strongest of all, is that if you question men about anything in the right way, they will answer you correctly of themselves. But they would not have been able to do that, unless they had had within themselves knowledge and right reason. Again, show them such things as geometrical diagrams, and the proof of the doctrine is complete.

Socrates:: And if that does not convince you, Simmias, look at the matter in another way and see if you agree then. You have doubts, I know, how what is called knowledge can be recollection.

Simmias:: Nay, I do not doubt. But I want to recollect the argument about recollection. What Cebes undertook to explain has nearly brought your theory back to me and convinced me. But I am none the less ready to hear how you undertake to explain it.

Socrates:: In this way. We are agreed, I suppose, that if a man remembers anything, he must have known it at some previous time.

Simmias:: Certainly.

Socrates:: And are we agreed that when knowledge comes in the following way, it is recollection? When a man has seen or heard anything, or has perceived it by some other sense, and then knows not that thing only, but has also in his mind an impression of some other thing, of which the knowledge is quite different, are we not right in saying that he remembers the thing of which he has an impression in his mind?

Simmias:: What do you mean?

Socrates:: I mean this. The knowledge of a man is different from the knowledge of a lyre, is it not?

Simmias:: Certainly.

Socrates:: And you know that when lovers see a lyre, or a garment, or anything that their favorites are wont to use, they have this feeling. They know the lyre, and in their mind they receive the image of the youth whose the lyre was. That is recollection. For instance, some one seeing Simmias often is reminded of Cebes; and there are endless examples of the same thing.

Simmias:: Indeed there are.

Socrates:: Is not that a kind of recollection; and more especially when a man has this feeling with reference to things which the lapse of time and inattention have made him forget?

Simmias:: Yes, certainly.

Socrates:: Well, is it possible to recollect a man on seeing the picture of a horse, or the picture of a lyre? or to recall Simmias on seeing a picture of Cebes?

Simmias:: Certainly.

Socrates:: And it is possible to recollect Simmias himself on seeing a picture of Simmias?

Simmias:: No doubt.

Socrates:: Then in all these cases there is recollection caused by similar objects, and also by dissimilar objects?

Simmias:: There is.

Socrates:: But when a man has a recollection caused by similar objects, will he not have a further feeling, and consider whether the likeness to that which he recollects is defective in any way or not?

Simmias:: He will.

Socrates:: Now see if this is true. Do we not believe in the existence of equality,—not the equality of pieces of wood, or of stones; but something beyond that,—equality in the abstract? Shall we say that there is such a thing, or not?

Simmias:: Yes indeed, most emphatically we will.

Socrates:: And do we know what this abstract equality is?

Simmias:: Certainly.

Socrates:: Where did we get the knowledge of it? Was it not from seeing the equal pieces of wood, and stones, and the like, which we were speaking of just now? Did we not form from them the idea of abstract equality, which is different from them? Or do you think that it is not different? Consider the question in this way. Do not equal pieces of wood and stones appear to us sometimes equal, and sometimes unequal, though in fact they remain the same all the time?

Simmias:: Certainly they do.

Socrates:: But did absolute equals ever seem to you to be unequal, or abstract equality to be inequality?

Simmias:: No, never, Socrates.

Socrates:: Then equal things, are not the same as abstract equality?

Simmias:: No, certainly not, Socrates.

Socrates:: Yet it was from these equal things, which are different from abstract equality, that you have conceived and got your knowledge of abstract equality?

Simmias:: That is quite true.

Socrates:: And that whether it is like them or unlike them?

Simmias:: Certainly.

Socrates:: But that makes no difference. As long as the sight of one thing brings another thing to your mind, there must be recollection, whether or no the two things are like.

Simmias:: That is so.

Socrates:: Well then, do the equal pieces of wood, and other similar equal things, of which we have been speaking, affect us at all in this way? Do they seem to us to be equal, in the way that abstract equality is equal? Do they come short of being like abstract equality, or not?

Simmias:: Indeed, they come very short of it.

Socrates:: Are we agreed about this? A man sees something and thinks to himself, 'This thing that I see aims at being like some other thing; but it comes short, and cannot be like that other thing; it is inferior:' must not the man who thinks that, have known at some previous time that other thing, which he says that it resembles, and to which it is inferior?

Simmias:: He must.

Socrates:: Well, have we ourselves had the same sort of feeling with reference to equal things, and to abstract equality?

Simmias:: Yes, certainly.

Socrates:: Then we must have had knowledge of equality before we first saw equal things, and perceived that they all strive to be like equality, and all come short of it.

Simmias:: That is so.

Socrates:: And we are agreed also that we have not, nor could we have, obtained the idea of equality except from sight or touch or some other sense. the same is true of all the senses.

Simmias:: Yes, Socrates, for the purposes of the argument that is so.

Socrates:: At any rate it is by the senses that we must perceive that all sensible objects strive to resemble absolute equality, and are inferior to it. Is not that so?

Simmias:: Yes.

Socrates:: Then before we began to see, and to hear, and to use the other senses, we must have received the knowledge of the nature of abstract and real equality; otherwise we could not have compared equal sensible objects with abstract equality, and seen that the former in all cases strive to be like the latter, though they are always inferior to it?

Simmias:: That is the necessary consequence of what we have been saying, Socrates.

Socrates:: Did we not see, and hear, and possess the other senses as soon as we were born?

Simmias:: Yes, certainly.

Socrates:: And we must have received the knowledge of abstract equality before we had these senses?

Simmias:: Yes.

Socrates:: Then, it seems, we must have received that knowledge before we were born?

Simmias:: It does.

Socrates:: Now if we received this knowledge before our birth, and were born with it, we knew, both before, and at the moment of our birth, not only the equal, and the greater, and the less, but also everything of the same kind, did we not? Our present reasoning does not refer only to equality. It refers just as much to absolute good, and absolute beauty, and absolute justice, and absolute holiness; in short, I repeat, to everything which we mark with the name of the real, in the questions and answers of our dialectic. So we must have received our knowledge of all realities before we were born.

Simmias:: That is so.

Socrates:: And we must always be born with this knowledge, and must always retain it throughout life, if we have not each time forgotten it, after having received it. For to know means to receive and retain knowledge, and not to have lost it. Do not we mean by forgetting the loss of knowledge, Simmias?

Simmias:: Yes, certainly, Socrates.

Socrates:: But, I suppose, if it be the case that we lost at birth the knowledge which we received before we were born, and then afterwards, by using our senses on the objects of sense, recovered the knowledge which we had previously possessed, then what we call learning is the recovering of knowledge which is already ours And are we not right in calling that recollection?

Simmias:: Certainly.

Socrates:: For we have found it possible to perceive a thing by sight, or hearing, or any other sense, and thence to form a notion of some other thing, like or unlike, which had been forgotten, but with which this thing was associated. And therefore, I say, one of two things must be true.

Either we are all born with this knowledge, and retain it all our life; or, after birth, those whom we say are learning are only recollecting, and our knowledge is recollection.

Simmias:: Yes indeed, that is undoubtedly true, Socrates.

Socrates:: Then which do you choose, Simmias? Are we born with knowledge, or do we recollect the things of which we have received knowledge before our birth?

Simmias:: I cannot say at present, Socrates.

Socrates:: Well, have you an opinion about this question? Can a man who knows give an account of what he knows, or not? What do you think about that?

Simmias:: Yes, of course he can, Socrates.

Socrates:: And do you think that every one can give an account of the ideas of which we have been speaking?

Simmias:: I wish I did, indeed, but I am very much afraid that by this time to-morrow there will no longer be any man living able to do so as it should be done.

Socrates:: Then, Simmias, you do not think that all men know these things?

Simmias:: Certainly not.

Socrates:: Then they recollect what they once learned?

Simmias:: Necessarily.

Socrates:: And when did our souls gain this knowledge? It cannot have been after we were born men.

Simmias:: No, certainly not.

Socrates:: Then it was before?

Simmias:: Yes.

Socrates:: Then, Simmias, our souls existed formerly, apart from our bodies, and possessed intelligence before they came into mans shape.

Simmias:: Unless we receive this knowledge at the moment of birth, Socrates. That time still remains.

Socrates:: Well, my friend. and at what other time do we lose it? We agreed just now that we are not born with it. do we lose it at the same moment that we gain it? or can you suggest any other time?

Simmias:: I cannot, Socrates. I did not see that I was talking nonsense.

Socrates:: Then, Simmias, is not this the truth? If, as we are for ever repeating, beauty, and good, and the other ideas really exist, and if we refer all the objects of sensible perception to these ideas which were formerly ours, and which we find to be ours still, and compare sensible objects with them, then, just as they exist, our souls must have existed before ever we were born. But if they do not exist, then our reasoning will have been thrown away. Is it so? If these ideas exist, does it not at once follow that our souls must have existed before we were born, and if they do not exist, then neither did our souls?

Simmias:: Admirably put, Socrates. I think that the necessity is the same for the one as for the other. The reasoning has reached a place of safety in the common proof of the existence of our souls before we were born, and of the existence of the ideas of which you spoke. Nothing is so evident to me as that beauty, and good, and the other ideas, which you spoke of just now, have a very real existence indeed. Your proof is quite sufficient for me.

Socrates:: But what of Cebes? I must convince Cebes too.

Simmias:: I think that he is satisfied, though he is the most skeptical of men in argument. But I think that he is perfectly convinced that our souls existed before we were born.

But I do not think myself, Socrates, that you have proved that the soul will continue to exist when we are dead. The common fear which Cebes spoke of, that she may be scattered to the winds at death, and that death may be the end of her existence, still stands in the way. Assuming that the soul is generated and comes together from some other elements, and exists before she ever enters the human body, why should she not come to an end and be destroyed, after she has entered into the body, when she is released from it?

Cebes:: You are right, Simmias. I think that only half the required proof has been given. It has been shown that our souls existed before we were born; but it must also be shown that our souls will continue to exist after we are dead, no less than that they existed before we were born, if the proof is to be complete.

Socrates:: That has been shown already, Simmias and Cebes, if you will combine this reasoning with our previous conclusion, that all life is generated from death. For if the soul exists in a previous state, and if when she comes into life and is born, she can only be born from death, and from a state of death, must she not exist after death too, since she has to be born again? So the point which you speak of has been already proved.

Still I think that you and Simmias would be glad to discuss this question further. Like children, you are afraid that the wind will really blow the soul away and disperse her when she leaves the body; especially if a man happens to die in a storm and not in a calm.

Phaedo:: Cebes laughed and said;

Cebes:: Try and convince us as if we were afraid, Socrates; or rather, do not think that we are afraid ourselves. Perhaps there is a child within us who has these fears. Let us try and persuade him not to be afraid of death, as if it were a bugbear.

Socrates:: You must charm him every day, until you have charmed him away.

Cebes:: And where shall we find a good charmer, Socrates, now that you are leaving us?

Socrates:: Hellas is a large country, Cebes, and good men may doubtless be found in it; and the nations of the Barbarians are many. You must search them all through for such a charmer, sparing neither money nor labor; for there is nothing on which you could spend money more profitably. And you must search for him among yourselves too, for you will hardly find a better charmer than yourselves.

Cebes:: That shall be done. But let us return to the point where we left off, if you will.

Socrates:: Yes, I will, why not?.

Cebes:: Very good.

Socrates:: Well, must we not ask ourselves this question? What kind of thing is liable to suffer dispersion, and for what kind of thing have we to fear dispersion? And then we must see whether the soul belongs to that kind or not, and be confident or afraid about our own souls accordingly.

Cebes:: That is true.

Socrates:: Now is it not the compound and composite which is naturally liable to be dissolved in the same way in which it was compounded? And is not what is uncompounded alone not liable to dissolution, if anything is not?

Cebes:: I think that that is so.

Socrates:: And what always remains in the same state and unchanging is most likely to be uncompounded, and what is always changing and never the same is most likely to be compounded, I suppose?

Cebes:: Yes, I think so.

Socrates:: Now let us return to what we were speaking of before in the discussion. Does the being, which in our dialectic we define as meaning absolute existence, remain always in exactly the same state, or does it change? Do absolute equality, absolute beauty, and every other absolute existence, admit of any change at all? or does absolute existence in each case, being essentially uniform, remain the same and unchanging, and never in any case admit of any sort or kind of change whatsoever?

Cebes:: It must remain the same and unchanging, Socrates.

Socrates:: And what of the many beautiful things, such as men, and horses, and garments, and the like, and of all which bears the names of the ideas, whether equal, or beautiful, or anything else? Do they remain the same, or is it exactly the opposite with them? In short, do they never remain the same at all, either in themselves or in their relations?

Cebes:: These things, never remain the same.

Socrates:: You can touch them, and see them, and perceive them with the other senses, while you can grasp the unchanging only by the reasoning of the intellect. These latter are invisible and not seen. Is it not so?

Cebes:: That is perfectly true.

Socrates:: Let us assume then, if you will, that there are two kinds of existence, the one visible, the other invisible.

Cebes:: Yes.

Socrates:: And the invisible is unchanging, while the visible is always changing.

Cebes:: Yes.

Socrates:: Are not we men made up of body and soul?

Cebes:: There is nothing else.

Socrates:: And which of these kinds of existence should we say that the body is most like, and most akin to?

Cebes:: The visible; that is quite obvious.

Socrates:: And the soul? Is that visible or invisible?

Cebes:: It is invisible to man, Socrates.

Socrates:: But we mean by visible and invisible, visible and invisible to man; do we not?

Cebes:: Yes; that is what we mean.

Socrates:: Then what do we say of the soul? Is it visible, or not visible?

Cebes:: It is not visible.

Socrates:: Then is it invisible?

Cebes:: Yes.

Socrates:: Then the soul is more like the invisible than the body; and the body is like the visible.

Cebes:: That is necessarily so, Socrates.

Socrates:: Have we not also said that, when the soul employs the body in any inquiry, and makes use of sight, or hearing, or any other sense,—for inquiry with the body means inquiry with the senses,—she is dragged away by it to the things which never remain the same, and wanders about blindly, and becomes confused and dizzy, like a drunken man, from dealing with things that are ever changing?

Cebes:: Certainly.

Socrates:: But when she investigates any question by herself, she goes away to the pure, and eternal, and immortal, and unchangeable, to which she is akin, and so she comes to be ever with it, as soon as she is by herself, and can be so. and then she rests from her wanderings, and dwells with it unchangingly, for she is dealing with what is unchanging? And is not this state of the soul called wisdom?

Cebes:: Indeed, Socrates, you speak well and truly.

Socrates:: Which kind of existence do you think from our former and our present arguments that the soul is more like and more akin to?

Cebes:: I think, Socrates, that after this inquiry the very dullest man would agree that the soul is infinitely more like the unchangeable than the changeable.

Socrates:: And the body?

Cebes:: That is like the changeable.

Socrates:: Consider the matter in yet another way. When the soul and the body are united, nature ordains the one to be a slave and to be ruled, and the other to be master and to rule. Tell me once again, which do you think is like the divine, and which is like the mortal? Do you not think that the divine naturally rules and has authority, and that the mortal naturally is ruled and is a slave?

Cebes:: I do.

Socrates:: Then which is the soul like?

Cebes:: That is quite plain, Socrates. The soul is like the divine, and the body is like the mortal.

Socrates:: Now tell me, Cebes; is the result of all that we have said that the soul is most like the divine, and the immortal, and the intelligible, and the uniform, and the indissoluble, and the unchangeable; while the body is most like the human, and the mortal, and the unintelligible, and the multiform, and the dissoluble, and the changeable? Have we any other argument to show that this is not so, my dear Cebes?

Cebes:: We have not.

Socrates:: Then if this is so, is it not the nature of the body to be dissolved quickly, and of the soul to be wholly or very nearly indissoluble?

Cebes:: Certainly.

Socrates:: You observe, that after a man is dead, the visible part of him, his body, which lies in the visible world, and which we call the corpse, which is subject to dissolution and decomposition, is not dissolved and decomposed at once? It remains as it was for a considerable time, and even for a long time, if a man dies with his body in good condition, and in the vigor of life. And when the body falls in and is embalmed, like the mummies of Egypt, it remains nearly entire for an immense time. And should it decay, yet some parts of it, such as the bones and muscles, may almost be said to be immortal. Is it not so?

Cebes:: Yes.

Socrates:: And shall we believe that the soul, which is invisible, and which goes hence to a place that is like herself, glorious, and pure, and invisible, to Hades, which is rightly called the unseen world, to dwell with the good and wise God, whither, if it be the will of God, my soul too must shortly go;—shall we believe that the soul, whose nature is so glorious, and pure, and invisible, is blown away by the winds and perishes as soon as she leaves the body, as the world says? Nay, dear Cebes and Simmias, it is not so. I will tell you what happens to a soul which is pure at her departure, and which in her life has had no intercourse that she could avoid with the body, and so draws after her, when she dies, no taint of the body, but has shunned it, and gathered herself into herself, for such has been her constant study;—and that only means that she has loved wisdom rightly, and has truly practiced how to die. Is not this the practice of death?

Cebes:: Yes, certainly.

Socrates:: Does not the soul, then, which is in that state, go away to the invisible that is like herself, and to the divine, and the immortal, and the wise, where she is released from error, and folly, and fear, and fierce passions, and all the other evils that fall to the lot of men, and is happy, and for the rest of time lives in very truth with the gods, as they say that the initiated do? Shall we affirm this, Cebes?

Cebes:: Yes, certainly.

Socrates:: But if she be defiled and impure when she leaves the body, from being ever with it, and serving it and loving it, and from being besotted by it, and by its desires and pleasures, so that she thinks nothing true, but what is bodily, and can be touched, and seen, and eaten, and drunk, and used for men's lusts; if she has learnt to hate, and tremble at, and fly from what is dark and invisible to the eye, and intelligible and apprehended by philosophy—do you think that a soul which is in that state will be pure and without alloy at her departure?

Cebes:: No, indeed.

Socrates:: She is penetrated, I suppose, by the corporeal, which the unceasing intercourse and company and care of the body has made a part of her nature.

Cebes:: Yes.

Socrates:: And, my dear friend, the corporeal must be burdensome, and heavy, and earthy, and visible; and it is by this that such a soul is weighed down and dragged back to the visible world, because she is afraid of the invisible world of Hades, and haunts, it is said, the graves and tombs, where shadowy forms of souls have been seen, which are the phantoms of souls which were impure at their release, and still cling to the visible; which is the reason why they are seen.

Cebes:: That is likely enough, Socrates.

Socrates:: That is likely, certainly, Cebes, and these are not the souls of the good, but of the evil, which are compelled to wander in such places as a punishment for the wicked lives that they have lived; and their wanderings continue until, from the desire for the corporeal that clings to them, they are again imprisoned in a body.

And, they are imprisoned, probably, in the bodies of animals with habits similar to the habits which were theirs in their lifetime.

Cebes:: What do you mean by that, Socrates?

Socrates:: I mean that men who have practiced unbridled gluttony, and wantonness, and drunkenness, probably enter the bodies of asses, and suchlike animals. Do you not think so?

Cebes:: Certainly that is very likely.

Socrates:: And those who have chosen injustice, and tyranny, and robbery, enter the bodies of wolves, and hawks, and kites. Where else should we say that such souls go?

Cebes:: No doubt, they go into such animals.

Socrates:: In short, it is quite plain, whither each soul goes; each enters an animal with habits like its own.

Cebes:: Certainly, that is so.

Socrates:: And of these, the happiest, who go to the best place, are those who have practiced the popular and social virtues which are called temperance and justice, and which come from habit and practice, without philosophy or reason?

Cebes:: And why are they the happiest?

Socrates:: Because it is probable that they return into a mild and social nature like their own, such as that of bees, or wasps, or ants; or, it may be, into the bodies of men, and that from them are made worthy citizens.

Cebes:: Very likely.

Socrates:: But none but the philosopher or the lover of knowledge, who is wholly pure when he goes hence, is permitted to go to the race of the gods; and therefore, my friends Simmias and Cebes, the true philosopher is temperate, and refrains from all the pleasures of the body, and does not give himself up to them. It is not squandering his substance and poverty that he fears, as the multitude and the lovers of wealth do; nor again does he dread the dishonor and disgrace of wickedness, like the lovers of power and honor. It is not for these reasons, that he is temperate.

Cebes:: No, it would be unseemly in him if he were, Socrates.

Socrates:: Indeed it would, and therefore all those who have any care for their souls, and who do not spend their lives in forming and molding their bodies, bid farewell to such persons, and do not walk in their ways, thinking that they know not whither they are going. They themselves turn and follow whithersoever philosophy leads them, for they believe that they ought not to resist philosophy, or its deliverance and purification.

Cebes:: How, Socrates?

Socrates:: I will tell you. The lovers of knowledge know that when philosophy receives the soul, she is fast bound in the body, and fastened to it. she is unable to contemplate what is, by herself, or except through the bars of her prison-house, the body; and she is wallowing in utter ignorance. And philosophy sees that the dreadful thing about the imprisonment is that it is caused by lust, and that the captive herself is an accomplice in her own captivity. The lovers of knowledge, I repeat, know that philosophy takes the soul when she is in this condition, and gently encourages her, and strives to release her from her captivity, showing her that the perceptions of the eye, and the ear, and the other senses, are full of deceit, and persuading her to stand aloof from the senses, and to use them only when she must, and exhorting her to rally and gather herself together, and to trust only to herself, and to the real existence which she of her own self apprehends. and to believe that nothing which is subject to change, and which she perceives by other faculties, has any truth, for such things are visible and sensible, while what she herself sees is apprehended by reason and invisible. The soul of the true philosopher thinks that it would be wrong to resist this deliverance from captivity, and therefore she holds aloof, so far as she can, from pleasure, and desire, and pain, and fear; for she reckons that when a man has vehement pleasure, or fear, or pain, or desire, he suffers from them, not merely the evils which might be expected, such as sickness, or some loss arising from the indulgence of his desires; he suffers what is the greatest and last of evils, and does not take it into account.

Cebes:: What do you mean, Socrates?

Socrates:: I mean that when the soul of any man feels vehement pleasure or pain, she is forced at the same time to think that the object, whatever it be, of these sensations is the most distinct and truest, when it is not. Such objects are chiefly visible ones, are they not?

Cebes:: They are.

Socrates:: And is it not in this state that the soul is most completely in bondage to the body?

Cebes:: How so?

Socrates:: Because every pleasure and pain has a kind of nail, and nails and pins her to the body, and gives her a bodily nature, making her think that whatever the body says is true. And so, from having the same fancies and the same pleasures as the body, she is obliged, I suppose, to come to have the same ways, and way of life. she must always be defiled with the body when she leaves it, and cannot be pure when she reaches the other world; and so she soon falls back into another body, and takes root in it, like seed that is sown. Therefore she loses all part in intercourse with the divine, and pure, and uniform.

Cebes:: That is very true, Socrates.

Socrates:: It is for these reasons then, Cebes, that the real lovers of knowledge are temperate and brave; and not for the worlds reasons. Or do you think so?

Cebes:: No, certainly I do not.

Socrates:: Assuredly not. The soul of a philosopher will consider that it is the office of philosophy to set her free. She will know that she must not give herself up once more to the bondage of pleasure and pain, from which philosophy is releasing her, and, like Penelope, do a work, only to undo it continually, weaving instead of unweaving her web. She gains for herself peace from these things, and follows reason and ever abides in it, contemplating what is true and divine and real, and fostered up by them. So she thinks that she should live in this life, and when she dies she believes that she will go to what is akin to and like herself, and be released from human ills. A soul, Simmias and Cebes, that has been so nurtured, and so trained, will never fear lest she should be torn in pieces at her departure from the body, and blown away by the winds, and vanish, and utterly cease to exist.

Phaedo:: At these words there was a long silence. Socrates himself seemed to be absorbed in his argument, and so were most of us. Cebes and Simmias conversed for a little by themselves When Socrates observed them, he said.

Socrates:: What? Do you think that our reasoning is incomplete? It still offers many points of doubt and attack, if it is to be examined thoroughly. If you are discussing another question, I have nothing to say. But if you have any difficulty about this one, do not hesitate to tell me what it is, and, if you are of opinion that the argument should be stated in a better way, explain your views yourselves. and take me along with you, if you think that you will be more successful in my company.

Simmias:: Well, Socrates, I will tell you the truth. Each of us has a difficulty, and each has been pushing on the other, and urging him to ask you about it. We were anxious to hear what you have to say; but we were reluctant to trouble you, for we were afraid that it might be unpleasant to you to be asked questions now.

Phaedo:: Socrates smiled at this answer, and said;

Socrates:: Dear me! Simmias; I shall find it hard to convince other people that I do not consider my fate a misfortune, when I cannot convince even you of it, and you are afraid that I am more peevish now than I used to be. You seem to think me inferior in prophetic power to the swans, which, when they find that they have to die, sing more loudly than they ever sang before, for joy that they are about to depart into the presence of God, whose servants they are. The fear which men have of death themselves makes them speak falsely of the swans, and they say that the swan is wailing at its death, and that it sings loud for grief. They forget that no bird sings when it is hungry, or cold, or in any pain; not even the nightingale, nor the swallow, nor the hoopoe, which, they assert, wail and sing for grief. But I think that neither these birds nor the swan sing for grief. I believe that they have a prophetic power and foreknowledge of the good things in the next world, for they are Apollo's birds. and so they sing and rejoice on the day of their death, more than in all their life. And I believe that I myself am a fellow slave with the swans, and consecrated to the service of the same God, and that I have prophetic power from my master no less than they; and that I am not more despondent than they are at leaving this life. So, as far as vexing me goes, you may talk to me and ask questions as you please, as long as the Eleven of the Athenians will let you.

Simmias:: Good; I will tell you my difficulty, and Cebes will tell you why he is dissatisfied with your statement. I think, Socrates, and I daresay you think so too, that it is very difficult, and perhaps impossible, to obtain clear knowledge about these matters in this life. Yet I should hold him to be a very poor creature who did not test what is said about them in every way, and persevere until he had examined the question from every side, and could do no more. It is our duty to do one of two things. We must learn, or we must discover for ourselves, the truth of these matters; or, if that be impossible, we must take the best and most irrefragable of human doctrines, and embarking on that, as on a raft, risk the voyage of life, unless a stronger vessel, some divine word, could be found, on which we might take our journey more safely and more securely. And now, after what you have said, I shall not be ashamed to put a question to you. and then I shall not have to blame myself hereafter for not having said now what I think. Cebes and I have been considering your argument; and we think that it is hardly sufficient.

Socrates:: I daresay you are right, my friend. But tell me, where is it insufficient?

Simmias:: To me it is insufficient, because the very same argument might be used of a harmony, and a lyre, and its strings. It might be said that the harmony in a tuned lyre is something unseen, and incorporeal, and perfectly beautiful, and divine, while the lyre and its strings are corporeal, and with the nature of bodies, and compounded, and earthly, and akin to the mortal. Now suppose that, when the lyre is broken and the strings are cut or snapped, a man were to press the same argument that you have used, and were to say that the harmony cannot have perished, and that it must still exist. for it cannot possibly be that the lyre and the strings, with their mortal nature, continue to exist, though those strings have been broken, while the harmony, which is of the same nature as the divine and the immortal, and akin to them, has perished, and perished before the mortal lyre. He would say that the harmony itself must still exist somewhere, and that the wood and the strings will rot away before anything happens to it. And I think, Socrates, that you too must be aware that many of us believe the soul to be most probably a mixture and harmony of the elements by which our body is, as it were, strung and held together, such as heat and cold, and dry and wet, and the like, when they are mixed together well and in due proportion. Now if the soul is a harmony, it is clear that, when the body is relaxed out of proportion, or over-strung by disease or other evils, the soul, though most divine, must perish at once, like other harmonies of sound and of all works of art, while what remains of each body must remain for a long time, until it be burnt or rotted away. What then shall we say to a man who asserts that the soul, being a mixture of the elements of the body, perishes first, at what is called death?

Phaedo:: Socrates looked keenly at us, as he often used to do, and smiled.

Socrates:: Simmias objection is a fair one. If any of you is readier than I am, why does he not answer? For Simmias looks like a formidable assailant. But before we answer him, I think that we had better hear what fault Cebes has to find with my reasoning, and so gain time to consider our reply. And then, when we have heard them both, we must either give in to them, if they seem to harmonies, or, if they do not, we must proceed to argue in defense of our reasoning. Come, Cebes, what is it that troubles you, and makes you doubt?

Cebes:: I will tell you. I think that the argument is just where it was, and still open to our former objection. You have shown very cleverly, and, if it is not arrogant to say so, quite conclusively, that our souls existed before they entered the human form. I don't retract my admission on that point. But I am not convinced that they will continue to exist after we are dead. I do not agree with Simmias objection, that the soul is not stronger and more lasting than the body. I think that it is very much superior in those respects. 'Well, then,' the argument might reply, 'do you still doubt, when you see that the weaker part of a man continues to exist after his death? Do you not think that the more lasting part of him must necessarily be preserved for as long?' See, therefore, if there is anything in what I say; for I think that I, like Simmias, shall best express my meaning in a figure. It seems to me that a man might use an argument similar to yours, to prove that a weaver, who had died in old age, had not in fact perished, but was still alive somewhere; on the ground that the garment, which the weaver had woven for himself and used to wear, had not perished or been destroyed. And if any one were incredulous, he might ask whether a human being, or a garment constantly in use and wear, lasts the longest; and on being told that a human being lasts much the longest, he might think that he had shown beyond all doubt that the man was safe, because what lasts a shorter time than the man had not perished. But that, I suppose, is not so, Simmias; for you too must examine what I say. Every one would understand that such an argument was simple nonsense. This weaver wove himself many such garments and wore them out; he outlived them all but the last, but he perished before that one. Yet a man is in no wise inferior to his cloak, or weaker than it, on that account. And I think that the souls relation to the body may be expressed in a similar figure. Why should not a man very reasonably say in just the same way that the soul lasts a long time, while the body is weaker and lasts a shorter time? But, he might go on, each soul wears out many bodies, especially if she lives for many years. For if the body is in a state of flux and decay in the mans lifetime, and the soul is ever repairing the worn-out part, it will surely follow that the soul, on perishing, will be clothed in her last robe, and perish before that alone. But when the soul has perished, then the body will show its weakness and quickly rot away. So as yet we have no right to be confident, on the strength of this argument, that our souls continue to exist after we are dead. And a man might concede even more than this to an opponent who used your argument; he might admit not only that our souls existed in the period before we were born, but also that there is no reason why some of them should not continue to exist in the future, and often come into being, and die again, after we are dead; for the soul is strong enough by nature to endure coming into being many times. He might grant that, without conceding that she suffers no harm in all these births, or that she is not at last wholly destroyed at one of the deaths; and he might say that no man knows when this death and dissolution of the body, which brings destruction to the soul, will be, for it is impossible for any man to find out that. But if this is true, a mans confidence about death must be an irrational confidence, unless he can prove that the soul is wholly indestructible and immortal. Otherwise every one who is dying must fear that his soul will perish utterly this time in her separation from the body.

Phaedo:: It made us all very uncomfortable to listen to them, as we afterwards said to each other. We had been fully convinced by the previous argument; and now they seemed to overturn our conviction, and to make us distrust all the arguments that were to come, as well as the preceding ones, and to doubt if our judgment was worth anything, or even if certainty could be attained at all.

Echecrates:: By the gods, Phaedo, I can understand your feelings very well. I myself felt inclined while you were speaking to ask myself, 'Then what reasoning are we to believe in future? That of Socrates was quite convincing, and now it has fallen into discredit.' For the doctrine that our soul is a harmony has always taken a wonderful hold of me, and your mentioning it reminded me that I myself had held it. And now I must begin again and find some other reasoning which shall convince me that a mans soul does not die with him at his death. So tell me, I pray you, how did Socrates pursue the argument? Did he show any signs of uneasiness, as you say that you did, or did he come to the defense of his argument calmly? And did he defend it satisfactorily or no? Tell me the whole story as exactly as you can.

Phaedo:: I have often, Echecrates, wondered at Socrates; but I never admired him more than I admired him then. There was nothing very strange in his having an answer. what I chiefly wondered at was, first, the kindness and good-nature and respect with which he listened to the young men's objections; and, secondly, the quickness with which he perceived their effect upon us; and, lastly, how well he healed our wounds, and rallied us as if we were beaten and flying troops, and encouraged us to follow him, and to examine the reasoning with him.

Echecrates:: How?

Phaedo:: I will tell you. I was sitting by the bed on a stool at his right hand, and his seat was a good deal higher than mine. He stroked my head and gathered up the hair on my neck in his hand—you know he used often to play with my hair—and said;

Socrates:: To-morrow, Phaedo, I daresay you will cut off these beautiful locks.

Phaedo:: I suppose so, Socrates.

Socrates:: You will not, if you take my advice.

Phaedo:: Why not?

Socrates:: You and I will cut off our hair to-day, if our argument be dead indeed, and we cannot bring it to life again. And I, if I were you, and the argument were to escape me, would swear an oath, as the Argives did, not to wear my hair long again, until I had renewed the fight and conquered the argument of Simmias and Cebes.

Phaedo:: But Heracles himself, they say, is not a match for two.

Socrates:: Then summon me to aid you, as your Iolaus, while there is still light.

Phaedo:: Then I summon you, not as Heracles summoned Iolaus, but as Iolaus might summon Heracles.

Socrates:: It will be the same. But first let us take care not to make a mistake.

Phaedo:: What mistake?

Socrates:: The mistake of becoming misologists, or haters of reasoning, as men become misanthropists for to hate reasoning is the greatest evil that can happen to us. Misology and misanthropy both come from similar causes. The latter arises out of the implicit and irrational confidence which is placed in a man, who is believed by his friend to be thoroughly true and sincere and trustworthy, and who is soon afterwards discovered to be a bad man and untrustworthy. This happens again and again; and when a man has had this experience many times, particularly at the hands of those whom he has believed to be his nearest and dearest friends, and he has quarreled with many of them, he ends by hating all men, and thinking that there is no good at all in any one. Have you not seen this happen?

Phaedo:: Yes, certainly.

Socrates:: Is it not discreditable? Is it not clear that such a man tries to deal with men without understanding human nature? Had he understood it he would have known that, in fact, good men and bad men are very few indeed, and that the majority of men are neither one nor the other.

Phaedo:: What do you mean?

Socrates:: Just what is true of extremely large and extremely small things. What is rarer than to find a man, or a dog, or anything else which is either extremely large or extremely small? Or again, what is rarer than to find a man who is extremely swift or slow, or extremely base or honorable, or extremely black or white? Have you not noticed that in all these cases the extremes are rare and few, and that the average specimens are abundant and many?

Phaedo:: Yes, certainly.

Socrates:: And in the same way, if there were a competition in wickedness, don’t you think that the leading sinners would be found to be very few?

Phaedo:: That is likely enough.

Socrates:: Yes, it is. But this is not the point in which arguments are like men. it was you who led me on to discuss this point. The analogy is this. When a man believes some reasoning to be true, though he does not understand the art of reasoning, and then soon afterwards, rightly or wrongly, comes to think that it is false, and this happens to him time after time, he ends by disbelieving in reasoning altogether. You know that persons who spend their time in disputation, come at last to think themselves the wisest of men, and to imagine that they alone have discovered that there is no soundness or certainty anywhere, either in reasoning or in things; and that all existence is in a state of perpetual flux, like the currents of the Euripus, and never remains still for a moment.

Phaedo:: Yes, that is certainly true.

Socrates:: And, Phaedo, if there be a system of reasoning which is true, and certain, and which our minds can grasp, it would be very lamentable that a man, who has met with some of these arguments which at one time seem true and at another false, should at last, in the bitterness of his heart gladly put all the blame on the reasoning, instead of on himself and his own unskillfulness, and spend the rest of his life in hating and reviling reasoning, and lose the truth and knowledge of reality.

Phaedo:: Indeed, that would be very lamentable.

Socrates:: First then, let us be careful not to admit into our souls the notion that all reasoning is very likely unsound. let us rather think that we ourselves are not yet sound. And we must strive earnestly like men to become sound, you, my friends, for the sake of all your future life; and I, because of my death. For I am afraid that at present I can hardly look at death like a philosopher; I am in a contentious mood, like the uneducated persons who never give a thought to the truth of the question about which they are disputing, but are only anxious to persuade their audience that they themselves are right. And I think that to-day I shall differ from them only in one thing. I shall not be anxious to persuade my audience that I am right, except by the way; but I shall be very anxious indeed to persuade myself. For see, my dear friend, how selfish my reasoning is. If what I say is true, it is well to believe it. But if there is nothing after death, at any rate I shall pain my friends less by my lamentations in the interval before I die. And this ignorance will not last for ever that would have been an evil—it will soon come to an end. So prepared, Simmias and

Cebes, I come to the argument. And you, if you take my advice, will think not of Socrates, but of the truth; and you will agree with me, if you think that what I say is true. otherwise you will oppose me with every argument that you have. and be careful that, in my anxiety to convince you, I do not deceive both you and myself, and go away, leaving my sting behind me, like a bee.

Now let us proceed. And first, if you find I have forgotten your arguments, repeat them. Simmias, I think, has fears and misgivings that the soul, being of the nature of a harmony, may perish before the body, though she is more divine and nobler than the body.

Cebes, if I am not mistaken, conceded that the soul is more enduring than the body; but he said that no one could tell whether the soul, after wearing out many bodies many times, did not herself perish on leaving her last body, and whether death be not precisely this, the destruction of the soul; for the destruction of the body is unceasing. Is there anything else, Simmias and Cebes, which we have to examine?

Phaedo:: They both agreed that these were the questions.

Socrates:: Do you reject all our previous conclusions, or only some of them?

Phaedo:: Only some of them.

Socrates:: Well, what do you say of our doctrine that knowledge is recollection, and that therefore our souls must necessarily have existed somewhere else, before they were imprisoned in our bodies?

Cebes:: I, was convinced by it at the time in a wonderful way. and now there is no doctrine to which I adhere more firmly.

Simmias:: And I am of that mind too; and I shall be very much surprised if I ever change it.

Socrates:: But, my Theban friend, you will have to change it, if this opinion of yours, that a harmony is a composite thing, and that the soul is a harmony composed of the elements of the body at the right tension, is to stand. You will hardly allow yourself to assert that the harmony was in existence before the things from which it was to be composed? Will you do that?

Simmias:: Certainly not, Socrates.

Socrates:: But you see that that is what your assertion comes to when you say that the soul existed before she came into the form and body of man, and yet that she is composed of elements which did not yet exist? Your harmony is not like what you compare it to. the lyre and the strings and the sounds, as yet untuned, come into existence first. and the harmony is composed last of all, and perishes first. How will this belief of yours accord with the other?

Simmias:: It will not.

Socrates:: And yet, an argument about harmony is hardly the place for a discord.

Simmias:: No, indeed.

Socrates:: Well, there is a discord in your argument. You must choose which doctrine you will retain, that knowledge is recollection, or that the soul is a harmony.

Simmias:: The former, Socrates, certainly. The latter has never been demonstrated to me; it rests only on probable and plausible grounds, which make it a popular opinion. I know that doctrines which ground their proofs on probabilities are impostors, and that they are very apt to mislead, both in geometry and everything else, if one is not on ones guard against them. But the doctrine about recollection and knowledge rests upon a foundation which claims belief. We agreed that the soul exists before she ever enters the body, as surely as the essence itself which has the name of real being, exists. And I am persuaded that I believe in this essence rightly and on sufficient evidence. It follows therefore, I suppose, that I cannot allow myself or any one else to say that the soul is a harmony.

Socrates:: And, consider the question in another way, Simmias. Do you think that a harmony or any other composition can exist in a state other than the state of the elements of which it is composed?

Simmias:: Certainly not.

Socrates:: Nor, I suppose, can it do or suffer anything beyond what they do and suffer?

Phaedo:: He assented.

Socrates:: A harmony therefore cannot lead the elements of which it is composed; it must follow them?

Phaedo:: He agreed.

Socrates:: And much less can it be moved, or make a sound, or do anything else, in opposition to its parts.

Simmias:: Much less, indeed.

Socrates:: Well; is not every harmony by nature a harmony according as it is adjusted?

Simmias:: I don’t understand you.

Socrates:: If it is tuned more, and to a greater extent, supposing that to be possible, will it not be more a harmony, and to a greater extent, while if it is tuned less, and to a smaller extent, will it not be less a harmony, and to a smaller extent?

Simmias:: Certainly.

Socrates:: Well, is this true of the soul? Can one soul be more a soul, and to a greater extent, or less a soul, and to a smaller extent, than another, even in the smallest degree?

Simmias:: Certainly not.

Socrates:: Well then, please tell me this; is not one soul said to have intelligence and virtue and to be good, while another is said to have folly and vice and to be bad? And is it not true?

Simmias:: Yes, certainly.

Socrates:: What then will those, who assert that the soul is a harmony, say that the virtue and the vice which are in our souls are? Another harmony and another discord? Will they say that the good soul is in tune, and that, herself a harmony, she has within herself another harmony, and that the bad soul is out of tune herself, and has no other harmony within her?

Simmias:: I, cannot tell. But it is clear that they would have to say something of the kind.

Socrates:: But it has been conceded, that one soul is never more or less a soul than another. In other words, we have agreed that one harmony is never more, or to a greater extent, or less, or to a smaller extent a harmony than another. Is it not so?

Simmias:: Yes, certainly.

Socrates:: And the harmony which is neither more nor less a harmony, is not more or less tuned. Is that so?

Simmias:: Yes.

Socrates:: And has that which is neither more nor less tuned, a greater, or a less, or an equal share of harmony?

Simmias:: An equal share.

Socrates:: Then, since one soul is never more nor less a soul than another, it has not been more or less tuned either?

Simmias:: True.

Socrates:: Therefore it can have no greater share of harmony or of discord?

Simmias:: Certainly not.

Socrates:: And, therefore, can one soul contain more vice or virtue than another, if vice be discord, and virtue harmony?

Simmias:: By no means.

Socrates:: Or rather, Simmias, to speak quite accurately, I suppose that there will be no vice in any soul, if the soul is a harmony. I take it, there can never be any discord in a harmony, which is a perfect harmony.

Simmias:: Certainly not.

Socrates:: Neither can a soul, if it be a perfect soul, have any vice in it?

Simmias:: No; that follows necessarily from what has been said.

Socrates:: Then the result of this reasoning is that all the souls of all living creatures will be equally good, if the nature of all souls is to be equally souls.

Simmias:: Yes, I think so, Socrates.

Socrates:: And do you think that this is true, and that this would have been the fate of our argument, if the hypothesis that the soul is a harmony had been correct?

Simmias:: No, certainly not.

Socrates:: Well, of all the parts of a man, should you not say that it was the soul, and particularly the wise soul, which rules?

Simmias:: I should.

Socrates:: Does she yield to the passions of the body, or does she oppose them? I mean this. When the body is hot and thirsty, does not the soul drag it away and prevent it from drinking, and when it is hungry does she not prevent it from eating? And do we not see her opposing the passions of the body in a thousand other ways?

Simmias:: Yes, certainly.

Socrates:: But we have also agreed that, if she is a harmony, she can never give a sound contrary to the tensions, and relaxations, and vibrations, and other changes of the elements of which she is composed; that she must follow them, and can never lead them?

Simmias:: Yes, we certainly have.

Socrates:: Well, now do we not find the soul acting in just the opposite way, and leading all the elements of which she is said to consist, and opposing them in almost everything all through life; and lording it over them in every way, and chastising them, sometimes severely, and with a painful discipline, such as gymnastic and medicine, and sometimes lightly; sometimes threatening and sometimes admonishing the desires and passions and fears, as though she were speaking to something other than herself, as Homer makes Odysseus do in the Odyssey, where he says that

> "He smote upon his breast, and chid his heart.
> 'Endure, my heart, even worse hast thou endured.'"

Do you think that when Homer wrote that, he supposed the soul to be a harmony, and capable of being led by the passions of the body, and not of a nature to lead them, and be their lord, being herself far too divine a thing to be like a harmony?

Simmias:: Certainly, Socrates, I think not.

Socrates:: Then, my excellent friend, it is quite wrong to say that the soul is a harmony. For then, you see, we should not be in agreement either with the divine poet Homer, or with ourselves.

Simmias:: That is true.

Socrates:: Very good; I think that we have contrived to appease our Theban Harmonia with tolerable success. But how about Cadmus, Cebes? How shall we appease him, and with what reasoning?

Cebes:: I daresay that you will find out how to do it. At all events you have argued that the soul is not a harmony in a way which surprised me very much. When Simmias was stating his objection, I wondered how any one could possibly dispose of his argument. and so I was very much surprised to see it fall before the very first onset of yours. I should not wonder if the same fate awaited the argument of Cadmus.

Socrates:: My good friend, do not be over confident, or some evil eye will overturn the argument that is to come. However, that we will leave to God; let us, like Homers heroes, 'advancing boldly,' see if there is anything in what you say. The sum of what you seek is this. You require me to prove to you that the soul is indestructible and immortal; for if it be not so, you think that the confidence of a philosopher, who is confident in death, and who believes that when he is dead he will fare infinitely better in the other world than if he had lived a different sort of life in this world, is a foolish and idle confidence. You say that to show that the soul is strong and godlike, and that she existed before we were born men, is not enough; for that does not necessarily prove her immortality, but only that she lasts a long time, and has existed an enormous while, and has known and done many things in a previous state. Yet she is not any the more immortal for that. her very entrance into mans body was, like a disease, the beginning of her destruction. And, you say, she passes this life in misery, and at last perishes in what we call death. You think that it makes no difference at all to the fears of each one of us, whether she enters the body once or many times. for every one but a fool must fear death, if he does not know and cannot prove that she is immortal. That, I think, Cebes, is the substance of your objection. I state it again and again on purpose, that nothing may escape us, and that you may add to it or take away from it anything that you wish.

Cebes:: No, that is my meaning. I don't want to add or to take away anything at present.

Phaedo:: Socrates paused for some time and thought. Then he said;

Socrates:: It is not an easy question that you are raising, Cebes. We must examine fully the whole subject of the causes of generation and decay. If you like, I will give you my own experiences, and if you think that you can make use of anything that I say, you may employ it to satisfy your misgivings.

Cebes:: Indeed, I should like to hear your experiences.

Socrates:: Listen, then, and I will tell you, Cebes. When I was a young man, I had a passionate desire for the wisdom which is called Physical Science. I thought it a splendid thing to know the causes of everything; why a thing comes into being, and why it perishes, and why it exists. I was always worrying myself with such questions as, Do living creatures take a definite form, as some persons say, from the fermentation of heat and cold? Is it the blood, or the air, or fire by which we think? Or is it none of these, but the brain which gives the senses of hearing and sight and smell, and do memory and opinion come from these, and knowledge from memory and opinion when in a state of quiescence? Again, I used to examine the destruction of these things, and the changes of the heaven and the earth, until at last I concluded that I was wholly and absolutely unfitted for these studies. I will prove that to you conclusively. I was so completely blinded by these studies, that I forgot what I had formerly seemed to myself and to others to know quite well. I unlearnt all that I had been used to think that I understood; even the cause of mans growth. Formerly I had thought it evident on the face of it that the cause of growth was eating and drinking; and that, when from food flesh is added to flesh, and bone to bone, and in the same way to the other parts of the body their proper elements, then by degrees the small bulk grows to be large, and so the boy becomes a man. Don’t you think that my belief was reasonable?

Cebes:: I do.

Socrates:: Then here is another experience for you. I used to feel no doubt, when I saw a tall man standing by a short one, that the tall man was, it might be, a head the taller, or, in the same way, that one horse was bigger than another. I was even clearer that ten was more than eight by the addition of two, and that a thing two cubits long was longer by half its length than a thing one cubit long.

Cebes:: And what do you think now?

Socrates:: I think that I am very far from believing that I know the cause of any of these things. Why, when you add one to one, I am not sure either that the one to which one is added has become two, or that the one added and the one to which it is added become, by the addition, two. I cannot understand how, when they are brought together, this union, or placing of one by the other, should be the cause of their becoming two, whereas, when they were separated, each of them was one, and they were not two. Nor, again, if you divide one into two, can I convince myself that this division is the cause of one becoming two. for then a thing becomes two from exactly the opposite cause. In the former case it was because two units were brought together, and the one was added to the other; while now it is because they are separated, and the one divided from the other. Nor, again, can I persuade myself that I know how one is generated; in short, this method does not show me the cause of the generation or destruction or existence of anything. I have in my own mind a confused idea of another method, but I cannot admit this one for a moment.

But one day I listened to a man who said that he was reading from a book of Anaxagoras, which affirmed that it is Mind which orders and is the cause of all things. I was delighted with this theory; it seemed to me to be right that Mind should be the cause of all things, and I thought to myself, If this is so, then Mind will order and arrange each thing in the best possible way. So if we wish to discover the cause of the generation or destruction or existence of a thing, we must discover how it is best for that thing to exist, or to act, or to be acted on. Man therefore has only to consider what is best and fittest for himself, or for other things, and then it follows necessarily that he will know what is bad; for both are included in the same science. These reflections made me very happy. I thought that I had found in Anaxagoras a teacher of the cause of existence after my own heart, and I expected that he would tell me first whether the earth is flat or round, and that he would then go on to explain to me the cause and the necessity, and tell me what is best, and that it is best for the earth to be of that shape. If he said that the earth was in the centre of the universe, I thought that he would explain that it was best for it to be there; and I was prepared not to require any other kind of cause, if he made this clear to me. In the same way I was prepared to ask questions about the sun, and the moon, and the stars, about their relative speeds, and revolutions, and changes; and to hear why it is best for each of them to act and be acted on as they are acted on. I never thought that, when he said that things are ordered by Mind, he would introduce any reason for their being as they are, except that they are best so. I thought that he would assign a cause to each thing, and a cause to the universe, and then would go on to explain to me what was best for each thing, and what was the common good of all. I would not have sold my hopes for a great deal. I seized the books very eagerly, and read them as fast as I could, in order that I might know what is best and what is worse.

All my splendid hopes were dashed to the ground, my friend, for as I went on reading I found that the writer made no use of Mind at all, and that he assigned no causes for the order of things. His causes were air, and ether, and water, and many other strange things. I thought that he was exactly like a man who should begin by saying that Socrates does all that he does by Mind, and who, when he tried to give a reason for each of my actions, should say, first, that I am sitting here now, because my body is composed of bones and muscles, and that the bones are hard and separated by joints, while the muscles can be tightened and loosened, and, together with the flesh, and the skin which holds them together, cover the bones; and that therefore, when the bones are raised in their sockets, the relaxation and contraction of the muscles makes it possible for me now to bend my limbs, and that that is the cause of my sitting here with my legs bent. And in the same way he would go on to explain why I am talking to you. he would assign voice, and air, and hearing, and a thousand other things as causes; but he would quite forget to mention the real cause, which is that since the Athenians thought it right to condemn me, I have thought it right and just to sit here and to submit to whatever sentence they may think fit to impose. For, by the dog of Egypt, I think that these muscles and bones would long ago have been in Megara or Boeotia, prompted by their opinion of what is best, if I had not thought it better and more honorable to submit to whatever penalty the state inflicts, rather than escape by flight. But to call these things causes is too absurd! If it were said that without bones and muscles and the other parts of my body I could not have carried my resolutions into effect, that would be true. But to say that they are the cause of what I do, and that in this way

I am acting by Mind, and not from choice of what is best, would be a very loose and careless way of talking. It simply means that a man cannot distinguish the real cause from that without which the cause cannot be the cause, and this it is, I think, which the multitude, groping about in the dark, speak of as the cause, giving it a name which does not belong to it. And so one man surrounds the earth with a vortex, and makes the heavens sustain it. Another represents the earth as a flat kneading-trough, and supports it on a basis of air. But they never think of looking for a power which is involved in these things being disposed as it is best for them to be, nor do they think that such a power has any divine strength. they expect to find an Atlas who is stronger and more immortal and abler to hold the world together, and they never for a moment imagine that it is the binding force of good which really binds and holds things together. I would most gladly learn the nature of that kind of cause from any man; but I wholly failed either to discover it myself, or to learn it from any one else. However, I had a second string to my bow, and perhaps, Cebes, you would like me to describe to you how I proceeded in my search for the cause.

Cebes:: I should like to hear very much indeed.

Socrates:: When I had given up inquiring into real existence, I thought that I must take care that I did not suffer as people do who look at the sun during an eclipse. For they are apt to lose their eyesight, unless they look at the suns reflection in water or some such medium. That danger occurred to me. I was afraid that my soul might be completely blinded if I looked at things with my eyes, and tried to grasp them with my senses. So I thought that I must have recourse to conceptions, and examine the truth of existence by means of them. Perhaps my illustration is not quite accurate. I am scarcely prepared to admit that he who examines existence through conceptions is dealing with mere reflections, any more than he who examines it as manifested in sensible objects. However I began in this way. I assumed in each case whatever principle I judged to be strongest; and then I held as true whatever seemed to agree with it, whether in the case of the cause or of anything else, and as untrue, whatever seemed not to agree with it. I should like to explain my meaning more clearly. I don't think you understand me yet.

Cebes:: Indeed I do not very well.

Socrates:: I mean nothing new; only what I have repeated over and over again, both in our conversation to-day and at other times. I am going to try to explain to you the kind of cause at which I have worked, and I will go back to what we have so often spoken of, and begin with the assumption that there exists an absolute beauty, and an absolute good, and an absolute greatness, and so on. If you grant me this, and agree that they exist, I hope to be able to show you what my cause is, and to discover that the soul is immortal.

Cebes:: You may assume that I grant it you; go on with your proof.

Socrates:: Then do you agree with me in what follows? It appears to me that if anything besides absolute beauty is beautiful, it is so simply because it partakes of absolute beauty, and I say the same of all phenomena. Do you allow that kind of cause?

Cebes:: I do.

Socrates:: Well then, I no longer recognize, nor can I understand, these other wise causes. if I am told that anything is beautiful because it has a rich color, or a goodly form, or the like, I pay no attention, for such language only confuses me; and in a simple and plain, and perhaps a foolish way, I hold to the doctrine that the thing is only made beautiful by the presence or communication, or whatever you please to call it, of absolute beauty I do not wish to insist on the nature of the communication, but what I am sure of is, that it is absolute beauty which makes all beautiful things beautiful. This seems to me to be the safest answer that I can give myself or others; I believe that I shall never fall if I hold to this; it is a safe answer to make to myself or any one else, that it is absolute beauty which makes beautiful things beautiful. Don't you think so?

Cebes:: I do.

Socrates:: And it is size that makes large things large, and larger things larger, and smallness that makes smaller things smaller?

Cebes:: Yes.

Socrates:: And if you were told that one man was taller than another by a head, and that the shorter man was shorter by a head, you would not accept the statement. You would protest that you say only that the greater is greater by size, and that size is the cause of its being greater; and that the less is only less by smallness, and that smallness is the cause of its being less. You would be afraid to assert that a man is greater or smaller by a head, lest you should be met by the retort, first, that the greater is greater, and the smaller, smaller, by the same thing, and secondly, that the greater is greater by a head, which is a small thing, and that it is truly marvelous that a small thing should make a man great. Should you not be afraid of that?

Phaedo:: laughing Cebes said:—

Cebes:: Yes, indeed.

Socrates:: And you would be afraid to say that ten is more than eight by two, and that two is the cause of the excess; you would say that ten was more than eight by number, and that number is the cause of the excess? And in just the same way you would be afraid to say that a thing two cubits long was longer than a thing one cubit long by half its length, instead of by size, would you not?

Cebes:: Yes, certainly.

Socrates:: Again, you would be careful not to affirm that, if one is added to one, the addition is the cause of two, or, if one is divided, that the division is the cause of two? You would protest loudly that you know of no way in which a thing can be generated, except by participation in its own proper essence; and that you can give no cause for the generation of two except participation in duality; and that all things which are to be two must participate in duality, while whatever is to be one must participate in unity. You would leave the explanation of these divisions and additions and all such subtleties to wiser men than yourself. You would be frightened, as the saying is, at your own shadow and ignorance, and would hold fast to the safety of our principle, and so give your answer. But if any one should attack the principle itself, you would not mind him or answer him until you had considered whether the consequences of it are consistent or inconsistent, and when you had to give an account of the principle itself, you would give it in the same way, by assuming some other principle which you think the strongest of the higher ones, and so go on until you had reached a satisfactory resting-place. You would not mix up the first principle and its consequences in your argument, as mere disputants do, if you really wish to discover anything of existence. Such persons will very likely not spend a single word or thought upon that. for they are clever enough to be able to please themselves entirely, though their argument is a chaos. But you, I think, if you are a philosopher, will do as I say.

Phaedo:: Very true, said Simmias and Cebes together.

Echecrates:: And they were right, Phaedo. I think the clearness of his reasoning, even to the dullest, is quite wonderful.

Phaedo:: Indeed, Echecrates, all who were there thought so too.

Echecrates:: So do we who were not there, but who are listening to your story. But how did the argument proceed after that?

Phaedo:: They had admitted that each of the Ideas exists, and that Phenomena take the names of the Ideas as they participate in them. Socrates, I think, then went on to ask,—

Socrates:: If you say this, do you not, in saying that Simmias is taller than Socrates and shorter than Phaedo, say that Simmias possesses both the attribute of tallness and the attribute of shortness?

Cebes:: I do.

Socrates:: But you admit, that the proposition that Simmias is taller than Socrates is not exactly true, as it is stated. Simmias is not really taller because he is Simmias, but because of his height. Nor again is he taller than Socrates because Socrates is Socrates, but because of Socrates shortness compared with Simmias tallness.

Cebes:: True.

Socrates:: Nor is Simmias shorter than Phaedo because Phaedo is Phaedo, but because of Phaedo tallness compared with Simmias shortness.

Cebes:: That is so.

Socrates:: Then in this way Simmias is called both short and tall, when he is between the two, he exceeds the shortness of one by the excess of his height, and gives the other a tallness exceeding his own shortness. I daresay you think, that my language is like a legal document for precision and formality. But I think that it is as I say.

Phaedo:: He agreed.

Socrates:: I say it because I want you to think as I do. It seems to me not only that absolute greatness will never be great and small at once, but also that greatness in us never admits smallness, and will not be exceeded. One of two things must happen. either the greater will give way and fly at the approach of its opposite, the less, or it will perish. It will not stand its ground, and receive smallness, and be other than it was, just as I stand my ground, and receive smallness and remain the very same small man that I was. But greatness cannot endure to be small, being great. Just in the same way again smallness in us will never become nor be great. nor will any opposite, while it remains what it was, become or be at the same time the opposite of what it was. Either it goes away, or it perishes in the change.

Cebes:: That is exactly what I think.

Phaedo:: Thereupon some one—I am not sure who—said;

Someone:: But surely is not this just the reverse of what we agreed to be true earlier in the argument, that the greater is generated from the less, and the less from the greater, and, in short, that opposites are generated from opposites? But now it seems to be denied that this can ever happen.

Phaedo:: Socrates inclined his head to the speaker and listened.

Socrates:: Well and bravely remarked but you have not noticed the difference between the two propositions. What we said then was that a concrete thing is generated from its opposite what we say now is that the absolute opposite can never become opposite to itself, either when it is in us, or when it is in nature. We were speaking then of things in which the opposites are, and we named them after those opposites but now we are speaking of the opposites themselves, whose inherence gives the things their names; and they, we say, will never be generated from each other.

Phaedo:: At the same time he turned to Cebes and asked;

Socrates:: Did his objection trouble you at all, Cebes?

Cebes:: No; I don't feel that difficulty. But I will not deny that many other things trouble me.

Socrates:: Then we are quite agreed on this point. An opposite will never be opposite to itself.

Cebes:: No, never.

Socrates:: Now tell me again; do you agree with me in this? Are there not things which you call heat and cold?

Cebes:: Yes.

Socrates:: Are they the same as snow and fire?

Cebes:: No, certainly not.

Socrates:: Heat is different from fire, and cold from snow?

Cebes:: Yes.

Socrates:: But I suppose, as we have said, that you do not think that snow can ever receive heat, and yet remain what it was, snow and hot. it will either retire or perish at the approach of heat.

Cebes:: Certainly.

Socrates:: And fire, again, will either retire or perish at the approach of cold. It will never endure to receive the cold and still remain what it was, fire and cold.

Cebes:: True.

Socrates:: Then, it is true of some of these things, that not only the idea itself has a right to its name for all time, but that something else too, which is not the idea, but which has the form of the idea wherever it exists, shares the name.

Perhaps my meaning will be clearer by an example. The odd ought always to have the name of odd, ought it not?

Cebes:: Yes, certainly.

Socrates:: Well, my question is this. Is the odd the only thing with this name, or is there something else, which is not the same as the odd, but which must always have this name, together with its own, because its nature is such that it is never separated from the odd? There are many examples of what I mean. let us take one of them, the number three, and consider it. Do you not think that we must always call it by the name of odd, as well as by its own name, although the odd is not the same as the number three? Yet the nature of the number three, and of the number five, and of half the whole series of numbers, is such that each of them is odd, though none of them is the same as the odd. In the same way the number two, and the number four, and the whole of the other series of numbers, are each of them always even, though they are not the same as the even. Do you agree or not?

Cebes:: Yes, of course.

Socrates:: Then see what I want to show you. It is not only opposite ideas which appear not to admit their opposites; things also which are not opposites, but which always contain opposites, seem as if they would not admit the idea which is opposite to the idea that they contain. they either perish, or retire at its approach. Shall we not say that the number three would perish or endure anything sooner than become even while it remains three?

Cebes:: Yes, indeed.

Socrates:: And yet, the number two is not the opposite of the number three.

Cebes:: No, certainly not.

Socrates:: Then it is not only the ideas which will not endure the approach of their opposites; there are some other things besides which will not endure such an approach.

Cebes:: That is quite true.

Socrates:: Shall we determine, if we can, what is their nature?

Cebes:: Certainly.

Socrates:: Will they not be those things, Cebes, which force whatever they are in to have always not its own idea only, but the idea of some opposite as well?

Cebes:: What do you mean?

Socrates:: Only what we were saying just now. You know, I think, that whatever the idea of three is in, is bound to be not three only, but odd as well.

Cebes:: Certainly.

Socrates:: Well, we say that the opposite idea to the form which produces this result will never come to that thing.

Cebes:: Indeed, no.

Socrates:: But the idea of the odd produces it?

Cebes:: Yes.

Socrates:: And the idea of the even is the opposite of the idea of the odd?

Cebes:: Yes.

Socrates:: Then the idea of the even will never come to three?

Cebes:: Certainly not.

Socrates:: So three has no part in the even?

Cebes:: None.

Socrates:: Then the number three is uneven?

Cebes:: Yes.

Socrates:: So much for the definition which I undertook to give of things which are not opposites, and yet do not admit opposites; thus we have seen that the number three does not admit the even, though it is not the opposite of the even, for it always brings with it the opposite of the even; and the number two does not admit the odd, nor fire cold, and so on. Do you agree with me in saying that not only does the opposite not admit the opposite, but also that whatever brings with it an opposite of anything to which it goes, never admits the opposite of that which it brings? Let me recall this to you again; there is no harm in repetition. Five will not admit the idea of the even, nor will the double of five—ten—admit the idea of the odd. It is not itself an opposite, yet it will not admit the idea of the odd. Again, one and a half, a half, and the other numbers of that kind will not admit the idea of the whole, nor again will such numbers as a third. Do you follow and agree?

Cebes:: I follow you and entirely agree with you.

Socrates:: Now begin again, and answer me. And imitate me; do not answer me in the terms of my question. I mean, do not give the old safe answer which I have already spoken of, for I see another way of safety, which is the result of what we have been saying. If you ask me, what is that which must be in the body to make it hot, I shall not give our old safe and stupid answer, and say that it is heat; I shall make a more refined answer, drawn from what we have been saying, and reply, fire. If you ask me, what is that which must be in the body to make it sick, I shall not say sickness, but fever. and again to the question what is that which must be in number to make it odd, I shall not reply oddness, but unity, and so on. Do you understand my meaning clearly yet?

Cebes:: Yes, quite.

Socrates:: Tell me, what is that which must be in a body to make it alive?

Cebes:: A soul.

Socrates:: And is this always so?

Cebes:: Of course.

Socrates:: Then the soul always brings life to whatever contains her?

Cebes:: No doubt.

Socrates:: And is there an opposite to life, or not?

Cebes:: Yes.

Socrates:: What is it?

Cebes:: Death.

Socrates:: And we have already agreed that the soul cannot ever receive the opposite of what she brings?

Cebes:: Yes, certainly we have.

Socrates:: Well; what name did we give to that which does not admit the idea of the even?

Cebes:: The uneven.

Socrates:: And what do we call that which does not admit justice or music?

Cebes:: The unjust, and the unmusical.

Socrates:: Good; and what do we call that which does not admit death?

Cebes:: The immortal.

Socrates:: And the soul does not admit death?

Cebes:: No.

Socrates:: Then the soul is immortal?

Cebes:: It is.

Socrates:: Good. Shall we say that this is proved? What do you think?

Cebes:: Yes, Socrates, and very sufficiently.

Socrates:: Well, Cebes, if the odd had been necessarily imperishable, must not three have been imperishable?

Cebes:: Of course.

Socrates:: And if cold had been necessarily imperishable, snow would have retired safe and unmelted, whenever warmth was applied to it. It would not have perished, and it would not have stayed and admitted the heat.

Cebes:: True.

Socrates:: In the same way, I suppose, if warmth were imperishable, whenever cold attacked fire, the fire would never have been extinguished or have perished. It would have gone away in safety.

Cebes:: Necessarily.

Socrates:: And must we not say the same of the immortal? If the immortal is imperishable, the soul cannot perish when death comes upon her. It follows from what we have said that she will not ever admit death, or be in a state of death, any more than three, or the odd itself, will ever be even, or fire, or the heat itself which is in fire, cold. But, it may be said, Granted that the odd does not become even at the approach of the even; why, when the odd has perished, may not the even come into its place? We could not contend in reply that it does not perish, for the uneven is not imperishable. if we had agreed that the uneven was imperishable, we could have easily contended that the odd and three go away at the approach of the even; and we could have urged the same contention about fire and heat and the rest, could we not?

Cebes:: Yes, certainly.

Socrates:: And now, if we are agreed that the immortal is imperishable, then the soul will be not immortal only, but also imperishable; otherwise we shall require another argument.

Cebes:: Nay, there is no need of that, as far as this point goes; for if the immortal, which is eternal, will admit of destruction, what will not?

Socrates:: And all men would admit, that God, and the essential form of life, and all else that is immortal, never perishes.

Cebes:: All men, indeed, and, what is more, I think, all gods would admit that.

Socrates:: Then if the immortal is indestructible, must not the soul, if it be immortal, be imperishable?

Cebes:: Certainly, it must.

Socrates:: Then, it seems, when death attacks a man, his mortal part dies, but his immortal part retreats before death, and goes away safe and indestructible.

Cebes:: It seems so.

Socrates:: Then, Cebes, beyond all question the soul is immortal and imperishable; and our souls will indeed exist in the other world.

Cebes:: I, Socrates, have no more objections to urge; your reasoning has quite satisfied me. If Simmias, or any one else, has anything to say, it would be well for him to say it now. for I know not to what other season he can defer the discussion, if he wants to say or to hear anything touching this matter.

Simmias:: No, indeed; neither have I any further ground for doubt after what you have said. Yet I cannot help feeling some doubts still in my mind; for the subject of our conversation is a vast one, and I distrust the feebleness of man.

Socrates:: You are right, Simmias, and more than that, you must re-examine our original assumptions, however certain they seem to you; and when you have analyzed them sufficiently, you will, I think, follow the argument, as far as man can follow it; and when that becomes clear to you, you will seek for nothing more.

Simmias:: That is true.

Socrates:: But then, my friends, we must think of this. If it be true that the soul is immortal, we have to take care of her, not merely on account of the time which we call life, but also on account of all time. Now we can see how terrible is the danger of neglect. For if death had been a release from all things, it would have been a godsend to the wicked; for when they died they would have been released with their souls from the body and from their own wickedness. But now we have found that the soul is immortal; and so her only refuge and salvation from evil is to become as perfect and wise as possible. For she takes nothing with her to the other world but her education and culture; and these, it is said, are of the greatest service or of the greatest injury to the dead man, at the very beginning of his journey thither. For it is said that the genius, who has had charge of each man in his life, proceeds to lead him, when he is dead, to a certain place, where the departed have to assemble and receive judgment, and then go to the world below with the guide who is appointed to conduct them thither. And when they have received their deserts there, and remained the appointed time, another guide brings them back again after many long revolutions of ages. So this journey is not as Eschylus describes it in the Telephus, where he says that ‘a simple way leads to Hades.’ But I think that the way is neither simple nor single; there would have been no need of guides had it been so; for no one could miss the way, if there were but one path. But this road must have many branches and many windings, as I judge from the rites of burial on earth. The orderly and wise soul follows her leader, and is not ignorant of the things of that world; but the soul which lusts after the body, flutters about the body and the visible world for a long time, as I have said, and struggles hard and painfully, and at last is forcibly and reluctantly dragged away by her appointed genius. And when she comes to the place where the other souls are, if she is impure and stained with evil, and has been concerned in foul murders, or if she has committed any other crimes that are akin to these, and the deeds of kindred souls, then every one shuns her and turns aside from meeting her, and will neither be her companion nor her guide, and she wanders about by herself in extreme distress until a certain time is completed, and then she is borne away by force to the habitation which befits her. But the soul that has spent her life in purity and temperance has the gods for her companions and guides, and dwells in the place which befits her. There are many wonderful places in the earth; and neither its nature nor its size is what those who are wont to describe it imagine, as a friend has convinced me.

Simmias:: What do you mean, Socrates? I have heard a great deal about the earth myself, but I have never heard the view of which you are convinced. I should like to hear it very much.

Socrates:: Well, Simmias, I don't think that it needs the skill of Glaucus to describe it to you, but I think that it is beyond the skill of Glaucus to prove it true. I am sure that I could not do so; and besides, Simmias, even if I knew how, I think that my life would come to an end before the argument was finished. But there is nothing to prevent my describing to you what I believe to be the form of the earth, and its regions.

Simmias:: Well, that will do.

Socrates:: In the first place then, I believe that the earth is a spherical body placed in the centre of the heavens, and that therefore it has no need of air or of any other force to support it. The equiformity of the heavens in all their parts, and the equipoise of the earth itself, are sufficient to hold it up. A thing in equipoise placed in the centre of what is equiform cannot incline in any direction, either more or less. it will remain unmoved and in perfect balance. That, is the first thing that I believe.

Simmias:: And rightly.

Socrates:: Also, I think that the earth is of vast extent, and that we who dwell between the Phasis and the pillars of Heracles inhabit only a small portion of it, and dwell round the sea, like ants or frogs round a marsh; and I believe that many other men dwell elsewhere in similar places. For everywhere on the earth there are many hollows of every kind of shape and size, into which the water and the mist and the air collect; but the earth itself lies pure in the purity of the heavens, wherein are the stars, and which men who speak of these things commonly call ether. The water and the mist and the air, which collect into the hollows of the earth, are the sediment of it. Now we dwell in these hollows though we think that we are dwelling on the surface of the earth. We are just like a man dwelling in the depths of the ocean, who thought that he was dwelling on its surface, and believed that the sea was the heaven, because he saw the sun and the stars through the water; but who was too weak and slow ever to have reached the waters surface, and to have lifted his head from the sea, and come out from his depths to our world, and seen, or heard from one who had seen, how much purer and fairer our world was than the place wherein he dwelt. We are just in that state; we dwell in a hollow of the earth, and think that we are dwelling on its surface; and we call the air heaven, and think it to be the heaven wherein the stars run their courses. But the truth is that we are too weak and slow to pass through to the surface of the air. For if any man could reach the surface, or take wings and fly upward, he would look up and see a world beyond, just as the fishes look forth from the sea, and behold our world. And he would know that that was the real heaven, and the real light, and the real earth, if his nature were able to endure the sight. For this earth, and its stones, and all its regions have been spoilt and corroded, as things in the sea are corroded by the brine. nothing of any worth grows in the sea, nor, in short, is there anything therein without blemish, but, wherever land does exist, there are only caves, and sand, and vast tracts of mud and slime, which are not worthy even to be compared with the fair things of our world. But you would think that the things of that other world still further surpass the things of our world. I can tell you a tale, Simmias, about what is on the earth that lies beneath the heavens, which is worth your hearing.

Simmias:: Indeed, Socrates, we should like to hear your tale very much.

Socrates:: Well, my friend, this is my tale. In the first place, the earth itself, if a man could look at it from above, is like one of those balls which are covered with twelve pieces of leather, and is marked with various colors, of which the colors that our painters use here are, as it were, samples. But there the whole earth is covered with them, and with others which are far brighter and purer ones than they. For part of it is purple of marvelous beauty, and part of it is golden, and the white of it is whiter than chalk or snow. It is made up of the other colors in the same way, and also of colors which are more beautiful than any that we have ever seen. The very hollows in it, that are filled with water and air, have themselves a kind of color, and glisten amid the diversity of the others, so that its form appears as one unbroken and varied surface. And what grows in this fair earth—its trees and flowers and fruit—is more beautiful than what grows with us in the same proportion: and so likewise are the hills and the stones in their smoothness and transparency and color. the pebbles which we prize in this world, our cornelians, and jaspers, and emeralds, and the like, are but fragments of them. but there all the stones are as our precious stones, and even more beautiful still. The reason of this is that they are pure, and not corroded or spoilt, as ours are, with the decay and brine from the sediment that collects in the hollows, and brings to the stones and the earth and all animals and plants deformity and disease. All these things, and with them gold and silver and the like, adorn the real earth. and they are conspicuous from their multitude and size, and the many places where they are found; so that he who could behold it would be a happy man. Many creatures live upon it; and there are men, some dwelling inland, and others round the air, as we dwell round the sea, and others in islands encircled by the air, which lie near the continent. In a word, they use the air as we use water and the sea, and the ether as we use the air. The temperature of their seasons is such that they are free from disease, and live much longer than we do; and in sight, and hearing, and smell, and the other senses, they are as much more perfect than we, as air is purer than water, and ether than air. Moreover they have sanctuaries and temples of the gods, in which the gods dwell in very truth; they hear the voices and oracles of the gods, and see them in visions, and have intercourse with them face to face. and they see the sun and moon and stars as they really are; and in other matters their happiness is of a piece with this.

That is the nature of the earth as a whole, and of what is upon it; and everywhere on its globe there are many regions in the hollows, some of them deeper and more open than that in which we dwell; and others also deeper, but with narrower mouths; and others again shallower and broader than ours. All these are connected by many channels beneath the earth, some of them narrow and others wide; and there are passages, by which much water flows from one of them to another, as into basins, and vast and never-failing rivers of both hot and cold water beneath the earth, and much fire, and great rivers of fire, and many rivers of liquid mud, some clearer and others more turbid, like the rivers of mud which precede the lava stream in Sicily, and the lava stream itself. These fill each hollow in turn, as each stream flows round to it. All of them are moved Up and down by a certain oscillation which is in the earth, and which is produced by a natural cause of the following kind. One of the chasms in the earth is larger than all the others, and pierces right through it, from side to side. Homer describes it in the words

> 'Far away, where is the deepest depth beneath the earth.'

And elsewhere he and many others of the poets have called it Tartarus. All the rivers flow into this chasm, and out of it again; and each of them comes to be like the soil through which it flows. The reason why they all flow into and out of the chasm is that the liquid has no bottom or base to rest on. it oscillates and surges up and down, and the air and wind around it do the same. for they accompany it in its passage to the other side of the earth, and in its return; and just as in breathing the breath is always in process of being exhaled and inhaled, so there the wind, oscillating with the water, produces terrible and irresistible blasts as it comes in and goes out. When the water retires with a rush to what we call the lower parts of the earth, it flows through to the regions of those streams, and fills them, as if it were pumped into them. And again, when it rushes back hither from those regions, it fills the streams here again, and then they flow through the channels of the earth, and make their way to their several places, and create seas, and lakes, and rivers, and springs. Then they sink once more into the earth, and after making, some a long circuit through many regions, and some a shorter one through fewer, they fall again into Tartarus, some at a point much lower than that at which they rose, and others only a little lower; but they all flow in below their point of issue. And some of them burst forth again on the side on which they entered; others again on the opposite side; and there are some which completely encircle the earth, twining round it, like snakes, once or perhaps oftener, and then fall again into Tartarus, as low down as they can. They can descend as far as the centre of the earth from either side but no farther. Beyond that point on either side they would have to flow uphill. These streams are many, and great, and various; but among them all are four, of which the greatest and outermost, which flows round the whole of the earth, is called Oceanus. Opposite Oceanus, and flowing in the reverse direction, is Acheron, which runs through desert places, and then under the earth until it reaches the Acherusian lake, whither the souls of the dead generally go, and after abiding there the appointed time, which for some is longer, and for others shorter, are sent forth again to be born as animals. The third river rises between these two, and near its source falls into a vast and fiery region, and forms a lake larger than our sea, seething with water and mud. Thence it goes forth turbid and muddy round the earth, and after many windings comes to the end of the Acherusian lake, but it does not mingle with the waters of the lake; and after many windings more beneath the earth, it falls into the lower part of Tartarus. This is the river that men name Pyriphlegethon; and portions of it are discharged in the lava streams, wherever they are found on the earth. The fourth river is on the opposite side, it is said to fall first into a terrible and savage region, of which the color is one dark blue. It is called the Stygian stream, and the lake which its waters create is called Styx. After falling into the lake and receiving strange powers in its waters, it sinks into the earth, and runs winding about in the opposite direction to Pyriphlegethon, which it meets in the Acherusian lake from the opposite side. Its waters too mingle with no other waters. it flows round in a circle and falls into Tartarus opposite to Pyriphlegethon. Its name, the poets say, is Cocytus.

Such is the nature of these regions; and when the dead come to the place whither each is brought by his genius, sentence is first passed on them according as their lives have been good and holy, or not. Those whose lives seem to have been neither very good nor very bad, go to the river Acheron, and embarking on the vessels which they find there, proceed to the lake. There they dwell, and are punished for the crimes which they have committed, and are purified and absolved; and for their good deeds they are rewarded, each according to his deserts. But all who appear to be incurable from the enormity of their sins—those who have committed many and great sacrileges, and foul and lawless murders, or other crimes like these—are hurled down to Tartarus by the fate which is their due, whence they never come forth again. Those who have committed sins which are great, but not too great for atonement, such, for instance, as those who have used violence towards a father or a mother in wrath, and then repented of it for the rest of their lives, or who have committed homicide in some similar way, have also to descend into Tartarus. but then when they have been there a year, a wave casts them forth, the homicides by Cocytus, and the parricides and matricides by Pyriphlegethon; and when they have been carried as far as the Acherusian lake they cry out and call on those whom they slew or outraged, and beseech and pray that they may be allowed to come out into the lake, and be received as comrades. And if they prevail, they come out, and their sufferings cease; but if they do not, they are carried back to Tartarus, and thence into the rivers again, and their punishment does not end until they have prevailed on those whom they wronged. such is the sentence pronounced on them by their judges. But such as have been preeminent for holiness in their lives are set free and released from this world, as from a prison. they ascend to their pure habitation, and dwell on the earths surface. And those of them who have sufficiently purified themselves with philosophy, live thenceforth without bodies, and proceed to dwellings still fairer than these, which are not easily described, and of which I have not time to speak now. But for all these reasons, Simmias, we must leave nothing undone that we may obtain virtue and wisdom in this life. Noble is the prize, and great the hope. A man of sense will not insist that these things are exactly as I have described them. But I think that he will believe that something of the kind is true of the soul and her habitations, seeing that she is shown to be immortal, and that it is worth his while to stake everything on this belief. The venture is a fair one, and he must charm his doubts with spells like these. That is why I have been prolonging the fable all this time. For these reasons a man should be of good cheer about his soul, if in his life he has renounced the pleasures and adornments of the body, because they were nothing to him, and because he thought that they would do him not good but harm; and if he has instead earnestly pursued the pleasures of learning, and adorned his soul with the adornment of temperance, and justice, and courage, and freedom, and truth, which belongs to her, and is her own, and so awaits his journey to the other world, in readiness to set forth whenever fate calls him. You, Simmias and Cebes, and the rest will set forth at some future day, each at his own time. But me now, as a tragic poet would say, fate calls at once; and it is time for me to betake myself to the bath. I think that I had better bathe before I drink the poison, and not give the women the trouble of washing my dead body.

Phaedo:: When he had finished speaking Crito said;

Crito:: Be it so, Socrates. But have you any commands for your friends or for me about your children, or about other things? How shall we serve you best?

Socrates:: Simply by doing what I always tell you, Crito. Take care of your own selves, and you will serve me and mine and yourselves in all that you do, even though you make no promises now. But if you are careless of your own selves, and will not follow the path of life which we have pointed out in our discussions both to-day and at other times, all your promises now, however profuse and earnest they are, will be of no avail.

Crito:: We will do our best. But how shall we bury you?

Socrates:: As you please; only you must catch me first, and not let me escape you.

Phaedo:: And then he looked at us with a smile and said.

Socrates:: My friends, I cannot convince Crito that I am the Socrates who has been conversing with you, and arranging his arguments in order. He thinks that I am the body which he will presently see a corpse, and he asks how he is to bury me. All the arguments which I have used to prove that I shall not remain with you after I have drunk the poison, but that I shall go away to the happiness of the blessed, with which I tried to comfort you and myself, have been thrown away on him. Do you therefore be my sureties to him, as he was my surety at the trial, but in a different way. He was surety for me then that I would remain; but you must be my sureties to him that I shall go away when I am dead, and not remain with you, then he will feel my death less; and when he sees my body being burnt or buried, he will not be grieved because he thinks that I am suffering dreadful things, and at my funeral he will not say that it is Socrates whom he is laying out, or bearing to the grave, or burying. For, dear Crito, you must know that to use words wrongly is not only a fault in itself; it also creates evil in the soul. You must be of good cheer, and say that you are burying my body. and you must bury it as you please, and as you think right.

Phaedo:: With these words he rose and went into another room to bathe himself. Crito went with him and told us to wait. So we waited, talking of the argument, and discussing it, and then again dwelling on the greatness of the calamity which had fallen upon us, it seemed as if we were going to lose a father, and to be orphans for the rest of our life. When he had bathed, and his children had been brought to him, he had two sons quite little, and one grown up,—and the women of his family were come, he spoke with them in Crito’s presence, and gave them his last commands; then he sent the women and children away, and returned to us. By that time it was near the hour of sunset, for he had been a long while within. When he came back to us from the bath he sat down, but not much was said after that. Presently the servant of the Eleven came and stood before him and said;

Jailer:: I know that I shall not find you unreasonable like other men, Socrates. They are angry with me and curse me when I bid them drink the poison because the authorities make me do it. But I have found you all along the noblest and gentlest and best man that has ever come here; and now I am sure that you will not be angry with me, but with those who you know are to blame. And so farewell, and try to bear what must be as lightly as you can; you know why I have come.

Phaedo:: With that he turned away weeping, and went out.

Socrates looked up at him, and replied;

Socrates:: Farewell. I will do as you say.

Phaedo:: Then he turned to us and said;

Socrates:: How courteous the man is! And the whole time that I have been here, he has constantly come in to see me, and sometimes he has talked to me, and has been the best of men; and now, how generously he weeps for me! Come, Crito, let us obey him, let the poison be brought if it is ready; and if it is not ready, let it be prepared.

Crito:: Nay, Socrates, I think that the sun is still upon the hills; it has not set. Besides, I know that other men take the poison quite late, and eat and drink heartily, and even enjoy the company of their chosen friends, after the announcement has been made. So do not hurry; there is still time.

Socrates:: And those whom you speak of, Crito, naturally do so; for they think that they will be gainers by so doing. And I naturally shall not do so; for I think that I should gain nothing by drinking the poison a little later, but my own contempt for so greedily saving up a life which is already spent. So do not refuse to do as I say.

Phaedo:: Then Crito made a sign to his slave who was standing by; and the slave went out, and after some delay returned with the man who was to give the poison, carrying it prepared in a cup. When Socrates saw him, he asked;

Socrates:: You understand these things, my good sir, what have I to do?

Jailer:: You have only to drink this, and to walk about until your legs feel heavy, and then lie down; and it will act of itself.

Phaedo:: With that he handed the cup to Socrates, who took it quite cheerfully, Echecrates, without trembling, and without any change of color or of feature, and looked up at the man with that fixed glance of his, and asked;

Socrates:: What say you to making a libation from this draught? May I, or not?

Jailer:: We only prepare so much as we think sufficient, Socrates.

Socrates:: I understand. But I suppose that I may, and must, pray to the gods that my journey hence may be prosperous, that is my prayer; be it so.

Phaedo:: With these words he put the cup to his lips and drank the poison quite calmly and cheerfully. Till then most of us had been able to control our grief fairly well; but when we saw him drinking, and then the poison finished, we could do so no longer, my tears came fast in spite of myself, and I covered my face and wept for myself, it was not for him, but at my own misfortune in losing such a friend. Even before that Crito had been unable to restrain his tears, and had gone away; and Apollodorus, who had never once ceased weeping the whole time, burst into a loud cry, and made us one and all break down by his sobbing and grief, except only Socrates himself.

Socrates:: What are you doing, my friends? I sent away the women chiefly in order that they might not offend in this way; for I have heard that a man should die in silence. So calm yourselves and bear up.

Phaedo:: When we heard that we were ashamed, and we ceased from weeping. But he walked about, until he said that his legs were getting heavy, and then he lay down on his back, as he was told. And the man who gave the poison began to examine his feet and legs, from time to time, then he pressed his foot hard, and asked

Jailer:: Do you feel this?

Socrates:: No.

Phaedo:: and then his legs, and so higher and higher, and showed us that he was cold and stiff. And Socrates felt himself, and said;

Socrates:: When it comes to my heart, I will go.

Phaedo:: He was already growing cold about the groin, when he uncovered his face, which had been covered, and spoke for the last time.

Socrates:: Crito, I owe a cock to Asclepius; do not forget to pay it.

Crito:: It shall be done. Is there anything else that you wish?

Phaedo:: He made no answer to this question; but after a short interval there was a movement, and the man uncovered him, and his eyes were fixed. Then Crito closed his mouth and his eyes.

Such was the end, Echecrates, of our friend, a man, I think, who was the wisest and justest, and the best man that I have ever known.

# Phaedo.

Translated by E. M. Cope.

CHARACTERS OF THE DIALOGUE.

Echecrates. Cebes. Phaedo.
Simmias. Apollodorus. Crito.
Socrates. Attendant.

Echecrates:: Were you present yourself, Phaedo, with Socrates that memorable day when he drank the poison in the prison, or did you hear the story from some one else?

Phaedo:: I was there myself, Echecrates.

Echecrates:: Then do pray tell me what it was that he said before his death and how he died. I should be so glad to hear. For in fact none of my fellow-townsmen, of Phlius, are just now very much in the habit of going to stay at Athens, nor has any stranger paid us a visit from that place for a long time who might have brought us an accurate report of all this—except indeed merely that he was put to death by poison; but of all the rest no one could tell us anything.

Phaedo:: Then I suppose you didn’t hear the account of the issue of the trial either?

Echecrates:: Yes, some one brought us news of that; and surprised we were, to be sure, to hear that he seems not to have suffered till long after it took place. Now why was this, Phaedo?

Phaedo:: It was quite an accident, Echecrates, for it happened that the stern of the vessel which the

Athenians are in the habit of sending to Delos had been decorated just the day before the trial.

Echecrates:: And pray what vessel do you mean?

Phaedo:: This is the vessel, according to the Athenian tradition, in which Theseus once went with those twice seven to Crete, and saved their lives and his own to boot. So they made a vow to Apollo, as the story goes, at the time, that if they got safe back they would dispatch a sacred embassy to Delos every year: which in fact they have sent ever since year by year to the God, as they still continue to do. Well, from the very commencement of the sacred embassy, it is the custom with them that their city be kept pure all this time, and that no state execution be allowed until the vessel has made its voyage to Delos and back again here; and this occasionally requires a long time, whenever the crew chance to be arrested by contrary winds. The commencement of the sacred embassy dates from the crowning of the vessels stern by the priest of Apollo; and, as I say, this happened to have been done the day before the trial. And this was the reason why Socrates had so long an interval in the prison between the trial and his death.

Echecrates:: Well, but the story of the death itself, Phaedo; what was all that was said and done? and which of his friends were with him? or did the magistrates refuse them permission to be present, so that he had no friends near him at his death?

Phaedo:: By no means; on the contrary, there were some present, aye and a good many.

Echecrates:: Then pray be good enough to give me as exact an account as you can of it all—unless you happen to be engaged.

Phaedo:: Oh no, I am not at all busy, and I will do my best to tell you the whole story; for indeed to recall Socrates to mind, whether by talking of him myself or by listening to another, to me has ever been the most agreeable thing in the world.

Echecrates:: Well, Phaedo, you may make sure of finding a similar feeling in the audience that is going to be. So pray try to describe all the circumstances as precisely as you possibly can.

Phaedo:: Well, to be sure, for my own part I was in a strange state of mind all the time I was there. For no feeling of compassion such as might be expected in one who is present at a friends death entered my mind—for the man seemed to me, Echecrates, quite happy both in his behavior and in his language, so fearlessly and nobly did he meet his death; so that to my mind he presented himself as one whose journey even to the world below was not unattended by a divine providence, nay, whose lot when he arrived there would be a happy one, if any human being ever was happy; for this reason, I say, no feeling at all of pity entered my mind, as would seem natural to one present at a scene of woe, nor on the other hand of pleasure, as was to be expected when we were engaged in our ordinary way upon philosophy—for in fact our conversation was of that nature but I found myself in quite a singular state of mind and in an unwonted mixture of feeling, a feeling at once of pleasure and of pain, when I reflected that our friend was presently to die. And all of us that were there were pretty nearly in the same state, laughing one while, and anon weeping; and one of us, Apollodorus, beyond all the rest; you know the man, I dare say, and his humor?

Echecrates:: Of course I do.

Phaedo:: Well, as I say, he abandoned himself without reserve to these emotions; but at the same time I my self and the rest participated in them.

Echecrates:: But who were they, Phaedo, that chanced to be present?

Phaedo:: Why of natives there was this same Apollodorus, and Critobulus and his father Crito, and besides, Hermogenes, and Epigenes, and Eschines, and Antisthenes, There was also Ctesippus the Paeanian, and Menexenus, and some other native Athenians; but Plato, I believe, was ill.

Echecrates:: And were there any strangers there?

Phaedo:: Oh yes, Simmias of Thebes of course, and Cebes, and Phiedondes, and Euclides and Terpsion of Megara.

Echecrates:: Well? but Aristippus and Cleombrotus were with him, I suppose?

Phaedo:: No they were not; they were said to be in Egina.

Echecrates:: And was there any one else there?

Phaedo:: I think that these were pretty nearly all.

Echecrates:: Well to proceed then—let us have your account of the conversation.

Phaedo:: I will endeavor to relate it all to you from the first. And so to begin. We had been in the constant habit, I and the rest, of visiting Socrates also during the preceding days, beginning to assemble in the early morning at the court in which the trial was held, as it was in the neighborhood of the prison. Well, we used always to loiter about conversing amongst ourselves until the prison happened to be opened—which did not take place very early—but as soon as it was opened we went in to Socrates, and generally spent the whole day with him. However on this particular occasion we met earlier than usual; for having learnt the day before, when we quitted the prison in the evening, that the vessel had returned from Delos, we parted with mutual admonitions to be present as early as possible at the usual spot. So when we came, the porter who was accustomed to answer our knock came out to us and told us to wait and not appear until he summoned us himself. 'For,' said he, 'the Eleven are taking off Socrates irons, and bidding him prepare for death to-day.' However he did not wait long before he returned and bade us walk in. So we entered, and found Socrates just released from his fetters, and Xanthippe, whom you know, holding his little boy in her arms and seated near him. As soon as she saw us she burst into lamentations and exclamations such as women are wont to indulge in;

Xanthippe:: O Socrates, this is the very last time that your friends will speak to you and you to them.

Phaedo:: And Socrates with a glance towards Crito said;

Socrates:: Crito, let some one take her away home.

Phaedo:: So some of Crito's people led her away screaming and beating her breast; but Socrates lay down again upon the bed, and bending his leg together rubbed it with his hand; and as he was rubbing it, he said;

Socrates:: What a strange thing that seems to be which men call pleasure; how wonderfully it is associated by nature with that which seems its opposite, pain; in that the pair of them will never present themselves to mankind together, and yet if a man pursue the one and grasp it, he is almost always obliged to take the other too, as if, distinct as they are, they were fastened together from one head. And I think, that if Aesop had noticed them he would have made a fable upon it, that God, anxious to compose their differences, but finding himself unable to do so, fastened their heads together, and that that is the reason why, if any one has obtained possession of the one, the other also is sure to follow upon it; just, you see, as it seems in my own case—after the pain had been first caused in my leg by the irons, the corresponding pleasure seems now to have come in its train.

Phaedo:: Here Cebes broke in.

Cebes:: Aye indeed, Socrates, I am much obliged to you for reminding me. For to be sure about those poems which you have composed—your metrical version of the fables of Aesop and your prelude to Apollo—I have been asked already by several people, and quite lately by Evenus himself, what could possibly have been your intention in writing them since you came here, when you never yet wrote any verses before. If then you care for my having an answer to give to Evenus when he repeats his question—for I am sure he will—tell me what I must say.

Socrates:: Well then, tell him the truth, Cebes; that it was from no desire to set myself up as a rival to him or his poems that I composed them—for I knew it was not easy to do that—but that I did so in an attempt to make out the meaning of certain dreams, and to acquit my conscience in respect of them in case this might chance to be the kind of music that they en joined me to cultivate. Something like this they were; the same dream used constantly to haunt me during my past life, assuming different shapes at different times but always with the same burden; ‘Socrates,’ it said, ‘cultivate music and practice it.’ And I used formerly to suppose that it was encouraging me and cheering me on in the very occupation which I was following—that, exactly as people cheer the runners in a race, even so my dream was urging me onward in my ordinary pursuit, the cultivation of music—under the idea that philosophy was the highest kind of music, and that that was what I was practicing. But now, since my trial took place and the festival of Apollo meanwhile delayed my death, I thought it my duty, in case perhaps it might be this popular kind of music that the dream enjoined me to cultivate, not to be disobedient, but to try. For it was safer, I thought, not to depart ere I had discharged my conscience by composing poems in obedience to the dream. Thus it was then that I first addressed a hymn to the God in whose honor the present festival was held; and after the God, having conceived the notion that it was the poet’s business, if he meant to be a poet, to write fables and not mere histories in verse, whilst I myself had no genius for fiction, for this reason I turned into verse accordingly the fables that I had ready to my hand and knew by heart, Æsop’s namely, just as they happened to occur to me.

This then, Cebes, is what you may tell Evenus; and at the same time bid him fare-well, and, if he be wise, follow me as soon as he can. And I am to depart to day, as it seems; for the Athenians will have it so.

Simmias:: How strange an exhortation is this, Socrates, to convey to Evenus! I have often met the man ere now, and I am pretty sure from what I have remarked that he will not have the smallest inclination to comply with your suggestion.

Socrates:: How say you? Isn’t Evenus a philosopher?

Simmias:: Oh yes, I suppose so.

Socrates:: Well then, he will desire it, and not only he but every one who worthily takes part in this study. However I don’t exactly mean to say that he will lay violent hands on himself; for they say this is wrong.

Phaedo:: (And as he said this, he let his legs drop from the bed upon the ground, and in this posture he remained during the rest of the dialogue.)

Thereupon Cebes asked him;

Cebes:: What do you mean, Socrates, by saying that it is not right for a man to lay violent hands upon himself, and yet that the philosopher would desire to follow the dying man?

Socrates:: How, Cebes? have you and Simmias never heard anything on such subjects during your intercourse with Philolaus?

Cebes:: No, Socrates, nothing distinct.

Socrates:: Well to be sure I myself speak of them from mere hearsay; however what I have heard I don’t grudge telling you. For in fact it is perhaps particularly suitable for one who is on the point of travelling in that direction to examine narrowly and mythologize about the conception we have formed of the nature of the journey thither; for how could one better employ the interval between this and sunset?

Cebes:: Then what can be their reason, Socrates, for asserting that it is unlawful to kill oneself? For it is true that, as you just now asked me, I have heard

Philolaus, as well as yourself, say, at the time when he was residing in our city, and others besides him ere now, that it was not right to do this; but I have never heard from any one anything distinct upon the subject.

Socrates:: Well you must keep up your spirits, for perhaps you may now. Possibly however it will seem surprising to you, that this, contrary to the universal rule, should be true without exception, and that it should never happen to mankind, as in every thing else it does, that in certain cases and for certain people only it is better to die than to live. And again, in cases where death is preferable, you may be surprised that these men are not allowed to do themselves a service, but are bound to wait for an extraneous benefactor.

Phaedo:: Cebes, with a quiet smile, and speaking in his native dialect, replied;

Cebes:: Aye, Heaven knows.

Socrates:: In fact, when stated thus nakedly, it would seem unreasonable; still it cannot be denied that there may be some sense in it. At the same time the account that is given of it in the mystic system, that we men are kept in a kind of ward, and that accordingly one must not endeavor to deliver oneself or run away from it, seems to me to be somewhat deep, and not very easy to see ones way through. Not that I mean to deny, Cebes, the correctness of this opinion, as far as I can see, that Gods are our guardians, and that we men are part of the property of the Gods. You think so, don’t you?

Cebes:: Oh yes.

Socrates:: Well, and wouldn’t you, if any of your chattels were to put itself to death without any indication from you that you wished it to die, be angry with it? and if you could find any means of punishment, wouldn’t you have recourse to it?

Cebes:: I certainly should.

Socrates:: Perhaps then in this point of view it is not unreasonable to say that no one has a right to kill himself, until God has imposed upon him an absolute necessity of some kind, like that which now lies before me.

Cebes:: No doubt, this does seem likely. How ever, as to what you said just now, that all philosophers would be willing and glad to die, that sounds like a paradox, Socrates, if what we were just now saying is correct, that God is our guardian, and that we are his property. For that the wisest men should not be concerned to quit this service wherein they are under the superintendence of Gods, the best of all possible masters, is highly unreasonable. For I presume no one imagines that he can take better care of himself when he has obtained his freedom. A fool, no doubt, might perhaps think that it is good for him to fly from his master, and would not reflect that it is his interest not to fly from one that is good, but rather to use every effort to abide with him, and so might fly from him in his folly; but the man of sense would desire, I presume, to be attached for ever to one who is better than himself. And yet according to this view of the matter, Socrates, the contrary to what was said just now seems to be true; for it is the wise that should be reluctant to die, and the fools that should be glad.

Phaedo:: On hearing all this Socrates seemed to me to be pleased with Cebes pertinacity, and said with a glance towards us;

Socrates:: You see Cebes is always tracking some speculation or other, and is not at all inclined to be satisfied at once with anything that he may be told.

Simmias:: Well to be sure, Socrates, this time I myself am disposed to think that there is some thing in what Cebes alleges; for what motive could in duce men who are really wise to fly from masters better than themselves and lightly quit their service? And, I imagine, it is at you that Cebes is aiming his argument, because you are so little affected at leaving us, as well as Gods whom you yourself own to be good rulers.

Socrates:: What you say is quite fair; that is, I suppose you mean that I am to defend myself against this charge as if I were in court.

Simmias:: By all means.

Socrates:: Come then, let me try to make a more successful defense to you than I did to my judges. For did I not think, Simmias and Cebes, that I should go to dwell in the company not only of Gods wise and good, but next also of men that have died better than those here on earth, I should be wrong in not feeling sorry at my approaching death. But, as it is, be assured that I trust to join the society not only of good men—and on this I would not so strongly insist—but that I shall go to abide with Gods, perfectly good masters, of all things of the kind, this, be assured, I would most confidently maintain. And so this is why I am not so much moved, but have a confident hope that the dead have some existence, and that existence, as indeed has been maintained ever so long ago, a far better one for the good than for the bad.

Simmias:: What, Socrates! Surely you don't mean to depart and keep this belief to yourself without letting us share it with you? For it seems to me that this is a benefit in which we also are entitled to participate; and at the same time it will serve for your defense, if you succeed in convincing us of the truth of what you say.

Socrates:: Well, I will do my best at all events. But first let us enquire what it is that Crito there has been so long, apparently, anxious to tell me.

Crito:: Why, Socrates, merely this; that the man who is to administer the poison to you has been suggesting to me ever so long to tell you to talk as little as possible; for he says that those that talk get too much excited, and that no excitement of this sort should be allowed to interfere with the action of the poison; other wise, those who act in this way are sometimes obliged to take two or three doses of it.

Socrates:: Let him alone; he need only mind his own business, and be prepared to give me two, or even three doses, if necessary.

Crito:: Nay, I knew well enough what answer you would make; but he has been plaguing me ever so long.

Socrates:: Never mind him. But to you, my judges, I will now render my account, how it is that it seems to me reasonable that a man who has really spent his life in the pursuit of philosophy should be cheerful in the near prospect of death, and have a sure hope after death of obtaining in another world the highest blessings. In what way then this may be true, Simmias and Cebes. I will endeavor to explain to you.

For it appears that all who apply themselves to the study of philosophy aright are, unknown to the rest of the world, as far as depends on themselves, engaged in nothing else than in studying the art of dying and death. If then this be true, it would surely be absurd of them to be striving eagerly all their lives after this alone, and then, when it has arrived, to feel vexed at what they had been so long eager for and studying.

Phaedo:: Here Simmias laughed and said;

Simmias:: Upon my word, So crates, you have made me laugh, though I am just now in anything but a laughing humor. For I fancy, you see, that the vulgar, had they heard precisely what you have been saying, would think that it applies with perfect truth to the philosophers; and that the people here would be ready enough to agree that the philosophers have quite a passion for death, aye and that they, the people, know well enough that they deserve it.

Socrates:: Yes, and it would be quite true, Simmias; except, at least, when they say that they know well enough; for they do not know in what sense genuine philosophers have a passion for death, and in what sense they deserve it, and what kind of death they deserve. However, let us bid adieu to them, and discuss the matter amongst ourselves. Do we hold death to be anything?

Simmias:: Certainly we do.

Socrates:: In fact, the separation of the soul from the body? so that the state of death is merely this, the separate existence of the body by itself apart from the soul, and the separate existence of the soul by herself apart from the body? Do you take death to be any thing else but this?

Simmias:: No, merely this.

Socrates:: Well then consider, my good friend, if perchance you and I agree in our opinions; for I think that from what I am going to say we shall be better able to form a judgment upon the subject of our investigation. Does it seem to you to belong to the character of a philosopher to be eager in the pursuit of what are called pleasures, such for example as the pleasures of eating and drinking?

Simmias:: Very far from it, Socrates.

Socrates:: Or again of the pleasures of sex?

Simmias:: By no means.

Socrates:: Or again the other services of the body—think you that such a person would hold them in esteem? For example, the possession of splendid cloaks and shoes and all other means of personal adornment—think you he would value or scorn them, except so far as it is absolutely necessary for him to meddle with them?

Simmias:: Scorn them, I should think; at least the genuine philosopher.

Socrates:: Then you think, that the studies of such a man are absolutely unconnected with the body, but keep aloof from it as far as possible, and are directed to the soul?

Simmias:: I do.

Socrates:: Then herein first, in such things as these, the philosopher beyond all other men manifests his anxiety to release the soul as much as possible from her connection with the body, doesn’t he?

Simmias:: Plainly so.

Socrates:: And most people are of opinion, I fancy, Simmias, that to a man who derives no pleasure from such things, and has no share in them, life is not worth having; but that one who cares nothing for the enjoyments of which the body is the vehicle, verges pretty closely upon the state of death.

Simmias:: Quite true.

Socrates:: Well and what about the acquisition of wisdom itself? Is the body an impediment or not, if a man take it with him as an associate in his search? To illustrate my meaning—do sight and hearing convey any certain truth to men? or rather, are not the very poets constantly harping to us upon this theme, that there is nothing accurate in what we either see or hear? However, if these two of our bodily senses are not accurate nor to be depended upon, it is hardly likely that the rest are; for they are all, I presume, inferior to these. You do think so, don’t you?

Simmias:: Most certainly.

Socrates:: Then when, does the soul attain to the truth? For whenever she attempts to pursue any investigation in company with the body, it is plain that then she is deluded by it.

Simmias:: Very true.

Socrates:: Is it not then in thinking, if at all, that any real truth becomes manifest to her?

Simmias:: Yes.

Socrates:: But she thinks, I should suppose, then best when there is none of these accessories to annoy her, neither hearing nor sight nor pain nor pleasure of any kind, but when she is as much as possible alone by herself and bids adieu to the body, and, as far as possible free from communication and contact with it, aspires to that which is.

Simmias:: It is so.

Socrates:: Here then it is that the philosophers soul most despises the body, and flies from it, and seeks to be alone by herself?

Simmias:: It appears so.

Socrates:: And what say you to this, Simmias? do we admit that there is such a thing as absolute justice or not?

Simmias:: We do indeed.

Socrates:: And absolute beauty and good?

Simmias:: To be sure.

Socrates:: Then did you ever yet see any of such things as these with your eyes?

Simmias:: No, never.

Socrates:: Well, did you ever arrive at the knowledge of them by any other of the senses which act through the body? And I mean to include every thing, for instance greatness, health, strength, and in a word, the reality of everything else, that is to say, what each thing really is. Is it by means of the body that their truest nature is contemplated? or does the case stand thus—that who ever amongst us has most completely and most exactly prepared himself to apprehend by thought each thing which may be the object of his investigation in its essence, he it is that will make the nearest approach to the knowledge of it?

Simmias:: Undoubtedly.

Socrates:: And would not this purity of thought be best attained by any one who strives to reach each thing as much as possible with his intellect alone, and neither takes as an accessory the sight in thinking, nor drags after him any other of his senses whatever to keep company with his reasoning faculty; but employs his intellect by itself in its purity in the attempt to catch each particular being by itself in its purity, freed as far as possible from eyes and ears, and so to speak from all the body together, because he thinks it only disturbs the soul and will not let her obtain possession of truth and wisdom when it is in communication with her? Is not this he, Simmias, who, if any, will attain to the reality of things?

Simmias:: What you say is all admirably true, Socrates.

Socrates:: Well then, from all that I have said, some such notion as this cannot fail to present itself to the minds of all genuine philosophers, and lead them to use language like this to each other; It seems, to be sure, that it is only a sort of by-way that can bring us to the end of our journey in company with our reason in our inquiries; in so far that, as long as we have our body, and our soul is blended in a confused mass with a nuisance such as that, we never can fully attain to the object of our desires; by which we mean truth. For infinite are the businesses in which the body involves us from the necessity of providing for its support, besides which, if ever we are attacked by diseases of any kind, these throw impediments in the way of our chase after what really exists and it fills us with desires and passions and terrors and vain imaginations of all kinds and a host of frivolities, so that in very truth it never allows us even ‘to think at all’ of anything, as the phrase is. For in fact wars and seditions and battles are entailed upon us by nothing in the world but the body and its passions. For it is by the pursuit of wealth and power that all our wars are engendered, and this wealth and power we are forced to seek for the body's sake, because we are enslaved to its service; and so it comes to pass that we have no leisure for the pursuit of philosophy in consequence of all this. And last and worst of all, if ever we do obtain any leisure from its exactions and apply ourselves to any course of reflection, in the very midst of our researches again at every moment it interrupts us, creating tumult and disturbance, and gives us such a shock that we are prevented by it from obtaining a clear view of the truth, but in fact it is made quite plain to us that, if we are ever to gain untroubled knowledge of anything, we must get rid of it, and with the soul by itself look at things in themselves; and then, as it seems, we shall have what we desire and profess a love for, that is to say, wisdom, after death, as our argument indicates, but not as long as we live. For if it is impossible to attain to pure knowledge while we are associated with the body, one of two things must follow; either we can nowhere at all acquire it, or only after death; for then the soul will be by herself separated from the body, but not before. And during our lifetime we shall in this way, I think, make the nearest approach to knowledge, if we abstain as far as possible from inter course and communication with the body—except so far as is absolutely necessary—and preserve ourselves from infection by its nature, keeping ourselves instead clear of it until God himself has set us free. And so, released unsullied from the vanity of the body, we shall dwell in all likelihood with beings like ourselves, and shall know by our own selves all that is pure; and this is, it is to be presumed, the truth. For that the impure ever attain to the pure is, I fear, unlawful. Such, I imagine, Simmias, must needs be the kind of language held amongst them selves and opinions entertained by all real lovers of learning. You agree with me, don't you?

Simmias:: Most completely, Socrates.

Socrates:: Well then, my friend, if this be true, there is abundant reason for hope that, on my arrival at the country for which I am now setting forth, I may there be able, if it be anywhere possible, fully to obtain possession of that to which the long study of my past life has been directed; so that the journey which is now enforced upon me is made with a good cheer by me or by anyone else who thinks that his mind has been prepared as it were by a process of purification.

Simmias:: Undoubtedly.

Socrates:: And may we not consider purification to be. what has been long indicated in the course of our discussion, the most complete attainable separation of the soul from the body and habituation of it to collect and concentrate itself by itself from all quarters out of the body, and to dwell as far as possible both in the time now present and in the future alone by itself, released from the body as from a prison?

Simmias:: Certainly.

Socrates:: This then is what is called death, a release and separation of soul from body?

Simmias:: Yes, unquestionably.

Socrates:: And the true philosophers, as we say, and they alone, are ever most earnest to release it, and the study of philosophers is neither more nor less than this, the release and separation of soul from body, is it not?

Simmias:: It seems so.

Socrates:: Well then, as I said at first, it would be ridiculous for a man first to prepare himself during his life to live in a state bordering as closely as possible on death, and then when it has come upon him to complain, would it not?

Simmias:: Of course.

Socrates:: In fact then, Simmias true philosophers do practice dying, and death is to them of all men least terrible. Consider the question from this point of view. Assuming that there is a complete rupture between them and their body, and that they do desire to have their soul all by itself, if when this actually happens they were to be alarmed and indignant, would it not be most unreasonable not to be glad to go to the place where on their arrival they may hope to obtain what they were in love with all through their life—which is, as we saw, wisdom—and to get entirely rid of the association of that which had become so odious to them? Or, whilst very many men upon the death of human loves and wives and children chose of their own free will to descend to the realms below, allured by this hope of beholding there those they longed for, and being in their company, is it likely that one who has a genuine love of wisdom and has taken a firm hold of this same expectation, that he will nowhere else meet with it in any degree worth mentioning than in the other world, should be vexed at dying, and not rather glad to go there? Surely he must think so, my friend, if at least he be indeed a philosopher—he will be strongly persuaded of this, that he will find pure wisdom nowhere but there. And if this be so, as I was just now saying, would it not be great folly for such a man to be afraid of death?

Simmias:: Great indeed, upon my word.

Socrates:: Here then, you have a sufficient token of any one that you ever see afflicted at the approach of death, that he was not after all a lover of wisdom but a mere lover of his body. And this very same man is most likely a lover of wealth or a lover of honor, either one of them, or even both.

Simmias:: Yes, it is exactly as you say.

Socrates:: Then, Simmias, is not what is called fortitude also natural to men of this temper more than to any others?

Simmias:: Quite so.

Socrates:: Well and temperance again,—that which even the vulgar call temperance, not to be thrown into a Butter by the passions, but to preserve an indifferent and sober demeanor,—is it not natural to those alone who are most scornfully indifferent to the body and pass-their lives in philosophy?

Simmias:: It must be.

Socrates:: Yes, for if you will notice, the fortitude and temperance of all others, you will think them very odd.

Simmias:: How so?

Socrates:: You know, that all the rest of mankind reckon death to be one of the great evils of our condition?

Simmias:: Certainly, I do.

Socrates:: And so it is from fear of greater evils that the brave amongst them support death, when they do sup port it?

Simmias:: It is so.

Socrates:: It follows then that all but philosophers are courageous only because they are afraid and from fear? Yet it is an odd thing for a man to be brave out of fear and cowardice?

Simmias:: It is, no doubt.

Socrates:: Again, is not the case exactly the same with their sober characters? Are they not temperate from a sort of intemperance? And yet, though we should be disposed to say that it is impossible, still their case in respect of this foolish kind of temperance does come to bear a close resemblance to this: for from mere fear of being deprived of one kind of pleasures and from desire of them, they abstain from some whilst they are under the dominion of others. However, to be under the empire of pleasures people call intemperance, and yet at the same time they succeed in mastering some pleasures just because they are mastered by others; and this is like what was said just now, that in a sort of way they are made temperate by intemperance.

Simmias:: It certainly seems so.

Socrates:: My dear friend, I fear this is not the true exchange towards the acquisition of virtue, to change pleasures against pleasures, and pains against pains, and fear against fear, and greater against less, like so many coins; but I am rather inclined to think that this alone is the true coin for which we must exchange all these things, that is to say, wisdom, and that all that is bought and sold for this and with this—that and that alone is in reality, whether it be fortitude or temperance or justice; and in a word that true virtue only exists when accompanied by wisdom. whether pleasures and fears and all the rest of such things be thrown in or withdrawn; whereas, separated from wisdom and exchanged one against another, such virtue as this, I am afraid, is a mere rough sketch and really servile, with no soundness nor genuineness about it; whilst the reality of it is in fact a sort of cleansing from all such things, and true temperance and justice and fortitude and wisdom itself is a kind of purificatory rite. And indeed those famous men who established the mysteries amongst us seem to have been no mean thinkers, but in reality to have been from the earliest times darkly hinting to us that whosoever reaches the world below uninitiated and unsanctified shall lie wallowing in mire, whilst he that has been purified and sanctified shall on his arrival there dwell with Gods. For there are, you know, say the ministers of the mysteries, ‘many that bear the thyrsus, but few bacchanals;’ and these last are according to my views no other than the true votaries of philosophy. And to become one of them I too during my life spared no effort, but used all diligence in every way; but whether I was right in so doing, and whether I have in any measure succeeded, we shall know for certain by and bye, when we have arrived at our journey’s end, if it be God’s will, as I think. Such then, Simmias and Cebes, is the defense I set up to show you that it is with reason that I feel no grief nor indignation at quitting you and my earthly masters, thinking as I do that there also no less than here on earth I shall find good masters and friends; though the vulgar are incredulous. So if I have succeeded better in convincing you by my defense than my Athenian judges, it is well.

Phaedo:: So when Socrates had ended, Cebes took up the discourse and said;

Cebes:: Socrates, all the rest of what you have said is in my judgment admirable, but as to the soul mankind are apt to feel a deep distrust that after its departure from the body it may no longer exist any where, but be destroyed and perish on the very day of a mans death,—lest, I say, at the very instant of its being released from and quitting the body it may be dispersed, be dissolved, and vanish, like a breath or smoke, and be nowhere any more; for, were it to exist anywhere collected by itself and set free from all those ills which you just now enumerated, there would be indeed a strong and fair hope, Socrates, that all that you say is true. But it is precisely this that requires, I am inclined to think, no slight persuasion and assurance, that the soul does exist after the man is dead, and preserves any of its faculties or its reason.

Socrates:: True, Cebes; but what then are we to do? Would you have us enter upon a detailed discussion of this obscure question itself, whether it is probable that it is so or not?

Cebes:: Certainly, speaking for myself, I should be very glad to hear your opinion upon it.

Socrates:: Well, I don’t think anyone would say now if he heard me, not even if he were a comic poet, that I am chattering and conversing on things which don’t concern us. So, if you please, well go through the enquiry.

And let us pursue it in some such way as the following, the enquiry, that is to say, whether the souls of men after their death exist in the world below, or not. Now there is an old tradition which I remember to this effect, that after their departure from this world they are in the other, and then return to this earth and arise from the dead. And if this be so, that the living rise again from the dead, must not our souls necessarily exist there below? for surely they never could have returned to life if they had no existence; and this would be a sufficient proof of its being as we say, if it were really to be made evident that the living derive their origin from no other source than from the dead. But if this is not so, the doctrine will require some other evidence.

Cebes:: No doubt.

Socrates:: Then, if you want to take the easiest method of gaining a knowledge of it, don’t confine your attention to the human race, but, taking in the whole animal and vegetable kingdoms, and, in a word, everything which is subject to the condition of birth, let us consider whether everything is thus generated, that is from no other origin than opposites from their opposites—all those, I mean, that have anything of the sort; as for example the fair is opposite, I suppose, to the foul, and just to unjust, and so on through an infinity of other cases. Let this then be the subject of our enquiry, whether it be necessary that everything that has any opposite derive its origin from nothing else than from that which is opposite to it. For instance, whenever anything becomes greater, I suppose that it must first have been less, and then out of that become greater?

Cebes:: Yes.

Socrates:: Well and if it become less, it must be greater first, and thence afterwards become less?

Cebes:: As you say.

Socrates:: And further, from stronger the weaker must be generated, and from slower the faster?

Cebes:: Yes, certainly.

Socrates:: And again, if a thing becomes worse, is it not from better, and if juster, from more unjust?

Cebes:: Of course it is.

Socrates:: Are we then quite satisfied of this, that all things are produced in this way, that is to say, from opposites the opposite things?

Cebes:: Yes, quite.

Socrates:: And again, is there in them also something like a pair of generations between both members of each pair of opposites, from the one to the other, and back again from the latter to the former? is there not, that is to say, between a greater thing and a less, growth and decline, and don't we give them these names, growing to the one, and declining to the other?

Cebes:: Yes.

Socrates:: Well and separation and composition, and cold and hot, and so on for all the rest—even if we do not employ the names sometimes, still in reality at any rate it must be so in every case, that they take their origin one from the other, and that there is a generation from each of the two into the other reciprocally?

Cebes:: Precisely so.

Socrates:: Well, has living any opposite, as the state of sleeping is to that of waking?

Cebes:: No doubt of it.

Socrates:: What?

Cebes:: Death.

Socrates:: Well, are these born one from the other, since they are opposites, and are the generations between them two like themselves?

Cebes:: Of course they must be.

Socrates:: Then the one pair of those which I just now mentioned, I will name to you, itself and its generations; and do you tell me the other. The one which I mean is sleeping and being awake, and I maintain that from sleep the state of being awake is generated, and from being awake the state of sleep, and that their generations are in the one case going to sleep, and in the other awaking. Are you satisfied with my explanation or not?

Cebes:: Quite.

Socrates:: Then tell me in your turn, in the same way about life and death. Don't you say that death is opposite to life?

Cebes:: Certainly I do.

Socrates:: And that they are generated one from the other?

Cebes:: Yes.

Socrates:: What then is that which is generated from the living?

Cebes:: The dead.

Socrates:: And again, what from the dead?

Cebes:: The living, it must be admitted.

Socrates:: Then it is from the dead, Cebes, that the living, persons as well as things, are generated?

Cebes:: It appears so.

Socrates:: Then, our souls exist in the lower world.

Cebes:: So it seems.

Socrates:: Well and of the two generations that belong to these the one is plain enough: for death is a tolerably certain fact, isn't it?

Cebes:: No doubt of it.

Socrates:: What shall we do then? Shall we refuse to assign the opposite generation to correspond, and suppose nature to remain mutilated on this side? Are we not rather obliged to balance dying by some opposite generation?

Cebes:: Absolutely, I should say.

Socrates:: What is that?

Cebes:: Coming back to life.

Socrates:: Well then, if there be such a thing as coming back to life, it must be a generation from the dead into the living, this same coming back to life?

Cebes:: Just so.

Socrates:: Then we are brought by this process of reasoning again to the conclusion that the living are generated from the dead just as much as the dead from the living; and if this be so, we thought it, I believe, sufficient evidence of the necessary existence, of the souls of the dead in some place or other from which they might be born back into life?

Cebes:: I suppose, Socrates, that this is a necessary consequence of our former conclusions.

Socrates:: Then, Cebes, let the following considerations convince you that we have not arrived at those conclusions in any unfair way, as it seems to me. For if there were not a perpetual correspondence between the two in generation, just as if they revolved in a circle, but the generation were forwards in a straight line as it were, only from the one to its opposite, and did not bend back its course to the other nor make a return, you know that all things at last would be reduced to the same form, and find themselves in the same condition, and cease to be born altogether.

Cebes:: How do you mean?

Socrates:: There is no difficulty, in understanding what I say; but to take an instance, if there were such a thing as going to sleep without any corresponding waking again generated from that which is asleep, you know that at last universal nature would make the famous Endymion a mere farce, and he would be quite eclipsed, because everything else would be in the same state as himself, asleep. And if all things were to be mixed together and never separated, the saying of Anaxagoras would soon be brought about, 'all things together.' And so also in the same way, my dear Cebes, if everything were to die which was endowed with life, and after their death things were to remain in this shape and never come back to life, isn't it absolutely necessary that everything should be at last dead, and nothing alive? For if all living things were to be generated out of all the rest, and the living were to die, what remedy could possibly be found to prevent everything being swallowed up in death?

Cebes:: None whatever, I believe, Socrates; on the contrary what you say seems to me infallibly true.

Socrates:: Yes, Cebes, and so it is in my judgment most surely as I say; and we have not been cheated into these particular admissions; but the return to life is a real fact, and so it is that the living are born from the dead, and that the souls of the dead do exist, and that there is a better fate in store for those that are good and for the bad a worse.

Cebes:: And besides taking up the argument, according to that doctrine too, Socrates, if it be true, which you are so often accustomed to lay down, that our learning is nothing but recollection, it would follow, I should suppose, necessarily from that too, that we have learnt at some earlier time what we now recollect; but that is impossible, unless our soul was existing somewhere before it was enclosed in this human form; so that thus too the soul seems to be an immortal thing.

Simmias:: But, Cebes, what are the proofs of this? Refresh my memory; for I have no very accurate remembrance of them just at present.

Cebes:: One argument, the strongest of all, is that men, when questions are put to them, provided they are put adroitly, give of themselves an accurate account of anything, whereas if they had not within them a scientific knowledge and true theory, they would never be able to do it: and then if anyone be set before geometrical figures or anything else of that sort, he thereupon most clearly shows the truth of this.

Socrates:: But if you are not convinced in this way, Simmias, see if you may be brought to agree by considerations of the following kind; for your doubt, I suppose, is as to how what is called learning can be recollection?

Simmias:: No, don’t doubt it at all; but I want to be brought into precisely the state which is the subject of our discourse, that is to say, recollection: indeed from the explanation that Cebes undertook to give I am already pretty well reminded and convinced; however I should not be at all less glad to hear from you now in what way you undertook to represent it.

Socrates:: In this way, I. We are ready to admit, no doubt, that, if anyone is to recollect anything, he must have known it before at some time or other.

Simmias:: Yes, certainly.

Socrates:: Well, do we allow this too, that, whenever knowledge presents itself in a manner such as I am about to describe, it is recollection? I mean in some such manner as the following. Suppose a person, after having seen or heard something first or perceived it by any other sense, not only to know that, but also to have an impression in his mind of something else, the knowledge of which is not the same but different, may we not fairly say that he recollected that of which he received the mental impression?

Simmias:: How do you mean?

Socrates:: For example, such cases as the following: the knowledge of a man and the knowledge of a lyre are distinct, I presume?

Simmias:: Of course.

Socrates:: Well, you know that lovers, whenever they catch sight of a lyre or a cloak or anything else which their favorites are in the habit of using, experience this: they recognize the lyre and at the same time receive in their minds the image of the youth to whom the lyre belonged; which is recollection: just as a man by seeing Simmias is often reminded of Cebes, and so on doubtless in an infinite number of other cases of the same kind.

Simmias:: Infinite indeed, by Zeus.

Socrates:: Well, is not such a case as that a kind of recollection? especially however when this happens to a person in the case of such things as had been already effaced from his memory by time and want of attention?

Simmias:: Undoubtedly.

Socrates:: Again, is it possible for any one to recall to mind a man by seeing a picture of a horse or a picture of a lyre? or by seeing a portrait of Simmias to remember Cebes?

Simmias:: Certainly it is.

Socrates:: Or again, by seeing a portrait of Simmias to call Simmias himself to mind?

Simmias:: It is, no doubt.

Socrates:: Does it not then happen in all these cases that recollection is derived at one time from similar, and at another from dissimilar things?

Simmias:: It does.

Socrates:: But whenever any particular recollection is suggested to any one by similar objects, must not this further phenomenon present itself, the perception, namely, whether or not this in any respect falls short, in point of resemblance, of the thing which he remembers?

Simmias:: It must.

Socrates:: Consider then, whether this be so. We allow, I believe, that there is such a thing as ‘equal.’ I don’t mean stick to stick, or stone to stone, or any thing else of that kind, but beyond all these something else, absolute equality: are we to admit that it is any thing or nothing?

Simmias:: ’Faith, let us admit it by all means, most emphatically.

Socrates:: Do we also know it absolutely?

Simmias:: Yes, certainly.

Socrates:: And where did we get our knowledge of it? Wasn’t it from the things we were mentioning just now, from the sight of sticks or stones or any other equal things—was it not from them that we obtained the other conception, distinct as it is from them? You think it is distinct, don’t you? Look at it again in this way. Does it not sometimes happen that equal stones and sticks, though they remain the same, appear at one time equal, and at another the contrary?

Simmias:: Unquestionably it does.

Socrates:: Well, did the absolute equals ever appear to you unequal? or equality inequality?

Simmias:: No, never, Socrates.

Socrates:: Then, those equal things which we spoke of just now are not the same as equality itself.

Simmias:: Not at all, according to my view, Socrates.

Socrates:: But still from those equals, distinct as they are from the other equal, you nevertheless have conceived and obtained the knowledge of it?

Simmias:: Most true.

Socrates:: And that, whether it resemble them or the reverse?

Simmias:: Quite so.

Socrates:: And that makes no difference. Whenever by seeing one thing you obtain from this sight the conception of another, whether like or unlike, it must of necessity have been, an act of recollection.

Simmias:: No doubt of it.

Socrates:: What say you to this then? Have we any such feeling as this about the equalities in bits of wood and those equal things that we were just now speaking of? Do they seem to us to be equal in the same sense as the very, absolute equal, or do they at all fall short of that, in that they are not of the same nature as the equal, or not?

Simmias:: Indeed, they do fall very far short of it.

Socrates:: So then, whenever a person in seeing a thing perceives that this, for instance, which I now have before my eyes means to be like something else existing, but falls short of it, and cannot attain to the nature of the other, but is inferior, we must admit, I think, that the person who perceives this must necessarily have had some previous knowledge of that which he says it resembles though it does not come up to it?

Simmias:: We must.

Socrates:: Well then, is this the case also with ourselves, or not, in respect of equals and absolute equality?

Simmias:: Certainly.

Socrates:: It follows then that we must have had a previous knowledge of the equal, before that time when we first saw equal things and perceived that all of them aspire to be of the same nature as the equal but cannot reach it.

Simmias:: It is so.

Socrates:: And further we acknowledge this also, that we have not obtained, and it was not possible for us to obtain, the conception of it from any other source except from the sight or touch or some other of the senses; for I say the same of all of them.

Simmias:: Why, the cases are the same, Socrates, as far as regards that which our argument would show.

Socrates:: But, be that as it may, it is from the senses that we must obtain the conception that every thing in the domain of sense strives after that absolute equality, though it falls short of it. Or, if not, what is our view of the question?

Simmias:: As you say.

Socrates:: Consequently, before we began to use our sight and hearing and the rest of our senses we must have obtained somewhere a knowledge of the nature of the absolutely equal to enable us, in referring the equals which we gather from our senses to it, to see that they are all eager to be such as the other, but yet are inferior to it.

Simmias:: It follows necessarily from our previous statements, Socrates.

Socrates:: Well, were we from the very moment of our birth in possession of sight and hearing and all the rest of our senses?

Simmias:: Yes, certainly.

Socrates:: And yet we say that we must have obtained the knowledge of the equal antecedently?

Simmias:: We do.

Socrates:: Then, as it appears, we must have obtained it before we were born?

Simmias:: It seems so.

Socrates:: So then if we obtained this knowledge before our birth and so were born with it in our possession, we had also before we were born and from the moment of our birth the knowledge not only of the equal and the greater and the less, but of the whole number of things of that kind? for our argument now does not turn upon the equal any more than upon the absolutely beautiful and the absolutely good and just and holy, and, as I say, upon every thing which we stamp with this impression, reality, in our questions when we question, and in our answers when we answer. So that we must needs have gained the knowledge of each of them previous to our birth.

Simmias:: It is so.

Socrates:: And had we not each in his own case forgotten what we had gained, we should have been constantly born with this knowledge and have constantly preserved it throughout our life: for to know is this, first, to obtain knowledge of a thing and then to keep it without having lost it. This is what we call forgetfulness, isn't it Simmias, the loss of knowledge?

Simmias:: To be sure it is, precisely, Socrates.

Socrates:: Yes, and if it be true, I should think, that, having obtained it before we were born, we lost it at our birth, and that we then afterwards, by employing our senses upon such things as those, recover that knowledge which we once had in a former state, would not what we call learning be the recovery of our own knowledge? and should we not in calling this recollection give it its right name?

Simmias:: Yes, certainly.

Socrates:: For this, you know, we found to be possible, for a man, after he has received an impression of something either by sight or by hearing or by any other of his senses, to derive from this a conception of something different that he had forgotten, with which this was associated, whether unlike or like. Wherefore, as I say, one of two things, either we are born with the knowledge of them and all retain that knowledge through our life, or subsequently to birth, those who learn, as we call it,—they do nothing but recall to mind, and so learning would be recollection.

Simmias:: It must be so, beyond all doubt, Socrates.

Socrates:: Then which of the two do you choose, Simmias? That we are born with the knowledge, or that we recall to mind afterwards that of which we had gained the knowledge before?

Simmias:: I cant tell which to choose yet, Socrates.

Socrates:: Well then, can you make choice in this case, or what is your opinion about it—can a man that has knowledge give a rational account of the subjects in which his knowledge lies, or not?

Simmias:: Of course he can, Socrates.

Socrates:: Do you think also that every body is able to give an explanation of these things of which we were just now speaking?

Simmias:: Indeed I wish they could: but on the contrary I am much more disposed to fear that to morrow at this time there will be no longer any man alive capable of doing it as it ought to be done.

Socrates:: So then, it is not your opinion, Simmias, that all men have the knowledge of them?

Simmias:: Assuredly not.

Socrates:: Then they recollect what they learnt at some time or other?

Simmias:: It must be so.

Socrates:: And when did our souls acquire the knowledge of them? For it certainly is not since we were born men.

Simmias:: No, indeed.

Socrates:: Then it was at some former time?

Simmias:: Yes.

Socrates:: Then our souls were existing likewise, Simmias, at an earlier time, ere they were enclosed in a human form, apart from their bodies, and were endowed with thought?

Simmias:: Unless perchance, Socrates, we acquire this knowledge at the very moment of our birth: for this period is still left.

Socrates:: Be it so, my friend: but at what other time do we lose it? For surely we are not born in possession of it, as we just now admitted. Or do we lose it at the very time at which we also acquire it? Or can you name any other time?

Simmias:: None whatever, Socrates; but I didn't perceive that I was talking nonsense.

Socrates:: Then, is it thus with us, Simmias? If the things really exist which we have constantly in our mouths, beautiful, and good, and all reality of this kind, and if we refer all the impressions of our senses to this latter, as a thing that had been once ours and which we rediscover to be in our possession, and bring them into comparison with it, it follows of necessity that in the same way in which these things exist, so also does our soul exist even before we are born: but if these things have no real existence, this argument of ours would have been thrown away? Is it indeed so, and is it just as certain that our souls exist as that these things exist, even before we were born, and if not the one, then not the other either?

Simmias:: It seems to me beyond all question, Socrates, that there is the same certainty, and it is well that our discussion has run for shelter to so safe a harbor as this equal assurance of the existence of our soul previous to our birth and of the existence of the absolute being which you even now refer to. For, for my own part I could not name any thing which is so evident to me as this, that all such things exist in the highest sense of the word, that is to say, beautiful and good and all the rest which you mentioned just now: and for me the demonstration which has been given is sufficient.

Socrates:: But how is it then with Cebes? For Cebes too must be convinced.

Simmias:: It must be sufficient for him, I should think: although of all mankind he is the most pertinacious skeptic as to arguments. Nevertheless I think he must be by this time sufficiently convinced of this, that our soul was in existence before we were born. However, I don’t think myself, Socrates, that it has been shown whether it will have a continued existence also after our death, but there is still an objection derived from that apprehension of the vulgar which Cebes just now alluded to, that the soul at the very instant of the mans death is scattered to the winds, and that this is an end of its existence. For admitting that it derives its origin and its composition from some other source and has existence before it reached a human body, what is to prevent it, when after having arrived there it takes its departure from it, coming to an end itself at the same time and being destroyed?

Cebes:: Well said, Simmias; for it does seem that only half, as one may say, of the demonstration which we require has been given, that, namely, our soul was in existence previous to our birth: but we want to prove besides that it will exist after our death no less than before our birth, if our demonstration is to be complete.

Socrates:: You will find, Simmias and Cebes, that it has been proved already, if you will combine this argument with our previous conclusion, that every thing living derives its origin from the dead. For if our soul does exist in a previous state, whilst on entering into life and being born it can be generated only out of death and the state of the dead, how can it possibly fail to exist after death too, since it has to be born again? Nay, the thing you speak of has been proved already. But still I fancy that you and Simmias would be glad to push this discussion too still further, and that you are haunted with that childish apprehension that the wind will literally blow it to pieces and disperse it as it issues from the body, especially whenever it happens that a man dies not in a calm, but in a high wind.

Phaedo:: To which Cebes replied, laughing at the conceit;

Cebes:: Suppose that we are, Socrates, and try to convince us: or rather you need not suppose that we are frightened ourselves, but there is perhaps a kind of child within us that is subject to such apprehensions. Him then let us try to persuade not to be frightened at death as at those frightful masks.

Socrates:: Well, you must apply a charm to it every day until you have succeeded in charming it.

Cebes:: But where, shall we find a charmer skilful enough for our purpose, Socrates, now that you are leaving us?

Socrates:: Greece is wide, Cebes, wherein doubtless good men are to be found, and many also are the tribes of the barbarians, all of whom it is your duty to search through in quest of such a charmer, and to spare neither money nor toil, for there is nothing on which you can lay out money to better purpose. And you must seek also yourselves in discussion with one another: for I dare say it may not be easy either to find persons better qualified for the task than you are.

Cebes:: Nay, this shall certainly be done: but now let us return to the point where we left off, if you have no objection.

Socrates:: Oh certainly, I have no objection. Why should I have any?

Cebes:: Thank you.

Socrates:: Well then, the question we must ask ourselves is something of this kind: what sort of thing that is whose nature it is to be subject to this accident, that is to say, dispersion; and what sort of thing that is for which we need feel any fear of its being subject to it, and the reverse? And after this again we must review the question to which of the two classes soul is to be referred, and thence derive either confidence or apprehension about our own soul.

Cebes:: True.

Socrates:: Then is it not the compounded and that which has a composite nature that is liable to this accident, to be dissolved, that is, in the same way in which it was put together: but if there be any thing uncompounded, does it not belong to this alone of all possible things to be exempt from such an accident?

Cebes:: I should think it must be so.

Socrates:: Well, the things that are always in the same state and wear the same aspect,—is it not most likely that these are the uncompounded? and those that are different at different times and never in the same state,—that these, I say, are the composite?

Cebes:: I should think so.

Socrates:: Then let us pass, to those same things with which we were engaged in the former part of our argument. The Being in itself which in our questions and answers we characterize as real existence,—is that always in the same state and with the same aspect, or different at different times? Absolute equality, absolute beauty, absolute every thing which is,—do these ever admit change of any kind whatever? or does each of them of which we predicate real existence, uniform in its pure simplicity, constantly preserve the same aspect and condition and never in any way on any occasion whatever admit any variation?

Cebes:: They must needs be constant and permanent in their nature, Socrates.

Socrates:: But what of the many beautiful things, men for in stance, or horses, or clothes, or any other whatever of the same kind, whether equal, or beautiful, or all that bear the same name with the ideas? Are they permanent in their condition? or, just the reverse of the others, do they never, as one may say, at all preserve any constancy, either in themselves or in their relations to one another?

Cebes:: You are right again: they are never the same.

Socrates:: Well, these latter you may touch, or see, or apprehend by the rest of your senses, may you not? whilst the permanent and immutable you can never lay hold of by any other instrument than the reasoning of the intellect; but all such things are invisible and beyond the reach of sight?

Cebes:: What you say is exactly true.

Socrates:: Then let us assume, if you please, two kinds of existing things, one visible and the other invisible.

Cebes:: Very well.

Socrates:: And the invisible constant and immutable, but the visible subject to perpetual change.

Cebes:: This again let us assume.

Socrates:: Come then, as to ourselves, are we not made up of body and soul?

Cebes:: There is nothing else.

Socrates:: Then to which of the two kinds should we say that the body bears the greater resemblance and is the more nearly akin?

Cebes:: Oh that must be quite obvious to every one; to the visible.

Socrates:: And the soul again—is it visible or invisible?

Cebes:: Not visible to the eyes of men at least, Socrates.

Socrates:: But of course when we said visible and the contrary, we meant to the human constitution? You don’t suppose it was to any other, do you?

Cebes:: No, to that of men.

Socrates:: Then what do we say about soul, that it is visible or not visible?

Cebes:: Not visible.

Socrates:: Then it is invisible?

Cebes:: Yes.

Socrates:: Consequently soul bears a nearer resemblance than body to the invisible, but the latter to the visible.

Cebes:: Quite necessary, Socrates.

Socrates:: Well, and were we not saying ever so long ago that the soul, whenever it employs the body as an assistant in the investigation of any subject through the medium either of the sight or of the hearing or of any other sense—for that is what we mean by through the medium of the body, to employ the senses in the investigation of a thing that then she is dragged by the body into the sphere of the ever-changing, and goes astray herself, and becomes confused and dizzy as if she were intoxicated, inasmuch as she is trying to lay hold of things of the same kind?

Cebes:: We certainly were saying so.

Socrates:: But whenever she contemplates anything by herself, she is gone at once into that region, to the pure and eternal and deathless and unchangeable, and from the affinity of her nature converses ever with that, whenever, that is, she can isolate herself and thus has the power of doing so, and then she rests from her wanderings, and in association with it is herself ever constant and unchangeable, seeing that she is laying hold upon things of a like sort; and is not this state of hers called thought?

Cebes:: Most nobly and truly spoken, Socrates.

Socrates:: Then to which of the two kinds, let me ask you again, taking into consideration our former conclusions as well as our present ones, do you think the soul bears a greater resemblance, and to which is it nearer akin?

Cebes:: I suppose, Socrates, any one, even the most stupid, would be forced by the method of demonstration that you have pursued to admit that wholly and entirely soul is more like that which is ever the same than that which is not.

Socrates:: And the body again?

Cebes:: More like the other.

Socrates:: And now look at the thing again in this point of view, that, namely, so long as soul and body are together, nature dictates to the one servitude and subjection, and to the other dominion and mastery: and in this respect again, which of the two appears to you to resemble the divine, and which the mortal? You think, don't you, that the divine is endowed with a nature formed for dominion and authority, and the mortal for subjection and servitude?

Cebes:: Oh yes, I do.

Socrates:: Which of the two then does the soul resemble?

Cebes:: It is quite plain, Socrates, that the soul resembles the divine, and the body the mortal.

Socrates:: Then consider, Cebes, whether from all that has been said we obtain this result, that soul is most like the divine and immortal and intelligible and uniform and indissoluble and that which is ever invariably consistent with itself, and that body again most resembles what is human and mortal and unintelligible and multi form and dissoluble and never consistent with itself. Have we any thing else to say on the other side, my dear Cebes, in contradiction of it?

Cebes:: Nothing whatever.

Socrates:: Well then, if this be so, is it not the nature of body to be quickly dissolved, but of soul on the contrary to be altogether indissoluble or nearly so?

Cebes:: No doubt it is.

Socrates:: And you observe, that after the man is dead, his body, the visible part of him, placed in the sphere of the visible—which, you know, we call a corpse—whose nature it is to be dissolved and to fall in pieces and to be dispersed in air, does not at once undergo any of these things, but is preserved a tolerably long time; if a man die with his body in a vigorous state and at a vigorous period of his life, a very considerable time in deed. For the body, when it has settled and been embalmed like those Egyptian mummies, remains nearly whole an incredible length of time. Nay, some parts of the body, even after it has rotted away, bones and sinews and all such parts, are nevertheless, so to speak, immortal: is it not so?

Cebes:: Yes.

Socrates:: But must the soul then, the invisible which flies at once to a place like itself, noble and pure and invisible, Hades in very truth so called, to dwell with the good and wise God, whither if it be God's will my own soul must shortly go,—must she, I say, being such as she is and so endowed by nature, on her departure from the body be at once scattered to the winds and perish, as the vulgar tell us? No, far from it, my dear Cebes and Simmias, but rather, far rather is the case thus: if she leave the body pure, dragging naught of it after her, as indeed during her lifetime she never with her goodwill had any communication with it, but avoided it and concentrated herself in herself, inasmuch, I say, as she was constantly practicing this and this is exactly what a truly philosophic soul is, and one that really studies the art of taking death easily—this is the practice of death, isn't it?

Cebes:: Yes, quite so.

Socrates:: Well, as I say, if she be in this condition, she departs to what is like herself, the invisible, the divine and deathless and wise; and arrived there she enjoys a happy lot, released from error and folly and fears and wild passions and all the rest of human ills; and, as is said of the initiated, passes in reality the rest of her existence with the gods. Is this to be our opinion, Cebes, or otherwise?

Cebes:: This, assuredly.

Socrates:: But, I suppose, if she take her departure from the body polluted and impure, which is likely, because she has been so constantly connected with it, and has waited on it and loved it, and has been so bewitched by it, I mean by its passions and its pleasures, that nothing seemed true to her but the corporeal, that is, what one may touch and see and drink and eat and use for one's lusts; whilst that which is to the eyes indeed dark and invisible, but by reason intelligible and by philosophy to be apprehended, this she has been accustomed to hate and shudder at and avoid,—think you that a soul in this state will quit the body pure, without ad mixture?

Cebes:: By no possibility.

Socrates:: But on the contrary distracted, I presume, by the corporeal, which the intercourse and union with the body from her constant association with it and her continual occupation about it has made a part of her very nature.

Cebes:: Exactly so.

Socrates:: But this, my friend, we must conceive to be ponderous and heavy and earthy and visible: and it is in fact by its union with this that the soul such as we have described it is weighed down and dragged back into the region of the visible, through fear of the invisible and of Hades haunting as men tell us, the tombs and graves, about which in fact certain shadowy phantoms of souls are sometimes seen—just such shapes as those souls are likely to exhibit which have been set free in a state not pure, but with the visible still clinging to them, which is in fact why they are seen.

Cebes:: Yes, that is likely, Socrates.

Socrates:: It is indeed, Cebes; and that these are in no respect the souls of the good, but those of the bad, which are compelled to wander about such like places, paying the penalty of their former education, because it was evil. And so long they continue thus to wander, until from the craving of the corporeal nature that attends them they are again confined in a body.

And they are confined, as is probable, in characters of the same kind as those which they have practiced during their past life.

Cebes:: What sort of characters do you mean, Socrates?

Socrates:: For example, those who have cultivated habits of gluttony and wantonness and drunkenness, and have not exercised thorough discretion in their conduct, enter, it is likely, into the race of asses and such like beasts. Don't you think so?

Cebes:: What you say is extremely likely.

Socrates:: And those that have had a propensity to injustice and tyranny and rapine, into the race of wolves and hawks and kites. Or, if not, where else should we say that such souls go?

Cebes:: To be sure they do, into animals of that kind.

Socrates:: Well then, is it quite clear for all the rest into what bodies each will pass according to the resemblance of their practice?

Cebes:: Quite so, of course.

Socrates:: Well then, of these again, those are happiest and pass into the happiest place who have exercised that popular and social virtue which men, you know, call temperance and justice, springing from habit and practice without philosophy and reason?

Cebes:: In what sense do you mean that they are happiest?

Socrates:: Because it is probable that they may be restored to a gregarious and civilized race, either bees perhaps or wasps or ants, or even back again into the same human race as before, and that respectable men may be made of them.

Cebes:: Like enough.

Socrates:: But the race of gods none may reach without having spent his life in the pursuit of wisdom and quitted it perfectly pure,—none but the lover of learning. And this is the reason, my friends Simmias and Cebes, why true philosophers abstain from the indulgence of all their bodily passions, and remain firm, and do not surrender themselves to them; not at all because they fear ruin and poverty like the vulgar and money-lovers: nor again, because they fear disgrace and the reproach of depravity like the lovers of power and of honor, is this the reason why they abstain from them.

Cebes:: Why, to be sure, it would ill become them.

Socrates:: Assuredly it would. Therefore, Cebes, those who have any concern for their own soul, instead of living merely to get fat and enjoy them selves, bid adieu to all such as these, and walk not in the same path, being assured that they know not where they are going: but they themselves, persuaded that they ought not to run counter to philosophy and to its liberating and purifying operations, take that direction, following her whithersoever she leads the way.

Cebes:: How so, Socrates?

Socrates:: I will tell you. For, the lovers of learning know that philosophy, receiving under its care their soul quite a close prisoner in the body and glued fast to it and forced to take its view of real things through it as it were through the walls of a dungeon, instead of alone by herself, and wallowing in every kind of ignorance, and clearly discerning that the fearfulness of the dungeon consists in her eager desire to make as much as possible the captive himself an accomplice in his own confinement,—well, I say, the lovers of learning know that philosophy, having taken their soul under its care in this condition, quietly talks her over and endeavors to set her free, by showing her that all observation by the eyes is full of illusion, and equally so that by the ears and the rest of the senses, and by persuading her to withdraw from them, except just so far as she is absolutely obliged to employ them, and by exhorting her to collect and concentrate herself into herself, and to put no faith in any thing but herself, that is, in that portion of real existence in and by itself which she can apprehend in and by herself, but whatsoever she contemplates by different organs varying in various things,—to hold none of that to be true, but that all such things belong to the realm of sense and of the visible, whereas what she sees herself belongs to the intelligible and invisible. Thinking then that she ought not to oppose herself to this process of liberation, the soul of the true philosopher holds herself aloof accordingly from pleasures and passions and pains and fears so far as she can, reflecting that, whenever any one is violently moved by pleasure or fear or pain or desire, the evil that he contracts from them is not of that slight magnitude that one might think—a fit of sickness for in stance or some loss incurred by the indulgence of his passions—but he suffers that which is the greatest and extremist of all ills, though he never takes it into account.

Cebes:: What is that, Socrates?

Socrates:: That every mans soul in the very act of feeling violent pleasure or pain at any thing is forced into the belief that every thing which most excites this feeling is the most real and the most true, though it is not so. And these are, most of all, the visible things. Aren't they?

Cebes:: Yes, no doubt.

Socrates:: Well, is it not in this feeling that soul is most completely chained down by body?

Cebes:: How so?

Socrates:: Because every pleasure and pain has, as one may say, a nail, with which it nails and buckles her to the body and gives her a bodily shape, fancying anything to be true which the body on its part asserts to be so. For from participation in the fancies of the body and taking pleasure in the same things she is forced, I conceive, to become like it also in its habits and it's alimentation, and of such a nature that she never can reach the world below in a pure state, but must ever take her departure from the body corrupted by it, so that she soon falls back into another body and takes root in it as if she were planted there, and hence loses all part in the intercourse with what is divine and pure and simple in its nature.

Cebes:: Most true, Socrates.

Socrates:: It is for this reason then, Cebes, that those that may be fairly called the true lovers of learning are regular and manly; and not for those which the vulgar assign you don't think so, do you?

Cebes:: Not I, you may be sure.

Socrates:: Why no. But a philosophers soul would reason thus, and would not think that, whilst it was the business of philosophy to set her free, she might still, while it was employed in doing it, abandon herself to her habitual pleasures and pains so as to be again made close prisoner in them, and so undo all the work again, plying a sort of Penelope's loom, only in the opposite sense; on the contrary, providing for herself a calm repose from all of them, following her reason and in it ever abiding, contemplating what is true and divine and be yond the sphere of mere opinion, and nourished by it, she deems that she must thus pass her life as long as it lasts, and after her death is to make her way to that which is akin and congenial to herself and so be delivered from all human ills. With such a nurture as this there is no fear of her being alarmed, after such a preparation, Simmias and Cebes, at the idea of being torn asunder on her departure from the body, and being blown in pieces and scattered by the winds, and so that she vanish and have no more any existence anywhere.

Phaedo:: So after Socrates had said this a silence ensued for a long time, Socrates himself being intent upon the preceding discussion, as his appearance plainly showed; and so indeed were most of us. But Cebes and Simmias were talking a little to one another. And Socrates, when he observed them, asked;

Socrates:: Tell me, what was the subject of your conversation? You think, I dare say, that the question has not been thoroughly discussed? for, to be sure, it still leaves room for a multitude of doubts and objections, if, that is to say, the question is to be thoroughly gone into. However, if you are pursuing any other enquiry, I have nothing to say: but if you have any difficulty about this one, don't hesitate for a moment, either to speak yourselves and explain your views if it seems to you that it has been treated in any better way, or again to call me in to your assistance if you think that with my aid you are at all more likely to be successful.

Simmias:: Very well, Socrates, I will tell you the truth. We have been puzzled, and each of us has been for some time past pushing the other on and urging him to ask a question, because we were anxious to hear what you have to say, and yet were reluctant to trouble you for fear it may be disagreeable to you in consequence of your present misfortune.

Phaedo:: And he, when he heard this, smiled quietly, and said;

Socrates:: Bless me! Simmias; truly it must be difficult for me to persuade the rest of the world that I do not look upon my present case as a misfortune, when I cant convince even you, but you are afraid that I may be in a worse humor now than I used to be in old times. And you take me, it seems, to be inferior in the gift of foresight to the swans; which, as soon as they feel that they must die, sing then louder and better than they have ever sung in all their past lives, for joy that they are about to depart into the presence of the God whose servants they are. But men from their own dread of death belie the swans too, and say that the song they pour forth is a dirge for their death out of grief, not reflecting that no bird sings when it is hungry or cold or suffering from any other pain, not even the nightingale herself nor the swallow nor the hoopoe, whose song they say is a dirge for grief: but neither these nor the swans seem to me to be in pain when they sing. But, I believe, as they belong to the service of Apollo, they are endowed with foresight, and, having foreknowledge of the good things in the world below, they sing and show their delight all through that day far more than in all their lives before. And I think myself too a fellow-slave of the swans and consecrated to the service of the same God, and that I have received the faculty of foresight from my master in no inferior measure to them, and that I am not more despondent than they are at the thought of departing from life. On the contrary, as far as any such feeling as this is concerned, you may say anything or ask me any question you please, as long as the eleven good men of Athens will allow.

Simmias:: You are very good: and so I will tell you my difficulty, and Cebes in his turn, to what extent it is that he cannot assent to what has been said. For to me it seems, Socrates, as I dare say it does to you, that to know what is certain of such subjects as this is in the present life either impossible or extremely difficult; yet on the other hand to refuse to test in every way the received opinions about them, and not to persevere until his powers have failed him in the examination of them from every point of view—this I take to be a sign of a very feeble character. For it is our duty in respect of them to effect one at least of these things, either to learn from others or discover for oneself the true account of them, or else, if this is a thing impossible, to take at any rate the best and most irrefragable of human doc trines, and conveyed upon it as it were upon a raft to hazard the voyage through life, unless indeed one could find a surer conveyance, that is, a divine doctrine, whereon to make the passage more safely and with less risk. And so now for myself at any rate, I shall not be deterred by any feeling of shame from putting my question—especially as you say what you have said—nor will I expose myself to my own reproaches at a future time for not having expressed my opinion now. For I do think, Socrates, when I look to myself as well as to him, that the subject has not been quite sufficiently discussed.

Socrates:: Why, my friend, I dare say you are right: but tell me how you think it insufficient.

Simmias:: In this way I find it so, as, you know, one might apply the same explanation to a harmony and a lyre and its strings, and say that the harmony is a thing in visible and incorporeal and eminently beautiful and divine in the tuned lyre, and yet the lyre itself and its strings are bodies and corporeal and composite and earthy and akin to what is mortal. And so whenever any one breaks the lyre, or cuts it in pieces, or even bursts its strings, supposing any one were to insist, by the same argument as yourself, that

that harmony must needs be still in existence and cannot have perished,—for, he might argue, it would be absolutely impossible for the lyre with its strings burst, and its strings, of mortal-mould as they are, to be still in existence and yet that the harmony should have perished, which is of like nature and near akin to the divine and immortal, and should have perished before the mortal—but were to say that the harmony itself must be still somewhere extant, and that the wood and strings would decay before anything happened to it,—for in fact now, Socrates, I should imagine this must often have occurred to you yourself, that the popular notion amongst us of the nature of the soul is something like this, that, our body being as it were raised to a certain pitch or held together by hot and cold, and dry and moist, and such like things, our soul is a mixture and harmony of just these things, the result of their being well and duly blended one with another:—supposing therefore that our soul is a harmony, it is plain that, whenever our body is relaxed or strung up out of due proportion by diseases and other ills, the soul must of necessity perish instantly, most divine as it is, like all other harmonies, whether they be in sounds or in any other works of craftsmen, whilst the relics of each body last for a long time, until they are consumed either by fire or by decay;—see then what reply we shall have to make to this hypothesis, should any one think fit to maintain that the soul, being a mixture of the component parts of the body, perishes first in what is called death.

Phaedo:: Whereupon Socrates, looking fixedly as was his constant custom and smiling, replied;

Socrates:: That is quite fair, what Simmias says: so if any of you has a readier wit than myself, he ought to answer at once. For indeed he looks quite a formidable assailant of my argument. At the same time, before I make my answer, I think we had better first hear Cebes also, what fault he on his part has to find with our argument, in order that we may gain time during the interval to deliberate upon our reply; and so, when we have heard him, we must either give way to them if they seem to be concordant, or, if not, then finally take up the defense of our theory. Come then, Cebes, tell me, what is it that disturbed you on your side and made you incredulous?

Cebes:: Then I tell you. It seems to me, that is, that our argument is still just where it was, and liable to the same objection as we urged in the former case. For that it has been cleverly enough, and indeed, if it is not presumptuous to say so, quite satisfactorily demonstrated that our soul was in existence also before it entered into this frame of ours,—that admission I am not disposed to retract: but that after our death it has any longer a local existence,—of that I am not convinced. Not that I agree with Simmias objection that soul is not stronger nor more durable than body: for in all these points I hold it very far superior. Then why, the argument might say, do you still refuse to believe me? when you see that after the mans death the weaker part still remains in existence, don’t you think it is a necessary consequence that the more durable part should continue safe at that time? To meet this objection then, see if the answer I am about to make has any weight: for I too, it seems, like Simmias, require an illustration to express my meaning. For the argument we have employed seems to me to be much as if any one were to apply the same theory to a weaver who had died old, that the man has not perished but is probably somewhere in existence, and were to produce in evidence that the cloak which he had woven for his own wearing still exists entire and has not perished, and, in case of any one refusing his assent, were to ask him which is the more durable kind, that of a man or that of a cloak when it is in constant use and wearing, and receiving for answer, that of a man by far, were to suppose it to have been demonstrated that then consequently beyond all manner of doubt the man must be safe and sound, seeing that the less durable object has not perished. Whereas, I believe, Simmias, the truth is otherwise;—for I wish you too to pay attention to what I say—every one would be of opinion that this is the language of a simpleton. For this weaver of ours has worn out and woven for himself again many a similar cloak, and outlived it is true all those many, but died, I presume, before the last, and yet a man is not a bit the more on that account inferior to or weaker than a cloak. And the very same image, I suppose, may be applied to the relation of soul and body, and should think that, if any one were to apply just what we are saying to their case, he would be quite reasonable in maintaining that the soul no doubt is durable, and the body weaker and less durable; yet still, he might say, each of our souls does wear out many bodies, especially if we suppose her to live many years: for sup posing the body to be in a state of flux and perishing while the man still lives, but the soul meanwhile to be constantly re-weaving her garment as it wears out, it must certainly follow of necessity that whenever the soul does die she must be wearing her last dress, and that she must be outlasted by this alone: but after the soul has perished, the body would then finally exhibit its natural weakness and speedily decay and be gone out of sight. So that one is not yet entitled to put so much faith in this argument as to feel any confidence that after death our soul still enjoys existence anywhere. For if one were even to concede to the arguer still more than you, Simmias, allow, granting to him not only that our soul was in existence in the time preceding our birth, but even that after our death there is nothing to prevent the souls of some of us still existing and having future existence and being born many times over and dying again,—for soul is by its nature so strong as to hold out through many different births,—but after granting all this were to stop short in his concessions and refuse to allow that she suffers no harm in the course of her many births and does not in fact at last in one of her various deaths perish outright, but this particular death and this dissolution of the body which brings destruction to the soul, he were to say, no one can determine, for it is impossible for any one of us to perceive it—if, I say, all this be so, no confidence that a man can feel about death can be otherwise than an irrational confidence, unless he can undertake to prove that soul is absolutely immortal and imperishable: otherwise, he who is about to die must ever feel apprehension for his soul, lest in the present separation from his body she should perish utterly.

Phaedo:: So when we heard this we were all, as we afterwards owned to one another, affected with an uncomfortable feeling, in that, after we had been so fully convinced by the preceding argument, they now seemed to unsettle our minds again, and not merely to throw us into doubt of the validity of the foregoing results, but also as to any arguments that might follow to inspire us with the fear of our being possibly incompetent judges or even of the things themselves admitting in fact of no certainty.

Echecrates:: Yes, by heaven, Phaedo, I can excuse you. For in fact, as I was listening to you just now myself, a thought struck me, and I said to myself something of this sort: Then what reasoning can Ave trust in future? for how extremely plausible that argument of Socrates was, which has now quite sunk into discredit. For that theory, that our soul is a kind of harmony, has now, as it has always had, a wonderful hold upon me, and, when it was stated, suggested to my memory, as it were, that it had been my own opinion previously. And again I am as completely at fault as at starting for some other reason to persuade me that the soul of the dead man does not die with him. Tell me then, in Gods name, how did Socrates pursue the discussion? And whether he too, as you say that you did, betrayed any symptoms of vexation, or no, but on the contrary advanced quietly to the rescue of his argument; and whether he defended it satisfactorily or inadequately: tell me the whole story as exactly as you can.

Phaedo:: In good truth, Echecrates, often as I have wondered at Socrates, I never yet felt so much admiration of him as at that interview. Now for a man like him to be able to find an answer is perhaps nothing remarkable: but what I was most struck with in him was, first of all this, that he listened so sweetly and kindly and admiringly to the young men's objections; next, that he so quickly perceived the effect they had produced upon us; and finally, that he so skillfully applied a remedy, and rallied us, as it were, from our rout and defeat, and encouraged us to advance by his side and join him in considering the argument.

Echecrates:: How, pray?

Phaedo:: I will tell you. I chanced to be sitting on his right by the bedside on a low stool, whilst his seat was a good deal higher than mine. So stroking down my head and pressing together the hair upon my neck—for it was a habit of his ever and anon to play with my hair said;—

Socrates:: So, Phaedo, to-morrow, I dare say, you will have all these beautiful locks cut off.

Phaedo:: I suppose so, Socrates.

Socrates:: Not if you take my advice.

Phaedo:: Why not?

Socrates:: We ought to do it to-day, I mine and you these, if our argument be really dead and we are unable to bring it to life again. Indeed, for my own part, if I were you and the argument had slipt through my fingers, I would make a vow, like the Argives, never to let my hair grow until I had renewed the struggle and defeated Simmias and Cebes reasoning.

Phaedo:: Nay, Hercules himself, says the proverb, is not a match for two.

Socrates:: Well then, call me in, your Iolaus, to your aid whilst it is still light.

Phaedo:: I summon you then to my aid, not in the character of Hercules, but in that of Iolaus summoning Hercules.

Socrates:: It wont matter. But first of all let us be on our guard against falling into a certain error.

Phaedo:: What is that?

Socrates:: Against becoming speculation-haters, as people become man-haters: for there is no greater evil, that can befall a man than this, that he have come to hate speculation. And speculation-hating arises from the same cause as man-hating. For the latter enters our minds from an excess of confidence artlessly placed in a person, and from an opinion conceived that the man is in all respects true and sincere and trust worthy, and then shortly afterwards finding him to be a villain and untrustworthy, and so again another: and when a man has often been treated thus, and particularly by any of those whom he would be inclined to esteem his nearest and dearest friends, so at last by frequent collisions of this kind he comes to hate every body and to think that there is nothing at all sound and sincere in any one. You have observed, haven't you, that this is the kind of way in which this feeling originates?

Phaedo:: Yes, certainly.

Socrates:: Well, isn't it shameful, and plain that such a person is venturing to hold intercourse with men with out a knowledge of mankind? For, I presume, if he had conducted his dealings on principles of art, he would in that case have believed, as is really the case, that the excessively good and bad are each of them rare, but that the intermediate sort are most numerous.

Phaedo:: How do you mean?

Socrates:: Just as is the case, with the excessively big and little: do you think there is any thing rarer than to meet with a man either extremely big or extremely little, or a dog, or any thing else you please? or again swift or slow, or ugly or handsome, or white or black? or have you not observed that in all such things the very extremes are rare and few in number, but the means abundant and numerous?

Phaedo:: No doubt.

Socrates:: Don't you think then, that, if a contest of rascality were to be proposed, the most distinguished would show themselves as scarce there as elsewhere?

Phaedo:: Like enough.

Socrates:: Why, so it is: however, this is not the way in which speculations resemble men, [viz. that the extremes are rare]—I merely followed your lead just now—but this, in that, when a man has believed a theory to be true independently of the art of reasoning, and then soon after it seems to him false, sometimes really being so and sometimes not, and again assumes different aspects in succession, and most especially those who devote themselves to the practice of disputation end, you know, by thinking that they have become the cleverest fellows in the world, and are the only people that have discovered that neither in things nor in speculations is there any thing sound or sure, but that all existing objects are in a constant flux and reflux, exactly as in the Euripus, and never abide an instant in any position.

Phaedo:: That is quite true.

Socrates:: It would indeed, Phaedo, be a lamentable case, if there be any true and certain doctrine attainable by our understanding, that a man, from lending his ear to speculations of such a nature that they seem, though the same, to be sometimes true and sometimes false, instead of accusing himself and his own want of skill, should at last out of mere vexation be glad to shift the blame from his own shoulders upon the speculations, and spend the rest of his life thenceforward in hating and abusing these speculations, and remain a stranger to the truth and knowledge of things.

Phaedo:: Upon my word, lamentable indeed.

Socrates:: First of all then, let us be on our guard against this, and let us not admit into our soul the fancy that there is nothing sound in philosophy; on the contrary we are much more bound to suppose that we ourselves are not yet in a sound state, but that we must strive manfully and earnestly to be so—you and the rest for the sake of your future life as well, and I as a preparation for death itself: for, for myself, I am afraid that on this very subject just at present I am not in a philosophical mood, but rather, like those very vulgar disputants, in a contentious humor. For they in fact, whenever they dispute on a point, are utterly regardless of the real truth of the question under examination, but direct all their efforts to making their own positions appear true to their audience: and I think in the present case that the difference between me and them will be merely this, that I shall not be anxious to convince my audience of the truth of my opinion, unless it were as a merely subordinate object, but to convince myself, as far as I possibly can, of the truth of what I say. For I make this calculation, my dear friend,—and mark in what a selfish spirit—if what I say should be really true, it is well indeed to be persuaded of it; but if there is nothing at all after our decease, yet at any rate for the mere interval that is to elapse before my death I shall be less likely to give offence by my complaints to my friends present. Besides, this ignorance of mine wont accompany me after death,—for that would have been a misery,—but will soon be gone. Thus armed, Simmias and Cebes, I advance to the encounter of the theory. You however, if you take my advice, will care little for Socrates, but much more for the truth: and so if I seem to you to say anything that is true, give me your assent; but if otherwise, oppose with every argument within your reach, and take care that I do not out of my zeal and earnestness cheat both myself and you, and so be gone like a bee with my sting left in the wound.

Come, let us on. First of all recall to my mind what you were saying, in case my memory be found at fault. For Simmias, I believe, is doubtful and alarmed lest the soul, more divine and more noble though it be than the body, should perish before it, being of the nature of a harmony: but Cebes, if I am not mistaken, granted me this, that soul is more lasting than body, but thought that nobody could feel sure that the soul, after having many times over worn out ever so many bodies, does not at last perish herself this time when she leaves it, and whether death be not precisely this, that is to say, souls destruction; for as to body, that knows no pause in its constant course of decay. Is there any thing besides these two, Simmias and Cebes, which we are required to review?

Phaedo:: They both agreed that these were the points.

Socrates:: Then do you reject, all our previous conclusions; or only some of them, and accept the others?

Phaedo:: Only some of them, they replied.

Socrates:: What then say you, to that argument in which we maintained that learning is recollection, and if this be so, that it follows of necessity that our souls were in existence somewhere else before they were confined in the body?

Cebes:: For my part, I was then wonderfully impressed by it, and I still adhere to it more firmly than to any other.

Simmias:: And I too, am myself of the same mind; and I should be quite surprised, if, on this point at least, I ever altered my opinion.

Socrates:: Aye, but you must alter it, my Theban friend, if this notion of yours is to stand, that a harmony is a composite thing, and that soul is a kind of harmony composed of the elements of the body strung to the proper pitch. For you never will allow yourself to say that a harmony was in being and those things were in existence of which it was to be composed. Will you?

Simmias:: Certainly not, Socrates.

Socrates:: Do you perceive then, that this is what you assert when you say that the soul existed before ever it entered into a human form and body, and was in being, composed of elements not yet in existence? For surely your harmony is not like what you compare it to; but the lyre and its strings and sounds are first called into being still untuned, and the harmony is composed last of all and is the first to perish. How then will this doctrine of yours harmonize with the other?

Simmias:: Not at all.

Socrates:: And yet, of all arguments in the world, that on the subject of harmony should be harmonious.

Simmias:: It should, no doubt.

Socrates:: However this theory of yours is not: so you must consider which of the two doctrines you choose, that learning is recollection, or that soul is a harmony.

Simmias:: I much prefer the former, Socrates. For the other has become mine without demonstration, resting merely on certain probable and plausible grounds, sources from which the vulgar usually derive their opinions; but I am conscious that doctrines which build their proofs upon mere probability are impostors, and if one be not on ones guard against them they thoroughly delude one, whether it be in geometry or in any thing else: whereas the doctrine of recollection and learning has been delivered upon a basis of proof sufficient to warrant our acceptance of it. For it was stated, I believe, that our soul was in being before ever it entered the body on the ground that to it appertains the absolute existence to which we give the name of ‘that which is.’ But the truth of this absolute essence I have accepted, I flatter myself, on right and satisfactory grounds. For this reason therefore I am forced, as it seems, to listen to no assertion either from myself or from any one else that soul is a harmony.

Socrates:: And again, Simmias, looking at it in this point of view, what say you? Think you that it is the nature of a harmony or of any other composition to be in any different state to its own component elements?

Simmias:: Certainly not.

Socrates:: Nor, again, to do any thing, I suppose, nor to suffer any thing beyond what those elements do or suffer?

Phaedo:: He assented.

Socrates:: Then consequently it is not the nature of a harmony to take the lead of its own component parts, but to follow them?

Phaedo:: He agreed to that.

Socrates:: Far less then can it have a contrary motion or sound, or act in any other way in opposition to its own parts?

Simmias:: Far indeed.

Socrates:: But again. Is not every harmony naturally a harmony in proportion to the adaptation of the elements?

Simmias:: I don’t understand.

Socrates:: Would it not, if it be better tuned and to a higher degree—supposing this possible—be more a harmony and in a higher degree? but if less and to a lower degree, less so and in a lower?

Simmias:: Yes, certainly.

Socrates:: Well, is this possible in respect of soul, that one soul in the very smallest degree can be to a greater extent and more, or to a smaller extent and less, than another, just what it is, that is to say, soul?

Simmias:: In no way whatever.

Socrates:: Come then, in heavens name, is not one soul said to contain wisdom and virtue, and to be good; and another, folly and vice, and to be bad? and are not these phrases true?

Simmias:: True, indeed.

Socrates:: What then will any of those that hold the view that soul is a harmony say that these things, virtue and vice, are in our souls? that they are again a different harmony and discord? and that the one is in tune, the good one, and in itself, a harmony, contains a second harmony; but that the other is out of tune itself, and contains no other within itself?

Simmias:: I m sure I cant tell you: but it is plain that any one who adopts that hypothesis must maintain something of that sort.

Socrates:: But it has been admitted before, that one soul is not a whit more or less so than another. And that admission is as much as to say that one harmony is not a whit more or in a higher degree such, nor less so or in a lower degree, than another. Isn’t it so?

Simmias:: Undoubtedly.

Socrates:: Yes, and that, that which is no more nor less a harmony is neither more nor less tuned. Is it so?

Simmias:: It is.

Socrates:: And that which is neither more nor less in tune—has it a greater or less share of harmony, or the same?

Simmias:: The same.

Socrates:: Well then, soul, seeing that one is in no degree more or less than another just what it is, that is to say, soul,—neither, consequently, is it more or less tuned?

Simmias:: Just so.

Socrates:: But if it be thus affected, it can have no greater share of discord or harmony?

Simmias:: No, certainly not.

Socrates:: And if this be true of it, can one have at all a larger share of vice or virtue than another, supposing vice to be a discord and virtue a harmony?

Simmias:: Not at all.

Socrates:: Or rather, I should imagine, Simmias, to be quite accurate, no soul at all will be infected with vice, if it is a harmony. For a harmony surely, if it be completely neither more nor less than this, a harmony, never can admit discord.

Simmias:: No, indeed.

Socrates:: Nor again soul, I presume, if it be perfectly soul, vice.

Simmias:: No: how could it according to our previous reasoning?

Socrates:: It will follow then from this theory that all souls of all living creatures are equally good, if it belongs to the nature of all souls alike to be neither more nor less than this, that is to say, soul.

Simmias:: I should think so, Socrates.

Socrates:: Do you think also, that this is well said, and that this must be the fate of our argument, if the sup position was correct that soul is a harmony?

Simmias:: No, nor any thing like well said.

Socrates:: But again, of all that is in man, think you that there is any thing else that has the command but soul, especially if it be a wise one?

Simmias:: Nothing, I should think.

Socrates:: And does it always fall in with the affections of the body, or sometimes oppose them? I mean, for instance, when there is heat and thirst in the body, that it drags it the contrary way to abstain from drinking, or, when hungry, to abstain from eating: and in an infinity of other cases we see the soul setting itself in opposition to the affections of the body, don't we?

Simmias:: To be sure we do.

Socrates:: At the same time, on the other hand, we came to the conclusion in our preceding discussion that, if it be a harmony, it never could produce notes contrary to the tension or relaxation or vibration or any other affection whatever of the elements of which it is made up, but must always follow them, and can never take the lead?

Simmias:: We did, of course.

Socrates:: Well, but are we not now supposing it to be doing the precise opposite, taking the lead, namely, of all those parts of which it may be said to be constituted, and setting itself in opposition in nearly every circum stance during its whole life, and exercising the mastery over them in every possible way, disciplining them, sometimes more severely and with pain in the way of bodily exercises and medicine, and again in a milder form, and now threatening, now admonishing its appetites and passions and terrors, like one distinct being holding converse with something else, just as Homer has represented in the Odyssey, where he says of Ulysses—

> “And he smote his breast, and chiding bespake his heart:
>
> ‘Be patient still, O my heart: thou hast borne ere now even worse.’”

Think you that, when he wrote this, he considered it as a harmony and of a nature to be influenced by the affections of the body, instead of, as it really is, capable of leading them all, and lording it over them, and itself far too divine a thing to be compared with a harmony?

Simmias:: No, upon my word, I should think not, Socrates.

Socrates:: Then, my excellent friend, it can in no sense be right for us to say that soul is a kind of harmony: for it seems, if we did, we should agree neither with that divine poet Homer nor with ourselves.

Simmias:: It is so.

Socrates:: Very good, we have succeeded tolerably well, it seems, in propitiating the Theban Harmony: but how about Cadmus, Cebes, how shall we appease him and by what words?

Cebes:: I dare say, you'll find a way: at all events your late argument against the harmony has had for me a singularly unexpected result. For whilst Simmias was speaking, when he expressed his doubts, I marveled much if any way could be found of dealing with his theory; and accordingly I thought it very odd that it instantly gave way at the very first onset of your argument. So I shouldn't be surprised if Cadmus theory shared the same fate.

Socrates:: My worthy friend, don't talk big, for fear some evil eye bring discomfiture upon the argument upon which we are about to enter. However heaven will take care of all that; but let us, like Homers heroes, 'advance near,' and try if there is anything in what you say. The sum of your enquiry is, I believe, this: you require it to be demonstrated that our soul is indestructible and immortal, in order that, if a philosopher at the point of death feel confident and believe that after death, in the world beyond, he will enjoy a lot beyond comparison better than if he had died after a life passed in any other manner, that confidence which he feels may not be senseless and idle. But as to proving that the soul is something strong and godlike, and that it was in existence even before we men were born,—there is no reason, say you, why all that should not indicate, not indeed its immortality, but that soul is durable and probably existed in a previous state an immensely long time and knew and did a number of things; and yet, for all that, it was not a bit the more immortal, but the very entrance into mans body was the commencement of its destruction, like a disease: and so, you say, it passes all this its life in trouble and distress, and at last in what is called death perishes. And, to be sure, say you, it makes no difference, in respect at least of the alarm which each one of us may feel, whether it enters a body once or several times: for it is natural for any one to feel alarm, unless he were insensible, who does not know nor can prove that it is immortal. That, I think, Cebes, is a tolerably exact account of your objection; and I purposely repeat it often, in order that nothing may escape us, and that you may make any addition or withdraw anything you please.

Cebes:: Nay, I have no occasion at present either to take away or to add anything: that is in fact just what I mean.

Phaedo:: Upon this, Socrates made a long pause, and after reflecting with himself said at length:

Socrates:: It is no trifling question, Cebes, that you raise: for we must enter into a full discussion of the whole subject of the cause of generation and corruption. I will therefore, if you like, describe to you my own experience on the subject: and then, if any of my statements appear to you likely to be of service, you will make use of it for your conviction in the matter you speak of.

Cebes:: Oh, certainly, I should like to do so.

Socrates:: Then listen to what I am going to say. In my youth, Cebes, I was singularly fond of this kind of science which they call physics. For it seemed to me a magnificent sort of science, to know the causes of everything, why it comes into being, and why it perishes, and why it exists: and I often drifted backwards and forwards in the examination, first of all, of questions like these, whether it was in consequence of a sort of fermentation engendered by heat and cold, as some once maintained, that living creatures grow into a consistent shape, and whether it is the blood which is the vehicle of thought, or the air, or fire, or none of all these, but the brain that furnishes the senses of hearing and sight and smell, and from these arise memory and opinion, and from memory and opinion, when they have attained a state of quiescence, in this way springs knowledge. And again I investigated the manner of destruction of all these things, and the various phenomena of the heavens and the earth, until at last I arrived at the conclusion that nothing in the world could be more stupid in such studies than myself. I will give you a satisfactory proof of it: for what I knew well enough before, in my own opinion and in that of the rest of the world—I was then so completely blinded by these studies that I unlearnt even what I thought I knew previously on a vast number of points, and amongst them, why it is that a man grows. For I formerly thought that it was quite plain to every one that it is caused by eating and drinking: when, namely, from his food flesh has grown on to his flesh, and bone to his bones, and so by the same rule to all the rest the elements that are related to them, each to each,—that then it was that the small bulk be comes in process of time large, and so the little man grows into a big one. So I then thought: don’t you think it was with reason?

Cebes:: Yes, I do.

Socrates:: Well then, here is another point for your consideration. I thought I was tolerably sure whenever a man appeared tall standing by a short one, that he was taller by the head itself for instance, and similarly horse larger than horse: or again, what was still plainer, ten seemed to me more than eight because two were added to it, and a thing two cubits long longer than one of one cubit because it exceeded it by half its length.

Cebes:: Well but what is your opinion of it now?

Socrates:: Why, ’faith, that I am far enough from thinking, that I am acquainted with the cause of any one of them: for I cant accept my own assurance even, when one is added to one, either that that to which the one is added has become two, or that the one added and that to which it is added have become two by the addition of the one to the other: for I am surprised that, whereas, whilst each of them was separate the one from the other, each was one, and they were not then two, when they were brought together it should then follow that this was the cause of their becoming two, that is to say, the combination caused by their being placed near one another. No, nor can I any longer persuade myself, if one be divided into two, that this again, that is to say, the division, has been the cause of its becoming two: for here we find a cause of a thing becoming two, the exact opposite of that in the former case: for in the former instance it was because they were brought together near to one another and added one to another, but now it is be cause they are carried away and separated one from another. No, nor can I any longer bring myself to believe that I know why a thing becomes one, nor, in a word, why anything else whatever comes into being, or perishes, or exists, that is to say, according to this method of investigation; but I follow another disorderly, confused kind of method of my own, but this one I can by no means admit.

But I happened once upon a time to hear some one reading out of a book, as he said, of Anaxagoras, and saying, that it is Mind that sets all in order and is the cause of all. I was at once delighted with this cause, and it seemed to me right in a manner that the supreme Mind should be the cause of all things, and I thought, if this be so, that the Mind in its ordering must order and arrange everything, each in that way in which it is best that it should be: should therefore any one want to find the cause of each individual thing, how it comes into being, or perishes, or exists, he must first ascertain this in respect of it, how, namely, it is best for it either to be, or to do or suffer anything else: and so according to this theory a man was bound to enquire after nothing, in his own case and in that of everything else, but what is best and most perfect: and it would follow of necessity that the same person would also become acquainted with the worse, because the science that belongs to them is the same. Reflecting then upon all this, I was glad to think I had discovered a teacher of the cause of existing things after my own heart, Anaxagoras namely, and that he would tell me first of all whether the earth is flat or round, and after he had told me, would add a complete explanation of the reason and the necessity., stating what is better, and then showing that it is better for it to be of that shape: and if he maintained that it is in the centre of the universe, that he would explain into the bargain that it is better for it to be in the centre: and if he made all this clear to me, I had made up my mind to require no other kind of cause beyond that. And so again with respect to the sun and the moon and the rest of the stars, I had determined similarly to carry on my enquiry in the same way, about their relative speed and their revolutions and the rest of their affections, how, that is, it may be better for them each to act and be acted on as they are. For I never should have thought that, whilst he asserted that they were ordered by Mind, he would afterwards apply to them any other cause besides than that it is best for them so to be as they are: and so I supposed that, in assigning its cause to each in particular and to all generally, he would describe in addition what was best for each and what was the common good of all. And I would not have bartered my expectations for a great deal, but I seized the book with the greatest avidity, and read it as fast as ever I could, in order to become acquainted as soon as possible with the best and the worse.

Glorious then was the hope, my friend, from which I was hurled down, when, as I went on in my reading, I saw a man making no use of his Mind, nor alleging any causes with reference to the ordering of things, but assigning as causes a parcel of airs and skies and waters and a hundred other things equally absurd. And the case with him seemed to me to be exactly similar to that of one who were to maintain that Socrates does all that he does in virtue of Mind, and then in the attempt to state the individual causes of each of my actions were to say first of all that the reason of my sitting here now is because my body is composed of bones and muscles, and the bones are solid and separated by joints from one another, and the muscles are capable of contraction and relaxation, surrounding the bones together with the flesh and the skin which keeps them together; accordingly, as the bones turn in their sockets, the muscles, expanding and contracting, give me the power now, we may suppose, of bending my limbs, and that is the reason why I am sitting here with my knees bent: and again with regard to the conversation I am holding with you, were to bring forward some other causes like these, a set of sounds namely and airs and hearings and an infinity of other things of the same kind, and forget to mention the real causes, that is to say, that, whereas it seemed better to the Athenians to condemn me to death, for that reason I too have thought it better in my turn to remain sitting here, and more right to stay and undergo my sentence, whatever it may be that they have ordered: for, by the dog, as I think, these muscles and bones would have been long ago in the region of Megara or Boeotia, put in motion by the 'opinion of what is best,' had I not thought it more right and honorable, rather than fly and run away, to undergo any penalty that the city chooses to impose upon me. However, to call such things as these causes is excessively absurd: if any one were to say indeed that without all such things, bones and muscles and everything else that I have, I should never have been able to put my resolutions into execution, it would be quite true; but to say that this is the reason of my doing any thing that I do, or that this is the meaning of acting by Mind, and not rather the choice of what is best, would be a very extraordinarily careless way of speaking. For to be unable to distinguish the essential difference between the real cause of a thing, and that without which the cause never could be a cause—which, in fact, is what the generality of thinkers seem to be groping after, as it were in the dark, and to apply a name quite foreign to it when they speak of it as if it were a cause. And so it is that one makes the earth to be kept steady, forsooth, by the heavens, by surrounding it with a vortex; another represents it as a flat kneading-trough supported by the air beneath as a basis for it to rest upon: but the meaning of their being disposed according to the best possible arrangement for them,—this they neither search after, nor deem it to possess any divine force, but suppose they might some time or other discover an Atlas stronger and more immortal than this, and more capable of holding the universe together, and conceive that the 'good and binding' does, in fact, bind and hold together nothing whatever. Now to learn the true nature of such a cause as this, I for my own part would most gladly have put myself to school under any one in the world: but when I found myself cheated of it, and unable either to discover it myself or to obtain the knowledge of it from any one else,—would you like me, Cebes, to give you a description of the way in which I have proceeded, as the second best course, in my search after the cause?

Cebes:: Oh, I should like it monstrously.

Socrates:: Well then I thought to myself, that next, after I had exhausted myself in my enquiries after the nature of things, I must take good care to avoid the fate of those who are looking at and examining an eclipse of the sun: for some of them, I rather think, lose their eyes, unless they look at the reflection of him in water or some such thing. Such was my own notion;

and I was afraid of having my soul quite blinded, if I looked at things with my eyes, or attempted to reach them with any of my senses. Accordingly it occurred to me that I must have recourse to words, and in them carry on the investigation of the true nature of things. Now perhaps the illustration that I employ to a certain degree does not correspond with the reality: for I do not altogether admit that any one who pursues his researches after things in words regards them in mere reflections any more than one who goes straight to the real objects: but be that as it may, this is the way in which I started; and having laid down any conception which I judge to be most incontestable in each case, I assume as true whatever seems to me to be in accordance with it, whether it be in the case of cause or in that of any thing else, and whatever is not, as false. But I will explain to you more clearly my meaning; for I think that at present you don't understand.

Cebes:: No, upon my honor, Socrates, not particularly well.

Socrates:: Well, this is what I mean; no novelty, but what I have never ceased to say constantly on all other occasions as well as in our past discussion. For I am in fact about to make the attempt to exhibit to you the kind of cause which has been the object of my studies, and to return to the old burden of my song, and to begin with it; with the assumption, that is, that there is such a thing as what is beautiful in itself independently, and good, and great, and so forth: and if you grant me this and admit the existence of such, I hope to be able from this to show you what the cause is, and to discover that the soul is immortal.

Cebes:: Nay, you may assume that I grant this, and so draw your conclusion as soon as you please.

Socrates:: Then consider, whether you agree with me in what follows. For it appears to me that, if any thing else is beautiful except the absolutely beautiful, the only possible cause of its beauty is that it participates in the nature of that absolute beauty: and so on for all the rest. Do you admit this kind of cause?

Cebes:: Oh, yes.

Socrates:: That being the case, I can no longer understand nor recognize all those other ingenious causes: but if any one assign to me as a reason for the beauty of any object, either that it has a blooming color, or a fine figure, or any other such reason as these, to all the rest I pay no sort of attention, for I am merely confused by them, but to this one thing I hold simply and artlessly and perhaps foolishly, that it is nothing else that makes it beautiful but that ideal beauty—whether we are to call it presence or communication, or in what ever way or by whatever means the connection is brought about—for on this latter point I can no longer pronounce any strong affirmation, but only to the extent that it is by the absolute beauty that all beautiful things are made beautiful. For this seems to me the safest answer to return either to myself or to any one else, and as long as I hold fast to this I think I can never fall, but that this is a safe reply to make to myself and to any one else whatever, that it is by the absolute beauty that beautiful things are made beautiful. Don’t you agree with me?

Cebes:: Certainly I do.

Socrates:: And consequently, that it is by greatness that great things become great, and greater things greater, and by smallness that the less become less?

Cebes:: Yes.

Socrates:: Then neither would you assent, if any one were to maintain that a man is taller than another 'by the head,' and that one who is shorter is shorter by precisely the same thing: but you would protest that you have nothing else to say about the matter than that every thing that is greater, one than another, is greater by nothing else than by greatness, and that the cause of its being greater is its greatness; and that the less is less by nothing else I than smallness, and that the cause of its being less is its smallness; dreading no doubt the encounter of some ad verse argument, if you assert that a person is taller or shorter by the head, first, that it is by the very same thing that the greater is greater and the less, less, and secondly, that your greater is greater by the head which is a little thing, and that it would be indeed a prodigy that a man should be great by a little thing. You would be afraid of this, wouldn't you?

Phaedo:: Cebes laughed at this, and replied;

Cebes:: I certainly should.

Socrates:: Well, that ten is more than eight by two, and that two is the reason of its excess, you would be afraid to assert, instead of saying by number and by reason of its number? and that two cubits are greater than one by half, and not by size? for there is the same fear, I imagine.

Cebes:: Undoubtedly.

Socrates:: And again, in the case of the addition of one, wouldn't you carefully avoid saying that the addition is the cause of their becoming two, or, when a thing is divided, the division; and loudly exclaim that you know no other way whatever in which each particular thing comes into being except by the participation in the appropriate being of each in which it does participate, and that in such cases you have no other cause to assign for their becoming two but their participation in the idea of two, and that all objects that are to be two must participate in this, and all that is to be one, in unity? And all these divisions and additions and the rest of such like subtleties, you would let alone, leaving the explanation of them to cleverer fellows than yourself: but you, frightened, as the phrase is, by your own shadow and ignorance, would hold fast to that certainty of our hypothesis, and so shape your answer. And should any one attack the hypothesis itself, you would let it pass and make no answer, until you had examined the consequences that proceed from it, whether you find they agree or disagree with one another. And then next when you were required to give an account of that itself, you would do so in like manner, by the assumption again of any second hypothesis which appeared to you the best of the higher generalizations, until you arrived at something satisfactory: and you would not, like those mere debaters, talk about the first principle and its consequences in such a way as to jumble them all up together, supposing you really wished to attain to the knowledge of any real thing? For they, I dare say, have no consideration at all or anxiety about this; for their cleverness enables them to give themselves entire satisfaction, whilst they mix every thing together: but you, if you belong to the order of lovers of wisdom, would do, I doubt not, as I say.

Phaedo:: Most true, said Simmias and Cebes both together.

Echecrates:: Yes, by Zeus, Phaedo, like enough. For I am amazingly struck with the clearness with which he explained this for any one possessed of a grain of sense.

Phaedo:: No doubt, Echecrates, and so were all that were there.

Echecrates:: Why so are we that were not there, and hear it now for the first time. But pray tell us what was said next.

Phaedo:: I think, after this was conceded to him, and it was admitted that each one of the ideas has a real existence, and that it is by participation in these that every thing else bears the name of themselves, he next enquired;

Socrates:: If then, you accept this doctrine, do you not, whenever you pronounce Simmias to be taller than Socrates and shorter than Phaedo, say at the same time that both these things reside in Simmias, greatness and smallness?

Cebes:: I do.

Socrates:: But still, you allow that the proposition, Simmias exceeds Socrates in height, is not exactly true as it is expressed in words: for surely it is not Simmias nature to be taller in virtue of this, that he is Simmias, but in virtue of the tallness which he happens to have; nor again, to be taller than Socrates because Socrates is Socrates, but because Socrates has smallness compared with the others greatness.

Cebes:: True.

Socrates:: No, nor again to be surpassed in height by Phaedo because Phaedo is Phaedo, but because Phaedo has height compared with Simmias shortness.

Cebes:: It is so.

Socrates:: Thus it is then that Simmias may be called short and tall at the same time, whilst he really is between both, exceeding the shortness of the one by excess of height, and lending to the other by comparison a size exceeding his own shortness.

Phaedo:: And at the same time smiling;

Socrates:: One would fancy, that I am going to talk like a legal document; but still what I say is not far from the truth.

Phaedo:: He agreed.

Socrates:: And my reason for dwelling upon the subject is the desire that I have to see you of my opinion. For it seems to me, not only that greatness in itself will never be great and small at once, but also that greatness in ourselves never admits what is small nor will be surpassed; but one of two things, either it flies and gives way on the approach of its opposite, the little, or, if the other make good its advance, perishes outright; but it will not stand its ground and admit littleness so as to be different to what it was, in the same way as I can admit and sustain the attack of littleness, and still be what I am, this very identical little fellow; whereas the other cannot bear to be small when it is great: and in the very same way what is small in us will never be come or be great, nor will any other of the opposite ideas, whilst it still remains what it was, become or be its opposite, but in such a case it either retires or ceases to be.

Cebes:: That is exactly my own view.

Phaedo:: And then one of the company present—but who it was I don't distinctly remember—said as soon as he heard this:

Someone:: In heavens name, didn't we, in an earlier part of our discussion, arrive at a conclusion exactly opposite to what has been just said, that the greater springs from the less, and the less from the greater, and that this is just the source from which opposites are generated, that is to say, their opposites? But now it seems to be denied that this can ever take place.

Phaedo:: And Socrates, who had bent his head forward to listen, answered;

Socrates:: Manfully suggested: nevertheless you don't remark the difference between our present and former assertions. For it was maintained on the occasion you allude to that the opposite thing derives its origin from the thing opposite to it; but now, that the absolute opposite can never become opposite to itself, neither what resides in ourselves nor what resides In universal nature. For on the former occasion, my friend, we were talking about the things that contain the opposites, and gave them the name that belongs to the latter: but now we are speaking of the ideas themselves, by the inherence of which phenomena named receive the name that they bear; but the ideas themselves, we maintain, never would admit a reciprocal generation.

Phaedo:: And at the same time he looked at Cebes, and asked;

Socrates:: You too, Cebes, were troubled I dare say at something in what he said?

Cebes:: No, I have not the same feeling this time: although I by no means aver that there are not a good many things that trouble me.

Socrates:: Then, we have arrived at this conclusion absolutely, that the opposite idea will never be opposite to itself.

Cebes:: Undoubtedly.

Socrates:: Then further, let me beg you to consider if you are inclined to agree to this too. There are such things as what you call hot and cold?

Cebes:: To be sure there are.

Socrates:: The same as snow and fire?

Cebes:: No indeed, of course not.

Socrates:: But heat is a thing distinct from fire, and cold a thing distinct from snow?

Cebes:: Yes.

Socrates:: But this, I suppose, you allow, that snow as snow can never admit the presence of heat, according to what we were saying before, so as still to be what it was, snow and hot, but upon the approach of heat will either give place to it or perish?

Cebes:: Yes, by all means.

Socrates:: And that fire again on the approach of cold must either yield to it or perish, but never will bear to admit cold and still be what it was, fire and cold?

Cebes:: Quite true.

Socrates:: It is true then, in respect of some of such things as we have been talking of, that not only is the idea itself held to have a right to its own name for ever, but also something else which is not it, but always has its form whensoever it occurs. But, to proceed, my meaning will perhaps appear more clearly in the following case. The idea of odd must always, I presume, receive this name as we now pronounce it: must it not?

Cebes:: Yes, certainly.

Socrates:: Is that the only thing in nature which must receive it,—for this is the drift of my question—or something else besides, which is not the same as the odd, but still, together with its own name, must ever receive this appellation also, because its nature is such that it never can be separated from the odd? As an example of what I mean we may take the case of the number three, and many others: but let us examine the number three. Don't you think that it must be called not only by its own name but also by that of the odd, though that be not the same as the number three? Yet still the nature of the number three and the number five and the entire half of the set of numbers is of such sort that each of them, though it be not the same as the odd, is nevertheless always odd. And again, two and four and the whole of the other row of numbers again, though it be not the same as the even, is still in each case constantly even. Do you admit this, or not?

Cebes:: Of course I do.

Socrates:: Then pay attention to what I want to explain; which is this, that it appears that not only those opposite ideas do not admit one another, but also all those things which, though not opposite to one another, have opposites in separably attached to them—that these too have all the air of not admitting that idea which is opposite to that which inheres in themselves, but upon the accession of it either perish or give way. Or must we not say that the number three would perish or undergo any other extremity whatever sooner than submit to become even, whilst still remaining three?

Cebes:: Undoubtedly.

Socrates:: Nor again, is the number two opposite to the number three.

Cebes:: No, certainly not.

Socrates:: Then not only the opposite ideas reciprocally exclude each other, but there are also certain other things which are incompatible with the intrusion of the opposites.

Cebes:: Most true.

Socrates:: Should you like us then, to determine, if we can, of what nature these things are?

Cebes:: Yes, of all things.

Socrates:: Then do you think it likely, Cebes, that they are such as force whatsoever they have possession of, not merely to entertain the idea proper to itself, but also to entertain constantly that of some opposite?

Cebes:: How do you mean?

Socrates:: Just what we were saying a while ago: for you under stand, I suppose, that all things which are possessed by the idea of three must of necessity be not only three but also odd.

Cebes:: Oh, certainly.

Socrates:: Accordingly our assertion is that the idea opposite to that form which effects this [makes it odd] can never obtain access to such a thing as that.

Cebes:: No, never.

Socrates:: But it was effected by the idea of the odd.

Cebes:: Yes.

Socrates:: And opposite to this is that of the even.

Cebes:: Yes.

Socrates:: It follows that the idea of the even will never make its way to three.

Cebes:: Certainly not.

Socrates:: Then three has no portion in the even.

Cebes:: None.

Socrates:: Consequently the number three is uneven.

Cebes:: Yes.

Socrates:: Well then, the definition I undertook to give of the nature of those things which, though not opposite to something else, still do not admit it, this opposite, as in the instance we just now took, the number three, though not opposite to the even, does not admit it any the more for that, for it the number three always brings to it the even its opposite the odd, and similarly the number two to the odd, and fire to cold, and a vast number of others—but see now if you accept my definition, that not only the opposite does not admit the opposite idea, but also whenever a thing brings with it an opposite to anything that it goes to, the importing object itself can never admit the opposite belonging to the imported. But recall it to mind once again, for it is just as well to hear it often. Five will not admit the idea of even, nor ten the double of it, that of odd. Now this double in its own nature is opposite to something else, but nevertheless will not admit the idea of odd: nor again will one and a half and all the rest of numbers of that kind, the half for instance, admit that of the whole, and a third again and so on—if you follow me and agree with what I say.

Cebes:: I agree with you entirely, and follow you too.

Socrates:: Then answer me over again from the beginning. And do not express your answer in the terms of my question, but in different words, as I shall set you the example. And I speak with reference to another safe method of answering which I have discovered from the observations just made, besides that mode, that sure one, which I pointed out at first. For supposing you were to ask me what it is that must reside in a body to make it hot, I shall not now make you that safe, ignorant answer that a body will be hot in which heat resides, but a more refined one derived from our recent conclusions, 'one in which fire resides;' nor, should you enquire what must reside in a body to make it sick, shall I answer sickness, but, a fever; nor again, should you ask what must reside in a number to make it odd, shall I say, oddness; but unity and so forth. Now consider if you by this time understand my meaning sufficiently.

Cebes:: Oh yes, quite sufficiently.

Socrates:: Then answer me; what must reside in a body in order that it may be alive?

Cebes:: Soul.

Socrates:: Well but is this always so?

Cebes:: How can it be otherwise?

Socrates:: It follows then that the soul ever by her presence brings life to whatsoever body she herself occupies?

Cebes:: She does indeed.

Socrates:: And is there anything opposite to life, or nothing?

Cebes:: There is.

Socrates:: What?

Cebes:: Death.

Socrates:: Well then soul can never possibly admit the contrary of that which she herself ever brings with her, according to the conclusion resulting from our previous discussion?

Cebes:: Beyond all possibility of doubt.

Socrates:: But again. What name did we give just now to that which does not admit the idea of even?

Cebes:: Uneven.

Socrates:: And to that which does not admit justice, or music?

Cebes:: Unmusical, and the other, unjust.

Socrates:: Very well: and what do we call that which does not admit death?

Cebes:: Immortal.

Socrates:: And does the soul not admit death?

Cebes:: No.

Socrates:: Consequently the soul(is immortal?

Cebes:: It is.

Socrates:: Very well; may we say now that this has been demonstrated? or how think you?

Cebes:: Yes indeed, and quite satisfactorily, Socrates.

Socrates:: But once more, Cebes, suppose the uneven had been necessarily imperishable, would not three have been imperishable too?

Cebes:: Of course it would.

Socrates:: Well, if again that which is without heat had been necessarily imperishable, whenever any one applied heat to snow, the snow would slip away safe and unmelted, for it certainly would not perish nor stay to admit heat.

Cebes:: Quite true.

Socrates:: And exactly in the same way, I suppose, if what is unsusceptible of cold had been imperishable, when any thing cold approached the fire, it would never have been extinguished nor have perished, but would have made good its escape.

Cebes:: Necessarily.

Socrates:: Well then, must we not hold the same language about what is immortal? If the immortal is also imperishable, it is impossible for a soul to perish at the approach of death: for, agreeably to our previous conclusions, it certainly will not admit death nor exist in a state of death; just as three, we said, will not be even, any more than the, odd itself, nor again, fire cold, any more than the heat which is in the fire. But, it may be said, though, as has been settled, the odd cannot become even on the approach of the even, yet what is to prevent its perishing and an even number coming, in to being in its place? Against one who urges this objection we could not contend that it does not perish: for the uneven is not imperishable; for had we come to this conclusion, we could easily have contended that on the approach of the even the odd and three take their departure: and about fire and heat and the rest we might have contended in the same way: might we not?

Cebes:: Undoubtedly.

Socrates:: Well and in the present instance of the immortal, if we are agreed that it is also imperishable, it would follow that soul is imperishable as well as immortal: or if not, we should require a new train of reasoning.

Cebes:: Nay, as far as this is concerned, there is no need of it: for it is hardly likely that any thing else could be incapable of destruction, if the immortal, being as it is eternal, can be supposed capable of it.

Socrates:: And surely the Divine Being, and the very idea of life, and all else that is immortal, must be admitted by all to be for ever exempt from destruction.

Cebes:: By all men, most certainly, and still more, I should conceive, by gods.

Socrates:: If then what is immortal is also indestructible, must not soul, if it be immortal, be also imperishable?

Cebes:: Infallibly.

Socrates:: Consequently, when death comes upon the whole man, the mortal part of him, as it appears, dies, but the immortal part gives place to death and takes its flight far away safe and indestructible.

Cebes:: It seems so.

Socrates:: Then nothing can be more certain, Cebes, than that soul is immortal and imperishable, and that our souls will really exist in the world below.

Cebes:: I at any rate, Socrates, have nothing else to say in opposition to this, nor can I in any way refuse my assent to your arguments. But if perhaps Simmias here or any one else has anything to say, it would be well not to suppress it: for I know not to what other season than the present he may think to put off his enquiries, if he desire to say or to hear anything on such subjects.

Simmias:: Nay indeed, neither have I myself any further ground for withholding my assent after what has been said: yet nevertheless I am compelled by the importance of the subject of our discussion and the distrust inspired by our human weakness, still to remain unconvinced in my own mind as to the truth of our conclusions.

Socrates:: Yes, Simmias, and not only so, but, besides what you have just so rightly suggested, you should also, however secure they may seem to you, nevertheless re-examine our first premises; and when you have submitted them to a sufficient analysis, you will then, as I believe, follow the course of the proof, so far at least as it is in any way possible for a human being to follow it; and if this particular point become clear to you, you will make no further search.

Simmias:: True.

Socrates:: But here is another point, my friends, which it is right to consider, that is to say, that, if the soul is immortal, it surely requires care and forethought to pro vide, not only for this time in which consists what we call life, but for the whole: and the hazard of neglecting it must now indeed appear fearful. For, had death been a release from everything, it would have been a godsend to the vicious to be released once for all by death from the body and from their own vice together with the soul: but now, whereas it proves to be immortal, there can be no other refuge for it nor salvation from its misery but to become as good and wise as possible. For the soul takes its journey to the lower world with nothing whatever but its education and cultivation, which in fact, as we are told, bring at once upon the dead the highest service or the deepest injury at the very outset of his journey thither. Now there is a tradition to the effect that each man's genius, to whose charge he had been allotted during his life,—he, when he dies, undertakes to conduct him to some particular place, at which they are all to assemble, and then, after having sentence passed upon them, to proceed to the lower regions in company with that guide to whom has been assigned the office of conveying the inhabitants of this world to the other. And there after they have received each man his appointed lot and have stayed the appointed time, another guide conducts them back hither after many and long revolutions of ages. And the journey, as they say, is not such as Eschylus' Telephus describes it: for he says that "a simple path leads to the world below;" whereas to me it seems to be neither one nor simple: for had it been so, there would have been no need of guides; for no one, I suppose, would go astray in any direction where there is only one road: whereas in reality it seems to have many branches and windings; a conclusion which I derive from the religious and funereal rites as they are practiced here. So the well-ordered and wise soul follows obediently, for she is not absolutely unacquainted with the present state of things: but that which has a passionate desire after the body, as I said before, fluttering long about it and the visible world, after many struggles and much suffering, with reluctance and difficulty is carried off by the appointed genius. And on her arrival at the place where the rest are, if she be impure and guilty of any such crimes as these, either stained, for example, with unrighteous murders or having committed any other such things as are akin to these and the deeds of kindred souls, her every one shuns and shrinks from, and will be neither her fellow-traveler nor her guide, and she wanders by herself involved in utter most perplexity until certain seasons have elapsed, at the end of which she is borne by necessity to the habitation fitted for her; whilst the souls that have passed their life with purity and discretion obtain gods for companions and guides, and dwell each in the place that is suitable to her nature. Now there are many and wondrous regions in the earth, and the earth itself is neither in quality nor in size what it is imagined to be by those who are accustomed to describe it, as a certain person has convinced me.

Simmias:: How mean you, Socrates? For I myself have heard a vast deal about the earth, not however the view you have accepted. I should there fore like very much to hear it.

Socrates:: Nay, in truth, Simmias, to describe to you what it is, seems to me hardly to require the skill of Glaucus: but to decide whether it be true, appears to me too hard even for Glaucus skill; and not only should I very likely find myself quite unable to do so, but also, even if I knew how, my life seems hardly long enough, Simmias, for an argument of such magnitude. Nevertheless the figure of the earth, such as I am convinced it is, and its various regions, there is nothing to prevent my describing to you.

Simmias:: Well, we will be content even with that.

Socrates:: My persuasion is then, first of all, that, if the earth is of a spherical figure and placed in the centre of the heavens, it has no need either of air to keep it from falling, or of any other similar sustaining force; but that the perfect uniformity of the heavens in all their parts and the equipoise of the earth itself are sufficient to support it: for a thing in equilibrium, placed in the centre of another, perfectly uniform and correspondent, will have no reason for inclining more or less to one side than another, and accordingly, as it does so correspond, will remain fixed and immoveable. Here you have then the first article of my creed.

Simmias:: And a sound one too.

Socrates:: And still further, that it is of vast size, and that we who are settled from the Phasis to the Columns of Hercules occupy quite a little bit of it, dwelling round the sea like ants or frogs round a pond, and that there are many others in various parts living in many similar regions. For in every direction round the earth there are many hollows, of every kind in shape and size, whereinto collect the water and the mist and the air; whilst the earth itself lies pure in the purity of the heaven, wherein are the stars, which in fact is called the sky by most of those who are accustomed to give an opinion upon such matters: whereof, as we may suppose, all this [water, mist, and air] is the mere sediment, which collects constantly into the cavities of the earth. Accordingly we are living without being aware of it in the hollows of the earth, fancying all the time that we are dwelling above on its surface; just as if a person living at the very bottom of the ocean were to suppose that he was living on its surface, and seeing the sun and all the other stars through the water were to imagine that the sea was heaven, and by reason of his dullness and infirmity had never risen to the top of the water, nor had been able to extricate himself and peer out of the sea into the regions of earth, so as to see how much purer and fairer they are than those with them, nor had heard the tale from one who had seen it. Precisely the same, I say, is the case with ourselves: for dwelling as we do in a kind of cavern of the earth, we yet fancy that we inhabit its surface, and call the air heaven, as though this were heaven and through it the stars ran their courses; whereas the case is just the same with ourselves, that from infirmity and dullness we are unable to penetrate to the outermost parts of the air: for, could any one reach its upper surface or make him wings to fly so high, he might peep out and descry—just as here on earth the fishes by raising their heads out of the sea can see objects on earth—so, I say, might a man descry also objects there, and, were our nature strong enough to endure the contemplation of them, might discover that that is the true heaven and the true light and the true earth. For this earth where we dwell and these stones and the whole region here are corrupted and gnawed away, as things in the sea are by the brine: and nothing grows in the sea worth noticing, neither is there anything, as one may say, perfect, but there are caves and sand and mud and slime—wherever there is land—in endless quantity, all utterly unworthy to be compared to the beautiful objects with us: and those others again would seem still further to surpass things which with us are esteemed beautiful. For if I must tell you a pretty fable, it is worth your while to hear, Simmias, the story of all that is to be found upon the earth beneath the heaven.

Simmias:: Nay, you may be sure, Socrates, that we should be glad to hear your fable.

Socrates:: Well then, my friend, the story goes, first of all, that this earth of which we are speaking, if it could be seen from above, is to look upon like those balls covered with twelve patches of leather, many-colored, distinguished with hues whereof the colors here which our painters make use of are, as it were, samples: but there the whole earth is painted with similar colors, nay, with colors even far more brilliant and purer than these; for part of it is of purple and of marvelous beauty, and part of the color of gold, and the part that is white whiter than chalk or snow, and of all the other colors it is composed in like manner, yet still more numerous and fairer than all that we have ever seen. Even these mere hollows of it, filled as they are with water and air, present a peculiar kind of color, glittering in the diversity of the rest of them, so that its form appears as one unbroken variegated surface. And in this, such as I have described it, the plants that grow are in like proportion, trees and flowers and their fruits: and the mountains again in like manner, and the stones have their smoothness and transparency and colors fairer in the same proportion; of which also the pebbles here, those that are so highly prized, are fragments, carnelians and jaspers and emeralds and all of that kind; but there everything without exception is of the same sort, nay, still fairer than these. And the reason of this is that those stones are pure, and not eaten away nor spoiled like those on earth by corruption and brine produced by all the sediments that collect here and engender ugliness and diseases in stones and earth and animals and plants as well. But the real earth is embellished, not only with all these ornaments, but with gold besides and silver and everything else of that kind: for from their great number and size and the multitude of places where they are found they are very conspicuous, so that to see it is a sight for the blessed. And not to mention a number of other living creatures, there are also men upon it, some dwelling inland, and some on the shores of the air, as we of the ocean, and others in islands encircled by the air, lying adjacent to the mainland: and in one word, what to us the water and the sea is in regard of our use, that the air is there, and what to us the air is, to them is the sky. And the seasons are so tempered for them that they are free from disease and live a much longer time than men here, and in sight and hearing and smell and all such things are removed from us by exactly the same distance as air is from water and sky from air in respect of purity. And furthermore they have temples of the gods and sacred edifices wherein the gods are actually dwellers, and they enjoy voices and responses and visions of the gods and all intercourse with them of that nature: and the sun and moon and stars are seen by them such as they really are, and their bliss in all other respects corresponds to this.

Such then is the nature of the earth as a whole and its surface: but there are in the hollow parts of it round its entire circumference a number of places, some deeper and more widely open than the one in which we our selves dwell, whilst others that are deeper have their mouth narrower than the region which we inhabit, whilst others again are shallower and wider than the one here. And all these are pierced in many places below the earth so as to communicate with one another by channels narrower and wider, and have passages where a quantity of water flows from one to the other, as it were into basins, and never-failing rivers of enormous size beneath the earth of hot water and of cold, and a mass of fire and great rivers of fire, and many of liquid mud purer as well as fouler, like the torrents of mud that burst forth in Sicily before the eruption of lava and the lava-stream itself; wherewith each of the places is filled in turn as the stream in its course round chances each time to reach it. And all this is moved up and down by a kind of oscillation in the earth; which is produced, as is said, by a natural cause of the following description. One in particular of the openings in the earth, besides that it is the largest of all, is also pierced right through the entire earth; that, namely, which Homer meant when he says of it;

> “Very far away, where is the deepest abyss beneath
> the earth,”

to which in fact elsewhere not only he but many others of the poets have given the name of Tartarus. For into this hollow all the rivers run together, and from it they again run out; and each of them takes a character corresponding to that of the earth through which it flows. And the reason why all the streams flow out of and into it is, that this liquid has no bottom nor resting-place: it is accordingly held in suspension and surges up and down, and the air and the wind about it do the same; for it is accompanied by them in its passage equally to the other side and to this side of the earth; and just as in the process of breathing the breath is constantly in motion by expiration and inspiration, so there also the wind which is held in suspension with the liquid creates by rushing in and out fearful and irresistible sorts of blasts. And whensoever the water retires with impetuous current to the region which is called ‘below,’ it flows through the earth to the neighborhood of those streams and fills them, as it were by a pump: and again whenever it quits those regions and rushes back hither, it fills in their turn the streams on our side; and these when they are filled flow through the channels and through the earth, and, arriving each at the places towards which in each instance they are making their way, produce seas and lakes and rivers and fountains: and thence descending again beneath the earth, after a circuit, some longer and of more places, some shorter and of fewer, they again discharge themselves into Tartarus, some far lower, and others a little lower, than the point at which they were pumped into their beds: but all of them enter at a lower point than that at which they issued. And some of them make their escape on the side directly opposite to their entrance, and some in the same quarter: but a few there are which encompass the earth completely round, twining round it like snakes once or even oftener, and then throw themselves again into Tartarus at the lowest depth they can possibly reach. And the depth they are able to attain is the centre of the earth in either direction, no lower: for the part beyond from either side is an ascent for both streams.

Now, to say nothing of all the rest of the streams many and large and various, there are in this great number four in particular, whereof the largest and outermost, flowing entirely round, is that which is called Ocean; opposite to it and flowing in the contrary direction is Acheron, which not only traverses various desert regions, but also flows in a subterranean channel till it reaches the Acherusian lake, in the quarter where the souls of most of the dead repair, and after abiding there certain appointed seasons, some longer and some shorter, are again sent out to animate the bodies of living creatures. And between these a third river rises, and not far from its source falls into a vast region burning with a great fire, and makes a lake larger than our sea, boiling with water and mud; and thence it pursues its circular course all turbid and muddy, and as it rolls round, besides other places, it arrives at the extremity of the Acherusian lake, though it mingles not with its waters; and after winding many times round underground it falls into the lower depths of Tartarus; and this is the one to which they give the name of Pyriphlegethon, whereof fragments are discharged by our volcanoes, wherever they chance to be found on the face of the earth. And on the opposite side to this the fourth river falls first into a place fearful and wild, as we are told, with a pervading color like indigo, which goes by the name of Stygian, and the lake which the river makes by its discharge, Styx. But after falling into it and contracting horrible properties in its waters, it buries itself under ground, and flows in a winding course in the opposite direction to the Pyriphlegethon, until it meets it from the opposite side in the Acherusian lake; and neither do its waters mingle with any other, but this also, after flowing round and round, discharges itself into Tartarus in the opposite direction to the Pyriphlegethon; and its name, as the poets say, is Cocytus.

Such being the nature of these regions, as soon as the dead have arrived at the spot to which each is conveyed by his genius, they first receive sentence whether they have led good and holy lives or no. And those that are found to have passed tolerable lives proceed to Acheron, and embarking in the vessels there provided for them are conveyed upon them to the lake; and there they dwell, either undergoing purification by the penalty they pay for their transgressions till they are absolved from the offences any one may have committed, or receiving rewards for their good deeds each according to his deserts. But those that are found to be incurable by reason of the enormity of their offences, either many and grievous acts of sacrilege or many unrighteous and lawless murders of which they have been guilty or any other crimes of that magnitude,—them the fate due to their guilt precipitates into Tartarus, whence they never come forth. But those that prove to have been guilty of offences curable indeed yet great, as for instance if they have been driven by passion to offer violence to father or mother but pass the rest of their lives in penitence for the act, or have committed homicide in any other similar way,—these must also be thrown into Tartarus, but after they have been cast in and have continued there a year, they are thrown out by the tide, the homicides by the Cocytus, and the parricides and matricides by the Pyriphlegethon; and as soon as they arrive in their course at the Acherusian lake, there with loud cries they invoke those whom they slew or insulted, and when they have thus summoned them, they implore and entreat them to suffer them to come out into the lake, and to admit them into their company; and if they prevail, they come forth and cease from their miseries, but if not, they are borne back into Tartarus, and thence again into the rivers, and this they never cease to endure until they have won over those whom they wronged; for this was the sentence pronounced upon them by their judges. But those that are found to have passed a preeminently holy life—these are they that are delivered and set free from these our earthly regions, as it were from a dungeon, and attain to that pure dwelling-place above, and make their abode upon the surface of the earth. And further of these all that have fully purified themselves by philosophy pass their lives for the future entirely without bodies, and attain to habitations still fairer than these, which, it is neither easy to describe nor would the time suffice at the present moment.

However, for the reasons I have assigned, Simmias, it is incumbent upon us to leave nothing undone for the acquisition of a share in virtue and wisdom during our lifetime: for noble is the prize and great the hope.

Now to insist upon it that everything is precisely as I have described, is unworthy of a man of sense: that however this or something like this is true of our souls and their dwelling-places, seeing that it is evident that the soul is a thing immortal,—this does seem to me to be worthy of one, and that it is worth while for him to run any risk in this belief: for noble is the hazard, and it is well to encourage oneself by such incantations, for so one may call them, as these: for which reason in fact I have been ever so long spinning out my fable. However, for these reasons any man may well feel confidence about his own soul, who during his lifetime has bid adieu to all other pleasures of the body and to its ornaments, because he thought them foreign to his true nature and rather likely to work mischief than good, and has zealously pursued the pleasures of knowledge, and having decked his soul with no foreign ornament, but with her own true one, temperance and justice and fortitude and freedom and truth, so awaits his journey to the other world, prepared to depart whenever fate call him.

You, Simmias and Cebes and the rest, will make this journey each at his own time in the future; but me, as a tragic poet would say, destiny summons forthwith at this very moment, and it is about time for me to betake myself to my bath; for it seems to me better to bathe before I drink the poison, and so save the women the trouble of washing the corpse.

Phaedo:: So after he had finished speaking, Crito said;

Crito:: Well, Socrates, but what charge have you to give your friends here or myself, either about your children or in any other matter, in which we may be able to serve you best?

Socrates:: Just what I always tell you, Crito, nothing more than usual: by attending to yourselves you will gratify not only me and mine but yourselves too in all that you do, even though you are not inclined to admit it now: but if you neglect yourselves and do not choose to pass your lives as it were in the track of what has been said now and on former occasions, you will gain nothing by it, no, not even if you bind yourselves to-day by ever so many and ever so sacred promises.

Crito:: Well then, we will do our best, to comply with your wishes: but how are we to bury you?

Socrates:: Anyhow you please, provided, that is, you catch me, and I don’t escape you altogether.

Phaedo:: And at the same time with a quiet smile and a glance at us;

Socrates:: I cant convince Crito, my friends, that the Socrates who is now conversing with you and arranges in due order each part of his discourse is my real self, but he fancies that I am that body which he will by and by see a corpse, and so he asks how to bury me. But all that long argument that I have held, to the effect that as soon as I have drunk the poison I shall stay with you no longer, but shall be gone at once to some happy state of the blessed,—all this he takes for mere idle talk to comfort you and myself alike. Go bail for me therefore to Crito, only in the opposite way to that which he offered for me to the judges. For he was security for me that I would assuredly stay; but I want you to be my bail that I shall assuredly not stay after my death, but shall be gone at once, so that Crito may be less afflicted, and may not be vexed about me when he sees my body burnt or buried, as if I were shamefully ill-treated, and may not say at my funeral that it is Socrates that he is laying out or carrying to his grave or burying. For be assured, my excellent Crito, that to use improper expressions not merely is an offence in respect of the thing itself, but also engenders some mischief in our souls. On the contrary you should take heart and say that it is my body that you bury, and bury it precisely as is most agreeable to yourself and as you deem most conform able to custom.

Phaedo:: Having thus spoken he rose to retire into another room to take his bath, and Crito accompanied him, but bade us wait. Accordingly we waited, talking over amongst our selves and reconsidering the subject of our conversation, and then again dwelling upon the magnitude of the calamity which had befallen us, regarding ourselves exactly in the light of orphans who would have to pass the rest of our lives deprived of a father. And after he had bathed and his children had been brought to him—for he had two sons of tender age and one grown up—and the women of his family had arrived, he conversed with the latter in the presence of Crito and gave them his parting injunctions, and then, desiring the women and children to go away, returned himself to us. And it was now near sunset; for he had spent a considerable time within. And he came and sat down after his bath, and after this he did not talk much. By and by came the officer of the Eleven, and standing near him said;

Jailer:: I am sure, Socrates, I shall not have to find the same fault with you as with the rest, that they are angry with me and curse me when I bring them the order to drink the poison because the magistrates force me: but I have found you all along the noblest and gentlest and best man of all that ever came here, and now too I am quite sure that you will not be angry with me, for you know who are to blame—but with them. Now therefore—for you know the message with which I came—farewell, and try to bear your fate as easily as you can.

Phaedo:: And bursting into tears he turned away and left the room. And Socrates, looking up at him, said;

Socrates:: And you too farewell, and we will do as you bid.

Phaedo:: And at the same time to us;

Socrates:: How courteous the man is! in fact during the whole time I have spent here he used to pay me visits and sometimes talk to me, and was the best fellow in the world: and now how generous it is of him to weep for me! So come therefore, Crito, let us do as he says, and let some one bring the poison, if it is bruised; or if not, let the fellow bruise it.

Crito:: Nay, I think, Socrates, the sun is still upon the mountains and is not set yet Besides, I know that others take it quite late, after the order has been brought them eating and drinking heartily and some enjoying the society of their intimates. Let me entreat you not to be in a hurry; for there is still time.

Socrates:: Yes, it is natural enough for those you speak of to act thus, for they suppose they shall be gainers by doing so, and it will be equally natural for me to do otherwise: for I think I should gain nothing by a little delay in taking it, except my own contempt and ridicule for showing such greediness of life and 'husbanding it when there is no longer a drop left.' So go, do as I bid you, and don't disoblige me.

Phaedo:: And Crito, when he heard this, made a sign to his slave standing by: and the slave went out, and after some delay came back with the man who was to administer the poison, which he carried bruised in a cup. And as soon as Socrates saw the fellow, he said;

Socrates:: Well, my excellent friend, as you understand these things, what is to be done?

Jailer:: Nothing else, but walk about after you have swallowed it until a feeling of heaviness comes on in your legs, and then lie down; and so it will act of itself.

Phaedo:: And at the same time he handed the cup to Socrates; who took it, and with the utmost cheerfulness, Echecrates, without trembling in the least or changing a jot either of color or of feature, but just as usual, with his fixed underlook at the man, said;

Socrates:: What say you to offering a libation to any one of this draught? may I or not?

Jailer:: We bruise only just as much, Socrates, as we think sufficient for a dose.

Socrates:: I understand; but at any rate I suppose I may, and indeed must, pray to the Gods that my change of abode from this world to the other may turn out prosperous: which indeed I do pray, and so be it.

Phaedo:: And just as he finished these words, he put the cup to his lips, and with the most perfect serenity and cheerfulness drank it off. And most of us up to this time had been tolerably successful in controlling our tears, but when we saw him drinking and the cup actually finished, it was all over, but in spite of myself my tears began to flow in torrents, so that I was obliged to cover my face and weep for myself;—for assuredly it was not for him, but for my own fate in being deprived of such a friend. And Crito, still earlier than myself, finding that he could not repress his tears, rose and quitted the room. But Apollodorus, who all along had never ceased weeping, burst out then into loud sobs, and by his tears and expressions of grief quite overcame every one that was present, except Socrates himself. But he exclaimed;

Socrates:: What conduct is this, my very worthy friends! Why, this was my chief reason for sending away the women, that they might not offend in this way: for indeed I have heard that one should die in silence. Pray be quiet and have patience.

Phaedo:: These words made us feel ashamed, and we refrained from weeping. But he walked about for some time, and then, when he told us that his legs began to feel heavy, lay down on his back: for such were the directions of the attendant. And at the same time the man that administered the poison touched him at intervals to examine his feet and legs, and then pressing his foot hard enquired

Jailer:: Do you feel this?

Socrates:: No.

Phaedo:: and next his legs again: and so advancing upwards, showed us that he was growing cold and stiff. And he himself did the same, and told us that as soon as it reached his heart, then he should be gone. Well, the cold was already beginning to affect the region of the abdomen, when he uncovered his face—for it had been covered—and said,—which were indeed the last words he spoke,—

Socrates:: Crito, we owe a cock to Aesculapius: pray pay it, and don’t forget.

Crito:: Oh, certainly, it shall be done: but consider if you have any other injunctions for us?

Phaedo:: To this question he made no reply this time; but after a short interval he stirred, and the attendant uncovered his face, and his eyes were fixed: upon which Crito, observing it, closed his mouth and his eyes.

This, Echecrates, was the end of our friend, a man, in my judgment, of all his contemporaries that I ever had any knowledge of, the best natured, and besides the wisest and most just.

# Phaedo.

[OR ON THE SOUL; ETHICAL]

Translated by Fowler, Harold North.

CHARACTERS

Echecrates, Phaedo, Apollodorus, Socrates, Cebes, Simmias,
Crito, The Servant Of The Eleven.

Echecrates:: Were you with Socrates yourself, Phaedo, on the day when he drank the poison in prison, or did you hear about it from someone else?

Phaedo:: I was there myself, Echecrates.

Echecrates:: Then what did he say before his death? and how did he die? I should like to hear, for nowadays none of the Phliasians go to Athens at all, and no stranger has come from there for a long time, who could tell us anything definite about this matter, except that he drank poison and died, so we could learn no further details.

Phaedo:: Did you not even hear about the trial and how it was conducted?

Echecrates:: Yes, some one told us about that, and we wondered that although it took place a long time ago, he was put to death much later. Now why was that, Phaedo?

Phaedo:: It was a matter of chance, Echecrates. It happened that the stern of the ship which the Athenians send to Delos was crowned on the day before the trial.

Echecrates:: What ship is this?

Phaedo:: This is the ship, as the Athenians say, in which Theseus once went to Crete with the fourteen youths and maidens, and saved them and himself. Now the Athenians made a vow to Apollo, as the story goes, that if they were saved they would send a mission every year to Delos. And from that time even to the present day they send it annually in honor of the god. Now it is their law that after the mission begins the city must be pure and no one may be publicly executed until the ship has gone to Delos and back; and sometimes, when contrary winds detain it, this takes a long time. The beginning of the mission is when the priest of Apollo crowns the stern of the ship; and this took place, as I say, on the day before the trial. For that reason Socrates passed a long time in prison between his trial and his death.

Echecrates:: What took place at his death, Phaedo? What was said and done? And which of his friends were with him? Or did the authorities forbid them to be present, so that he died without his friends?

Phaedo:: Not at all. Some were there, in fact, a good many.

Echecrates:: Be so good as to tell us as exactly as you can about all these things, if you are not too busy.

Phaedo:: I am not busy and I will try to tell you. It is always my greatest pleasure to be reminded of Socrates whether by speaking of him myself or by listening to someone else.

Echecrates:: Well, Phaedo, you will have hearers who feel as you do; so try to tell us everything as accurately as you can.

Phaedo:: For my part, I had strange emotions when I was there. For I was not filled with pity as I might naturally be when present at the death of a friend; since he seemed to me to be happy, both in his bearing and his words, he was meeting death so fearlessly and nobly. And so I thought that even in going to the abode of the dead he was not going without the protection of the gods, and that when he arrived there it would be well with him, if it ever was well with anyone. And for this reason I was not at all filled with pity, as might seem natural when I was present at a scene of mourning; nor on the other hand did I feel pleasure because we were occupied with philosophy, as was our custom—and our talk was of philosophy;—but a very strange feeling came over me, an unaccustomed mixture of pleasure and of pain together, when I thought that Socrates was presently to die. And all of us who were there were in much the same condition, sometimes laughing and sometimes weeping; especially one of us, Apollodorus; you know him and his character.

Echecrates:: To be sure I do.

Phaedo:: He was quite unrestrained, and I was much agitated myself, as were the others.

Echecrates:: Who were these, Phaedo?

Phaedo:: Of native Athenians there was this Apollodorus, and Critobulus and his father, and Hermogenes and Epiganes and Aeschines and Antisthenes; and Ctesippus the Paeanian was there too, and Menexenus and some other Athenians. But Plato, I think, was ill.

Echecrates:: Were any foreigners there?

Phaedo:: Yes, Simmias of Thebes and Cebes and Phaedonides, and from Megara Euclides and Terpsion.

Echecrates:: What? Were Aristippus and Cleombrotus there?

Phaedo:: No. They were said to be in Aegina.

Echecrates:: Was anyone else there?

Phaedo:: I think these were about all.

Echecrates:: Well then, what was the conversation?

Phaedo:: I will try to tell you everything from the beginning. On the previous days I and the others had always been in the habit of visiting Socrates. We used to meet at daybreak in the court where the trial took place, for it was near the prison; and every day we used to wait about, talking with each other, until the prison was opened, for it was not opened early; and when it was opened, we went in to Socrates and passed most of the day with him. On that day we came together earlier; for the day before, when we left the prison in the evening we heard that the ship had arrived from Delos. So we agreed to come to the usual place as early in the morning as possible. And we came, and the jailer who usually answered the door came out and told us to wait and not go in until he told us. “For,” he said, “the eleven are releasing Socrates from his fetters and giving directions how he is to die to-day.” So after a little delay he came and told us to go in. We went in then and found Socrates just released from his fetters and Xanthippe—you know her— with his little son in her arms, sitting beside him. Now when Xanthippe saw us, she cried out and said the kind of thing that women always do say;

Xanthippe:: Oh Socrates, this is the last time now that your friends will speak to you or you to them.

Phaedo:: And Socrates glanced at Crito and said;

Socrates:: Crito, let somebody take her home.

Phaedo:: And some of Crito's people took her away wailing and beating her breast. But Socrates sat up on his couch and bent his leg and rubbed it with his hand, and while he was rubbing it, he said;

Socrates:: What a strange thing, my friends, that seems to be which men call pleasure! How wonderfully it is related to that which seems to be its opposite, pain, in that they will not both come to a man at the same time, and yet if he pursues the one and captures it, he is generally obliged to take the other also, as if the two were joined together in one head. And I think if Aesop had thought of them, he would have made a fable telling how they were at war and god wished to reconcile them, and when he could not do that, he fastened their heads together, and for that reason, when one of them comes to anyone, the other follows after. Just so it seems that in my case, after pain was in my leg on account of the fetter, pleasure appears to have come following after.

Phaedo:: Here Cebes interrupted and said;

Cebes:: By Zeus, Socrates, I am glad you reminded me. Several others have asked about the poems you have composed, the metrical versions of Aesop's fables and the hymn to Apollo, and Evenus asked me the day before yesterday why you who never wrote any poetry before, composed these verses after you came to prison. Now, if you care that I should be able to answer Evenus when he asks me again—and I know he will ask me—tell me what to say.

Socrates:: Then tell him, Cebes, the truth, that I composed these verses not because I wished to rival him or his poems, for I knew that would not be easy, but because I wished to test the meaning of certain dreams, and to make sure that I was neglecting no duty in case their repeated commands meant that I must cultivate the Muses in this way. They were something like this. The same dream came to me often in my past life, sometimes in one form and sometimes in another, but always saying the same thing; ‘Socrates,’ it said, ‘make music and work at it.’ And I formerly thought it was urging and encouraging me to do what I was doing already and that just as people encourage runners by cheering, so the dream was encouraging me to do what I was doing, that is, to make music, because philosophy was the greatest kind of music and I was working at that. But now, after the trial and while the festival of the god delayed my execution, I thought, in case the repeated dream really meant to tell me to make this which is ordinarily called music, I ought to do so and not to disobey. For I thought it was safer not to go hence before making sure that I had done what I ought, by obeying the dream and composing verses. So first I composed a hymn to the god whose festival it was; and after the god, considering that a poet, if he is really to be a poet, must compose myths and not speeches, since I was not a maker of myths, I took the myths of Aesop, which I had at hand and knew, and turned into verse the first I came upon. So tell Evenus that, Cebes, and bid him farewell, and tell him, if he is wise, to come after me as quickly as he can. I, it seems, am going to-day; for that is the order of the Athenians.

Phaedo:: And Simmias said;

Simmias:: What a message that is, Socrates, for Evenus! I have met him often, and from what I have seen of him, I should say that he will not take your advice in the least if he can help it.

Socrates:: Why so? Is not Evenus a philosopher?

Simmias:: I think so.

Socrates:: Then Evenus will take my advice, and so will every man who has any worthy interest in philosophy. Perhaps, however, he will not take his own life, for they say that is not permitted.

Phaedo:: And as he spoke he put his feet down on the ground and remained sitting in this way through the rest of the conversation.

Then Cebes asked him

Cebes:: What do you mean by this, Socrates, that it is not permitted to take ones life, but that the philosopher would desire to follow after the dying?

Socrates:: How is this, Cebes? Have you and Simmias, who are pupils of Philolaus, not heard about such things?

Cebes:: Nothing definite, Socrates.

Socrates:: I myself speak of them only from hearsay; but I have no objection to telling what I have heard. And indeed it is perhaps especially fitting, as I am going to the other world, to tell stories about the life there and consider what we think about it; for what else could one do in the time between now and sunset?

Cebes:: Why in the world do they say that it is not permitted to kill oneself, Socrates? I heard Philolaus, when he was living in our city, say the same thing you just said, and I have heard it from others, too, that one must not do this; but I never heard anyone say anything definite about it.

Socrates:: You must have courage, and perhaps you might hear something. But perhaps it will seem strange to you that this alone of all laws is without exception, and it never happens to mankind, as in other matters, that only at some times and for some persons it is better to die than to live; and it will perhaps seem strange to you that these human beings for whom it is better to die cannot without impiety do good to themselves, but must wait for some other benefactor.

Phaedo:: And Cebes, smiling gently, said, speaking in his own dialect;

Cebes:: Gawd knows it doos.

Socrates:: It would seem unreasonable, if put in this way, but perhaps there is some reason in it. Now the doctrine that is taught in secret about this matter, that we men are in a kind of prison and must not set ourselves free or run away, seems to me to be weighty and not easy to understand. But this at least, Cebes, I do believe is sound, that the gods are our guardians and that we men are one of the chattels of the gods. Do you not believe this?

Cebes:: Yes, I do.

Socrates:: Well then, if one of your chattels should kill itself when you had not indicated that you wished it to die, would you be angry with it and punish it if you could?

Cebes:: Certainly.

Socrates:: Then perhaps from this point of view it is not unreasonable to say that a man must not kill himself until god sends some necessity upon him, such as has now come upon me.

Cebes:: That, seems sensible. But what you said just now, Socrates, that philosophers ought to be ready and willing to die, that seems strange if we were right just now in saying that god is our guardian and we are his possessions. For it is not reasonable that the wisest men should not be troubled when they leave that service in which the gods, who are the best overseers in the world, are watching over them. A wise man certainly does not think that when he is free he can take better care of himself than they do. A foolish man might perhaps think so, that he ought to run away from his master, and he would not consider that he must not run away from a good master, but ought to stay with him as long as possible; and so he might thoughtlessly run away; but a man of sense would wish to be always with one who is better than himself. And yet, Socrates, if we look at it in this way, the contrary of what we just said seems natural; for the wise ought to be troubled at dying and the foolish to rejoice.

Phaedo:: When Socrates heard this I thought he was pleased by Cebes' earnestness, and glancing at us, he said;

Socrates:: Cebes is always on the track of arguments and will not be easily convinced by whatever anyone says.

Simmias:: Well, Socrates, this time I think myself that Cebes is right. For why should really wise men run away from masters who are better than they and lightly separate themselves from them? And it strikes me that Cebes is aiming his argument at you, because you are so ready to leave us and the gods, who are, as you yourself agree, good rulers.

Socrates:: You have a right to say that; for I think you mean that I must defend myself against this accusation, as if we were in a law court.

Simmias:: Precisely.

Socrates:: Well, then, I will try to make a more convincing defense than I did before the judges. For if I did not believe, that I was going to other wise and good gods, and, moreover, to men who have died, better men than those here, I should be wrong in not grieving at death. But as it is, you may rest assured that I expect to go to good men, though I should not care to assert this positively; but I would assert as positively as anything about such matters that I am going to gods who are good masters. And therefore, so far as that is concerned, I not only do not grieve, but I have great hopes that there is something in store for the dead, and, as has been said of old, something better for the good than for the wicked.

Simmias:: Well, do you intend to go away, Socrates, and keep your opinion to yourself, or would you let us share it? It seems to me that this is a good which belongs in common to us also, and at the same time, if you convince us by what you say, that will serve as your defense.

Socrates:: I will try. But first let us ask Crito there what he wants. He has apparently been trying to say something for a long time.

Crito:: Only, Socrates, that the man who is to administer the poison to you has been telling me for some time to warn you to talk as little as possible. He says people get warm when they talk and heat has a bad effect on the action of the poison; so sometimes he has to make those who talk too much drink twice or even three times.

Socrates:: Never mind him. Just let him do his part and prepare to give it twice or even, if necessary, three times.

Crito:: I was pretty sure that was what you would say, but he has been bothering me for a long time.

Socrates:: Never mind him. I wish now to explain to you, my judges, the reason why I think a man who has really spent his life in philosophy is naturally of good courage when he is to die, and has strong hopes that when he is dead he will attain the greatest blessings in that other land. So I will try to tell you, Simmias, and Cebes, how this would be.

—Other people are likely not to be aware that those who pursue philosophy aright study nothing but dying and being dead. Now if this is true, it would be absurd to be eager for nothing but this all their lives, and then to be troubled when that came for which they had all along been eagerly practicing.

Phaedo:: And Simmias laughed and said;

Simmias:: By Zeus, Socrates, I don’t feel much like laughing just now, but you made me laugh. For I think the multitude, if they heard what you just said about the philosophers, would say you were quite right, and our people at home would agree entirely with you that philosophers desire death, and they would add that they know very well that the philosophers deserve it.

Socrates:: And they would be speaking the truth, Simmias, except in the matter of knowing very well. For they do not know in what way the real philosophers desire death, nor in what way they deserve death, nor what kind of a death it is. Let us then, speak with one another, paying no further attention to them. Do we think there is such a thing as death?

Simmias:: Certainly.

Socrates:: We believe, do we not, that death is the separation of the soul from the body, and that the state of being dead is the state in which the body is separated from the soul and exists alone by itself and the soul is separated from the body and exists alone by itself? Is death anything other than this?

Simmias:: No, it is this.

Socrates:: Now, my friend, see if you agree with me; for, if you do, I think we shall get more light on our subject. Do you think a philosopher would be likely to care much about the so-called pleasures, such as eating and drinking?

Simmias:: By no means, Socrates.

Socrates:: How about the pleasures of love?

Simmias:: Certainly not.

Socrates:: Well, do you think such a man would think much of the other cares of the body I mean such as the possession of fine clothes and shoes and the other personal adornments? Do you think he would care about them or despise them, except so far as it is necessary to have them?

Simmias:: I think the true philosopher would despise them.

Socrates:: Altogether, then, you think that such a man would not devote himself to the body, but would, so far as he was able, turn away from the body and concern himself with the soul?

Simmias:: Yes.

Socrates:: To begin with, then, it is clear that in such matters the philosopher, more than other men, separates the soul from communion with the body?

Simmias:: It is.

Socrates:: Now certainly most people think that a man who takes no pleasure and has no part in such things doesn't deserve to live, and that one who cares nothing for the pleasures of the body is about as good as dead.

Simmias:: That is very true.

Socrates:: Now, how about the acquirement of pure knowledge? Is the body a hindrance or not, if it is made to share in the search for wisdom? What I mean is this; Have the sight and hearing of men any truth in them, or is it true, as the poets are always telling us, that we neither hear nor see anything accurately? And yet if these two physical senses are not accurate or exact, the rest are not likely to be, for they are inferior to these. Do you not think so?

Simmias:: Certainly I do.

Socrates:: Then, when does the soul attain to truth? For when it tries to consider anything in company with the body, it is evidently deceived by it.

Simmias:: True.

Socrates:: In thought, then, if at all, something of the realities becomes clear to it?

Simmias:: Yes.

Socrates:: But it thinks best when none of these things troubles it, neither hearing nor sight, nor pain nor any pleasure, but it is, so far as possible, alone by itself, and takes leave of the body, and avoiding, so far as it can, all association or contact with the body, reaches out toward the reality.

Simmias:: That is true.

Socrates:: In this matter also, then, the soul of the philosopher greatly despises the body and avoids it and strives to be alone by itself?

Simmias:: Evidently.

Socrates:: Now how about such things as this, Simmias? Do we think there is such a thing as absolute justice, or not?

Simmias:: We certainly think there is.

Socrates:: And absolute beauty and goodness.

Simmias:: Of course.

Socrates:: Well, did you ever see anything of that kind with your eyes?

Simmias:: Certainly not.

Socrates:: Or did you ever reach them with any of the bodily senses? I am speaking of all such things, as size, health, strength, and in short the essence or underlying quality of everything. Is their true nature contemplated by means of the body? Is it not rather the case that he who prepares himself most carefully to understand the true essence of each thing that he examines would come nearest to the knowledge of it?

Simmias:: Certainly.

Socrates:: Would not that man do this most perfectly who approaches each thing, so far as possible, with the reason alone, not introducing sight into his reasoning nor dragging in any of the other senses along with his thinking, but who employs pure, absolute reason in his attempt to search out the pure, absolute essence of things, and who removes himself, so far as possible, from eyes arid ears, and, in a word, from his whole body, because he feels that its companionship disturbs the soul and hinders it from attaining truth and wisdom? Is not this the man, Simmias, if anyone, to attain to the knowledge of reality?

Simmias:: That is true as true can be, Socrates.

Socrates:: Then, all this must cause good lovers of wisdom to think and say one to the other something like this; ‘There seems to be a short cut which leads us and our argument to the conclusion in our search that so long as we have the body, and the soul is contaminated by such an evil, we shall never attain completely what we desire, that is, the truth. For the body keeps us constantly busy by reason of its need of sustenance; and moreover, if diseases come upon it they hinder our pursuit of the truth. And the body fills us with passions and desires and fears, and all sorts of fancies and foolishness, so that, as they say, it really and truly makes it impossible for us to think at all. The body and its desires are the only cause of wars and factions and battles; for all wars arise for the sake of gaining money, and we are compelled to gain money for the sake of the body. We are slaves to its service. And so, because of all these things, we have no leisure for philosophy. But the worst of all is that if we do get a bit of leisure and turn to philosophy, the body is constantly breaking in upon our studies and disturbing us with noise and confusion, so that it prevents our beholding the truth, and in fact we perceive that, if we are ever to know anything absolutely, we must be free from the body and must behold the actual realities with the eye of the soul alone. And then, as our argument shows, when we are dead we are likely to possess the wisdom which we desire and claim to be enamored of, but not while we live. For, if pure knowledge is impossible while the body is with us, one of two thing must follow, either it cannot be acquired at all or only when we are dead; for then the soul will be by itself apart from the body, but not before. And while we live, we shall, I think, be nearest to knowledge when we avoid, so far as possible, intercourse and communion with the body, except what is absolutely necessary, and are not filled with its nature, but keep ourselves pure from it until God himself sets us free. And in this way, freeing ourselves from the foolishness of the body and being pure, we shall, I think, be with the pure and shall know of ourselves all that is pure,—and that is, perhaps, the truth. For it cannot be that the impure attain the pure.' Such words as these, I think, Simmias, all who are rightly lovers of knowledge must say to each other and such must be their thoughts. Do you not agree?

Simmias:: Most assuredly, Socrates.

Socrates:: Then, if this is true, my friend, I have great hopes that when I reach the place to which I am going, I shall there, if anywhere, attain fully to that which has been my chief object in my past life, so that the journey which is now imposed upon me is begun with good hope; and the like hope exists for every man who thinks that his mind has been purified and made ready.

Simmias:: Certainly.

Socrates:: And does not the purification consist in this which has been mentioned long ago in our discourse, in separating, so far as possible, the soul from the body and teaching the soul the habit of collecting and bringing itself together from all parts of the body, and living, so far as it can, both now and hereafter, alone by itself, freed from the body as from fetters?

Simmias:: Certainly.

Socrates:: Well, then, this is what we call death, is it not, a release and separation from the body?

Simmias:: Exactly so.

Socrates:: But, as we hold, the true philosophers and they alone are always most eager to release the soul, and just this—the release and separation of the soul from the body—is their study, is it not?

Simmias:: Obviously.

Socrates:: Then, as I said in the beginning, it would be absurd if a man who had been all his life fitting himself to live as nearly in a state of death as he could, should then be disturbed when death came to him. Would it not be absurd?

Simmias:: Of course.

Socrates:: In fact, then, Simmias, the true philosophers practice dying, and death is less terrible to them than to any other men. Consider it in this way. They are in every way hostile to the body and they desire to have the soul apart by itself alone. Would it not be very foolish if they should be frightened and troubled when this very thing happens, and if they should not be glad to go to the place where there is hope of attaining what they longed for all through life—and they longed for wisdom—and of escaping from the companionship of that which they hated? When human loves or wives or sons have died, many men have willingly gone to the other world led by the hope of seeing there those whom they longed for, and of being with them; and shall he who is really in love with wisdom and has a firm belief that he can find it nowhere else than in the other world grieve when he dies and not be glad to go there? We cannot think that, my friend, if he is really a philosopher; for he will confidently believe that he will find pure wisdom nowhere else than in the other world. And if this is so, would it not be very foolish for such a man to fear death?

Simmias:: Very foolish, certainly.

Socrates:: Then is it not, a sufficient indication, when you see a man troubled because he is going to die, that he was not a lover of wisdom but a lover of the body? And this same man is also a lover of money and of honor, one or both.

Simmias:: Certainly, it is as you say.

Socrates:: Then, Simmias, is not that which is called courage especially characteristic of philosophers?

Simmias:: By all means.

Socrates:: And self-restraint—that which is commonly called self-restraint, which consists in not being excited by the passions and in being superior to them and acting in a seemly way—is not that characteristic of those alone who despise the body and pass their lives in philosophy?

Simmias:: Necessarily.

Socrates:: For, if you care to consider the courage and the self-restraint of other men, you will see that they are absurd.

Simmias:: How so, Socrates?

Socrates:: You know, do you not, that all other men count death among the great evils?

Simmias:: They certainly do.

Socrates:: And do not brave men face death—when they do face it—through fear of greater evils?

Simmias:: That is true.

Socrates:: Then all except philosophers are brave through fear. And yet it is absurd to be brave through fear and cowardice.

Simmias:: Very true.

Socrates:: And how about those of seemly conduct? Is their case not the same? They are self-restrained because of a kind of self-indulgence. We say, to be sure, that this is impossible, nevertheless their foolish self-restraint amounts to little more than this; for they fear that they may be deprived of certain pleasures which they desire, and so they refrain from some because they are under the sway of others. And yet being ruled by pleasures is called self-indulgence. Nevertheless they conquer pleasures because they are conquered by other pleasures. Now this is about what I said just now, that they are self-restrained by a kind of self indulgence.

Simmias:: So it seems.

Socrates:: My dear Simmias, I suspect that this is not the right way to purchase virtue, by exchanging pleasures for pleasures, and pains for pains, and fear for fear, and greater for less, as if they were coins, but the only right coinage, for which all those things must be exchanged and by means of and with which all these things are to be bought and sold, is in fact wisdom; and courage and self restraint and justice and, in short, true virtue exist only with wisdom, whether pleasures and fears and other things of that sort are added or taken away. And virtue which consists in the exchange of such things for each other without wisdom, is but a painted imitation of virtue and is really slavish and has nothing healthy or true in it; but truth is in fact a purification from all these things, and self restraint and justice and courage and wisdom itself are a kind of purification. And I fancy that those men who established the mysteries were not unenlightened, but in reality had a hidden meaning when they said long ago that whoever goes uninitiated and unsanctified to the other world will lie in the mire, but he who arrives there initiated and purified will dwell with the gods. For as they say in the mysteries, ‘the thyrsus-bearers are many, but the mystics few;’ and these mystics are, I believe, those who have been true philosophers. And I in my life have, so far as I could, left nothing undone, and have striven in every way to make myself one of them. But whether I have striven aright and have met with success, I believe I shall know clearly, when I have arrived there, very soon, if it is God’s will. This then, Simmias and Cebes, is the defense I offer to show that it is reasonable for me not to be grieved or troubled at leaving you and the rulers I have here, because I believe that there, no less than here, I shall find good rulers and friends. If now I am more successful in convincing you by my defense than I was in convincing my Athenian judges, it is well.

Phaedo:: When Socrates had finished, Cebes answered and said;

Cebes:: Socrates, I agree to the other things you say, but in regard to the soul men are very prone to disbelief. They fear that when the soul leaves the body it no longer exists anywhere, and that on the day when the man dies it is destroyed and perishes, and when it leaves the body and departs from it, straightway it flies away and is no longer anywhere, scattering like a breath or smoke. If it exists anywhere by itself as a unit, freed from these evils which you have enumerated just now, there would be good reason for the blessed hope, Socrates, that what you say is true. But perhaps no little argument and proof is required to show that when a man is dead the soul still exists and has any power and intelligence.

Socrates:: What you say, Cebes, is true. Now what shall we do? Do you wish to keep on conversing about this to see whether it is probable or not?

Cebes:: I do. I should like to hear what you think about it.

Socrates:: Well, I do not believe anyone who heard us now, even if he were a comic poet, would say that I am chattering and talking about things which do not concern me. So if you like, let us examine the matter to the end.

Let us consider it by asking whether the souls of men who have died are in the nether world or not. There is an ancient tradition, which we remember, that they go there from here and come back here again and are born from the dead. Now if this is true, if the living are born again from the dead, our souls would exist there, would they not? For they could not be born again if they did not exist, and this would be a sufficient proof that they exist, if it should really be made evident that the living are born only from the dead. But if this is not so, then some other argument would be needed.

Cebes:: Certainly.

Socrates:: Now, if you wish to find this out easily, do not consider the question with regard to men only, but with regard to all animals and plants, and, in short, to all things which may be said to have birth. Let us see with regard to all these, whether it is true that they are all born or generated only from their opposites, in case they have opposites, as for instance, the noble is the opposite of the disgraceful, the just of the unjust, and there are countless other similar pairs. Let us consider the question whether it is inevitable that everything which has an opposite be generated from its opposite and from it only. For instance, when anything becomes greater it must inevitably have been smaller and then have become greater.

Cebes:: Yes.

Socrates:: And if it becomes smaller, it must have been greater and then have become smaller?

Cebes:: That is true.

Socrates:: And the weaker is generated from the stronger, and the slower from the quicker?

Cebes:: Certainly.

Socrates:: And the worse from the better and the more just from the more unjust?

Cebes:: Of course.

Socrates:: Then, we have this fact sufficiently established, that all things are generated in this way, opposites from opposites?

Cebes:: Certainly.

Socrates:: Now then, is there between all these pairs of opposites what may be called two kinds of generation, from one to the other and back again from the other to the first? Between a larger thing and a smaller thing there is increment and diminution and we call one increasing and the other decreasing, do we not?

Cebes:: Yes.

Socrates:: And similarly analyzing and combining, and cooling and heating, and all opposites in the same way. Even if we do not in every case have the words to express it, yet in fact is it not always inevitable that there is a process of generation from each to the other?

Cebes:: Certainly.

Socrates:: Well then, is there anything that is the opposite of living, as being awake is the opposite of sleeping?

Cebes:: Certainly.

Socrates:: What?

Cebes:: Being dead.

Socrates:: Then these two are generated from each other, and as they are two, so the processes between them are two; is it not so?

Cebes:: Of course.

Socrates:: Now, I will tell about one of the two pairs of which I just spoke to you and its intermediate processes and do you tell me about the other. I say one term is sleeping and the other is being awake, and being awake is generated from sleeping, and sleeping from being awake, and the processes of generation are, in the latter case, falling asleep, and in the former, waking up. Do you agree, or not?

Cebes:: Certainly.

Socrates:: Now do you, tell me in this way about life and death. Do you not say that living is the opposite of being dead?

Cebes:: I do.

Socrates:: And that they are generated one from the other?

Cebes:: Yes.

Socrates:: Now what is it which is generated from the living?

Cebes:: The dead.

Socrates:: And what, from the dead?

Cebes:: I can say only one thing—the living.

Socrates:: From the dead, then, Cebes, the living, both things and persons, are generated?

Cebes:: Evidently.

Socrates:: Then, our souls exist in the other world.

Cebes:: So it seems.

Socrates:: And of the two processes of generation between these two, the one is plain to be seen; for surely dying is plain to be seen, is it not?

Cebes:: Certainly.

Socrates:: Well then, what shall we do next? Shall we deny the opposite process, and shall nature be one-sided in this instance? Or must we grant that there is some process of generation the opposite of dying?

Cebes:: Certainly we must.

Socrates:: What is this process?

Cebes:: Coming to life again.

Socrates:: Then, if there be such a thing as coming to life again, this would be the process of generation from the dead to the living?

Cebes:: Certainly.

Socrates:: So by this method also we reach the conclusion that the living are generated from the dead, just as much as the dead from the living; and since this is the case, it seems to me to be a sufficient proof that the souls of the dead exist somewhere, whence they come back to life.

Cebes:: I think, Socrates, that results necessarily from our previous admissions.

Socrates:: Now here is another method, Cebes, to prove, as it seems to me, that we were right in making those admissions. For if generation did not proceed from opposite to opposite and back again, going round, as it were in a circle, but always went forward in a straight line without turning back or curving, then, you know, in the end all things would have the same form and be acted upon in the same way and stop being generated at all.

Cebes:: What do you mean?

Socrates:: It is not at all hard, to understand what I mean. For example, if the process of falling asleep existed, but not the opposite process of waking from sleep, in the end, you know, that would make the sleeping Endymion mere nonsense; he would be nowhere, for everything else would be in the same state as he r sound asleep. Or if all things were mixed together and never separated, the saying of Anaxagoras, ‘all things are chaos,’ would soon come true. And in like manner, my dear Cebes, if all things that have life should die, and, when they had died, the dead should remain in that condition, is it not inevitable that at last all things would be dead and nothing alive? For if the living were generated from any other things than from the dead, and the living were to die, is there any escape from the final result that all things would be swallowed up in death?

Cebes:: I see none, Socrates. What you say seems to be perfectly true.

Socrates:: I think, Cebes, it is absolutely so, and we are not deluded in making these admissions, but the return to life is an actual fact, and it is a fact that the living are generated from the dead and that the souls of the dead exist.

Cebes:: And besides, if it is true, Socrates, as you are fond of saying, that our learning is nothing else than recollection, then this would be an additional argument that we must necessarily have learned in some previous time what we now remember. But this is impossible if our soul did not exist somewhere before being born in this human form; and so by this argument also it appears that the soul is immortal.

Simmias:: But, Cebes, what were the proofs of this? Remind me; for I do not recollect very well just now.

Cebes:: Briefly, a very good proof is this; When people are questioned, if you put the questions well, they answer correctly of themselves about everything; and yet if they had not within them some knowledge and right reason, they could not do this. And that this is so is shown most clearly if you take them to mathematical diagrams or anything of that sort.

Socrates:: And if you are not convinced in that way, Simmias, see if you don't agree when you look at it in this way. You are incredulous, are you not, how that which is called learning can be recollection?

Simmias:: I am not incredulous, but I want just what we are talking about, recollection. And from what

Cebes undertook to say I already begin to recollect and be convinced; nevertheless, I should like to hear what you were going to say.

Socrates:: It was this. We agree, I suppose, that if anyone is to remember anything, he must know it at some previous time?

Simmias:: Certainly.

Socrates:: Then do we agree to this also, that when knowledge comes in such a way, it is recollection? What I mean is this; If a man, when he has heard or seen or in any other way perceived a thing, knows not only that thing, but also has a perception of some other thing, the knowledge of which is not the same, but different, are we not right in saying that he recollects the thing of which he has the perception?

Simmias:: What do you mean?

Socrates:: Let me give an example. Knowledge of a man is different from knowledge of a lyre.

Simmias:: Of course.

Socrates:: Well, you know that a lover when he sees a lyre or a cloak or anything else which his beloved is wont to use, perceives the lyre and in his mind receives an image of the boy to whom the lyre belongs, do you not? But this is recollection, just as when one sees Simmias, one often remembers Cebes, and I could cite countless such examples.

Simmias:: To be sure you could.

Socrates:: Now, is that sort of thing a kind of recollection? Especially when it takes place with regard to things which have already been forgotten through time and inattention?

Simmias:: Certainly.

Socrates:: Well, then, can a person on seeing a picture of a horse or of a lyre be reminded of a man, or on seeing a picture of Simmias be reminded of Cebes?

Simmias:: Surely.

Socrates:: And on seeing a picture of Simmias he can be reminded of Simmias himself?

Simmias:: Yes.

Socrates:: All these examples show, then, that recollection is caused by like things and also by unlike things, do they not?

Simmias:: Yes.

Socrates:: And when one has a recollection of anything caused by like things, will he not also inevitably consider whether this recollection offers a perfect likeness of the thing recollected, or not?

Simmias:: Inevitably.

Socrates:: Now see, if this is true. We say there is such a thing as equality. I do not mean one piece of wood equal to another, or one stone to another, or anything of that sort, but something beyond that—equality in the abstract. Shall we say there is such a thing, or not?

Simmias:: We shall say that there is, most decidedly.

Socrates:: And do we know what it is?

Simmias:: Certainly.

Socrates:: Whence did we derive the knowledge of it? Is it not from the things we were just speaking of? Did we not, by seeing equal pieces of wood or stones or other things, derive from them a knowledge of abstract equality, which is another thing? Or do you not think it is another thing? Look at the matter in this way. Do not equal stones and pieces of wood, though they remain the same, sometimes appear to us equal in one respect and unequal in another?

Simmias:: Certainly.

Socrates:: Well, then, did absolute equals ever appear to you unequal or equality inequality?

Simmias:: No, Socrates, never.

Socrates:: Then, those equals are not the same as equality in the abstract.

Simmias:: Not at all, I should say, Socrates.

Socrates:: But from those equals, which are not the same as abstract equality, you have nevertheless conceived and acquired knowledge of it?

Simmias:: Very true.

Socrates:: And it is either like them or unlike them?

Simmias:: Certainly.

Socrates:: It makes no difference. Whenever the sight of one thing brings you a perception of another, whether they be like or unlike, that must necessarily be recollection.

Simmias:: Surely.

Socrates:: Now then, do the equal pieces of wood and the equal things of which we were speaking just now affect us in this way; Do they seem to us to be equal as abstract equality is equal, or do they somehow fall short of being like abstract equality?

Simmias:: They fall very far short of it.

Socrates:: Do we agree, then, that when anyone on seeing a thing thinks, 'This thing that I see aims at being like some other thing that exists, but falls short and is unable to be like that thing, but is inferior to it,' he who thinks thus must of necessity have previous knowledge of the thing which he says the other resembles but falls short of?

Simmias:: We must.

Socrates:: Well then, is this just what happened to us with regard to the equal things and equality in the abstract?

Simmias:: It certainly is.

Socrates:: Then we must have had knowledge of equality before the time when we first saw equal things and thought, ‘All these things are aiming to be like equality but fall short.’

Simmias:: That is true.

Socrates:: And we agree, also, that we have not gained knowledge of it, and that it is impossible to gain this knowledge, except by sight or touch or some other of the senses? I consider that all the senses are alike.

Simmias:: Yes, Socrates, they are all alike, for the purposes of our argument.

Socrates:: Then it is through the senses that we must learn that all sensible objects strive after absolute equality and fall short of it. Is that our view?

Simmias:: Yes.

Socrates:: Then before we began to see or hear or use the other senses we must somewhere have gained a knowledge of abstract or absolute equality, if we were to compare with it the equals which we perceive by the senses, and see that all such things; yearn to be like abstract equality but fall short of it.

Simmias:: That follows necessarily from what we have said before, Socrates.

Socrates:: And we saw and heard and had the other senses as soon as we were born?

Simmias:: Certainly.

Socrates:: But, we say, we must have acquired a knowledge of equality before we had these senses?

Simmias:: Yes.

Socrates:: Then it appears that we must have acquired it before we were born.

Simmias:: It does.

Socrates:: Now if we had acquired that knowledge before we were born, and were born with it, we knew before we were born and at the moment of birth not only the equal and the greater and the less, but all such abstractions? For our present argument is no more concerned with the equal than with absolute beauty and the absolute good and the just and the holy, and, in short, with all those things which we stamp with the seal of 'absolute' in our dialectic process of questions and answers; so that we must necessarily have acquired knowledge of all these before our birth.

Simmias:: That is true.

Socrates:: And if after acquiring it we have not, in each case, forgotten it, we must always be born knowing these things, and must know them throughout our life; for to know is to have acquired knowledge and to have retained it without losing it, and the loss of knowledge is just what we mean when we speak of forgetting, is it not, Simmias?

Simmias:: Certainly, Socrates.

Socrates:: But, I suppose, if we acquired knowledge before we were born and lost it at birth, but afterwards by the use of our senses regained the knowledge which we had previously possessed, would not the process which we call learning really be recovering knowledge which is our own? And should we be right in calling this recollection?

Simmias:: Assuredly.

Socrates:: For we found that it is possible, on perceiving a thing by the sight or the hearing or any other sense, to call to mind from that perception another thing which had been forgotten, which was associated with the thing perceived, whether like it or unlike it; so that, as I said, one of two things is true, either we are all born knowing these things and know them all our lives, or afterwards, those who are said to learn merely remember, and learning would then be recollection.

Simmias:: That is certainly true, Socrates.

Socrates:: Which then do you choose, Simmias? Were we born with the knowledge, or do we recollect afterwards things of which we had acquired knowledge before our birth?

Simmias:: I cannot choose at this moment, Socrates.

Socrates:: How about this question? You can choose and you have some opinion about it; When a man knows, can he give an account of what he knows or not?

Simmias:: Certainly he can, Socrates.

Socrates:: And do you think that everybody can give an account of the matters about which we have just been talking?

Simmias:: I wish they might; but on the contrary I fear that to-morrow, at this time, there will be no longer any man living who is able to do so properly.

Socrates:: Then, Simmias, you do not think all men know these things?

Simmias:: By no means.

Socrates:: Then they recollect the things they once learned?

Simmias:: Necessarily.

Socrates:: When did our souls acquire the knowledge of them? Surely not after we were born as human beings.

Simmias:: Certainly not.

Socrates:: Then previously.

Simmias:: Yes.

Socrates:: Then, Simmias, the souls existed previously, before they were in human form, apart from bodies, and they had intelligence.

Simmias:: Unless, Socrates, we acquire these ideas at the moment of birth; for that time still remains.

Socrates:: Very well, my friend. But at what other time do we lose them? For we are surely not born with them, as we just now agreed. Do we lose them at the moment when we receive them, or have you some other time to suggest?

Simmias:: None whatever, Socrates. I did not notice that I was talking nonsense.

Socrates:: Then, Simmias, is this the state of the case? If, as we are always saying, the beautiful exists, and the good, and every essence of that kind, and if we refer all our sensations to these, which we find existed previously and are now ours, and compare our sensations with these, is it not a necessary inference that just as these abstractions exist, so our souls existed before we were born; and if these abstractions do not exist, our argument is of no force? Is this the case, and is it equally certain that provided these things exist our souls also existed before we were born, and that if these do not exist, neither did our souls?

Simmias:: Socrates, it seems to me that there is absolutely the same certainty, and our argument comes to the excellent conclusion that our soul existed before we were born, and that the essence of which you speak likewise exists. For there is nothing so clear to me as this, that all such things, the beautiful, the good, and all the others of which you were speaking just now, have a most real existence. And I think the proof is sufficient.

Socrates:: But how about Cebes? For Cebes must be convinced, too.

Simmias:: He is fully convinced, I think; and yet he is the most obstinately incredulous of mortals. Still, I believe he is quite convinced of this, that our soul existed before we were born. However, that it will still exist after we die does not seem even to me to have been proved, Socrates, but the common fear, which Cebes mentioned just now, that when a man dies the soul is dispersed and this is the end of his existence, still remains. For assuming that the soul comes into being and is brought together from some source or other and exists before it enters into a human body, what prevents it, after it has entered into and left that body, from coming to an end and being destroyed itself?

Cebes:: You are right, Simmias. It seems to me that we have proved only half of what is required, namely, that our soul existed before our birth. But we must also show that it exists after we are dead as well as before our birth, if the proof is to be perfect.

Socrates:: It has been shown, Simmias and Cebes, already, if you will combine this conclusion with the one we reached before, that every living being is born from the dead. For if the soul exists before birth, and, when it comes into life and is born, cannot be born from anything else than death and a state of death, must it not also exist after dying, since it must be born again? So the proof you call for has already been given. However, I think you and Simmias would like to carry on this discussion still further. You have the childish fear that when the soul goes out from the body the wind will really blow it away and scatter it, especially if a man happens to die in a high wind and not in calm weather.

Phaedo:: And Cebes laughed and said;

Cebes:: Assume that we have that fear, Socrates, and try to convince us; or rather, do not assume that we are afraid, but perhaps there is a child within us, who has such fears. Let us try to persuade him not to fear death as if it were a hobgoblin.

Socrates:: Ah, you must sing charms to him every day until you charm away his fear.

Cebes:: Where then, Socrates, shall we find a good singer of such charms, since you are leaving us?

Socrates:: Hellas, Cebes, is a large country, in which there are many good men, and there are many foreign peoples also. You ought to search through all of them in quest of such a charmer, sparing neither money nor toil, for there is no greater need for which you could spend your money. And you must seek among yourselves, too, for perhaps you would hardly find others better able to do this than you.

Cebes:: That, shall be done.

Socrates:: But let us return to the point where we left off, if you are willing.

Cebes:: Oh, I am willing, of course.

Socrates:: Good.

—Well then, must we not ask ourselves some such question as this? What kind of thing naturally suffers, dispersion, and for what kind of thing might we naturally fear it, and again what kind of thing is not liable to it? And after this must we not inquire to which class the soul belongs and base our hopes or fears for our souls upon the answers to these questions?

Cebes:: You are quite right.

Socrates:: Now is not that which is compounded and composite naturally liable to be decomposed, in the same way in which it was compounded? And if anything is uncompounded is not that, if anything, naturally unlikely to be decomposed?

Cebes:: I think that is true.

Socrates:: Then it is most probable that things which are always the same and unchanging are the uncompounded things and the things that are changing and never the same are the composite things?

Cebes:: Yes, I think so.

Socrates:: Let us then, turn to what we were discussing before. Is the absolute essence, which we in our dialectic process of question and answer call true being, always the same or is it liable to change?

Absolute equality, absolute beauty, any absolute existence, true being do they ever admit of any change whatsoever? Or does each absolute essence, since it is uniform and exists by itself, remain the same and never in any way admit of any change?

Cebes:: It must, necessarily, remain the same, Socrates.

Socrates:: But how about the many things, for example, men, or horses, or cloaks, or any other such things, which bear the same names as the absolute essences and are called beautiful or equal or the like? Are they always the same? Or are they, in direct opposition to the essences, constantly changing in themselves, unlike each other, and, so to speak, never the same?

Cebes:: The latter; they are never the same.

Socrates:: And you can see these and touch them and perceive them by the other senses, whereas the things which are always the same can be grasped only by the reason, and are invisible and not to be seen?

Cebes:: Certainly, that is true.

Socrates:: Now, shall we assume two kinds of existences, one visible, the other invisible?

Cebes:: Let us assume them.

Socrates:: And that the invisible is always the same and the visible constantly changing?

Cebes:: Let us assume that also.

Socrates:: Well then, are we not made up of two parts, body and soul?

Cebes:: Yes.

Socrates:: Now to which class should we say the body is more similar and more closely akin?

Cebes:: To the visible; that is clear to everyone.

Socrates:: And the soul? Is it visible or invisible?

Cebes:: Invisible, to man, at least, Socrates.

Socrates:: But we call things visible and invisible with reference to human vision, do we not?

Cebes:: Yes, we do.

Socrates:: Then what do we say about the soul? Can it be seen or not?

Cebes:: It cannot be seen.

Socrates:: Then it is invisible?

Cebes:: Yes.

Socrates:: Then the soul is more like the invisible than the body is, and the body more like the visible.

Cebes:: Necessarily, Socrates.

Socrates:: Now we have also been saying for a long time, have we not, that, when the soul makes use of the body for any inquiry, either through seeing or hearing or any of the other senses—for inquiry through the body means inquiry through the senses,—then it is dragged by the body to things which never remain the same, and it wanders about and is confused and dizzy like a drunken man because it lays hold upon such things?

Cebes:: Certainly.

Socrates:: But when the soul inquires alone by itself, it departs into the realm of the pure, the everlasting, the immortal and the changeless, and being akin to these it dwells always with them whenever it is by itself and is not hindered, and it has rest from its wanderings and remains always the same and unchanging with the changeless, since it is in communion therewith. And this state of the soul is called wisdom. Is it not so?

Cebes:: Socrates, what you say is perfectly right and true.

Socrates:: And now again, in view of what we said before and of what has just been said, to which class do you think the soul has greater likeness and kinship?

Cebes:: I think, Socrates, that anyone, even the dullest, would agree, after this argument that the soul is infinitely more like that which is always the same than that which is not.

Socrates:: And the body?

Cebes:: Is more like the other.

Socrates:: Consider, then, the matter in another way. When the soul and the body are joined together, nature directs the one to serve and be ruled, and the other to rule and be master. Now this being the case, which seems to you like the divine, and which like the mortal? Or do you not think that the divine is by nature fitted to rule and lead, and the mortal to obey and serve?

Cebes:: Yes, I think so.

Socrates:: Which, then, does the soul resemble?

Cebes:: Clearly, Socrates, the soul is like the divine and the body like the mortal.

Socrates:: Then see, Cebes, if this is not the conclusion from all that we have said, that the soul is most like the divine and immortal and intellectual and uniform and indissoluble and ever unchanging, and the body, on the contrary, most like the human and mortal and multiform and unintellectual and dissoluble and ever changing. Can we say anything, my dear Cebes, to show that this is not so?

Cebes:: No, we cannot.

Socrates:: Well then, since this is the case, is it not natural for the body to meet with speedy dissolution and for the soul, on the contrary, to be entirely indissoluble, or nearly so?

Cebes:: Of course.

Socrates:: Observe, that when a man dies, the visible part of him, the body, which lies in the visible world and which we call the corpse, which is naturally subject to dissolution and decomposition, does not undergo these processes at once, but remains for a considerable time, and even for a very long time, if death takes place when the body is in good condition, and at a favorable time of the year. For when the body is shrunk and embalmed, as is done in Egypt, it remains almost entire for an incalculable time. And even if the body decay, some parts of it, such as the bones and sinews and all that, are, so to speak, indestructible. Is not that true?

Cebes:: Yes.

Socrates:: But the soul, the invisible, which departs into another place which is, like itself, noble and pure and invisible, to the realm of the god of the other world in truth, to the good and wise god, whither, if God will, my soul is soon to go,—is this soul, which has such qualities and such a nature, straightway scattered and destroyed when it departs from the body, as most men say? Far from it, dear Cebes and Simmias, but the truth is much rather this;—if it departs pure, dragging with it nothing of the body, because it never willingly associated with the body in life, but avoided it and gathered itself into itself alone, since this has always been its constant study—but this means nothing else than that it pursued philosophy rightly and really practiced being in a state of death; or is not this the practice of death?

Cebes:: By all means.

Socrates:: Then if it is in such a condition, it goes away into that which is like itself, into the invisible, divine, immortal, and wise, and when it arrives there it is happy, freed from error and folly and fear and fierce loves and all the other human ills, and as the initiated say, lives in truth through all after time with the gods. Is this our belief, Cebes, or not?

Cebes:: Assuredly.

Socrates:: But, I think, if when it departs from the body it is defiled and impure, because it was always with the body and cared for it and loved it and was fascinated by it and its desires and pleasures, so that it thought nothing was true except the corporeal, which one can touch and see and drink and eat and employ in the pleasures of love, and if it is accustomed to hate and fear and avoid that which is shadowy and invisible to the eyes but is intelligible and tangible to philosophy—do you think a soul in this condition will depart pure and uncontaminated?

Cebes:: By no means.

Socrates:: But it will be interpenetrated, I suppose, with the corporeal which intercourse and communion with the body have made a part of its nature because the body has been its constant companion and the object of its care?

Cebes:: Certainly.

Socrates:: And, my friend, we must believe that the corporeal is burdensome and heavy and earthly and visible. And such a soul is weighed down by this and is dragged back into the visible world, through fear of the invisible and of the other world, and so, as they say, it flits about the monuments and the tombs, where shadowy shapes of souls have been seen, figures of those souls which were not set free in purity but retain something of the visible; and this is why they are seen.

Cebes:: That is likely, Socrates.

Socrates:: It is likely, Cebes. And it is likely that those are not the souls of the good, but those of the base, which are compelled to flit about such places as a punishment for their former evil mode of life. And they flit about until through the desire of the corporeal which clings to them they are again imprisoned in a body. And they are likely to be imprisoned in natures which correspond to the practices of their former life.

Cebes:: What natures do you mean, Socrates?

Socrates:: I mean, for example, that those who have indulged in gluttony and violence and drunkenness, and have taken no pains to avoid them, are likely to pass into the bodies of asses and other beasts of that sort. Do you not think so?

Cebes:: Certainly that is very likely.

Socrates:: And those who have chosen injustice and tyranny and robbery pass into the bodies of wolves and hawks and kites. Where else can we imagine that they go?

Cebes:: Beyond a doubt, they pass into such creatures.

Socrates:: Then, it is clear where all the others go, each in accordance with its own habits?

Cebes:: Yes, of course.

Socrates:: Then, the happiest of those, and those who go to the best place, are those who have practiced, by nature and habit, without philosophy or reason, the social and civil virtues which are called moderation and justice?

Cebes:: How are these happiest?

Socrates:: Don’t you see? Is it not likely that they pass again into some such social and gentle species as that of bees or of wasps or ants, or into the human race again, and that worthy men spring from them?

Cebes:: Yes.

Socrates:: And no one who has not been a philosopher and who is not wholly pure when he departs, is allowed to enter into the communion of the gods, but only the lover of knowledge. It is for this reason, dear Simmias and Cebes, that those who truly love wisdom refrain from all bodily desires and resist them firmly and do not give themselves up to them, not because they fear poverty or loss of property, as most men, in their love of money, do; nor is it because they fear the dishonor or disgrace of wickedness, like the lovers of honor and power, that they refrain from them.

Cebes:: No, that would not be seemly for them, Socrates.

Socrates:: Most assuredly not. And therefore those who care for their own souls, and do not live in service to the body, turn their backs upon all these men and do not walk in their ways, for they feel that they know not whither they are going. They themselves believe that philosophy, with its deliverance and purification, must not be resisted, and so they turn and follow it whithersoever it leads.

Cebes:: How do they do this, Socrates?

Socrates:: I will tell you. The lovers of knowledge, perceive that when philosophy first takes possession of their soul it is entirely fastened and welded to the body and is compelled to regard realities through the body as through prison bars, not with its own unhindered vision, and is wallowing in utter ignorance. And philosophy sees that the most dreadful thing about the imprisonment is the fact that it is caused by the lusts of the flesh, so that the prisoner is the chief assistant in his own imprisonment. The lovers of knowledge, then, I say, perceive that philosophy, taking possession of the soul when it is in this state, encourages it gently and tries to set it free, pointing out that the eyes and the ears and the other senses are full of deceit, and urging it to withdraw from these, except in so far as their use is unavoidable, and exhorting it to collect and concentrate itself within itself, and to trust nothing except itself and its own abstract thought of abstract existence; and to believe that there is no truth in that which it sees by other means and which varies with the various objects in which it appears, since everything of that kind is visible and apprehended by the senses, whereas the soul itself sees that which is invisible and apprehended by the mind. Now the soul of the true philosopher believes that it must not resist this deliverance, and therefore it stands aloof from pleasures and lusts and griefs and fears, so far as it can, considering that when anyone has violent pleasures or fears or griefs or lusts he suffers from them not merely what one might think for example, illness or loss of money spent for his lusts but he suffers the greatest and most extreme evil and does not take it into account.

Cebes:: What is this evil, Socrates?

Socrates:: The evil is that the soul of every man, when it is greatly pleased or pained by anything, is compelled to believe that the object which caused the emotion is very distinct and very true; but it is not. These objects are mostly the visible ones, are they not?

Cebes:: Certainly.

Socrates:: And when this occurs, is not the soul most completely put in bondage by the body?

Cebes:: How so?

Socrates:: Because each pleasure or pain nails it as with a nail to the body and rivets it on and makes it corporeal, so that it fancies the things are true which the body says are true. For because it has the same beliefs and pleasures as the body it is compelled to adopt also the same habits and mode of life, and can never depart in purity to the other world, but must always go away contaminated with the body; and so it sinks quickly into another body again and grows into it, like seed that is sown. Therefore it has no part in the communion with the divine and pure and absolute.

Cebes:: What you say, Socrates, is very true.

Socrates:: This, Cebes, is the reason why the true lovers of knowledge are temperate and brave; not the worlds reason. Or do you disagree?

Cebes:: Certainly not.

Socrates:: No, for the soul of the philosopher would not reason as others do, and would not think it right that philosophy should set it free, and that then when set free it should give itself again into bondage to pleasure and pain and engage in futile toil, like Penelope unweaving the web she wove. No, his soul believes that it must gain peace from these emotions, must follow reason and abide always in it, beholding that which is true and divine and not a matter of opinion, and making that its only food; and in this way it believes it must live, while life endures, and then at death pass on to that which is akin to itself and of like nature, and be free from human ills. A soul which has been nurtured in this way, Simmias and Cebes, is not likely to fear that it will be torn asunder at its departure from the body and will vanish into nothingness, blown apart by the winds, and be no longer anywhere.

Phaedo:: When Socrates had said this there was silence for a long time, and Socrates himself was apparently absorbed in what had been said, as were also most of us. But Simmias and Cebes conversed a little with each other; and Socrates saw them and said;

Socrates:: Do you think there is any incompleteness in what has been said? There are still many subjects for doubt and many points open to attack, if anyone cares to discuss the matter thoroughly. If you are considering anything else, I have nothing to say; but if you are in any difficulty about these matters, do not hesitate to speak and discuss them yourselves, if you think anything better could be said on the subject, and to take me along with you in the discussion, if you think you can get on better in my company.

Simmias:: Socrates, I will tell you the truth. For some time each of us has been in doubt and has been egging the other on and urging him to ask a question, because we wish to hear your answer, but hesitate to trouble you, for fear that it may be disagreeable to you in your present misfortune.

Phaedo:: And when he heard this, he laughed gently and said;

Socrates:: Ah, Simmias! I should have hard work to persuade other people that I do not regard my present situation as a misfortune, when I cannot even make you believe it, but you are afraid I am more churlish now than I used to be. And you seem to think I am inferior in prophetic power to the swans who sing at other times also, but when they feel that they are to die, sing most and best in their joy that they are to go to the god whose servants they are. But men, because of their own fear of death, misrepresent the swans and say that they sing for sorrow, in mourning for their own death. They do not consider that no bird sings when it is hungry or cold or has any other trouble; no, not even the nightingale or the swallow or the hoopoe which are said to sing in lamentation. I do not believe they sing for grief, nor do the swans; but since they are Apollos birds, I believe they have prophetic vision, and because they have foreknowledge of the blessings in the other world they sing and rejoice on that day more than ever before. And I think that I am myself a fellow-servant of the swans, and am consecrated to the same God and have received from our master a gift of prophecy no whit inferior to theirs, and that I go out from life with as little sorrow as they. So far as this is concerned, then, speak and ask whatever questions you please, so long as the eleven of the Athenians permit.

Simmias:: Good. I will tell you my difficulty, and then Cebes in turn will say why he does not agree to all you have said. I think, Socrates, as perhaps you do yourself, that it is either impossible or very difficult to acquire clear knowledge about these matters in this life. And yet he is a weakling who does not test in every way what is said about them and persevere until he is worn out by studying them on every side. For he must do one of two things; either he must learn or discover the truth about these matters, or if that is impossible, he must take whatever human doctrine is best and hardest to disprove and, embarking upon it as upon a raft, sail upon it through life in the midst of dangers, unless he can sail upon some stronger vessel, some divine revelation, and make his voyage more safely and securely. And so now I am not ashamed to ask questions, since you encourage me to do so, and I shall not have to blame myself hereafter for not saying now what I think. For, Socrates, when I examine what has been said, either alone or with Cebes, it does not seem quite satisfactory.

Socrates:: Perhaps, my friend, you are right. But tell me in what respect it is not satisfactory.

Simmias:: In this, that one might use the same argument about harmony and a lyre with its strings. One might say that the harmony is invisible and incorporeal, and very beautiful and divine in the well attuned lyre, but the lyre itself and its strings are bodies, and corporeal and composite and earthy and akin to that which is mortal. Now if someone shatters the lyre or cuts and breaks the strings, what if he should maintain by the same argument you employed, that the harmony could not have perished and must still exist? For there would be no possibility that the lyre and its strings, which are of mortal nature, still exist after the strings are broken, and the harmony, which is related and akin to the divine and the immortal, perish before that which is mortal. He would say that the harmony must still exist somewhere, and that the wood and the strings must rot away before anything could happen to it. And I fancy, Socrates, that it must have occurred to your own mind that we believe the soul to be something after this fashion; that our body is strung and held together by heat, cold, moisture, dryness, and the like, and the soul is a mixture and a harmony of these same elements, when they are well and properly mixed. Now if the soul is a harmony, it is clear that when the body is too much relaxed or is too tightly strung by diseases or other ills, the soul must of necessity perish, no matter how divine it is, like other harmonies in sounds and in all the works of artists, and the remains of each body will endure a long time until they are burnt or decayed. Now what shall we say to this argument, if anyone claims that the soul, being a mixture of the elements of the body, is the first to perish in what is called death?

Phaedo:: Then Socrates, looking keenly at us, as he often used to do, smiled and said;

Socrates:: Simmias raises a fair objection. Now if any of you is readier than I, why does he not reply to him? For he seems to score a good point. However, I think before replying to him we ought to hear what fault our friend Cebes finds with our argument, that we may take time to consider what to say, and then when we have heard them, we can either agree with them, if they seem to strike the proper note, or, if they do not, we can proceed to argue in defense of our reasoning. Come, Cebes, tell us what it was that troubled you.

Cebes:: Well, I will tell you. The argument seems to me to be just where it was, and to be still open to the objection I made before. For I do not deny that it has been very cleverly, and, if I may say so, conclusively shown that the soul existed before it entered into this bodily form, but it does not seem to me proved that it will still exist when we are dead. I do not agree with Simmias objection, that the soul is not stronger and more lasting than the body, for I think it is far superior in all such respects. 'Why then,' the argument might say, 'do you still disbelieve, when you see that after a man dies the weaker part still exists? Do you not think the stronger part must necessarily be preserved during the same length of time?' Now see if my reply to this has any sense. I think I may, like Simmias, best express myself in a figure. It seems to me that it is much as if one should say about an old weaver who had died, that the man had not perished but was safe and sound somewhere, and should offer as a proof of this the fact that the cloak which the man had woven and used to wear was still whole and had not perished. Then if anyone did not believe him, he would ask which lasts longer, a man or a cloak that is in use and wear, and when the answer was given that a man lasts much longer, he would think it had been proved beyond a doubt that the man was safe, because that which was less lasting had not perished.

Cebes:: But I do not think he is right, Simmias, and I ask you especially to notice what I say. Anyone can understand that a man who says this is talking nonsense. For the weaver in question wove and wore out many such cloaks and lasted longer than they, though they were many, but perished, I suppose, before the last one. Yet a man is not feebler or weaker than a cloak on that account at all. And I think the same figure would apply to the soul and the body and it would be quite appropriate to say in like manner about them, that the soul lasts a long time, but the body lasts a shorter time and is weaker. And one might go on to say that each soul wears out many bodies, especially if the man lives many years. For if the body is constantly changing and being destroyed while the man still lives, and the soul is always weaving anew that which wears out, then when the soul perishes it must necessarily have on its last garment, and this only will survive it, and when the soul has perished, then the body will at once show its natural weakness and will quickly disappear in decay. And so we are not yet justified in feeling sure, on the strength of this argument, that our souls will still exist somewhere after we are dead. For if one were to grant even more to a man who uses your argument, Socrates, and allow not only that our souls existed before we were born, but also that there is nothing to prevent some of them from continuing to exist and from being born and dying again many times after we are dead, because the soul is naturally so strong that it can endure repeated births,—even allowing this, one might not grant that it does not suffer by its many births and does not finally perish altogether in one of its deaths. But he might say that no one knows beforehand the particular death and the particular dissolution of the body which brings destruction to the soul, for none of us can perceive that. Now if this is the case, anyone who feels confident about death has a foolish confidence, unless he can show that the soul is altogether immortal and imperishable. Otherwise a man who is about to die must always fear that his soul will perish utterly in the impending dissolution of the body.

Phaedo:: Now all of us, as we remarked to one another afterwards, were very uncomfortable when we heard what they said; for we had been thoroughly convinced by the previous argument, and now they seemed to be throwing us again into confusion and distrust, not only in respect to the past discussion but also with regard to any future one. They made us fear that our judgment was worthless or that no certainty could be attained in these matters.

Echecrates:: By the gods, Phaedo, I sympathies with you; for I myself after listening to you am inclined to ask myself; "What argument shall we believe henceforth? For the argument of Socrates was perfectly convincing, and now it has fallen into discredit." For the doctrine that the soul is a kind of harmony has always had (and has now) a wonderful hold upon me, and your mention of it reminded me that I had myself believed in it before. Now I must begin over again and find another argument to convince me that when a man dies his soul does not perish with him. So, for heavens sake, tell how Socrates continued the discourse, and whether he also, as you say the rest of you did, showed any uneasiness, or calmly defended his argument. And did he defend it successfully? Tell us everything as accurately as you can.

Phaedo:: Echecrates, I have often wondered at Socrates, but never did I admire him more than then. That he had an answer ready was perhaps to be expected; but what astonished me more about him was, first, the pleasant, gentle, and respectful manner in which he listened to the young men's criticisms, secondly, his quick sense of the effect their words had upon us, and lastly, the skill with which he cured us and, as it were, recalled us from our flight and defeat and made us face about and follow him and join in his examination of the argument.

Echecrates:: How did he do it?

Phaedo:: I will tell you. I was sitting at his right hand on a low stool beside his couch, and his seat was a good deal higher than mine. He stroked my head and gathered the hair on the back of my neck into his hand—he had a habit of playing with my hair on occasion—and said;

Socrates:: To-morrow, perhaps, Phaedo, you will cut off this beautiful hair.

Phaedo:: I suppose so, Socrates.

Socrates:: Not if you take my advice.

Phaedo:: What shall I do then?

Socrates:: You will cut it off to-day, and I will cut mine, if our argument dies and we cannot bring it to life again. If I were you and the argument escaped me, I would take an oath, like the Argives, not to let my hair grow until I had renewed the fight and won a victory over the argument of Simmias and Cebes.

Phaedo:: But, they say that even Heracles is not a match for two.

Socrates:: Well, call me to help you, as your Iolaus, while there is still light.

Phaedo:: I call you to help, then not as Heracles calling Iolaus, but as Iolaus calling Heracles.

Socrates:: That is all one. But first let us guard against a danger.

Phaedo:: Of what sort?

Socrates:: The danger of becoming misologists or haters of argument, as people become misanthropists or haters of man; for no worse evil can happen to a man than to hate argument. Misology and misanthropy arise from similar causes. For misanthropy arises from trusting someone implicitly without sufficient knowledge. You think the man is perfectly true and sound and trustworthy, and afterwards you find him base and false. Then you have the same experience with another person. By the time this has happened to a man a good many times, especially if it happens among those whom he might regard as his nearest and dearest friends, he ends by being in continual quarrels and by hating everybody and thinking there is nothing sound in anyone at all. Have you not noticed this?

Phaedo:: Certainly.

Socrates:: Well, is it not disgraceful, and is it not plain that such a man undertakes to consort with men when he has no knowledge of human nature? For if he had knowledge when he-dealt with them, he would think that the good and the bad are both very few and those between the two are very many, for that is the case.

Phaedo:: What do you mean?

Socrates:: I mean just what I might say about the large and small. Do you think there is anything more unusual than to find a very large or a very small man, or dog, or other creature, or again, one that is very quick or slow, very ugly or beautiful, very black or white? Have you not noticed that the extremes in all these instances are rare and few, and the examples between the extremes are very many?

Phaedo:: To be sure.

Socrates:: And don’t you think, that if there were to be a competition in rascality, those who excelled would be very few in that also?

Phaedo:: Very likely.

Socrates:: Yes, very likely. But it is not in that respect that arguments are like men; I was merely following your lead in discussing that. The similarity lies in this; when a man without proper knowledge concerning arguments has confidence in the truth of an argument and afterwards thinks that it is false, whether it really is so or not, and this happens again and again; then you know, those men especially who have spent their time in disputation come to believe that they are the wisest of men and that they alone have discovered that there is nothing sound or sure in anything, whether argument or anything else, but all things go up and down, like the tide in the Euripus, and nothing is stable for any length of time.

Phaedo:: Certainly, that is very true.

Socrates:: Then, Phaedo, if there is any system of argument which is true and sure and can be learned, it would be a sad thing if a man, because he has met with some of those arguments which seem to be sometimes true and sometimes false, should then not blame himself or his own lack of skill, but should end, in his vexation, by throwing the blame gladly upon the arguments and should hate and revile them all the rest of his life, and be deprived of the truth and knowledge of reality.

Phaedo:: Yes, by Zeus, it would be sad.

Socrates:: First, then, let us be on our guard against this, and let us not admit into our souls the notion that there is no soundness in arguments at all. Let us far rather assume that we ourselves are not yet in sound condition and that we must strive manfully and eagerly to become so, you and the others for the sake of all your future life, and I because of my impending death; for I fear that I am not just now in a philosophical frame of mind as regards this particular question, but am contentious, like quite uncultured persons. For when they argue about anything, they do not care what the truth is in the matters they are discussing, but are eager only to make their own views seem true to their hearers. And I fancy I differ from them just now only to this extent; I shall not be eager to make what I say seem true to my hearers, except as a secondary matter, but shall be very eager to make myself believe it. For see, my friend, how selfish my attitude is. If what I say is true, I am the gainer by believing it; and if there be nothing for me after death, at any rate I shall not be burdensome to my friends by my lamentations in these last moments. And this ignorance of mine will not last, for that would be an evil, but will soon end.

Socrates:: So, Simmias and Cebes, I approach the argument with my mind thus prepared. But you, if you do as I ask, will give little thought to Socrates and much more to the truth; and if you think what I say is true, agree to it, and if not, oppose me with every argument you can muster, that I may not in my eagerness deceive myself and you alike and go away, like a bee, leaving my sting sticking in you.

But we must get to work. First refresh my memory, if I seem to have forgotten anything. Simmias, I think, has doubts and fears that the soul, though more divine and excellent than the body, may perish first, being of the nature of a harmony. And, Cebes, I believe, granted that the soul is more lasting than the body, but said that no one could know that the soul, after wearing out many bodies, did not at last perish itself upon leaving the body; and that this was death—the destruction of the soul, since the body is continually being destroyed. Are those the points, Simmias and Cebes, which we must consider?

Phaedo:: They both agreed that these were the points.

Socrates:: Now, do you reject all of our previous arguments, or only some of them?

Phaedo:: Only some of them, they replied.

Socrates:: What do you think, about the argument in which we said that learning is recollection and that, since this is so, our soul must necessarily have been somewhere before it was imprisoned in the body?

Cebes:: I, was wonderfully convinced by it at the time and I still believe it more firmly than any other argument.

Simmias:: And I too, feel just as he does, and I should be much surprised if I should ever think differently on this point.

Socrates:: You must, my Theban friend, think differently, if you persist in your opinion that a harmony is a compound and that the soul is a harmony made up of the elements that are strung like harp-strings in the body. For surely you will not accept your own statement that a composite harmony existed before those things from which it had to be composed, will you?

Simmias:: Certainly not, Socrates.

Socrates:: Then do you see, that this is just what you say when you assert that the soul exists before it enters into the form and body of a man, and that it is composed of things that do not yet exist? For harmony is not what your comparison assumes it to be. The lyre and the strings and the sounds come into being in a tuneless condition, and the harmony is the last of all to be composed and the first to perish. So how can you bring this theory into harmony with the other?

Simmias:: I cannot at all.

Socrates:: And yet, there ought to be harmony between it and the theory about harmony above all others.

Simmias:: Yes, there ought.

Socrates:: Well, there is no harmony between the two theories. Now which do you prefer, that knowledge is recollection or that the soul is a harmony?

Simmias:: The former, decidedly, Socrates. For this other came to me without demonstration; it merely seemed probable and attractive, which is the reason why many men hold it. I am conscious that those arguments which base their demonstrations on mere probability are deceptive, and if we are not on our guard against them they deceive us greatly, in geometry and in all other things. But the theory of recollection and knowledge has been established by a sound course of argument. For we agreed that our soul before it entered into the body existed just as the very essence which is called the absolute exists. Now I am persuaded that I have accepted this essence on sufficient and right grounds. I cannot therefore accept from myself or anyone else the statement that the soul is a harmony.

Socrates:: Here is another way of looking at it, Simmias. Do you think a harmony or any other composite thing can be in any other state than that in which the elements are of which it is composed?

Simmias:: Certainly not.

Socrates:: And it can neither do nor suffer anything other than they do or suffer?

Phaedo:: He agreed.

Socrates:: Then a harmony cannot be expected to lead the elements of which it is composed, but to follow them.

Phaedo:: He assented.

Socrates:: A harmony, then, is quite unable to move or make a sound or do anything else that is opposed to its component parts.

Simmias:: Quite unable.

Socrates:: Well then, is not every harmony by nature a harmony according as it is harmonized?

Simmias:: I do not understand.

Socrates:: Would it not, be more completely a harmony and a greater harmony if it were harmonized more fully and to a greater extent, assuming that to be possible, and less completely a harmony and a lesser harmony if less completely harmonized and to a less extent?

Simmias:: Certainly.

Socrates:: Is this true of the soul? Is one soul even in the slightest degree more completely and to a greater extent a soul than another, or less completely and to a less extent?

Simmias:: Not in the least.

Socrates:: Well now, one soul is said to possess sense and virtue and to be good, and another to possess folly and wickedness and to be bad; and is this true?

Simmias:: Yes, it is true.

Socrates:: Now what will those who assume that the soul is a harmony say that these things—the virtue and the wickedness—in the soul are? Will they say that this is another kind of harmony and a discord, and that the soul, which is itself a harmony, has within it another harmony and that the other soul is discordant and has no other harmony within it?

Simmias:: I cannot tell, but evidently those who make that assumption would say something of that sort.

Socrates:: But we agreed, that one soul is no more or less a soul than another; and that is equivalent to an agreement that one is no more and to no greater extent, and no less and to no less extent, a harmony than another, is it not?

Simmias:: Certainly.

Socrates:: And that which is no more or less a harmony, is no more or less harmonized. Is that so?

Simmias:: Yes.

Socrates:: But has that which is no more and no less harmonized any greater or any less amount of harmony, or an equal amount?

Simmias:: An equal amount.

Socrates:: Then a soul, since it is neither more nor less a soul than another, is neither more nor less harmonized.

Simmias:: That is so.

Socrates:: And therefore can have no greater amount of discord or of harmony?

Simmias:: No.

Socrates:: And therefore again one soul can have no greater amount of wickedness or virtue than another, if wickedness is discord and virtue harmony?

Simmias:: It cannot.

Socrates:: Or rather, to speak exactly, Simmias, no soul will have any wickedness at all, if the soul is a harmony; for if a harmony is entirely harmony, it could have no part in discord.

Simmias:: Certainly not.

Socrates:: Then the soul, being entirely soul, could have no part in wickedness.

Simmias:: How could it, if what we have said is right?

Socrates:: According to this argument, then, if all souls are by nature equally souls, all souls of all living creatures will be equally good.

Simmias:: So it seems, Socrates.

Socrates:: And, do you think that this is true and that our reasoning would have come to this end, if the theory that the soul is a harmony were correct?

Simmias:: Not in the least.

Socrates:: Well, of all the parts that make up a man, do you think any is ruler except the soul, especially if it be a wise one?

Simmias:: No, I do not.

Socrates:: Does it yield to the feelings of the body or oppose them? I mean, when the body is hot and thirsty, does not the soul oppose it and draw it away from drinking, and from eating when it is hungry, and do we not see the soul opposing the body in countless other ways?

Simmias:: Certainly.

Socrates:: Did we not agree in our previous discussion that it could never, if it be a harmony, give forth a sound at variance with the tensions and relaxations and vibrations and other conditions of the elements which compose it, but that it would follow them and never lead them?

Simmias:: Yes, we did, of course.

Socrates:: Well then, do we not now find that the soul acts in exactly the opposite way, leading those elements of which it is said to consist and opposing them in almost everything through all our life, and tyrannizing over them in every way, sometimes inflicting harsh and painful punishments (those of gymnastics and medicine), and sometimes milder ones, sometimes threatening and sometimes admonishing, in short, speaking to the desires and passions and fears as if it were distinct from them and they from it, as Homer has shown in the Odyssey when he says of Odysseus;

—He smote his breast, and thus he chid his heart;

'Endure it, heart, thou didst bear worse than this?'

—Do you suppose that, when he wrote those words, he thought of the soul as a harmony which would be led by the conditions of the body, and not rather as something fitted to lead and rule them, and itself a far more divine thing than a harmony?

Simmias:: By Zeus, Socrates, the latter, I think.

Socrates:: Then, my good friend, it will never do for us to say that the soul is a harmony; for we should, it seems, agree neither with Homer, the divine poet, nor with ourselves.

Simmias:: That is true.

Socrates:: Very well, Harmonia, the Theban goddess, has, it seems, been moderately gracious to us; but how, Cebes, and by what argument can we find grace in the sight of Cadmus?

Cebes:: I think, you will find a way. At any rate, you conducted this argument against harmony wonderfully and better than I expected. For when Simmias was telling of his difficulty, I wondered if anyone could make head against his argument; so it seemed to me very remarkable that it could not withstand the first attack of your argument. Now I should not be surprised if the argument of Cadmus met with the same fate.

Socrates:: My friend, do not be boastful, lest some evil eye put to rout the argument that is to come. That, however, is in the hands of God. Let us, in Homeric fashion, 'charge the foe' and test the worth of what you say. Now the sum total of what you seek is this; You demand a proof that our soul is indestructible and immortal, if the philosopher, who is confident in the face of death and who thinks that after death he will fare better in the other world than if he had lived his life differently, is not to find his confidence senseless and foolish. And although we show that the soul is strong and godlike and existed before we men were born as men, all this, you say, may bear witness not to immortality, but only to the fact that the soul lasts a long while, and existed somewhere an immeasurably long time before our birth, and knew and did various things; yet it was none the more immortal for all that, but its very entrance into the human body was the beginning of its dissolution, a disease, as it were; and it lives in toil through this life and finally perishes in what we call death. Now it makes no difference, you say, whether a soul enters into a body once or many times, so far as the fear each of us feels is concerned; for anyone, unless he is a fool, must fear, if he does not know and cannot prove that the soul is immortal. That, Cebes, is, I think, about what you mean. And I restate it purposely that nothing may escape us and that you may, if you wish, add or take away anything.

Cebes:: I do not at present wish to take anything away or to add anything. You have expressed my meaning.

Phaedo:: Socrates paused for some time and was absorbed in thought. Then he said;

Socrates:: It is no small thing that you seek; for the cause of generation and decay must be completely investigated. Now I will tell you my own experience in the matter, if you wish; then if anything I say seems to you to be of any use, you can employ it for the solution of your difficulty.

Cebes:: Certainly, I wish to hear your experiences.

Socrates:: Listen then, and I will tell you. When I was young, Cebes, I was tremendously eager for the kind of wisdom which they call investigation of nature. I thought it was a glorious thing to know the causes of everything, why each thing comes into being and why it perishes and why it exists; and I was always unsettling myself with such questions as these; Do heat and cold, by a sort of fermentation, bring about the organization of animals, as some people say? Is it the blood, or air, or fire by which we think? Or is it none of these, and does the brain furnish the sensations of hearing and sight and smell, and do memory and opinion arise from these, and does knowledge come from memory and opinion in a state of rest? And again I tried to find out how these things perish, and I investigated the phenomena of heaven and earth until finally I made up my mind that I was by nature totally unfitted for this kind of investigation. And I will give you a sufficient proof of this. I was so completely blinded by these studies that I lost the knowledge that I, and others also, thought I had before; I forgot what I had formerly believed I knew about many things and even about the cause of mans growth. For I had thought previously that it was plain to everyone that man grows through eating and drinking; for when, from the food he eats, flesh is added to his flesh and bones to his bones, and in the same way the appropriate thing is added to each of his other parts, then the small bulk becomes greater and the small man large. That is what I used to think. Doesn’t that seem to you reasonable?

Cebes:: Yes.

Socrates:: Now listen to this, too. I thought I was sure enough, when I saw a tall man standing by a short one, that he was, say, taller by a head than the other, and that one horse was larger by a head than another horse; and, to mention still clearer things than those, I thought ten were more than eight because two had been added to the eight, and I thought a two-cubit rule was longer than a one-cubit rule because it exceeded it by half its length.

Cebes:: And now, what do you think about them?

Socrates:: By Zeus, I am far from thinking that I know the cause of any of these things, I who do not even dare to say, when one is added to one, whether the one to which the addition was made has become two, or the one which was added, or the one which was added and the one to which it was added became two by the addition of each to the other. I think it is wonderful that when each of them was separate from the other, each was one and they were not then two, and when they were brought near each other this juxtaposition was the cause of their becoming two. And I cannot yet believe that if one is divided, the division causes it to become two; for this is the opposite of the cause which produced two in the former case; for then two arose because one was brought near and added to another one, and now because one is removed and separated from another. And I no longer believe that I know by this method even how one is generated or, in a word, how anything is generated or is destroyed or exists, and I no longer admit this method, but have another confused way of my own.

Then one day I heard a man reading from a book, as he said, by Anaxagoras, that it is the mind that arranges and causes all things. I was pleased with this theory of cause, and it seemed to me to be somehow right that the mind should be the cause of all things, and I thought, 'If this is so, the mind in arranging things arranges everything and establishes each thing as it is best for it to be. So if anyone wishes to find the cause of the generation or destruction or existence of a particular thing, he must find out what sort of existence, or passive state of any kind, or activity is best for it. And therefore in respect to that particular thing, and other things too, a man need examine nothing but what is best and most excellent; for then he will necessarily know also what is inferior, since the science of both is the same.’ As I considered these things I was delighted to think that I had found in Anaxagoras a teacher of the cause of things quite to my mind, and I thought he would tell me whether the earth is flat or round, and when he had told me that, would go on to explain the cause and the necessity of it, and would tell me the nature of the best and why it is best for the earth to be as it is; and if he said the earth was in the centre, he would proceed to show that it is best for it to be in the centre; and I had made up my mind that if he made those things clear to me, I would no longer yearn for any other kind of cause. And I had determined that I would find out in the same way about the sun and the moon and the other stars, their relative speed, their revolutions, and their other changes, and why the active or passive condition of each of them is for the best. For I never imagined that, when he said they were ordered by intelligence, he would introduce any other cause for these things than that it is best for them to be as they are. So I thought when he assigned the cause of each thing and of all things in common he would go on and explain what is best for each and what is good for all in common. I prized my hopes very highly, and I seized the books very eagerly and read them as fast as I could, that I might know as fast as I could about the best and the worst.

My glorious hope, my friend, was quickly snatched away from me. As I went on with my reading I saw that the man made no use of intelligence, and did not assign any real causes for the ordering of things, but mentioned as causes air and ether and water and many other absurdities. And it seemed to me it was very much as if one should say that Socrates does with intelligence whatever he does, and then, in trying to give the causes of the particular thing I do, should say first that I am now sitting here because my body is composed of bones and sinews, and the bones are hard and have joints which divide them and the sinews can be contracted and relaxed and, with the flesh and the skin which contains them all, are laid about the bones; and so, as the bones are hung loose in their ligaments, the sinews, by relaxing and contracting, make me able to bend my limbs now, and that is the cause of my sitting here with my legs bent. Or as if in the same way he should give voice and air and hearing and countless other things of the sort as causes for our talking with each other, and should fail to mention the real causes, which are, that the Athenians decided that it was best to condemn me, and therefore I have decided that it was best for me to sit here and that it is right for me to stay and undergo whatever penalty they order. For, by the Dog, I fancy these bones and sinews of mine would have been in Megara or Boeotia long ago, carried thither by an opinion of what was best, if I did not think it was better and nobler to endure any penalty the city may inflict rather than to escape and run away. But it is most absurd to call things of that sort causes. If anyone were to say that I could not have done what I thought proper if I had not bones and sinews and other things that I have, he would be right. But to say that those things are the cause of my doing what I do, and that I act with intelligence but not from the choice of what is best, would be an extremely careless way of talking. Whoever talks in that way is unable to make a distinction and to see that in reality a cause is one thing, and the thing without which the cause could never be a cause is quite another thing. And so it seems to me that most people, when they give the name of cause to the latter, are groping in the dark, as it were, and are giving it a name that does not belong to it. And so one man makes the earth stay below the heavens by putting a vortex about it, and another regards the earth as a flat trough supported on a foundation of air; but they do not look for the power which causes things to be now placed as it is best for them to be placed, nor do they think it has any divine force, but they think they can find a new Atlas more powerful and more immortal and more all-embracing than this, and in truth they give no thought to the good, which must embrace and hold together all things. Now I would gladly be the pupil of anyone who would teach me the nature of such a cause; but since that was denied me and I was not able to discover it myself or to learn of it from anyone else, do you wish me, Cebes, to give you an account of the way in which I have conducted my second voyage in quest of the cause?

Cebes:: I wish it with all my heart.

Socrates:: After this, then, since I had given up investigating realities, I decided that I must be careful not to suffer the misfortune which happens to people who look at the sun and watch it during an eclipse. For some of them ruin their eyes unless they look at its image in water or something of the sort. I thought of that danger, and I was afraid my soul would be blinded if I looked at things with my eyes and tried to grasp them with any of my senses. So I thought I must have recourse to conceptions and examine in them the truth of realities. Now perhaps my metaphor is not quite accurate; for I do not grant in the least that he who studies realities by means of conceptions is looking at them in images any more than he who studies them in the facts of daily life. However, that is the way I began. I assume in each case some principle which I consider strongest, and whatever seems to me to agree with this, whether relating to cause or to anything else, I regard as true, and whatever disagrees with it, as untrue. But I want to tell you more clearly what I mean; for I think you do not understand now.

Cebes:: Not very well, certainly.

Socrates:: Well, this is what I mean. It is nothing new, but the same thing I have always been saying, both in our previous conversation and elsewhere. I am going to try to explain to you the nature of that cause which I have been studying, and I will revert to those familiar subjects of ours as my point of departure and assume that there are such things as absolute beauty and good and greatness and the like. If you grant this and agree that these exist, I believe I shall explain cause to you and shall prove that the soul is immortal.

Cebes:: You may assume, that I grant it, and go on.

Socrates:: Then, see if you agree with me in the next step. I think that if anything is beautiful besides absolute beauty it is beautiful for no other reason than because it partakes of absolute beauty; and this applies to everything. Do you assent to this view of cause?

Cebes:: I do.

Socrates:: Now I do not yet, understand, nor can I perceive those other ingenious causes. If anyone tells me that what makes a thing beautiful is its lovely color, or its shape or anything else of the sort, I let all that go, for all those things confuse me, and I hold simply and plainly and perhaps foolishly to this, that nothing else makes it beautiful but the presence or communion (call it which you please) of absolute beauty, however it may have been gained; about the way in which it happens, I make no positive statement as yet, but I do insist that beautiful things are made beautiful by beauty. For I think this is the safest answer I can give to myself or to others, and if I cleave fast to this, I think I shall never be overthrown, and I believe it is safe for me or anyone else to give this answer, that beautiful things are beautiful through beauty. Do you agree?

Cebes:: I do.

Socrates:: And great things are great and greater things greater by greatness, and smaller things smaller by smallness?

Cebes:: Yes.

Socrates:: And you would not accept the statement, if you were told that one man was greater or smaller than another by a head, but you would insist that you say only that every greater thing is greater than another by nothing else than greatness, and that it is greater by reason of greatness, and that which is smaller is smaller by nothing else than smallness and is smaller by reason of smallness. For you would, I think, be afraid of meeting with the retort, if you said that a man was greater or smaller than another by a head, first that the greater is greater and the smaller is smaller by the same thing, and secondly, that the greater man is greater by a head, which is small, and that it is a monstrous thing that one is great by something that is small. Would you not be afraid of this?

Phaedo:: And Cebes laughed and said;

Cebes:: Yes, I should.

Socrates:: Then, you would be afraid to say that ten is more than eight by two and that this is the reason it is more. You would say it is more by number and by reason of number; and a two cubit measure is greater than a one-cubit measure not by half but by magnitude, would you not? For you would have the same fear.

Cebes:: Certainly.

Socrates:: Well, then, if one is added to one or if one is divided, you would avoid saying that the addition or the division is the cause of two? You would exclaim loudly that you know no other way by which anything can come into existence than by participating in the proper essence of each thing in which it participates, and therefore you accept no other cause of the existence of two than participation in duality, and things which are to be two must participate in duality, and whatever is to be one must participate in unity, and you would pay no attention to the divisions and additions and other such subtleties, leaving those for wiser men to explain. You would distrust your inexperience and would be afraid, as the saying goes, of your own shadow; so you would cling to that safe principle of ours and would reply as I have said. And if anyone attacked the principle, you would pay him no attention and you would not reply to him until you had examined the consequences to see whether they agreed with one another or not; and when you had to give an explanation of the principle, you would give it in the same way by assuming some other principle which seemed to you the best of the higher ones, and so on until you reached one which was adequate. You would not mix things up, as disputants do, in talking about the beginning and its consequences, if you wished to discover any of the realities; for perhaps not one of them thinks or cares in the least about these things. They are so clever that they succeed in being well pleased with themselves even when they mix everything up; but if you are a philosopher, I think you will do as I have said.

Simmias:: That is true.

Cebes:: That is true.

Echecrates:: By Zeus, Phaedo, they were right. It seems to me that he made those mutters astonishingly clear, to anyone with even a little sense.

Phaedo:: Certainly, Echecrates, and all who were there thought so, too.

Echecrates:: And so do we who were not there, and are hearing about it now. But what was said after that?

Phaedo:: As I remember it, after all this had been admitted, and they had agreed that each of the abstract qualities exists and that other things which participate in these get their names from them, then Socrates asked;

Socrates:: Now if you assent to this, do you not, when you say that Simmias is greater than Socrates and smaller than Phaedo, say that there is in Simmias greatness and smallness?

Simmias:: Yes.

Socrates:: But, you agree that the statement that Simmias is greater than Socrates is not true as stated in those words. For Simmias is not greater than Socrates by reason of being Simmias, but by reason of the greatness he happens to have; nor is he greater than Socrates because Socrates is Socrates, but because Socrates has smallness relatively to his greatness.

Simmias:: True.

Socrates:: And again, he is not smaller than Phaedo because Phaedo is Phaedo, but because Phaedo has greatness relatively to Simmias smallness.

Simmias:: That is true.

Socrates:: Then Simmias is called small and great, when he is between the two, surpassing the smallness of the one by exceeding him in height, and granting to the other the greatness that exceeds his own smallness.

Phaedo:: And he laughed and said;

Socrates:: I seem to be speaking like a legal document, but it really is very much as I say.

Phaedo:: Simmias agreed.

Socrates:: I am speaking so because I want you to agree with me. I think it is evident not only that greatness itself will never be great and also small, but that the greatness in us will never admit the small or allow itself to be exceeded. One of two things must take place; either it flees or withdraws when its opposite, smallness, advances toward it, or it has already ceased to exist by the time smallness comes near it. But it will not receive and admit smallness, thereby becoming other than it was. So I have received and admitted smallness and am still the same small person I was; but the greatness in me, being great, has not suffered itself to become small. In the same way the smallness in us will never become or be great, nor will any other opposite which is still what it was, ever become or be also its own opposite. It either goes away or loses its existence in the change.

Cebes:: That, seems to me quite evident.

Phaedo:: Then one of those present—I don't just remember who it was—said; In Heavens name, is not this present doctrine the exact opposite of what was admitted in our earlier discussion, that the greater is generated from the less and the less from the greater and that opposites are always generated from their opposites? But now it seems to me we are saying that this can never happen.

Socrates cocked his head on one side and listened.

Socrates:: You have spoken up like a man, but you do not observe the difference between the present doctrine and what we said before. We said before that in the case of concrete things opposites are generated from opposites; whereas now we say that the abstract concept of an opposite can never become its own opposite, either in us or in the world about us. Then we were talking about things which possess opposite qualities and are called after them, but now about those very opposites the immanence of which gives the things their names. We say that these latter can never be generated from each other.

Phaedo:: At the same time he looked at Cebes and said;

Socrates:: And you—are you troubled by any of our friends objections?

Cebes:: No, not this time; though I confess that objections often do trouble me.

Socrates:: Well, we are quite agreed upon this, that an opposite can never be its own opposite.

Cebes:: Entirely agreed.

Socrates:: Now, see if you agree with me in what follows; Is there something that you call heat and something you call cold?

Cebes:: Yes.

Socrates:: Are they the same as snow and fire?

Cebes:: No, not at all.

Socrates:: But heat is a different thing from fire and cold differs from snow?

Cebes:: Yes.

Socrates:: Yet I fancy you believe that snow, if (to employ the form of phrase we used before) it admits heat, will no longer be what it was, namely snow, and also warm, but will either withdraw when heat approaches it or will cease to exist.

Cebes:: Certainly.

Socrates:: And similarly fire, when cold approaches it, will either withdraw or perish. It will never succeed in admitting cold and being still fire, as it was before, and also cold.

Cebes:: That is true.

Socrates:: The fact is, in some such cases, that not only the abstract idea itself has a right to the same name through all time, but also something else, which is not the idea, but which always, whenever it exists, has the form of the idea. But perhaps I can make my meaning clearer by some examples. In numbers, the odd must always have the name of odd, must it not?

Cebes:: Certainly.

Socrates:: But is this the only thing so called (for this is what I mean to ask), or is there something else, which is not identical with the odd but nevertheless has a right to the name of odd in addition to its own name, because it is of such a nature that it is never separated from the odd? I mean, for instance, the number three, and there are many other examples. Take the case of three; do you not think it may always be called by its own name and also be called odd, which is not the same as three? Yet the number three and the number five and half of numbers in general are so constituted, that each of them is odd though not identified with the idea of odd. And in the same way two and four and all the other series of numbers are even, each of them, though not identical with evenness. Do you agree, or not?

Cebes:: Of course.

Socrates:: Now see what I want to make plain. This is my point, that not only abstract opposites exclude each other, but all things which, although not opposites one to another, always contain opposites; these also, we find, exclude the idea which is opposed to the idea contained in them, and when it approaches they either perish or withdraw. We must certainly agree that the number three will endure destruction or anything else rather than submit to becoming even, while still remaining three, must we not?

Cebes:: Certainly.

Socrates:: But the number two is not the opposite of the number three.

Cebes:: No.

Socrates:: Then not only opposite ideas refuse to admit each other when they come near, but certain other things refuse to admit the approach of opposites.

Cebes:: Very true.

Socrates:: Shall we then, determine if we can, what these are?

Cebes:: Certainly.

Socrates:: Then, Cebes, will they be those which always compel anything of which they take possession not only to take their form but also that of some opposite?

Cebes:: What do you mean?

Socrates:: Such things as we were speaking of just now. You know of course that those things in which the number three is an essential element must be not only three but also odd.

Cebes:: Certainly.

Socrates:: Now such a thing can never admit the idea which is the opposite of the concept which produces this result.

Cebes:: No, it cannot.

Socrates:: But the result was produced by the concept of the odd?

Cebes:: Yes.

Socrates:: And the opposite of this is the idea of the even?

Cebes:: Yes.

Socrates:: Then the idea of the even will never be admitted by the number three.

Cebes:: No.

Socrates:: Then three has no part in the even.

Cebes:: No, it has none.

Socrates:: Then the number three is uneven.

Cebes:: Yes.

Socrates:: Now I propose to determine what things, without being the opposites of something, nevertheless refuse to admit it, as the number three, though it is not the opposite of the idea of even, nevertheless refuses to admit it, but always brings forward its opposite against it, and as the number two brings forward the opposite of the odd and fire that of cold, and so forth, for there are plenty of examples. Now see if you accept this statement; not only will opposites not admit their opposites, but nothing which brings an opposite to that which it approaches will ever admit in itself the oppositeness of that which is brought. Now let me refresh your memory; for there is no harm in repetition. The number five will not admit the idea of the even, nor will ten, the double of five, admit the idea of the odd. Now ten is not itself an opposite, and yet it will not admit the idea of the odd; and so one-and-a-half and other mixed fractions and one-third and other simple fractions reject the idea of the whole. Do you go with me and agree to this?

Cebes:: Yes, I agree entirely, and am with you.

Socrates:: Then, please begin again at the beginning. And do not answer my questions in their own words, but do as I do. I give an answer beyond that safe answer which I spoke of at first, now that I see another safe reply deduced from what has just been said. If you ask me what causes anything in which it is to be hot, I will not give you that safe but stupid answer and say that it is heat, but I can now give a more refined answer, that it is fire; and if you ask, what causes the body in which it is to be ill, I shall not say illness, but fever; and if you ask what causes a number in which it is to be odd, I shall not say oddness, but the number one, and so forth. Do you understand sufficiently what I mean?

Cebes:: Quite sufficiently.

Socrates:: Now answer. What causes the body in which it is to be alive?

Cebes:: The soul.

Socrates:: Is this always the case?

Cebes:: Yes, of course.

Socrates:: Then if the soul takes possession of anything it always brings life to it?

Cebes:: Certainly.

Socrates:: Is there anything that is the opposite of life?

Cebes:: Yes.

Socrates:: What?

Cebes:: Death.

Socrates:: Now the soul, as we have agreed before, will never admit the opposite of that which it brings with it.

Cebes:: Decidedly not.

Socrates:: Then what do we now call that which does not admit the idea of the even?

Cebes:: Uneven.

Socrates:: And those which do not admit justice and music?

Cebes:: Unjust, and unmusical.

Socrates:: Well then what do we call that which does not admit death?

Cebes:: Deathless or immortal.

Socrates:: And the soul does not admit death?

Cebes:: No.

Socrates:: Then the soul is immortal.

Cebes:: Yes.

Socrates:: Very well. Shall we say then that this is proved?

Cebes:: Yes, and very satisfactorily, Socrates.

Socrates:: Well then, Cebes, if the odd were necessarily imperishable, would not the number three be imperishable?

Cebes:: Of course.

Socrates:: And if that which is without heat were imperishable, would not snow go away whole and unmelted whenever heat was brought in conflict with snow? For it could not have been destroyed, nor could it have remained and admitted the heat.

Cebes:: That is very true.

Socrates:: In the same way, I think, if that which is without cold were imperishable, whenever anything cold approached fire, it would never perish or be quenched, but would go away unharmed.

Cebes:: Necessarily.

Socrates:: And must not the same be said of that which is immortal? If the immortal is also imperishable, it is impossible for the soul to perish when death comes against it. For, as our argument has shown, it will not admit death and will not be dead, just as the number three, we said, will not be even, and the odd will not be even, and as fire, and the heat in the fire, will not be cold. But, one might say, why is it not possible that the odd does not become even when the even comes against it (we agreed to that), but perishes, and the even takes its place? Now we cannot silence him who raises this question by saying that it does not perish, for the odd is not imperishable. If that were conceded to us, we could easily silence him by saying that when the even approaches, the odd and the number three go away; and we could make the corresponding reply about fire and heat and the rest, could we not?

Cebes:: Certainly.

Socrates:: And so, too, in the case of the immortal; if it is conceded that the immortal is imperishable, the soul would be imperishable as well as immortal, but if not, further argument is needed.

Cebes:: But, it is not needed, so far as that is concerned; for surely nothing would escape destruction, if the immortal, which is everlasting, is perishable.

Socrates:: All, I think, would agree that God and the principle of life, and anything else that is immortal, can never perish.

Cebes:: All men would, certainly, and still more, I fancy, the Gods.

Socrates:: Since, then, the immortal is also indestructible, would not the soul, if it is immortal, be also imperishable?

Cebes:: Necessarily.

Socrates:: Then when death comes to a man, his mortal part, it seems, dies, but the immortal part goes away unharmed and undestroyed, withdrawing from death.

Cebes:: So it seems.

Socrates:: Then, Cebes, it is perfectly certain that the soul is immortal and imperishable, and our souls will exist somewhere in another world.

Cebes:: I, have nothing more to say against that, and I cannot doubt your conclusions. But if Simmias, or anyone else, has anything to say, he would do well to speak, for I do not know to what other time than the present he could defer speaking, if he wishes to say or hear anything about those matters.

Simmias:: But, I don't see how I can doubt, either, as to the result of the discussion; but the subject is so great, and I have such a poor opinion of human weakness, that I cannot help having some doubt in my own mind about what has been said.

Socrates:: Not only that, Simmias, but our first assumptions ought to be more carefully examined, even though they seem to you to be certain. And if you analyze them completely, you will, I think, follow and agree with the argument, so far as it is possible for man to do so. And if this is made clear, you will seek no farther.

Simmias:: That is true.

Socrates:: But my friends, we ought to bear in mind, that, if the soul is immortal, we must care for it, not only in respect to this time, which we call life, but in respect to all time, and if we neglect it, the danger now appears to be terrible. For if death were an escape from everything, it would be a boon to the wicked, for when they die they would be freed from the body and from their wickedness together with their souls. But now, since the soul is seen to be immortal, it cannot escape from evil or be saved in any other way than by becoming as good and wise as possible. For the soul takes with it to the other world nothing but its education and nurture, and these are said to benefit or injure the departed greatly from the very beginning of his journey thither. And so it is said that after death, the tutelary genius of each person, to whom he had been allotted in life, leads him to a place where the dead are gathered together; then they are judged and depart to the other world with the guide whose task it is to conduct thither those who come from this world; and when they have there received their due and remained through the time appointed, another guide brings them back after many long periods of time. And the journey is not as Telephus says in the play of Aeschylus; for he says a simple path leads to the lower world, but I think the path is neither simple nor single, for if it were, there would be no need of guides, since no one could miss the way to any place if there were only one road. But really there seem to be many forks of the road and many windings; this I infer from the rites and ceremonies practiced here on earth. Now the orderly and wise soul follows its guide and understands its circumstances; but the soul that is desirous of the body, as I said before, flits about it, and in the visible world for a long time, and after much resistance and many sufferings is led away with violence and with difficulty by its appointed genius. And when it arrives at the place where the other souls are, the soul which is impure and has done wrong, by committing wicked murders or other deeds akin to those and the works of kindred souls, is avoided and shunned by all, and no one is willing to be its companion or its guide, but it wanders about alone in utter bewilderment, during certain fixed times, after which it is carried by necessity to its fitting habitation. But the soul that has passed through life in purity and righteousness, finds gods for companions and guides, and goes to dwell in its proper dwelling. Now there are many wonderful regions of the earth, and the earth itself is neither in size nor in other respects such as it is supposed to be by those who habitually discourse about it, as I believe on someone’s authority.

Simmias:: What do you mean, Socrates? I have heard a good deal about the earth myself, but not what you believe; so I should like to hear it.

Socrates:: Well Simmias, I do not think I need the art of Glaucus to tell what it is. But to prove that it is true would, I think, be too hard for the art of Glaucus, and perhaps I should not be able to do it; besides, even if I had the skill, I think my life, Simmias, will end before the discussion could be finished. However, there is nothing to prevent my telling what I believe the form of the earth to be, and the regions in it.

Simmias:: Well, that will be enough.

Socrates:: I am convinced, then, that in the first place, if the earth is round and in the middle of the heavens, it needs neither the air nor any other similar force to keep it from falling, but its own equipoise and the homogeneous nature of the heavens on all sides suffice to hold it in place; for a body which is in equipoise and is placed in the centre of something which is homogeneous cannot change its inclination in any direction, but will remain always in the same position. This, then, is the first thing of which I am convinced.

Simmias:: And rightly.

Socrates:: Secondly, I believe that the earth is very large and that we who dwell between the pillars of Hercules and the river Phasis live in a small part of it about the sea, like ants or frogs about a pond, and that many other people live in many other such regions. For I believe there are in all directions on the earth many hollows of very various forms and sizes, into which the water and mist and air have run together; but the earth itself is pure and is situated in the pure heaven in which the stars are, the heaven which those who discourse about such matters call the ether; the water, mist and air are the sediment of this and flow together into the hollows of the earth. Now we do not perceive that we live in the hollows, but think we live on the upper surface of the earth, just as if someone who lives in the depth of the ocean should think he lived on the surface of the sea, and, seeing the sun and the stars through the water, should think the sea was the sky, and should, by reason of sluggishness or feebleness, never have reached the surface of the sea, and should never have seen, by rising and lifting his head out of the sea into our upper world, and should never have heard from anyone who had seen, how much purer and fairer it is than the world he lived in. Now I believe this is just the case with us; for we dwell in a hollow of the earth and think we dwell on its upper surface; and the air we call the heaven, and think that is the heaven in which the stars move. But the fact is the same, that by reason of feebleness and sluggishness, we are unable to attain to the upper surface of the air; for if anyone should come to the top of the air or should get wings and fly up, he could lift his head above it and see, as fishes lift their heads out of the water and see the things in our world, so he would see things in that upper world; and, if his nature were strong enough to bear the sight, he would recognize that that is the real heaven and the real light and the real earth. For this earth of ours, and the stones and the whole region where we live, are injured and corroded, as in the sea things are injured by the brine, and nothing of any account grows in the sea, and there is, one might say, nothing perfect there, but caverns and sand and endless mud and mire, where there is earth also, and there is nothing at all worthy to be compared with the beautiful things of our world. But the things in that world above would be seen to be even more superior to those in this world of ours. If I may tell a story, Simmias, about the things on the earth that is below the heaven, and what they are like, it is well worth hearing.

Simmias:: By all means, Socrates; we should be glad to hear this story.

Socrates:: Well then, my friend, to begin with, the earth when seen from above is said to look like those balls that are covered with twelve pieces of leather; it is divided into patches of various colors, of which the colors which we see here may be regarded as samples, such as painters use. But there the whole earth is of such colors, and they are much brighter and purer than ours; for one part is purple of wonderful beauty, and one is golden, and one is white, whiter than chalk or snow, and the earth is made up of the other colors likewise, and they are more in number and more beautiful than those which we see here. For those very hollows of the earth which are full of water and air, present an appearance of color as they glisten amid the variety of the other colors, so that the whole produces one continuous effect of variety. And in this fair earth the things that grow, the trees, and flowers and fruits, are correspondingly beautiful; and so too the mountains and the stones are smoother, and more transparent and more lovely in color than ours. In fact, our highly prized stones, sards and jaspers, and emeralds, and other gems, are fragments of those there, but there everything is like these or still more beautiful. And the reason of this is that there the stones are pure, and not corroded or defiled, as ours are, with filth and brine by the vapors and liquids which flow together here and which cause ugliness and disease in earth and stones and animals and plants. And the earth there is adorned with all these jewels and also with gold and silver and every thing of the sort. For there they are in plain sight, abundant and large and in many places, so that the earth is a sight to make those blessed who look upon it. And there are many animals upon it, and men also, some dwelling inland, others on the coasts of the air, as we dwell about the sea, and others on islands, which the air flows around, near the mainland; and in short, what water and the sea are in our lives, air is in theirs, and what the air is to us, ether is to them. And the seasons are so tempered that people there have no diseases and live much longer than we, and in sight and hearing and wisdom and all such things are as much superior to us as air is purer than water or the ether than air. And they have sacred groves and temples of the gods, in which the gods really dwell, and they have intercourse with the gods by speech and prophecies and visions, and they see the sun and moon and stars as they really are, and in all other ways their blessedness is in accord with this.

Socrates:: Such then is the nature of the earth as a whole, and of the things around it. But round about the whole earth, in the hollows of it, are many regions, some deeper and wider than that in which we live, some deeper but with a narrower opening than ours, and some also less in depth and wider. Now all these are connected with one another by many subterranean channels, some larger and some smaller, which are bored in all of them, and there are passages through which much water flows from one to another as into mixing bowls; and there are everlasting rivers of huge size under the earth, flowing with hot and cold water; and there is much fire, and great rivers of fire, and many streams of mud, some thinner and some thicker, like the rivers of mud that flow before the lava in Sicily, and the lava itself. These fill the various regions as they happen to flow to one or another at any time. Now a kind of oscillation within the earth moves all these up and down. And the nature of the oscillation is as follows; One of the chasms of the earth is greater than the rest, and is bored right through the whole earth; this is the one which Homer means when he says;

Far off, the lowest abyss beneath the earth;

and which elsewhere he and many other poets have called Tartarus. For all the rivers flow together into this chasm and flow out of it again, and they have each the nature of the earth through which they flow.

And the reason why all the streams flow in and out here is that this liquid matter has no bottom or foundation. So it oscillates and waves up and down, and the air and wind about it do the same; for they follow the liquid both when it moves toward the other side of the earth and when it moves toward this side, and just as the breath of those who breathe blows in and out, so the wind there oscillates with the liquid and causes terrible and irresistible blasts as it rushes in and out. And when the water retires to the region which we call the lower, it flows into the rivers there and fills them up, as if it were pumped into them; and when it leaves that region and comes back to this side, it fills the rivers here; and when the streams are filled they flow through the passages and through the earth and come to the various places to which their different paths lead, where they make seas and marshes, and rivers and springs. Thence they go down again under the earth, some passing around many great regions and others around fewer and smaller places, and flow again into Tartarus, some much below the point where they were sucked out, and some only a little; but all flow in below their exit. Some flow in on the side from which they flowed out, others on the opposite side; and some pass completely around in a circle, coiling about the earth once or several times, like serpents, then descend to the lowest possible depth and fall again into the chasm. Now it is possible to go down from each side to the centre, but not beyond, for there the slope rises upward in front of the streams from either side of the earth.

Now these streams are many and great and of all sorts, but among the many are four streams, the greatest and outermost of which is that called

Oceanus, which flows round in a circle, and opposite this, flowing in the opposite direction, is Acheron, which flows through various desert places and, passing under the earth, comes to the Acherusian lake. To this lake the souls of most of the dead go and,, after remaining there the appointed time, which is for some longer and for others shorter, are sent back to be born again into living beings. The third river flows out between these two, and near the place whence it issues it falls into a vast region burning with a great fire and makes a lake larger than our Mediterranean sea, boiling with water and mud. Thence it flows in a circle, turbid and muddy, and comes in its winding course, among other places, to the edge of the Acherusian lake, but does not mingle with its water. Then, after winding about many times underground, it flows into Tartarus at a lower level. This is the river which is called Pyriphlegethon, and the streams of lava which spout up at various places on earth are offshoots from it. Opposite this the fourth river issues, it is said, first into a wild and awful place, which is all of a dark blue color, like lapis lazuli. This is called the Stygian river, and the lake which it forms by flowing in is the Styx. And when the river has flowed in here and has received fearful powers into its waters, it passes under the earth and, circling round in the direction opposed to that of Pyriphlegethon, it meets it coming from the other way in the Acherusian lake. And the water of this river also mingles with no other water, but this also passes round in a circle and falls into Tartarus opposite Pyriphlegethon. And the name of this river, as the poets say, is Cocytus.

Such is the nature of these things. Now when the dead have come to the place where each is led by his genius, first they are judged and sentenced, as they have lived well and piously, or not. And those who are found to have lived neither well nor ill, go to the Acheron and, embarking upon vessels provided for them, arrive in them at the lake; there they dwell and are purified, and if they have done any wrong they are absolved by paying the penalty for their wrong doings, and for their good deeds they receive rewards, each according to his merits. But those who appear to be incurable, on account of the greatness of their wrongdoings, because they have committed many great deeds of sacrilege, or wicked and abominable murders, or any other such crimes, are cast by their fitting destiny into Tartarus, whence they never emerge. Those, however, who are curable, but are found to have committed great sins—who have, for example, in a moment of passion done some act of violence against father or mother and have lived in repentance the rest of their lives, or who have slain some other person under similar conditions—these must needs be thrown into Tartarus, and when they have been there a year the wave casts them out, the homicides by way of Cocytus, those who have outraged their parents by way of Pyriphlegethon. And when they have been brought by the current to the Acherusian lake, they shout and cry out, calling to those whom they have slain or outraged, begging and beseeching them to be gracious and to let them come out into the lake; and if they prevail they come out and cease from their ills, but if not, they are borne away again to Tartarus and thence back into the rivers, and this goes on until they prevail upon those whom they have wronged; for this is the penalty imposed upon them by the judges. But those who are found to have excelled in holy living are freed from these regions within the earth and are released as from prisons; they mount upward into their pure abode and dwell upon the earth. And of these, all who have duly purified themselves by philosophy live henceforth altogether without bodies, and pass to still more beautiful abodes which it is not easy to describe, nor have we now time enough.

But, Simmias, because of all these things which we have recounted we ought to do our best to acquire virtue and wisdom in life. For the prize is fair and the hope great.

Now it would not be fitting for a man of sense to maintain that all this is just as I have described it, but that this or something like it is true concerning our souls and their abodes, since the soul is shown to be immortal, I think he may properly and worthily venture to believe; for the venture is well worth while; and he ought to repeat such things to himself as if they were magic charms, which is the reason why I have been lengthening out the story so long. This then is why a man should be of good cheer about his soul, who in his life has rejected the pleasures and ornaments of the body, thinking they are alien to him and more likely to do him harm than good, and has sought eagerly for those of learning, and after adorning his soul with no alien ornaments, but with its own proper adornment of self-restraint and justice and courage and freedom and truth, awaits his departure to the other world, ready to go when fate calls him. You, Simmias and Cebes and the rest, will go hereafter, each in his own time; but I am now already, as a tragedian would say, called by fate, and it is about time for me to go to the bath; for I think it is better to bathe before drinking the poison, that the women may not have the trouble of bathing the corpse.

Phaedo:: When he had finished speaking, Crito said;

Crito:: Well, Socrates, do you wish to leave any directions with us about your children or anything else—anything we can do to serve you?

Socrates:: What I always say, Crito, nothing new. If you take care of yourselves you will serve me and mine and yourselves, whatever you do, even if you make no promises now; but if you neglect yourselves and are not willing to live following step by step, as it were, in the path marked out by our present and past discussions, you will accomplish nothing, no matter how much or how eagerly you promise at present.

Crito:: We will certainly try hard to do as you say. But how shall we bury you?

Socrates:: However you please, if you can catch me and I do not get away from you.

Phaedo:: And he laughed gently, and looking towards us, said;

Socrates:: I cannot persuade Crito, my friends, that the Socrates who is now conversing and arranging the details of his argument is really I; he thinks I am the one whom he will presently see as a corpse, and he asks how to bury me. And though I have been saying at great length that after I drink the poison I shall no longer be with you, but shall go away to the joys of the blessed you know of, he seems to think that was idle talk uttered to encourage you and myself. So, give security for me to Crito, the opposite of that which he gave the judges at my trial; for he gave security that I would remain, but you must give security that I shall not remain when I die, but shall go away, so that Crito may bear it more easily, and may not be troubled when he sees my body being burnt or buried, or think I am undergoing terrible treatment, and may not say at the funeral that he is laying out Socrates, or following him to the grave, or burying him. For, dear Crito, you may be sure that such wrong words are not only undesirable in themselves, but they infect the soul with evil. No, you must be of good courage, and say that you bury my body,—and bury it as you think best and as seems to you most fitting.

Phaedo:: When he had said this, he got up and went into another room to bathe; Crito followed him, but he told us to wait. So we waited, talking over with each other and discussing the discourse we had heard, and then speaking of the great misfortune that had befallen us, for we felt that he was like a father to us and that when bereft of him we should pass the rest of our lives as orphans. And when he had bathed and his children had been brought to him—for he had two little sons and one big one—and the women of the family had come, he talked with them in Crito’s presence and gave them such directions as he wished; then he told the women to go away, and he came to us. And it was now nearly sunset; for he had spent a long time within. And he came and sat down fresh from the bath. After that not much was said, and the servant of the eleven came and stood beside him and said;

Jailer:: Socrates, I shall not find fault with you, as I do with others, for being angry and cursing me, when at the behest of the authorities, I tell them to drink the poison. No, I have found you in all this time in every way the noblest and gentlest and best man who has ever come here, and now I know your anger is directed against others, not against me, for you know who are to blame. Now, for you know the message I came to bring you, farewell and try to bear what you must as easily as you can.

Phaedo:: And he burst into tears and turned and went away. And Socrates looked up at him and said;

Socrates:: Fare you well, too; I will do as you say.

Phaedo:: And then he said to us;

Socrates:: How charming the man is! Ever since I have been here he has been coming to see me and talking with me from time to time, and has been the best of men, and now how nobly he weeps for me! But come, Crito, let us obey him, and let someone bring the poison, if it is ready; and if not, let the man prepare it.

Crito:: But I think, Socrates, the sun is still upon the mountains and has not yet set; and I know that others have taken the poison very late, after the order has come to them, and in the meantime have eaten and drunk and some of them enjoyed the society of those whom they loved. Do not hurry; for there is still time.

Socrates:: Crito, those whom you mention are right in doing as they do, for they think they gain by it; and I shall be right in not doing as they do; for I think I should gain nothing by taking the poison a little later. I should only make myself ridiculous in my own eyes if I clung to life and spared it, when there is no more profit in it. Come, do as I ask and do not refuse.

Phaedo:: Thereupon Crito nodded to the boy who was standing near. The boy went out and stayed a long time, then came back with the man who was to administer the poison, which he brought with him in a cup ready for use. And when Socrates saw him, he said;

Socrates:: Well, my good man, you know about these things; what must I do?

Jailer:: Nothing, except drink the poison and walk about till your legs feel heavy; then lie down, and the poison will take effect of itself.

Phaedo:: At the same time he held out the cup to Socrates. He took it, and very gently, Echecrates, without trembling or changing color or expression, but looking up at the man with wide open eyes, as was his custom, said;

Socrates:: What do you say about pouring a libation to some deity from this cup? May I, or not?

Jailer:: Socrates, we prepare only as much as we think is enough.

Socrates:: I understand; but I may and must pray to the gods that my departure hence be a fortunate one; so I offer this prayer, and may it be granted.

Phaedo:: With these words he raised the cup to his lips and very cheerfully and quietly drained it. Up to that time most of us had been able to restrain our tears fairly well, but when we watched him drinking and saw that he had drunk the poison, we could do so no longer, but in spite of myself my tears rolled down in floods, so that I wrapped my face in my cloak and wept for myself; for it was not for him that I wept, but for my own misfortune in being deprived of such a friend. Crito had got up and gone away even before I did, because he could not restrain his tears. But Apollodorus, who had been weeping all the time before, then wailed aloud in his grief and made us all break down, except Socrates himself. But he said;

Socrates:: What conduct is this, you strange men! I sent the women away chiefly for this very reason, that they might not behave in this absurd way; for I have heard that it is best to die in silence. Keep quiet and be brave.

Phaedo:: Then we were ashamed and controlled our tears. He walked about and, when he said his legs were heavy, lay down on his back, for such was the advice of the attendant. The man who had administered the poison laid his hands on him and after a while examined his feet and legs, then pinched his foot hard and asked if he felt it. He said

Socrates:: No;

Phaedo:: then after that, his thighs; and passing upwards in this way he showed us that he was growing cold and rigid. And again he touched him and said that when it reached his heart, he would be gone. The chill had now reached the region about the groin, and uncovering his face, which had been covered, he said—and these were his last words,—

Socrates:: Crito, we owe a cock to Aesculapius. Pay it and do not neglect it.

Crito:: That, shall be done; but see if you have anything else to say.

Phaedo:: To this question he made no reply, but after a little while he moved; the attendant uncovered him; his eyes were fixed. And Crito when he saw it, closed his mouth and eyes.

Such was the end, Echecrates, of our friend, who was, as we may say, of all those of his time whom we have known, the best and wisest and most righteous man.

# Phaedo

Translated by G.M.A. Grube.

Socrates, Phaedo, Echecrates, Crito, Cebes, Simmias,
Apollodorus, Attendant, Xanthippe, Someone, Jailer

Echecrates:: Were you with Socrates yourself, Phaedo, on the day when he drank the poison in prison, or did someone else tell you about it?

Phaedo:: I was there myself, Echecrates.

Echecrates:: What are the things he said before he died? And how did he die? I should be glad to hear this. Hardly anyone from Phlius visits Athens nowadays, nor has any stranger come from Athens for some time who could give us a clear account of what happened, except that he drank the poison and died, but nothing more.

Phaedo:: Did you not even hear how the trial went?

Echecrates:: Yes, someone did tell us about that, and we wondered that he seems to have died a long time after the trial took place. Why was that, Phaedo?

Phaedo:: That was by chance, Echecrates. The day before the trial, as it happened, the prow of the ship that the Athenians send to Delos had been crowned with garlands.

Echecrates:: What ship is that?

Phaedo:: It is the ship in which, the Athenians say, Theseus once sailed to Crete, taking with him the two lots of seven victims. He saved them and was himself saved. They vowed then to Apollo, so the story goes, that if they were saved they would send a mission to Delos every year. And from that time to this they send such an annual mission to the god. They have a law to keep the city pure while it lasts, and no execution may take place once the mission has begun until the ship has made its journey to Delos and returned to Athens, and this can sometimes take a long time if the winds delay it. The mission begins when the priest of Apollo crowns the prow of the ship, and this happened, as I say, the day before Socrates' trial. That is why Socrates was in prison a long time between this trial and his execution.

Echecrates:: What about his actual death, Phaedo? What did he say? What did he do? Who of his friends were with him? Or did the authorities not allow them to be present and he died with no friends present?

Phaedo:: By no means. Some were present, in fact, a good many.

Echecrates:: Please be good enough to tell us all that occurred as fully as possible, unless you have some pressing business.

Phaedo:: I have the time and I will try to tell you the whole story, for nothing gives me more pleasure than to call Socrates to mind, whether talking about him myself, or listening to someone else do so.

Echecrates:: Your hearers will surely be like you in this, Phaedo. So do try to tell us every detail as exactly as you can.

Phaedo:: I certainly found being there an astonishing experience. Although I was witnessing the death of one who was my friend, I had no feeling of pity, for the man appeared happy both in manner and words as he died nobly and without fear, Echecrates, so that it struck me that even in going down to the underworld he was going with the gods' blessing and that he would fare well when he got there, if anyone ever does. That is why I had no feeling of pity, such as would seem natural in my sorrow, nor indeed of pleasure, as we engaged in philosophical discussion as we were accustomed to do—for our arguments were of that sort—but I had a strange feeling, an unaccustomed mixture of pleasure and pain at the same time as I reflected that he was just about to die. All of us present were affected in much the same way, sometimes laughing, then weeping; especially one of us, Apollodorus—you know the man and his ways.

Echecrates:: Of course I do.

Phaedo:: He was quite overcome; but I was myself disturbed, and so were the others.

Echecrates:: Who, Phaedo, were those present?

Phaedo:: Among the local people there was Apollodorus, whom I mentioned, Critobulus and his father, also Hermogenes, Epigenes, Aeschines and Antisthenes. Ctesippus of Paeania was there, Menexenus and some others. Plato, I believe, was ill.

Echecrates:: Were there some strangers present?

Phaedo:: Yes, Simmias from Thebes with Cebes and Phaedondes, and from Megara, Euclides and Terpsion.

Echecrates:: What about Aristippus and Cleombrotus? Were they there?

Phaedo:: No. They were said to be in Aegina.

Echecrates:: Was there anyone else?

Phaedo:: I think these were about all.

Echecrates:: Well then, what do you say the conversation was about?

Phaedo:: I will try to tell you everything from the beginning. On the previous days also both the others and I used to visit Socrates. We foregathered at daybreak at the court where the trial took place, for it was close to the prison, and each day we used to wait around talking until the prison should open, for it did not open early. When it opened we used to go in to Socrates and spend most of the day with him. On this day we gathered rather early, because when we left the prison on the previous evening we were informed that the ship from Delos had arrived, and so we told each other to come to the usual place as early as possible. When we arrived the gatekeeper who used to answer our knock came out and told us to wait and not go in until he told us to.

Jailer:: ‘The Eleven, are freeing Socrates from his bonds and telling him how his death will take place today.”

Phaedo:: After a short time he came and told us to go in. We found Socrates recently released from his chains, and Xanthippe—you know her—sitting by him, holding their baby. When she saw us, she cried out and said the sort of thing that women usually say:

Xanthippe:: “Socrates, this is the last time your friends will talk to you and you to them.”

Phaedo:: Socrates looked at Crito.

Socrates:: “Crito, let someone take her home.”

Phaedo:: And some of Crito’s people led her away lamenting and beating her breast.

Socrates sat up on the bed, bent his leg and rubbed it with his hand, and as he rubbed he said:

Socrates:: “What a strange thing that which men call pleasure seems to be, and how astonishing the relation it has with what is thought to be its opposite, namely pain! A man cannot have both at the same time. Yet if he pursues and catches the one, he is almost always bound to catch the other also, like two creatures with one head. I think that if Aesop had noted this he would have composed a fable that a god wished to reconcile their opposition but could not do so, so he joined their two heads together, and therefore when a man has the one, the other follows later. This seems to be happening to me. My bonds caused pain in my leg, and now pleasure seems to be following.”

Phaedo:: Cebes intervened and said:

Cebes:: “By Zeus, yes, Socrates, you did well to remind me. Evenus asked me the day before yesterday, as others had done before, what induced you to write poetry after you came to prison, you who had never composed any poetry before, putting the fables of Aesop into verse and composing the hymn to Apollo. If it is of any concern to you that I should have an answer to give to Evenus when he repeats his question, as I know he will, tell me what to say to him.”

Socrates:: Tell him the truth, Cebes, that I did not do this with the idea of rivaling him or his poems, for I knew that would not be easy, but I tried to find out the meaning of certain dreams and to satisfy my conscience in case it was this kind of art they were frequently bidding me to practice. The dreams were something like this: the same dream often came to me in the past, now in one shape now in another, but saying the same thing: “Socrates,” it said, “practice and cultivate the arts.” In the past I imagined that it was instructing and advising me to do what I was doing, such as those who encourage runners in a race, that the dream was thus bidding me do the very thing I was doing, namely, to practice the art of philosophy, this being the highest kind of art, and I was doing that.

But now, after my trial took place, and the festival of the god was preventing my execution, I thought that, in case my dream was bidding me to practice this popular art, I should not disobey it but compose poetry. I thought it safer not to leave here until I had satisfied my conscience by writing poems in obedience to the dream. So I first wrote in honor of the god of the present festival. After that I realized that a poet, if he is to be a poet, must compose fables, not arguments. Being no teller of fables myself, I took the stories I knew and had at hand, the fables of Aesop, and I versified the first ones I came across. Tell this to Evenus, Cebes, wish him well and bid him farewell, and tell him, if he is wise, to follow me as soon as possible. I am leaving today, it seems, as the Athenians so order it.

Simmias:: “What kind of advice is this you are giving to Evenus, Socrates? I have met him many times, and from my observation he is not at all likely to follow it willingly.”

Socrates:: How so, is Evenus not a philosopher?

Simmias:: I think so.

Socrates:: Then Evenus will be willing, like every man who partakes worthily of philosophy. Yet perhaps he will not take his own life, for that, they say, is not right.

Phaedo:: As he said this, Socrates put his feet on the ground and remained in this position during the rest of the conversation.

Cebes:: “How do you mean Socrates, that it is not right to do oneself violence, and yet that the philosopher will be willing to follow one who is dying?”

Socrates:: Come now, Cebes, have you and Simmias, who keep company with Philolaus, not heard about such things?

Cebes:: Nothing definite, Socrates.

Socrates:: Indeed, I too speak about this from hearsay, but I do not mind telling you what I have heard, for it is perhaps most appropriate for one who is about to depart yonder to tell and examine tales about what we believe that journey to be like. What else could one do in the time we have until sunset?

Cebes:: But whatever is the reason, Socrates, for people to say that it is not right to kill oneself? As to your question just now, I have heard Philolaus say this when staying in Thebes and I have also heard it from others, but I have never heard anyone give a clear account of the matter.

Socrates:: Well, we must do our best, and you may yet hear one. And it may well astonish you if this subject, alone of all things, is simple, and it is never, as with everything else, better at certain times and for certain people to die than to live. And if this is so, you may well find it astonishing that those for whom it is better to die are wrong to help themselves, and that they must wait for someone else to benefit them.

Phaedo:: And Cebes, lapsing into his own dialect, laughed quietly and said:

Cebes:: “Zeus knows it is.”

Socrates:: Indeed, it does seem unreasonable when put like that, but perhaps there is reason to it. There is the explanation that is put in the language of the mysteries, that we men are in a kind of prison, and that one must not free oneself or run away. That seems to me an impressive doctrine and one not easy to understand fully. However, Cebes, this seems to me well expressed, that the gods are our guardians and that men are one of their possessions. Or do you not think so?

Cebes:: I do.

Socrates:: And would you not be angry if one of your possessions killed itself when you had not given any sign that you wished it to die, and if you had any punishment you could inflict, you would inflict it?

Cebes:: Certainly.

Socrates:: Perhaps then, put in this way, it is not unreasonable that one should not kill oneself before a god had indicated some necessity to do so, like the necessity now put upon us.

Cebes:: That seems likely. As for what you were saying, that philosophers should be willing and ready to die, that seems strange, Socrates, if what we said just now is reasonable, namely, that a god is our protector and that we are his possessions. It is not logical that the wisest of men should not resent leaving this service in which they are governed by the best of masters, the gods, for a wise man cannot believe that he will look after himself better when he is free. A foolish man might easily think so, that he must escape from his master; he would not reflect that one must not escape from a good master but stay with him as long as possible, because it would be foolish to escape. But the sensible man would want always to remain with one better than himself. So, Socrates, the opposite of what was said before is likely to be true; the wise would resent dying, whereas the foolish would rejoice at it.

Phaedo:: I thought that when Socrates heard this he was pleased by Cebes' argumentation. Glancing at us, he said:

Socrates:: "Cebes is always on the track of some arguments; he is certainly not willing to be at once convinced by what one says."

Simmias:: "But actually, Socrates, I think myself that Cebes has a point now. Why should truly wise men want to avoid the service of masters better than themselves, and leave them easily? And I think Cebes is aiming his argument at you, because you are bearing leaving us so lightly, and leaving those good masters, as you say yourself, the gods."

Socrates:: You are both justified in what you say, and I think you mean that I must make a defense against this, as if I were in court.

Simmias:: You certainly must.

Socrates:: Come then, let me try to make my defense to you more convincing than it was to the jury. For, Simmias and Cebes, I should be wrong not to resent dying if I did not believe that I should go first to other wise and good gods, and then to men who have died and are better than men are here. Be assured that, as it is, I expect to join the company of good men. This last I would not altogether insist on, but if

I insist on anything at all in these matters, it is that I shall come to gods who are very good masters. That is why I am not so resentful, because I have good hope that some future awaits men after death, as we have been told for years, a much better future for the good than for the wicked.

Simmias:: Well now, Socrates, do you intend to keep this belief to yourself as you leave us, or would you share it with us? I certainly think it would be a blessing for us too, and at the same time it would be your defense if you convince us of what you say.

Socrates:: I will try, but first let us see what it is that Crito here has, I think, been wanting to say for quite a while.

Crito:: What else, Socrates, but what the man who is to give you the poison has been telling me for some time, that I should warn you to talk as little as possible. People get heated when they talk, he says, and one should not be heated when taking the poison, as those who do must sometimes drink it two or three times.

Socrates:: 'Take no notice of him; only let him be prepared to administer it twice or, if necessary, three times."

Crito:: I was rather sure you would say that, but he has been bothering me for some time.

Socrates:: Let him be, I want to make my argument before you, my judges, as to why I think that a man who has truly spent his life in philosophy is probably right to be of good cheer in the face of death and to be very hopeful that after death he will attain the greatest blessings yonder. I will try to tell you, Simmias and Cebes, how this may be so. I am afraid that other people do not realize that the one aim of those who practice philosophy in the proper manner is to practice for dying and death. Now if this is true, if would be strange indeed if they were eager for this all their lives and then resent it when what they have wanted and practiced for a long time comes upon them.

Phaedo:: Simmias laughed and said:

Simmias:: "By Zeus, Socrates, you made me laugh, though I was in no laughing mood just now. I think that the majority, on hearing this, will think that it describes the philosophers very well, and our people in Thebes would thoroughly agree that philosophers are nearly dead and that the majority of men is well aware that they deserve to be.

Socrates:: And they would be telling the truth, Simmias, except for their being aware. They are not aware of the way true philosophers are nearly dead, nor of the way they deserve to be, nor of the sort of death they deserve. But never mind them, let us talk among ourselves. Do we believe that there is such a thing as death?

Simmias:: Certainly.

Socrates:: Is it anything else than the separation of the soul from the body? Do we believe that death is this, namely, that the body comes to be separated by itself apart from the soul, and the soul comes to be separated by itself apart from the body? Is death anything else than that?

Simmias:: No, that is what it is.

Socrates:: Consider then, my good sir, whether you share my opinion, for this will lead us to a better knowledge of what we are investigating. Do you think it is the part of a philosopher to be concerned with such so-called pleasures as those of food and drink?

Simmias:: By no means.

Socrates:: What about the pleasures of sex?

Simmias:: Not at all.

Socrates:: What of the other pleasures concerned with the service of the body? Do you think such a man prizes them greatly, the acquisition of distinguished clothes and shoes and the other bodily ornaments? Do you think he values these or despises them, except in so far as one cannot do without them?

Simmias:: I think the true philosopher despises them.

Socrates:: Do you not think, that in general such a man's concern is not with the body but that, as far as he can, he turns away from the body towards the soul?

Simmias:: I do.

Socrates:: So in the first place, such things show clearly that the philosopher more than other men frees the soul from association with the body as much as possible?

Simmias:: Apparently.

Socrates:: A man who finds no pleasure in such things and has no part in them is thought by the majority not to deserve to live and to be close to death; the man, that is, who does not care for the pleasures of the body.

Simmias:: What you say is certainly true.

Socrates:: Then what about the actual acquiring of knowledge? Is the body an obstacle when one associates with it in the search for knowledge? I mean, for example, do men find any truth in sight or hearing, or are not even the poets forever telling us that we do not see or hear anything accurately, and surely if those two physical senses are not clear or precise, our other senses can hardly be accurate, as they are all inferior to these. Do you not think so?

Simmias:: I certainly do.

Socrates:: When then, does the soul grasp the truth? For whenever it attempts to examine anything with the body, it is clearly deceived by it.

Simmias:: True.

Socrates:: Is it not in reasoning if anywhere that any reality becomes clear to the soul?

Simmias:: Yes.

Socrates:: And indeed the soul reasons best when none of these senses troubles it, neither hearing nor sight, nor pain nor pleasure, but when it is most by itself, taking leave of the body and as far as possible having no contact or association with it in its search for reality.

Simmias:: That is so.

Socrates:: And it is then that the soul of the philosopher most disdains the body, flees from it and seeks to be by itself?

Simmias:: It appears so.

Socrates:: What about the following, Simmias? Do we say that there is such a thing as the Just itself, or not?

Simmias:: We do say so, by Zeus.

Socrates:: And the Beautiful, and the Good?

Simmias:: Of course.

Socrates:: And have you ever seen any of these things with your eyes?

Simmias:: In no way.

Socrates:: Or have you ever grasped them with any of your bodily senses? I am speaking of all things such as Size, Health, Strength and, in a word, the reality of all other things, that which each of them essentially is. Is what is most true in them contemplated through the body, or is this the position: whoever of us prepares himself best and most accurately to grasp that thing itself which he is investigating will come closest to the knowledge of it?

Simmias:: Obviously.

Socrates:: Then he will do this most perfectly who approaches the object with thought alone, without associating any sight with his thought, or dragging in any sense perception with his reasoning, but who, using pure thought alone, tries to track down each reality pure and by itself, freeing himself as far as possible from eyes and ears, and in a word, from the whole body, because the body confuses the soul and does not allow it to acquire truth and wisdom whenever it is associated with it. Will not that man reach reality, Simmias, if anyone does?

Simmias:: What you say, is indeed true.

Socrates:: All these things will necessarily make the true philosophers believe and say to each other something like this: "There is likely to be something such as a path to guide us out of our confusion, because as long as we have a body and our soul is fused with such an evil we shall never adequately attain what we desire, which we affirm to be the truth. The body keeps us busy in a thousand ways because of its need for nurture. Moreover, if certain diseases befall it, they impede our search for the truth. It fills us with wants, desires, fears, all sorts of illusions and much nonsense, so that, as it is said, in truth and in fact no thought of any kind ever comes to us from the body. Only the body and its desires cause war, civil discord and battles, for all wars are due to the desire to acquire wealth, and it is the body and the care of it, to which we are enslaved, which compel us to acquire wealth, and all this makes us too busy to practice philosophy.

Worst of all, if we do get some respite from it and turn to some investigation, everywhere in our investigations the body is present and makes for confusion and fear, so that it prevents us from seeing the truth.

"It really has been shown to us that, if we are ever to have pure knowledge, we must escape from the body and observe things in themselves with the soul by itself. It seems likely that we shall, only then, when we are dead, attain that which we desire and of which we claim to be lovers, namely, wisdom, as our argument shows, not while we live; for if it is impossible to attain any pure knowledge with the body, then one of two things is true: either we can never attain knowledge or we can do so after death. Then and not before, the soul is by itself apart from the body. While we live, we shall be closest to knowledge if we refrain as much as possible from association with the body and do not join with it more than we must, if we are not infected with its nature but purify ourselves from it until the god himself frees us. In this way we shall escape the contamination of the body's folly; we shall be likely to be in the company of people of the same kind, and by our own efforts we shall know all that is pure, which is presumably the truth, for it is not permitted to the impure to attain the pure."

Such are the things, Simmias, that all those who love learning in the proper manner must say to one another and believe. Or do you not think so?

Simmias:: I certainly do, Socrates.

Socrates:: And if this is true, my friend, there is good hope that on arriving where I am going, if anywhere, I shall acquire what has been our chief preoccupation in our past life, so that the journey that is now ordered for me is full of good hope, as it is also for any other man who believes that his mind has been prepared and, as it were, purified.

Simmias:: It certainly is.

Socrates:: And does purification not turn out to be what we mentioned in our argument some time ago, namely, to separate the soul as far as possible from the body and accustom it to gather itself and collect itself out of every part of the body and to dwell by itself as far as it can both now and in the future, freed, as it were, from the bonds of the body?

Simmias:: Certainly.

Socrates:: And that freedom and separation of the soul from the body is called death?

Simmias:: That is altogether so.

Socrates:: It is only those who practice philosophy in the right way, we say, who always most want to free the soul; and this release and separation of the soul from the body is the preoccupation of the philosophers?

Simmias:: So it appears.

Socrates:: Therefore, as I said at the beginning, it would be ridiculous for a man to train himself in life to live in a state as close to death as possible, and then to resent it when it comes?

Simmias:: Ridiculous, of course.

Socrates:: In fact, Simmias, those who practice philosophy in the right way are in training for dying and they fear death least of all men. Consider it from this point of view: if they are altogether estranged from the body and desire to have their soul by itself, would it not be quite absurd for them to be afraid and resentful when this happens? If they did not gladly set out for a place, where, on arrival, they may hope to attain that for which they had yearned during their lifetime, that is, wisdom, and where they would be rid of the presence of that from which they are estranged?

Many men, at the death of their lovers, wives or sons, were willing to go to the underworld, driven by the hope of seeing there those for whose company they longed, and being with them. Will then a true lover of wisdom, who has a similar hope and knows that he will never find it to any extent except in Hades, be resentful of dying and not gladly undertake the journey thither? One must surely think so, my friend, if he is a true philosopher, for he is firmly convinced that he will not find pure knowledge anywhere except there. And if this is so, then, as I said just now, would it not be highly unreasonable for such a man to fear death?

Simmias:: It certainly would, by Zeus.

Socrates:: Then you have sufficient indication, that any man whom you see resenting death was not a lover of wisdom but a lover of the body, and also a lover of wealth or of honors, either or both.

Simmias:: It is certainly as you say.

Socrates:: And, Simmias, does not what is called courage belong especially to men of this disposition?

Simmias:: Most certainly.

Socrates:: And the quality of moderation which even the majority call by that name, that is, not to get swept off one's feet by one's passions, but to treat them with disdain and orderliness, is this not suited only to those who most of all despise the body and live the life of philosophy?

Simmias:: Necessarily so.

Socrates:: If you are willing to reflect on the courage and moderation of other people, you will find them strange.

Simmias:: In what way, Socrates?

Socrates:: You know that they all consider death a great evil?

Simmias:: Definitely.

Socrates:: And the brave among them face death, when they do, for fear of greater evils?

Simmias:: That is so.

Socrates:: Therefore, it is fear and terror that make all men brave, except the philosophers. Yet it is illogical to be brave through fear and cowardice.

Simmias:: It certainly is.

Socrates:: What of the moderate among them? Is their experience not similar? Is it license of a kind that makes them moderate? We say this is impossible, yet their experience of this unsophisticated moderation turns out to be similar: they fear to be deprived of other pleasures which they desire, so they keep away from some pleasures because they are overcome by others. Now to be mastered by pleasure is what they call license, but what happens to them is that they master certain pleasures because they are mastered by others. This is like what we mentioned just now, that in some way it is a kind of license that has made them moderate.

Simmias:: That seems likely.

Socrates:: My good Simmias, I fear this is not the right exchange to attain virtue, to exchange pleasures for pleasures, pains for pains and fears for fears, the greater for the less like coins, but that the only valid currency for which all these things should be exchanged is wisdom. With this we have real courage and moderation and justice and, in a word, true virtue, with wisdom, whether pleasures and fears and all such things be present or absent. Exchanged for one another without wisdom such virtue is only an illusory appearance of virtue; it is in fact fit for slaves, without soundness or truth, whereas, in truth, moderation and courage and justice are a purging away of all such things, and wisdom itself is a kind of cleansing or purification. It is likely that those who established the mystic rites for us were not inferior persons but were speaking in riddles long ago when they said that whoever arrives in the underworld uninitiated and unsanctified will wallow in the mire, whereas he who arrives there purified and initiated will dwell with the gods. There are indeed, as those concerned with the mysteries say, many who carry the thyrsus but the Bacchants are few. These latter are, in my opinion, no other than those who have practiced philosophy in the right way. I have in my life left nothing undone in order to be counted among these as far as possible, as I have been eager to be in every way. Whether my eagerness was right and we accomplished anything we shall, I think, know for certain in a short time, god willing, on arriving yonder.

This is my defense, Simmias and Cebes, that I am likely to be right to leave you and my masters here without resentment or complaint, believing that there, as here, I shall find good masters and good friends. If my defense is more convincing to you than to the Athenian jury, it will be well.

Phaedo:: When Socrates finished, Cebes intervened:

Cebes:: Socrates, everything else you said is excellent, I think, but men find it very hard to believe what you said about the soul. They think that after it has left the body it no longer exists anywhere, but that it is destroyed and dissolved on the day the man dies, as soon as it leaves the body; and that, on leaving it, it is dispersed like breath or smoke, has flown away and gone and is no longer anything anywhere. If indeed it gathered itself together and existed by itself and escaped those evils you were recently enumerating, there would then be much good hope, Socrates, that what you say is true; but to believe this requires a good deal of faith and persuasive argument, to believe that the soul still exists after a man has died and that it still possesses some capability and intelligence.”

Socrates:: What you say is true, Cebes, but what shall we do? Do you want to discuss whether this is likely to be true or not?

Cebes:: Personally, I should like to hear your opinion on the subject.

Socrates:: I do not think, that anyone who heard me now, not even a comic poet, could say that I am babbling and discussing things that do not concern me, so we must examine the question thoroughly, if you think we should do so. Let us examine it in some such a manner as this: whether the souls of men who have died exist in the underworld or not. We recall an ancient theory that souls arriving there come from here, and then again that they arrive here and are born here from the dead. If that is true, that the living come back from the dead, then surely our souls must exist there, for they could not come back if they did not exist, and this is a sufficient proof that these things are so if it truly appears that the living never come from any other source than from the dead. If this is not the case we should need another argument.

Cebes:: Quite so.

Socrates:: Do not, confine yourself to humanity if you want to understand this more readily, but take all animals and all plants into account, and, in short, for all things which come to be, let us see whether they come to be in this way, that is, from their opposites if they have such, as the beautiful is the opposite of the ugly and the just of the unjust, and a thousand other things of the kind. Let us examine whether those that have an opposite must necessarily come to be from their opposite and from nowhere else, as for example when something comes to be larger it must necessarily become larger from having been smaller before.

Cebes:: Yes.

Socrates:: Then if something smaller comes to be, it will come from something larger before, which became smaller?

Cebes:: That is so.

Socrates:: And the weaker comes to be from the stronger, and the swifter from the slower?

Cebes:: Certainly.

Socrates:: Further, if something worse comes to be, does it not come from the better, and the juster from the more unjust?

Cebes:: Of course.

Socrates:: So we have sufficiently established that all things come to be in this way, opposites from opposites?

Cebes:: Certainly.

Socrates:: There is a further point, something such as this, about these opposites: between each of those pairs of opposites there are two processes: from the one to the other and then again from the other to the first; between the larger and the smaller there is increase and decrease, and we call the one increasing and the other decreasing?

Cebes:: Yes.

Socrates:: And so too there is separation and combination, cooling and heating, and all such things, even if sometimes we do not have a name for the process, but in fact it must be everywhere that they come to be from one another, and that there is a process of becoming from each into the other?

Cebes:: Assuredly.

Socrates:: Well then, is there an opposite to living, as sleeping is the opposite of being awake?

Cebes:: Quite so.

Socrates:: What is it?

Cebes:: Being dead.

Socrates:: Therefore, if these are opposites, they come to be from one another, and there are two processes of generation between the two?

Cebes:: Of course.

Socrates:: I will tell you, one of the two pairs I was just talking about, the pair itself and the two processes, and you will tell me the other. I mean, to sleep and to be awake; to be awake comes from sleeping, and to sleep comes from being awake. Of the two processes one is going to sleep, the other is waking up. Do you accept that, or not?

Cebes:: Certainly.

Socrates:: You tell me in the same way about life and death. Do you not say that to be dead is the opposite of being alive?

Cebes:: I do.

Socrates:: And they come to be from one another?

Cebes:: Yes.

Socrates:: What comes to be from being alive?

Cebes:: Being dead.

Socrates:: And what comes to be from being dead?

Cebes:: One must agree that it is being alive.

Socrates:: Then, Cebes, living creatures and things come to be from the dead?

Cebes:: So it appears.

Socrates:: Then our souls exist in the underworld.

Cebes:: That seems likely.

Socrates:: Then in this case one of the two processes of becoming is clear, for dying is clear enough, is it not?

Cebes:: It certainly is.

Socrates:: What shall we do then? Shall we not supply the opposite process of becoming? Is nature to be lame in this case? Or must we provide a process of becoming opposite to dying?

Cebes:: We surely must.

Socrates:: And what is that?

Cebes:: Coming to life again.

Socrates:: Therefore, if there is such a thing as coming to life again, it would be a process of coming from the dead to the living?

Cebes:: Quite so.

Socrates:: It is agreed between us then that the living come from the dead in this way no less than the dead from the living and, if that is so, it seems to be a sufficient proof that the souls of the dead must be somewhere whence they can come back again.

Cebes:: I think, Socrates, that this follows from what we have agreed on.

Socrates:: Consider in this way, Cebes, that, as I think, we were not wrong to agree. If the two processes of becoming did not always balance each other as if they were going round in a circle, but generation proceeded from one point to its opposite in a straight line and it did not turn back again to the other opposite or take any turning, do you realize that all things would ultimately be in the same state, be affected in the same way, and cease to become?

Cebes:: How do you mean?

Socrates:: It is not hard to understand what I mean. If, for example, there was such a process as going to sleep, but no corresponding process of waking up, you realize that in the end everything would show the story of Endymion to have no meaning. There would be no point to it because everything would have the same experience as he, be asleep. And if everything were combined and nothing separated, the saying of Anaxagoras would soon be true, “that all things were mixed together.” In the same way, my dear Cebes, if everything that partakes of life were to die and remain in that state and not come to life again, would not everything ultimately have to be dead and nothing alive? Even if the living came from some other source, and all that lived died, how could all things avoid being absorbed in death?

Cebes:: It could not be, Socrates, and I think what you say is altogether true.

Socrates:: I think, Cebes, that this is very definitely the case and that we were not deceived when we agreed on this: coming to life again in truth exists, the living come to be from the dead, and the souls of the dead exist.

Cebes:: Furthermore, Socrates, such is also the case if that theory is true that you are accustomed to mention frequently, that for us learning is no other than recollection. According to this, we must at some previous time have learned what we now recollect. This is possible only if our soul existed somewhere before it took on this human shape. So according to this theory too, the soul is likely to be something immortal.

Simmias:: Cebes, what are the proofs of this? Remind me, for I do not quite recall them at the moment.

Cebes:: There is one excellent argument, namely that when men are interrogated in the right manner, they always give the right answer of their own accord, and they could not do this if they did not possess the knowledge and the right explanation inside them. Then if one shows them a diagram or something else of that kind, this will show most clearly that such is the case.

Socrates:: If this does not convince you, Simmias, see whether you agree if we examine it in some such way as this, for do you doubt that what we call learning is recollection?

Simmias:: It is not that I doubt, but I want to experience the very thing we are discussing, recollection, and from what Cebes undertook to say, I am now remembering and am pretty nearly convinced. Nevertheless, I should like to hear now the way you were intending to explain it.

Socrates:: This way. We surely agree that if anyone recollects anything, he must have known it before.

Simmias:: Quite so.

Socrates:: Do we not also agree that when knowledge comes to mind in this way, it is recollection? What way do I mean? Like this: when a man sees or hears or in some other way perceives one thing and not only knows that thing but also thinks of another thing of which the knowledge is not the same but different, are we not right to say that he recollects the second thing that comes into his mind?

Simmias:: How do you mean?

Socrates:: Things such as this: to know a man is surely a different knowledge from knowing a lyre.

Simmias:: Of course.

Socrates:: Well, you know what happens to lovers: whenever they see a lyre, a garment or anything else that their beloved is accustomed to use, they know the lyre, and the image of the boy to whom it belongs comes into their mind. This is recollection, just as someone, on seeing Simmias, often recollects Cebes, and there are thousands of other such occurrences.

Simmias:: Thousands indeed.

Socrates:: Is this kind of thing not recollection of a kind? especially so when one experiences it about things that one had forgotten, because one had not seen them for some time?—

Simmias:: Quite so.

Socrates:: Further, can a man seeing the picture of a horse or a lyre recollect a man, or seeing a picture of Simmias recollect Cebes?—

Simmias:: Certainly.

Socrates:: Or seeing a picture of Simmias, recollect Simmias himself?—

Simmias:: He certainly can.

Socrates:: In all these cases the recollection can be occasioned by things that are similar, but it can also be occasioned by things that are dissimilar?—

Simmias:: It can.

Socrates:: When the recollection is caused by similar things, must one not of necessity also experience this: to consider whether the similarity to that which one recollects is deficient in any respect or complete?—

Simmias:: One must.

Socrates:: Consider, whether this is the case: we say that there is something that is equal. I do not mean a stick equal to a stick or a stone to a stone, or anything of that kind, but something else beyond all these, the Equal itself. Shall we say that this exists or not?

Simmias:: Indeed we shall, by Zeus, most definitely.

Socrates:: And do we know what this is?—

Simmias:: Certainly.

Socrates:: Whence have we acquired the knowledge of it? Is it not from the things we mentioned just now, from seeing sticks or stones or some other things that are equal we come to think of that other which is different from them? Or doesn't it seem to you to be different? Look at it also this way: do not equal stones and sticks sometimes, while remaining the same, appear to one to be equal and to another to be unequal?—

Simmias:: Certainly they do.

Socrates:: But what of the equals themselves? Have they ever appeared unequal to you, or Equality to be Inequality?

Simmias:: Never, Socrates.

Socrates:: These equal things and the Equal itself are therefore not the same?

Simmias:: I do not think they are the same at all, Socrates.

Socrates:: But it is definitely from the equal things, though they are different from that Equal, that you have derived and grasped the knowledge of equality?

Simmias:: Very true, Socrates.

Socrates:: Whether it be like them or unlike them?

Simmias:: Certainly.

Socrates:: It makes no difference. As long as the sight of one thing makes you think of another, whether it be similar or dissimilar, this must of necessity be recollection?

Simmias:: Quite so.

Socrates:: Well then, do we experience something like this in the case of equal sticks and the other equal objects we just mentioned? Do they seem to us to be equal in the same sense as what is Equal itself? Is there some deficiency in their being such as the Equal, or is there not?

Simmias:: A considerable deficiency.

Socrates:: Whenever someone, on seeing something, realizes that that which he now sees wants to be like some other reality but falls short and cannot be like that other since it is inferior, do we agree that the one who thinks this must have prior knowledge of that to which he says it is like, but deficiently so?

Simmias:: Necessarily.

Socrates:: Well, do we also feel this about the equal objects and the Equal itself, or do we not?

Simmias:: Very definitely.

Socrates:: We must then possess knowledge of the Equal before that time when we first saw the equal objects and realized that all these objects strive to be like the Equal but are deficient in this.

Simmias:: That is so.

Socrates:: Then surely we also agree that this conception of ours derives from seeing or touching or some other sense perception, and cannot come into our mind in any other way, for all these senses, I say, are the same.

Simmias:: They are the same, Socrates, at any rate in respect to that which our argument wishes to make plain.

Socrates:: Our sense perceptions must surely make us realize that all that we perceive through them is striving to reach that which is Equal but falls short of it; or how do we express it?

Simmias:: Like that.

Socrates:: Then before we began to see or hear or otherwise perceive, we must have possessed knowledge of the Equal itself if we were about to refer our sense perceptions of equal objects to it, and realized that all of them were eager to be like it, but were inferior.

Simmias:: That follows from what has been said, Socrates.

Socrates:: But we began to see and hear and otherwise perceive right after birth?

Simmias:: Certainly.

Socrates:: We must then have acquired the knowledge of the Equal before this.

Simmias:: Yes.

Socrates:: It seems then that we must have possessed it before birth.

Simmias:: It seems so.

Socrates:: Therefore, if we had this knowledge, we knew before birth and immediately after not only the Equal, but the Greater and the Smaller and all such things, for our present argument is no more about the Equal than about the Beautiful itself, the Good itself, the Just, the Pious and, as I say, about all those things to which we can attach the word “itself,” both when we are putting questions and answering them. So we must have acquired knowledge of them all before we were born.

Simmias:: That is so.

Socrates:: If, having acquired this knowledge in each case, we have not forgotten it, we remain knowing and have knowledge throughout our life, for to know is to acquire knowledge, keep it and not lose it. Do we not call the losing of knowledge forgetting?

Simmias:: Most certainly, Socrates.

Socrates:: But, I think, if we acquired this knowledge before birth, then lost it at birth, and then later by the use of our senses in connection with those objects we mentioned, we recovered the knowledge we had before, would not what we call learning be the recovery of our own knowledge, and we are right to call this recollection?

Simmias:: Certainly.

Socrates:: It was seen to be possible for someone to see or hear or otherwise perceive something, and by this to be put in mind of something else which he had forgotten and which is related to it by similarity or difference. One of two things follows, as I say: either we were born with the knowledge of it, and all of us know it throughout life, or those who later, we say, are learning, are only recollecting, and learning would be recollection.

Simmias:: That is certainly the case, Socrates.

Socrates:: Which alternative do you choose, Simmias? That we are born with this knowledge or that we recollect later the things of which we had knowledge previously?

Simmias:: I have no means of choosing at the moment, Socrates.

Socrates:: Well, can you make this choice? What is your opinion about it? A man who has knowledge would be able to give an account of what he knows, or would he not?

Simmias:: He must certainly be able to do so, Socrates.

Socrates:: And do you think everybody can give an account of the things we were mentioning just now?

Simmias:: I wish they could, but I'm afraid it is much more likely that by this time tomorrow there will be no one left who can do so adequately.

Socrates:: So you do not think that everybody has knowledge of those things?

Simmias:: No indeed.

Socrates:: So they recollect what they once learned?

Simmias:: They must.

Socrates:: When did our souls acquire the knowledge of them? Certainly not since we were born as men.

Simmias:: Indeed no.

Socrates:: Before that then?

Simmias:: Yes.

Socrates:: So then, Simmias, our souls also existed apart from the body before they took on human form, and they had intelligence.

Simmias:: Unless we acquire the knowledge at the moment of birth, Socrates, for that time is still left to us.

Socrates:: Quite so, my friend, but at what other time do we lose it? We just now agreed that we are not born with that knowledge. Do we then lose it at the very time we acquire it, or can you mention any other time?

Simmias:: I cannot, Socrates. I did not realize that I was talking nonsense.

Socrates:: So this is our position, Simmias? If those realities we are always talking about exist, the Beautiful and the Good and all that kind of reality, and we refer all the things we perceive to that reality, discovering that it existed before and is ours, and we compare these things with it, then, just as they exist, so our soul must exist before we are born. If these realities do not exist, then this argument is altogether futile. Is this the position, that there is an equal necessity for those realities to exist, and for our souls to exist before we were born? If the former do not exist, neither do the latter?

Simmias:: I do not think, Socrates, that there is any possible doubt that it is equally necessary for both to exist, and it is opportune that our argument comes to the conclusion that our soul exists before we are born, and equally so that reality of which you are now speaking. Nothing is so evident to me personally as that all such things must certainly exist, the Beautiful, the Good, and all those you mentioned just now. I also think that sufficient proof of this has been given.

Socrates:: Then what about Cebes? for we must persuade Cebes also.

Simmias:: He is sufficiently convinced I think, though he is the most difficult of men to persuade by argument, but I believe him to be fully convinced that our soul existed before we were born. I do not think myself, however, that it has been proved that the soul continues to exist after death; the opinion of the majority which Cebes mentioned still stands, that when a man dies his soul is dispersed and this is the end of its existence. What is to prevent the soul coming to be and being constituted from some other source, existing before it enters a human body and then, having done so and departed from it, itself dying and being destroyed?

Cebes:: You are right, Simmias. Half of what needed proof has been proved, namely, that our soul existed before we were born, but further proof is needed that it exists no less after we have died, if the proof is to be complete.

Socrates:: It has been proved even now, Simmias and Cebes, if you are ready to combine this argument with the one we agreed on before, that every living thing must come from the dead. If the soul exists before, it must, as it comes to life and birth, come from nowhere else than death and being dead, so how could it avoid existing after death since it must be born again? What you speak of has then even now been proved. However, I think you and Simmias would like to discuss the argument more fully. You seem to have this childish fear that the wind would really dissolve and scatter the soul, as it leaves the body, especially if one happens to die in a high wind and not in calm weather.

Phaedo:: Cebes laughed and said:

Cebes:: “Assuming that we were afraid, Socrates, try to change our minds, or rather do not assume that we are afraid, but perhaps there is a child in us who has these fears; try to persuade him not to fear death like a bogey.”

Socrates:: You should, sing a charm over him every day until you have charmed away his fears.

Cebes:: Where shall we find a good charmer for these fears, Socrates, now that you are leaving us?

Socrates:: Greece is a large country, Cebes, and there are good men in it; the tribes of foreigners are also numerous. You should search for such a charmer among them all, sparing neither trouble nor expense, for there is nothing on which you could spend your money to greater advantage.

You must also search among yourselves, for you might not easily find people who could do this better than yourselves.

Cebes:: That shall be done, but let us, if it pleases you, go back to the argument where we left it.

Socrates:: Of course it pleases me.

Cebes:: Splendid.

Socrates:: We must then ask ourselves something like this: what kind of thing is likely to be scattered? On behalf of what kind of thing should one fear this, and for what kind of thing should one not fear it? We should then examine to which class the soul belongs, and as a result either fear for the soul or be of good cheer.

Cebes:: What you say is true.

Socrates:: Is not anything that is composite and a compound by nature liable to be split up into its component parts, and only that which is noncomposite, if anything, is not likely to be split up?

Cebes:: I think that is the case.

Socrates:: Are not the things that always remain the same and in the same state most likely not to be composite, whereas those that vary from one time to another and are never the same are composite?

Cebes:: I think that is so.

Socrates:: Let us then return to those same things with which we were dealing earlier, to that reality of whose existence we are giving an account in our questions and answers; are they ever the same and in the same state, or do they vary from one time to another; can the Equal itself, the Beautiful itself, each thing in itself, the real, ever be affected by any change whatever? Or does each of them that really is, being uniform by itself, remain the same and never in any way tolerate any change whatever?

Cebes:: It must remain the same, and in the same state, Socrates.

Socrates:: What of the many beautiful particulars, be they men, horses, clothes, or other such things, or the many equal particulars, and all those which bear the same name as those others? Do they remain the same or, in total contrast to those other realities, one might say, never in any way remain the same as themselves or in relation to each other?

Cebes:: The latter is the case, they are never in the same state.

Socrates:: These latter you could touch and see and perceive with the other senses, but those that always remain the same can only be grasped by the reasoning power of the mind? They are not seen but are invisible?

Cebes:: That is altogether true.

Socrates:: Do you then want us to assume two kinds of existences, the visible and the invisible?

Cebes:: Let us assume this.

Socrates:: And the invisible always remains the same, whereas the visible never does?

Cebes:: Let us assume that too.

Socrates:: Now one part of ourselves is the body, another part is the soul?

Cebes:: Quite so.

Socrates:: To which class of existence do we say the body is more alike and akin?

Cebes:: To the visible, as anyone can see.

Socrates:: What about the soul? Is it visible or invisible?

Cebes:: It is not visible to men, Socrates.

Socrates:: Well, we meant visible and invisible to human eyes; or to any others, do you think?

Cebes:: To human eyes.

Socrates:: Then what do we say about the soul? Is it visible or not visible?

Cebes:: Not visible.

Socrates:: So it is invisible?—

Cebes:: Yes.

Socrates:: So the soul is more like the invisible than the body, and the body more like the visible?—

Cebes:: Without any doubt, Socrates.

Socrates:: Haven't we also said some time ago that when the soul makes use of the body to investigate something, be it through hearing or seeing or some other sense—for to investigate something through the body is to do it through the senses—it is dragged by the body to the things that are never the same, and the soul itself strays and is confused and dizzy, as if it were drunk, in so far as it is in contact with that kind of thing?

Cebes:: Certainly.

Socrates:: But when the soul investigates by itself it passes into the realm of what is pure, ever existing, immortal and unchanging, and being akin to this, it always stays with it whenever it is by itself and can do so; it ceases to stray and remains in the same state as it is in touch with things of the same kind, and its experience then is what is called wisdom?

Cebes:: Altogether well said and very true, Socrates.

Socrates:: Judging from what we have said before and what we are saying now, to which of these two kinds do you think that the soul is more alike and more akin?

Cebes:: I think, Socrates, that on this line of argument any man, even the dullest, would agree that the soul is altogether more like that which always exists in the same state rather than like that which does not.

Socrates:: What of the body?

Cebes:: That is like the other.

Socrates:: Look at it also this way: when the soul and the body are together, nature orders the one to be subject and to be ruled, and the other to rule and be master. Then again, which do you think is like the divine and which like the mortal? Do you not think that the nature of the divine is to rule and to lead, whereas it is that of the mortal to be ruled and be subject?

Cebes:: I do.

Socrates:: Which does the soul resemble?

Cebes:: Obviously, Socrates, the soul resembles the divine, and the body resembles the mortal.

Socrates:: Consider then, Cebes, whether it follows from all that has been said that the soul is most like the divine, deathless, intelligible, uniform, indissoluble, always the same as itself, whereas the body is most like that which is human, mortal, multiform, unintelligible, soluble and never consistently the same. Have we anything else to say to show, my dear Cebes, that this is not the case?

Cebes:: We have not.

Socrates:: Well then, that being so, is it not natural for the body to dissolve easily, and for the soul to be altogether indissoluble, or nearly so?

Cebes:: Of course.

Socrates:: You realize, that when a man dies, the visible part, the body, which exists in the visible world, and which we call the corpse, whose natural lot it would be to dissolve, fall apart and be blown away, does not immediately suffer any of these things but remains for a fair time, in fact, quite a long time if the man dies with his body in a suitable condition and at a favorable season? If the body is emaciated or embalmed, as in Egypt, it remains almost whole for a remarkable length of time, and even if the body decays, some parts of it, namely bones and sinews and the like, are nevertheless, one might say, deathless. Is that not so?—

Cebes:: Yes.

Socrates:: Will the soul, the invisible part which makes its way to a region of the same kind, noble and pure and invisible, to Hades in fact, to the good and wise god whither, god willing, my soul must soon be going—will the soul, being of this kind and nature, be scattered and destroyed on leaving the body, as the majority of men say? Far from it, my dear Cebes and Simmias, but what happens is much more like this: if it is pure when it leaves the body and drags nothing bodily with it, as it had no willing association with the body in life, but avoided it and gathered itself together by itself and always practiced this, which is no other than practicing philosophy in the right way, in fact, training to die easily. Or is this not training for death?

Cebes:: It surely is.

Socrates:: A soul in this state makes its way to the invisible, which is like itself, the divine and immortal and wise, and arriving there it can be happy, having rid itself of confusion, ignorance, fear, violent desires and the other human ills and, as is said of the initiates, truly spend the rest of time with the gods. Shall we say this, Cebes, or something different?

Cebes:: This, by Zeus.

Socrates:: But I think that if the soul is polluted and impure when it leaves the body, having always been associated with it and served it, bewitched by physical desires and pleasures to the point at which nothing seems to exist for it but the physical, which one can touch and see or eat and drink or make use of for sexual enjoyment, and if that soul is accustomed to hate and fear and avoid that which is dim and invisible to the eyes but intelligible and to be grasped by philosophy—do you think such a soul will escape pure and by itself?

Cebes:: Impossible.

Socrates:: It is no doubt permeated by the physical, which constant intercourse and association with the body, as well as considerable practice, has caused to become ingrained in it?

Cebes:: Quite so.

Socrates:: We must believe, my friend, that this bodily element is heavy, ponderous, earthy and visible. Through it, such a soul has become heavy and is dragged back to the visible region in fear of the unseen and of Hades. It wanders, as we are told, around graves and monuments, where shadowy phantoms, images that such souls produce, have been seen, souls that have not been freed and purified but share in the visible, and are therefore seen.

Cebes:: That is likely, Socrates.

Socrates:: It is indeed, Cebes. Moreover, these are not the souls of good but of inferior men, which are forced to wander there, paying the penalty for their previous bad upbringing. They wander until their longing for that which accompanies them, the physical, again imprisons them in a body, and they are then, as is likely, bound to such characters as they have practiced in their life.

Cebes:: What kind of characters do you say these are, Socrates?

Socrates:: Those, for example, who have carelessly practiced gluttony, violence and drunkenness are likely to join a company of donkeys or of similar animals. Do you not think so?

Cebes:: Very likely.

Socrates:: Those who have esteemed injustice highly, and tyranny and plunder will join the tribes of wolves and hawks and kites, or where else shall we say that they go?

Cebes:: Certainly to those.

Socrates:: And clearly, the destination of the others will conform to the way in which they have behaved?

Cebes:: Clearly, of course.

Socrates:: The happiest of these, who will also have the best destination, are those who have practiced popular and social virtue, which they call moderation and justice and which was developed by habit and practice, without philosophy or understanding?

Cebes:: How are they the happiest?

Socrates:: Because it is likely that they will again join a social and gentle group, either of bees or wasps or ants, and then again the same kind of human group, and so be moderate men.

Cebes:: That is likely.

Socrates:: No one may join the company of the gods who has not practiced philosophy and is not completely pure when he departs from life, no one but the lover of learning. It is for this reason, my friends Simmias and Cebes, that those who practice philosophy in the right way keep away from all bodily passions, master them and do not surrender themselves to them; it is not at all for fear of wasting their substance and of poverty, which the majority and the money-lovers fear, nor for fear of dishonor and ill repute, like the ambitious and lovers of honors, that they keep away from them.

Cebes:: That would not be natural for them, Socrates.

Socrates:: By Zeus, no. Those who care for their own soul and do not live for the service of their body dismiss all these things. They do not travel the same road as those who do not know where they are going but, believing that nothing should be done contrary to philosophy and their deliverance and purification, they turn to this and follow wherever philosophy leads.

Cebes:: How so, Socrates?

Socrates:: I will tell you. The lovers of learning know that when philosophy gets hold of their soul, it is imprisoned in and clinging to the body, and that it is forced to examine other things through it as through a cage and not by itself, and that it wallows in every kind of ignorance. Philosophy sees that the worst feature of this imprisonment is that it is due to desires, so that the prisoner himself is contributing to his own incarceration most of all. As I say, the lovers of learning know that philosophy gets hold of their soul when it is in that state, then gently encourages it and tries to free it by showing them that investigation through the eyes is full of deceit, as is that through the ears and the other senses. Philosophy then persuades the soul to withdraw from the senses in so far as it is not compelled to use them and bids the soul to gather itself together by itself, to trust only itself and whatever reality, existing by itself, the soul by itself understands, and not to consider as true whatever it examines by other means, for this is different in different circumstances and is sensible and visible, whereas what the soul itself sees is intelligible and invisible. The soul of the true philosopher thinks that this deliverance must not be opposed and so keeps away from pleasures and desires and pains as far as he can; he reflects that violent pleasure or pain or passion does not cause merely such evils as one might expect, such as one suffers when one has been sick or extravagant through desire, but the greatest and most extreme evil, though one does not reflect on this.

Cebes:: What is that, Socrates?

Socrates:: That the soul of every man, when it feels violent pleasure or pain in connection with some object, inevitably believes at the same time that what causes such feelings must be very clear and very true, which it is not. Such objects are mostly visible, are they not?

Cebes:: Certainly.

Socrates:: And doesn’t such an experience tie the soul to the body most completely?

Cebes:: How so?

Socrates:: Because every pleasure and every pain provides, as it were, another nail to rivet the soul to the body and to weld them together. It makes the soul corporeal, so that it believes that truth is what the body says it is. As it shares the beliefs and delights of the body, I think it inevitably comes to share its ways and manner of life and is unable ever to reach Hades in a pure state; it is always full of body when it departs, so that it soon falls back into another body and grows with it as if it had been sewn into it. Because of this, it can have no part in the company of the divine, the pure and uniform.

Cebes:: What you say is very true, Socrates.

Socrates:: This is why genuine lovers of learning are moderate and brave, or do you think it is for the reasons the majority says they are?

Cebes:: I certainly do not.

Socrates:: Indeed no. This is how the soul of a philosopher would reason: it would not think that while philosophy must free it, it should while being freed surrender itself to pleasures and pains and imprison itself again, thus laboring in vain like Penelope at her web. The soul of the philosopher achieves a calm from such emotions; it follows reason and ever stays with it contemplating the true, the divine, which is not the object of opinion. Nurtured by this, it believes that one should live in this manner as long as one is alive and, after death, arrive at what is akin and of the same kind, and escape from human evils. After such nurture there is no danger, Simmias and Cebes, that one should fear that, on parting from the body, the soul would be scattered and dissipated by the winds and no longer be anything anywhere.

Phaedo:: When Socrates finished speaking there was a long silence. He appeared to be concentrating on what had been said, and so were most of us. But Cebes and Simmias were whispering to each other. Socrates observed them and questioned them.

Socrates:: Come, do you think there is something lacking in my argument? There are still many doubtful points and many objections for anyone who wants a thorough discussion of these matters. If you are discussing some other subject, I have nothing to say, but if you have some difficulty about this one, do not hesitate to speak for yourselves and expound it if you think the argument could be improved, and if you think you will do better, take me along with you in the discussion.

Simmias:: I will tell you the truth, Socrates, both of us have been in difficulty for some time, and each of us has been urging the other to question you because we wanted to hear what you would say, but we hesitated to bother you, lest it be displeasing to you in your present misfortune.

Phaedo:: When Socrates heard this he laughed quietly and said:

Socrates:: “Really, Simmias, it would be hard for me to persuade other people that I do not consider my present fate a misfortune if I cannot persuade even you, and you are afraid that it is more difficult to deal with me than before. You seem to think me inferior to the swans in prophecy. They sing before too, but when they realize that they must die they sing most and most beautifully, as they rejoice that they are about to depart to join the god whose servants they are. But men, because of their own fear of death, tell lies about the swans and say that they lament their death and sing in sorrow. They do not reflect that no bird sings when it is hungry or cold or suffers in any other way, neither the nightingale nor the swallow nor the hoopoe, though they do say that these sing laments when in pain. Nor do the swans, but I believe that as they belong to Apollo, they are prophetic, have knowledge of the future and sing of the blessings of the underworld, sing and rejoice on that day beyond what they did before. As I believe myself to be a fellow servant with the swans and dedicated to the same god, and have received from my master a gift of prophecy not inferior to theirs, I am no more despondent than they on leaving life. Therefore, you must speak and ask whatever you want as long as the authorities allow it.”

Simmias:: Well spoken. I will tell you my difficulty, and then Cebes will say why he does not accept what was said. I believe, as perhaps you do, that precise knowledge on that subject is impossible or extremely difficult in our present life, but that it surely shows a very poor spirit not to examine thoroughly what is said about it, and to desist before one is exhausted by an all-round investigation. One should achieve one of these things: learn the truth about these things or find it for oneself, or, if that is impossible, adopt the best and most irrefutable of men’s theories, and, borne upon this, sail through the dangers of life as upon a raft, unless someone should make that journey safer and less risky upon a firmer vessel of some divine doctrine. So even now, since you have said what you did, I will feel no shame at asking questions, and I will not blame myself in the future because I did not say what I think. As I examine what we said, both by myself and with Cebes, it does not seem to be adequate.

Socrates:: "You may well be right, my friend, but tell me how it is inadequate."

Simmias:: In this way, as it seems to me: "One might make the same argument about harmony, lyre and strings, that a harmony is something invisible, without body, beautiful and divine in the attuned lyre, whereas the lyre itself and its strings are physical, bodily, composite, earthy and akin to what is mortal. Then if someone breaks the lyre, cuts or breaks the strings and then insists, using the same argument as you, that the harmony must still exist and is not destroyed because it would be impossible for the lyre and the strings, which are mortal, still to exist when the strings are broken, and for the harmony, which is akin and of the same nature as the divine and immortal, to be destroyed before that which is mortal; he would say that the harmony itself still must exist and that the wood and the strings must rot before the harmony can suffer. And indeed Socrates, I think you must have this in mind, that we really do suppose the soul to be something of this kind; as the body is stretched and held together by the hot and the cold, the dry and the moist and other such things, and our soul is a mixture and harmony of those things when they are mixed with each other rightly and in due measure. If then the soul is a kind of harmony or attunement, clearly, when our body is relaxed or stretched without due measure by diseases and other evils, the soul must immediately be destroyed, even if it be most divine, as are the other harmonies found in music and all the works of artists, and the remains of each body last for a long time until they rot or are burned. Consider what we shall say in answer to one who deems the soul to be a mixture of bodily elements and to be the first to perish in the process we call death.”

Phaedo:: Socrates looked at us keenly, as was his habit, smiled and said:

Socrates:: “What Simmias says is quite fair. If one of you is more resourceful than I am, why did he not answer him, for he seems to have handled the argument competently. However, I think that before we answer him, we should hear Cebes’ objection, in order that we may have time to deliberate on an answer. When we have heard him we should either agree with them, if we think them in tune with us or, if not, defend our own argument. Come then, Cebes. What is troubling you?”

Cebes:: I tell you, the argument seems to me to be at the same point as before and open to the same objection. I do not deny that it has been very elegantly and, if it is not offensive to say so, sufficiently proved that our soul existed before it took on this present form, but I do not believe the same applies to its existing somewhere after our death. Not that I agree with Simmias’ objection that the soul is not stronger and much more lasting than the body, for I think it is superior in all these respects. “Why then,” the argument might say, “are you still unconvinced? Since you see that when the man dies, the weaker part continues to exist, do you not think that the more lasting part must be preserved during that time?” On this point consider whether what I say makes sense.

Like Simmias, I too need an image, for I think this argument is much as if one said at the death of an old weaver that the man had not perished but was safe and sound somewhere, and offered as proof the fact that the cloak the old man had woven himself and was wearing was still sound and had not perished. If one was not convinced, he would be asked whether a man lasts longer than a cloak which is in use and being worn, and if the answer was that a man lasts much longer, this would be taken as proof that the man was definitely safe and sound, since the more temporary thing had not perished. But Simmias, I do not think that is so, for consider what I say. Anybody could see that the man who said this was talking nonsense. That weaver had woven and worn out many such cloaks. He perished after many of them, but before the last. That does not mean that a man is inferior and weaker than a cloak. The image illustrates, I think, the relationship of the soul to the body, and anyone who says the same thing about them would appear to me to be talking sense, that the soul lasts a long time while the body is weaker and more short-lived. He might say that each soul wears out many bodies, especially if it lives many years. If the body were in a state of flux and perished while the man was still alive, and the soul wove afresh the body that is worn out, yet it would be inevitable that whenever the soul perished it would be wearing the last body it wove and perish only before this last. Then when the soul perished, the body would show the weakness of its nature by soon decaying and disappearing. So we cannot trust this argument and be confident that our soul continues to exist somewhere after our death. For, if one were to concede, even more than you do, to a man using that argument, if one were to grant him not only that the soul exists in the time before we are born, but that there is no reason why the soul of some should not exist and continue to exist after our death, and thus frequently be born and die in turn; if one were to grant him that the soul's nature is so strong that it can survive many bodies, but if, having granted all this, one does not further agree that the soul is not damaged by its many births and is not, in the end, altogether destroyed in one of those deaths, he might say that no one knows which death and dissolution of the body brings about the destruction of the soul, since not one of us can be aware of this. And in that case, any man who faces death with confidence is foolish, unless he can prove that the soul is altogether immortal. If he cannot, a man about to die must of necessity always fear for his soul, lest the present separation of the soul from the body bring about the complete destruction of the soul.

Phaedo:: When we heard what they said we were all depressed, as we told each other afterwards. We had been quite convinced by the previous argument, and they seemed to confuse us again, and to drive us to doubt not only what had already been said but also what was going to be said, lest we be worthless as critics or the subject itself admitted of no certainty.

Echecrates:: By the gods, Phaedo, you have my sympathy, for as I listen to you now I find myself saying to myself: “What argument shall we trust? That of Socrates, which was extremely convincing, has now fallen into discredit; the statement that the soul is some kind of harmony has a remarkable hold on me, now and always, and when it was mentioned it reminded me that I had myself previously thought so. And now I am again quite in need, as if from the beginning, of some other argument to convince me that the soul does not die along with the man. Tell me then, by Zeus, how Socrates tackled the argument. Was he obviously distressed, as you say you people were, or was he not, but quietly came to the rescue of his argument, and did he do so satisfactorily or inadequately? Tell us everything as precisely as you can.

Phaedo:: I have certainly often admired Socrates, Echecrates, but never more than on this occasion. That he had a reply was perhaps not strange. What I wondered at most in him was the pleasant, kind and admiring way he received the young men’s argument, and how sharply he was aware of the effect the discussion had on us, and then how well he healed our distress and, as it were, recalled us from our flight and defeat and turned us around to join him in the examination of their argument.

Echecrates:: How did he do this?

Phaedo:: I will tell you. I happened to be sitting on his right by the couch on a low stool, so that he was sitting well above me. He stroked my head and pressed the hair on the back of my neck, for he was in the habit of playing with my hair at times.

Socrates:: “Tomorrow, Phaedo, you will probably cut this beautiful hair.”

Phaedo:: Likely enough, Socrates.

Socrates:: Not if you take my advice.

Phaedo:: Why not?

Socrates:: t is today, that I shall cut my hair and you yours, if our argument dies on us, and we cannot revive it. If I were you, and the argument escaped me, I would take an oath, as the Argives did, not to let my hair grow before I fought again and defeated the argument of Simmias and Cebes.

Phaedo:: But, they say that not even Heracles could fight two people.

Socrates:: hen call on me as your Iolaus, as long as the daylight lasts.

Socrates:: I shall call on you, but in this case as Iolaus calling on Heracles.

Socrates:: It makes no difference, but first there is a certain experience we must be careful to avoid.

Phaedo:: What is that?

Socrates:: That we should not become misologues, as people become misanthropes. There is no greater evil one can suffer than to hate reasonable discourse. Misology and misanthropy arise in the same way. Misanthropy comes when a man without knowledge or skill has placed great trust in someone and believes him to be altogether truthful, sound and trustworthy; then, a short time afterwards he finds him to be wicked and unreliable, and then this happens in another case; when one has frequently had that experience, especially with those whom one believed to be one's closest friends, then, in the end, after many such blows, one comes to hate all men and to believe that no one is sound in any way at all. Have you not seen this happen?

Phaedo:: I surely have.

Socrates:: This is a shameful state of affairs, and obviously due to an attempt to have human relations without any skill in human affairs, for such skill would lead one to believe, what is in fact true, that the very good and the very wicked are both quite rare, and that most men are between those extremes.

Phaedo:: How do you mean?

Socrates:: The same as with the very tall and the very short. Do you think anything is rarer than to find an extremely tall man or an extremely short one? Or a dog or any thing else whatever? Or again, one extremely swift or extremely slow, ugly or beautiful, white or black? Are you not aware that in all those cases the most extreme at either end are rare and few, but those in between are many and plentiful?

Phaedo:: Certainly.

Socrates:: Therefore, if a contest of wickedness were established, there too the winners, you think, would be very few?

Phaedo:: That is likely.

Socrates:: Likely indeed, but arguments are not like men in this particular. I was merely following your lead just now. The similarity lies rather in this: it is as when one who lacks skill in arguments puts his trust in an argument as being true, then shortly afterwards believes it to be false— as sometimes it is and sometimes it is not—and so with another argument and then another. You know how those in particular who spend their time studying contradiction in the end believe themselves to have become very wise and that they alone have understood that there is no soundness or reliability in any object or in any argument, but that all that exists simply fluctuates up and down as if it were in the Euripus and does not remain in the same place for any time at all.

Phaedo:: What you say, is certainly true.

Socrates:: It would be pitiable, Phaedo, when there is a true and reliable argument and one that can be understood, if a man who has dealt with such arguments as appear at one time true, at another time untrue, should not blame himself or his own lack of skill but, because of his distress, in the end gladly shift the blame away from himself to the arguments, and spend the rest of his life hating and reviling reasonable discussion and so be deprived of truth and knowledge of reality.

Phaedo:: Yes, by Zeus, that would be pitiable indeed.

Socrates:: This then is the first thing we should guard against. We should not allow into our minds the conviction that argumentation has nothing sound about it; much rather we should believe that it is we who are not yet sound and that we must take courage and be eager to attain soundness, you and the others for the sake of your whole life still to come, and I for the sake of death itself. I am in danger at this moment of not having a philosophical attitude about this, but like those who are quite uneducated, I am eager to get the better of you in argument, for the uneducated, when they engage in argument about anything, give no thought to the truth about the subject of discussion but are only eager that those present will accept the position they have set forth. I differ from them only to this extent: I shall not be eager to get the agreement of those present that what I say is true, except incidentally, but I shall be very eager that I should myself be thoroughly convinced that things are so. For I am thinking— see in how contentious a spirit—that if what I say is true, it is a fine thing to be convinced; if, on the other hand, nothing exists after death, at least for this time before I die I shall distress those present less with lamentations and my folly will not continue to exist along with me—that would be a bad thing—but will come to an end in a short time. Thus prepared, Simmias and Cebes, I come to deal with your argument. If you will take my advice, you will give but little thought to Socrates but much more to the truth. If you think that what I say is true, agree with me; if not, oppose it with every argument and take care that in my eagerness I do not deceive myself and you and, like a bee, leave my sting in you when I go.

We must proceed, and first remind me of what you said if I do not appear to remember it. Simmias, as I believe, is in doubt and fear that the soul, though it is more divine and beautiful than the body, yet predeceases it, being a kind of harmony. Cebes, I thought, agrees with me that the soul lasts much longer than the body, but that no one knows whether the soul often wears out many bodies and then, on leaving its last body, is now itself destroyed. This then is death, the destruction of the soul, since the body is always being destroyed. Are these the questions, Simmias and Cebes, which we must investigate?

Phaedo:: They both agreed that they were.

Socrates:: Do you then, reject all our previous statements, or some but not others?

Phaedo:: Some, they both said, but not others.

Socrates:: What, about the statements we made that learning is recollection and that, if this was so, our soul must of necessity exist elsewhere before us, before it was imprisoned in the body?

Cebes:: For myself, I was wonderfully convinced by it at the time and I stand by it now also, more than by any other statement.

Simmias:: That, is also my position, and I should be very surprised if I ever changed my opinion about this.

Socrates:: But you must change your opinion, my Theban friend, if you still believe that a harmony is a composite thing, and that the soul is a kind of harmony of the elements of the body in a state of tension, for surely you will not allow yourself to maintain that a composite harmony existed before those elements from which it had to be composed, or would you?

Simmias:: Never, Socrates.

Socrates:: Do you realize, that this is what you are in fact saying when you state that the soul exists before it takes on the form and body of a man and that it is composed of elements which do not yet exist? A harmony is not like that to which you compare it; the lyre and the strings and the notes, though still unharmonized, exist; the harmony is composed last of all, and is the first to be destroyed. How will you harmonize this statement with your former one?

Simmias:: In no way.

Socrates:: And surely, a statement about harmony should do so more than any other.

Simmias:: It should.

Socrates:: So your statement is inconsistent? Consider which of your statements you prefer, that learning is recollection or that the soul is a harmony?

Simmias:: I much prefer the former, Socrates. I adopted the latter without proof, because of a certain probability and plausibility, which is why it appeals to most men. I know that arguments of which the proof is based on probability are pretentious and, if one does not guard against them, they certainly deceive one, in geometry and everything else. The theory of recollection and learning, however, was based on an assumption worthy of acceptance, for our soul was said to exist also before it came into the body, just as the reality does that is of the kind that we qualify by the words "which truly is," and I convinced myself that I was quite correct to accept it. Therefore, I cannot accept the theory that the soul is a harmony either from myself or anyone else.

Socrates:: What of this, Simmias? Do you think it natural for a harmony, or any other composite, to be in a different state from that of the elements of which it is composed?

Simmias:: Not at all.

Socrates:: Nor, as I think, can it act or be acted upon in a different way than its elements?

Phaedo:: He agreed.

Socrates:: One must therefore suppose that a harmony does not direct its components, but is directed by them.

Phaedo:: He accepted this.

Socrates:: A harmony is therefore far from making a movement, or uttering a sound, or doing anything else, in a manner contrary to that of its parts.

Simmias:: Far from it indeed.

Socrates:: Does not the nature of each harmony depend on the way it has been harmonized?

Simmias:: I do not understand.

Socrates:: Will it not, if it is more and more fully harmonized, be more and more fully a harmony, and if it is less and less fully harmonized, it will be less and less fully a harmony?

Simmias:: Certainly.

Socrates:: Can this be true about the soul, that one soul is more and more fully a soul than another, or is less and less fully a soul, even to the smallest extent?

Simmias:: Not in any way.

Socrates:: Come now, by Zeus. One soul is said to have intelligence and virtue and to be good, another to have folly and wickedness and to be bad. Are those things truly said?

Simmias:: They certainly are.

Socrates:: What will someone who holds the theory that the soul is a harmony say that those things are which reside in the soul, that is, virtue and wickedness? Are these some other harmony and disharmony? That the good soul is harmonized and, being a harmony, has within itself another harmony, whereas the evil soul is both itself a lack of harmony and has no other within itself?

Simmias:: I don’t know what to say, but one who holds that assumption must obviously say something of that kind.

Socrates:: We have previously agreed, that one soul is not more and not less a soul than another, and this means that one harmony is not more and more fully, or less and less fully, a harmony than another. Is that not so?

Simmias:: Certainly.

Socrates:: Now that which is no more and no less a harmony is not more or less harmonized. Is that so?

Simmias:: It is.

Socrates:: Can that which is neither more nor less harmonized partake more or less of harmony, or does it do so equally?

Simmias:: Equally.

Socrates:: Then if a soul is neither more nor less a soul than another, it has been harmonized to the same extent?

Simmias:: This is so.

Socrates:: If that is so, it would have no greater share of disharmony or of harmony?

Simmias:: It would not.

Socrates:: That being the case, could one soul have more wickedness or virtue than another, if wickedness is disharmony and virtue harmony?

Simmias:: It could not.

Socrates:: But rather, Simmias, according to correct reasoning, no soul, if it is a harmony, will have any share of wickedness, for harmony is surely altogether this very thing, harmony, and would never share in disharmony.

Simmias:: It certainly would not.

Socrates:: Nor would a soul, being altogether this very thing, a soul, share in wickedness?

Simmias:: How could it, in view of what has been said?

Socrates:: So it follows from this argument that all the souls of all living creatures will be equally good, if souls are by nature equally this very thing, souls.

Simmias:: I think so, Socrates.

Socrates:: Does our argument seem right, and does it seem that it should have come to this, if the hypothesis that the soul is a harmony was correct?

Simmias:: Not in any way.

Socrates:: Further, of all the parts of a man, can you mention any other part that rules him than his soul, especially if it is a wise soul?

Simmias:: I cannot.

Socrates:: Does it do so by following the affections of the body or by opposing them? I mean, for example, that when the body is hot and thirsty the soul draws him to the opposite, to not drinking; when the body is hungry, to not eating, and we see a thousand other examples of the soul opposing the affections of the body. Is that not so?

Simmias:: It certainly is.

Socrates:: On the other hand we previously agreed that if the soul were a harmony, it would never be out of tune with the stress and relaxation and the striking of the strings or anything else done to its composing elements, but that it would follow and never direct them?

Simmias:: We did so agree, of course.

Socrates:: Well, does it now appear to do quite the opposite, ruling over all the elements of which one says it is composed, opposing nearly all of them throughout life, directing all their ways, inflicting harsh and painful punishment on them, at times in physical culture and medicine, at other times more gently by threats and exhortations, holding converse with desires and passions and fears as if it were one thing talking to a different one, as Homer wrote somewhere in the Odyssey where he says that

Odysseus “struck his breast and rebuked his heart saying, ‘Endure, my heart, you have endured worse than this.’”

Do you think that when he composed this the poet thought that his soul was a harmony, a thing to be directed by the affections of the body? Did he not rather regard it as ruling over them and mastering them, itself a much more divine thing than a harmony?

Simmias:: Yes, by Zeus, I think so, Socrates.

Socrates:: Therefore, my good friend, it is quite wrong for us to say that the soul is a harmony, and in saying so we would disagree both with the divine poet Homer and with ourselves.

Simmias:: That is so.

Socrates:: Very well. Harmonia of Thebes seems somehow reasonably propitious to us. How and by what argument, my dear Cebes, can we propitiate Cadmus?

Cebes:: I think, that you will find a way. You dealt with the argument about harmony in a manner that was quite astonishing to me. When Simmias was speaking of his difficulties I was very much wondering whether anyone would be able to deal with his argument, and I was quite dumbfounded when right away he could not resist your argument’s first onslaught. I should not wonder therefore if that of Cadmus suffered the same fate.

Socrates:: My good sir, do not boast, lest some malign influence upset the argument we are about to make. However, we leave that to the care of the god, but let us come to grips with it in the Homeric fashion, to see if there is anything in what you say. The sum of your problem is this: you consider that the soul must be proved to be immortal and indestructible before a philosopher on the point of death, who is confident that he will fare much better in the underworld than if he had led any other kind of life, can avoid being foolish and simple-minded in this confidence. To prove that the soul is strong, that it is divine, that it existed before we were born as men, all this, you say, does not show the soul to be immortal but only long-lasting. That it existed for a very long time before, that it knew much and acted much, makes it no more immortal because of that; indeed, its very entering into a human body was the beginning of its destruction, like a disease; it would live that life in distress and would in the end be destroyed in what we call death. You say it makes no difference whether it enters a body once or many times as far as the fear of each of us is concerned, for it is natural for a man who is no fool to be afraid, if he does not know and cannot prove that the soul is immortal. This, I think, is what you maintain, Cebes; I deliberately repeat it often, in order that no point may escape us, and that you may add or subtract something if you wish.

Cebes:: “There is nothing that I want to add or subtract at the moment. That is what I say.”

Phaedo:: Socrates paused for a long time, deep in thought. He then said:

Socrates:: “This is no unimportant problem that you raise, Cebes, for it requires a thorough investigation of the cause of generation and destruction. I will, if you wish, give you an account of my experience in these matters. Then if something I say seems useful to you, make use of it to persuade us of your position.”

Cebes:: I surely do wish that.

Socrates:: Listen then, and I will, Cebes. When I was a young man I was wonderfully keen on that wisdom which they call natural science, for I thought it splendid to know the causes of everything, why it comes to be, why it perishes and why it exists. I was often changing my mind in the investigation, in the first instance, of questions such as these: Are living creatures nurtured when heat and cold produce a kind of putrefaction, as some say? Do we think with our blood, or air, or fire, or none of these, and does the brain provide our senses of hearing and sight and smell, from which come memory and opinion, and from memory and opinion which has become stable, comes knowledge? Then again, as I investigated how these things perish and what happens to things in the sky and on the earth, finally I became convinced that I have no natural aptitude at all for that kind of investigation, and of this I will give you sufficient proof. This investigation made me quite blind even to those things which I and others thought that I clearly knew before, so that I unlearned what I thought I knew before, about many other things and specifically about how men grew. I thought before that it was obvious to anybody that men grew through eating and drinking, for food adds flesh to flesh and bones to bones, and in the same way appropriate parts were added to all other parts of the body, so that the man grew from an earlier small bulk to a large bulk later, and so a small man became big. That is what I thought then. Do you not think it was reasonable?

Cebes:: I do.

Socrates:: Then further consider this: I thought my opinion was satisfactory, that when a large man stood by a small one he was taller by a head, and so a horse was taller than a horse. Even clearer than this, I thought that ten was more than eight because two had been added, and that a two-cubit length is larger than a cubit because it surpasses it by half its length.

Cebes:: And what do you think now about those things?

Socrates:: That I am far, by Zeus, from believing that I know the cause of any of those things. I will not even allow myself to say that where one is added to one either the one to which it is added or the one that is added becomes two, or that the one added and the one to which it is added become two because of the addition of the one to the other. I wonder that, when each of them is separate from the other, each of them is one, nor are they then two, but that, when they come near to one another, this is the cause of their becoming two, the coming together and being placed closer to one another. Nor can I any longer be persuaded that when one thing is divided, this division is the cause of its becoming two, for just now the cause of becoming two was the opposite. At that time it was their coming close together and one was added to the other, but now it is because one is taken and separated from the other.

I do not any longer persuade myself that I know why a unit or anything else comes to be, or perishes or exists by the old method of investigation, and I do not accept it, but I have a confused method of my own. One day I heard someone reading, as from a book of Anaxagoras, and saying that it is Mind that directs and is the cause of everything. I was delighted with this cause and it seemed to me good, in a way, that Mind should be the cause of all. I thought that if this were so, the directing Mind would direct everything and arrange each thing in the way that was best. If then one wished to know the cause of each thing, why it comes to be or perishes or exists, one had to find what was the best way for it to be, or to be acted upon, or to act. On these premises then it befitted a man to investigate only, about this and other things, what is best. The same man must inevitably also know what is worse, for that is part of the same knowledge. As I reflected on this subject I was glad to think that I had found in Anaxagoras a teacher about the cause of things after my own heart, and that he would tell me, first, whether the earth is flat or round, and then would explain why it is so of necessity, saying which is better, and that it was better to be so. If he said it was in the middle of the universe, he would go on to show that it was better for it to be in the middle, and if he showed me those things I should be prepared never to desire any other kind of cause. I was ready to find out in the same way about the sun and the moon and the other heavenly bodies, about their relative speed, their turnings and whatever else happened to them, how it is best that each should act or be acted upon. I never thought that Anaxagoras, who said that those things were directed by Mind, would bring in any other cause for them than that it was best for them to be as they are. Once he had given the best for each as the cause for each and the general cause of all, I thought he would go on to explain the common good for all, and I would not have exchanged my hopes for a fortune. I eagerly acquired his books and read them as quickly as I could in order to know the best and the worst as soon as possible.

This wonderful hope was dashed as I went on reading and saw that the man made no use of Mind, nor gave it any responsibility for the management of things, but mentioned as causes air and ether and water and many other strange things. That seemed to me much like saying that Socrates' actions are all due to his mind, and then in trying to tell the causes of everything I do, to say that the reason that I am sitting here is because my body consists of bones and sinews, because the bones are hard and are separated by joints, that the sinews are such as to contract and relax, that they surround the bones along with flesh and skin which hold them together, then as the bones are hanging in their sockets, the relaxation and contraction of the sinews enable me to bend my limbs, and that is the cause of my sitting here with my limbs bent.

Again, he would mention other such causes for my talking to you: sounds and air and hearing, and a thousand other such things, but he would neglect to mention the true causes, that, after the Athenians decided it was better to condemn me, for this reason it seemed best to me to sit here and more right to remain and to endure whatever penalty they ordered. For by the dog, I think these sinews and bones could long ago have been in Megara or among the Boeotians, taken there by my belief as to the best course, if I had not thought it more right and honorable to endure whatever penalty the city ordered rather than escape and run away. To call those things causes is too absurd. If someone said that without bones and sinews and all such things, I should not be able to do what I decided, he would be right, but surely to say that they are the cause of what I do, and not that I have chosen the best course, even though I act with my mind, is to speak very lazily and carelessly. Imagine not being able to distinguish the real cause from that without which the cause would not be able to act as a cause. It is what the majority appear to do, like people groping in the dark; they call it a cause, thus giving it a name that does not belong to it. That is why one man surrounds the earth with a vortex to make the heavens keep it in place, another makes the air support it like a wide lid. As for their capacity of being in the best place they could possibly be put, this they do not look for, nor do they believe it to have any divine force, but they believe that they will some time discover a stronger and more immortal Atlas to hold everything together more, and they do not believe that the truly good and “binding” binds and holds them together. I would gladly become the disciple of any man who taught the workings of that kind of cause. However, since I was deprived and could neither discover it myself nor learn it from another, do you wish me to give you an explanation of how, as a second best, I busied myself with the search for the cause, Cebes?

Cebes:: I would wish it above all else.

Socrates:: After this, when I had wearied of investigating things, I thought that I must be careful to avoid the experience of those who watch an eclipse of the sun, for some of them ruin their eyes unless they watch its reflection in water or some such material. A similar thought crossed my mind, and I feared that my soul would be altogether blinded if I looked at things with my eyes and tried to grasp them with each of my senses. So I thought I must take refuge in discussions and investigate the truth of things by means of words. However, perhaps this analogy is inadequate, for I certainly do not admit that one who investigates things by means of words is dealing with images any more than one who looks at facts. However, I started in this manner: taking as my hypothesis in each case the theory that seemed to me the most compelling, I would consider as true, about cause and everything else, whatever agreed with this, and as untrue whatever did not so agree. But I want to put my meaning more clearly for I do not think that you understand me now.

Cebes:: No, by Zeus, not very well.

Socrates:: This, is what I mean. It is nothing new, but what I have never stopped talking about, both elsewhere and in the earlier part of our conversation. I am going to try to show you the kind of cause with which I have concerned myself. I turn back to those oft-mentioned things and proceed from them. I assume the existence of a Beautiful, itself by itself, of a Good and a Great and all the rest. If you grant me these and agree that they exist, I hope to show you the cause as a result, and to find the soul to be immortal.

Cebes:: Take it that I grant you this, and hasten to your conclusion.

Socrates:: Consider then, whether you share my opinion as to what follows, for I think that, if there is anything beautiful besides the Beautiful itself, it is beautiful for no other reason than that it shares in that Beautiful, and I say so with everything. Do you agree to this sort of cause?—

Cebes:: I do.

Socrates:: I no longer understand or recognize those other sophisticated causes, and if someone tells me that a thing is beautiful because it has a bright color or shape or any such thing, I ignore these other reasons—for all these confuse me—but I simply, naively and perhaps foolishly cling to this, that nothing else makes it beautiful other than the presence of, or the sharing in, or however you may describe its relationship to that Beautiful we mentioned, for I will not insist on the precise nature of the relationship, but that all beautiful things are beautiful by the Beautiful. That, I think, is the safest answer I can give myself or anyone else. And if I stick to this I think I shall never fall into error. This is the safe answer for me or anyone else to give, namely, that it is through Beauty that beautiful things are made beautiful. Or do you not think so too?—

Cebes:: I do.

Socrates:: And that it is through Bigness that big things are big and the bigger are bigger, and that smaller things are made small by Smallness?—

Cebes:: Yes.

Socrates:: And you would not accept the statement that one man is taller than another by a head and the shorter man shorter by the same, but you would bear witness that you mean nothing else than that everything that is bigger is made bigger by nothing else than by Bigness, and that is the cause of its being bigger, and the smaller is made smaller only by Smallness and this is why it is smaller. I think you would be afraid that some opposite argument would confront you if you said that someone is bigger or smaller by a head, first, because the bigger is bigger and the smaller smaller by the same, then because the bigger is bigger by a head which is small, and this would be strange, namely, that someone is made bigger by something small. Would you not be afraid of this?

Cebes:: I certainly would.

Phaedo::  said Cebes, laughing.

Socrates:: Then you would be afraid to say that ten is more than eight by two, and that this is the cause of the excess, and not magnitude and because of magnitude, or that two cubits is bigger than one cubit by half and not by Bigness, for this is the same fear.—

Cebes:: Certainly.

Socrates:: Then would you not avoid saying that when one is added to one it is the addition and when it is divided it is the division that is the cause of two? And you would loudly exclaim that you do not know how else each thing can come to be except by sharing in the particular reality in which it shares, and in these cases you do not know of any other cause of becoming two except by sharing in Twoness, and that the things that are to be two must share in this, as that which is to be one must share in Oneness, and you would dismiss these additions and divisions and other such subtleties, and leave them to those wiser than yourself to answer. But you, afraid, as they say, of your own shadow and your inexperience, would cling to the safety of your own hypothesis and give that answer. If someone then attacked your hypothesis itself, you would ignore him and would not answer until you had examined whether the consequences that follow from it agree with one another or contradict one another. And when you must give an account of your hypothesis itself you will proceed in the same way: you will assume another hypothesis, the one which seems to you best of the higher ones until you come to something acceptable, but you will not jumble the two as the debaters do by discussing the hypothesis and its consequences at the same time, if you wish to discover any truth. This they do not discuss at all nor give any thought to, but their wisdom enables them to mix everything up and yet to be pleased with themselves, but if you are a philosopher I think you will do as I say.

Phaedo:: What you say is very true, said Simmias and Cebes together.

Echecrates:: Yes, by Zeus, Phaedo, and they were right, I think he made these things wonderfully clear to anyone of even small intelligence.

Phaedo:: Yes indeed, Echecrates, and all those present thought so too.

Echecrates:: And so do we who were not present but hear of it now. What was said after that?

Phaedo:: As I recall it, when the above had been accepted, and it was agreed that each of the Forms existed, and that other things acquired their name by having a share in them, he followed this up by asking:

Socrates:: If you say these things are so, when you then say that Simmias is taller than Socrates but shorter than Phaedo, do you not mean that there is in Simmias both tallness and shortness?—

Cebes:: I do.

Socrates:: But, do you agree that the words of the statement ‘Simmias is taller than Socrates’ do not express the truth of the matter? It is not, surely, the nature of Simmias to be taller than Socrates because he is Simmias but because of the tallness he happens to have? Nor is he taller than Socrates because Socrates is Socrates, but because Socrates has smallness compared with the tallness of the other?—

Cebes:: True.

Socrates:: Nor is he shorter than Phaedo because Phaedo is Phaedo, but because Phaedo has tallness compared with the shortness of Simmias?—

Cebes:: That is so.

Socrates:: So then Simmias is called both short and tall, being between the two, presenting his shortness to be overcome by the tallness of one, and his tallness to overcome the shortness of the other.

Phaedo:: He smilingly added;

Socrates:: I seem to be going to talk like a book, but it is as I say.

Phaedo:: The other agreed.

Socrates:: My purpose is that you may agree with me. Now it seems to me that not only Tallness itself is never willing to be tall and short at the same time, but also that the tallness in us will never admit the short or be overcome, but one of two things happens: either it flees and retreats whenever its opposite, the short, approaches, or it is destroyed by its approach. It is not willing to endure and admit shortness and be other than it was, whereas I admit and endure shortness and still remain the same person and am this short man. But Tallness, being tall, cannot venture to be small. In the same way, the short in us is unwilling to become or to be tall ever, nor does any other of the opposites become or be its opposite while still being what it was; either it goes away or is destroyed when that happens.—

Cebes:: I altogether agree.

Phaedo:: When he heard this, someone of those present—I have no clear memory of who it was—said:

Someone:: “By the gods, did we not agree earlier in our discussion to the very opposite of what is now being said, namely, that the larger came from the smaller and the smaller from the larger, and that this simply was how opposites came to be, from their opposites, but now I think we are saying that this would never happen?”

Phaedo:: On hearing this, Socrates inclined his head towards the speaker and said:

Socrates:: “You have bravely reminded us, but you do not understand the difference between what is said now and what was said then, which was that an opposite thing came from an opposite thing; now we say that the opposite itself could never become opposite to itself, neither that in us nor that in nature. Then, my friend, we were talking of things that have opposite qualities and naming these after them, but now we say that these opposites themselves, from the presence of which in them things get their name, never can tolerate the coming to be from one another.”

Phaedo:: At the same time he looked to Cebes and said:

Socrates:: “Does anything of what this man says also disturb you?”

Cebes:: Not at the moment, but I do not deny that many things do disturb me.

Socrates:: We are altogether agreed then, that an opposite will never be opposite to itself.—

Cebes:: Entirely agreed.

Socrates:: Consider then whether you will agree to this further point. There is something you call hot and something you call cold.—

Cebes:: There is.

Socrates:: Are they the same as what you call snow and fire?—

Cebes:: By Zeus, no.

Socrates:: So the hot is something other than fire, and the cold is something other than snow?—

Cebes:: Yes.

Socrates:: You think, I believe, that being snow it will not admit the hot, as we said before, and remain what it was and be both snow and hot, but when the hot approaches it will either retreat before it or be destroyed.—

Cebes:: Quite so.

Socrates:: So fire, as the cold approaches, will either go away or be destroyed; it will never venture to admit coldness and remain what it was, fire and cold.—

Cebes:: What you say is true.

Socrates:: It is true then about some of these things that not only the Form itself deserves its own name for all time, but there is something else that is not the Form but has its character whenever it exists. Perhaps I can make my meaning clearer: the Odd must always be given this name we now mention. Is that not so?—

Cebes:: Certainly.

Socrates:: Is it the only one of existing things to be called odd?—this is my question—or is there something else than the Odd which one must nevertheless also always call odd, as well as by its own name, because it is such by nature as never to be separated from the Odd? I mean, for example, the number three and many others. Consider three: do you not think that it must always be called both by its own name and by that of the Odd, which is not the same as three? That is the nature of three, and of five, and of half of all the numbers; each of them is odd, but it is not the Odd. Then again, two and four and the whole other column of numbers; each of them, while not being the same as the Even, is always even. Do you not agree?—

Cebes:: Of course.

Socrates:: Look now. What I want to make clear is this: not only do those opposites not admit each other, but this is also true of those things which, while not being opposite to each other yet always contain the opposites, and it seems that these do not admit that Form which is opposite to that which is in them; when it approaches them, they either perish or give way. Shall we not say that three will perish or undergo anything before, while remaining three, becoming even?—

Cebes:: Certainly.

Socrates:: Yet surely two is not the opposite of three?—

Cebes:: Indeed it is not.

Socrates:: It is then not only opposite Forms that do not admit each other's approach, but also some other things that do not admit the onset of opposites.—

Cebes:: Very true.

Socrates:: Do you then want us, if we can, to define what these are?—

Cebes:: I surely do.

Socrates:: Would they be the things that are compelled by whatever occupies them not only to contain that thing's Form but also always that of some opposite?—

Cebes:: How do you mean?

Socrates:: As we were saying just now, you surely know that what the Form of three occupies must not only be three but also odd.—

Cebes:: Certainly.

Socrates:: And we say that the opposite Form to the Form that achieves this result could never come to it.—

Cebes:: It could not.

Socrates:: Now it is Oddness that has done this?—

Cebes:: Yes.

Socrates:: And opposite to this is the Form of the Even?—

Cebes:: Yes.

Socrates:: So then the Form of the Even will never come to three?—

Cebes:: Never.

Socrates:: Then three has no share in the Even?—

Cebes:: Never.

Socrates:: So three is uneven?—

Cebes:: Yes.

Socrates:: As for what I said we must define, that is, what kind of things, while not being opposites to something, yet do not admit the opposite, as for example the triad, though it is not the opposite of the Even, yet does not admit it because it always brings along the opposite of the Even, and so the dyad in relation to the Odd, fire to the Cold, and very many other things, see whether you would define it thus: Not only does the opposite not admit its opposite, but that which brings along some opposite into that which it occupies, that which brings this along will not admit the opposite to that which it brings along. Refresh your memory, it is no worse for being heard often. Five does not admit the form of the Even, nor will ten, its double, admit the form of the Odd. The double itself is an opposite of something else, yet it will not admit the form of the Odd. Nor do one-and-a-half and other such fractions admit the form of the Whole, nor will one-third, and so on, if you follow me and agree to this.

Cebes:: I certainly agree, and I follow you.

Socrates:: Tell me again from the beginning, and do not answer in the words of the question, but do as I do. I say that beyond that safe answer, which I spoke of first, I see another safe answer. If you should ask me what, coming into a body, makes it hot, my reply would not be that safe and ignorant one, that it is heat, but our present argument provides a more sophisticated answer, namely, fire, and if you ask me what, on coming into a body, makes it sick, I will not say sickness but fever. Nor, if asked the presence of what in a number makes it odd, I will not say oddness but oneness, and so with other things. See if you now sufficiently understand what I want.—

Cebes:: Quite sufficiently.

Socrates:: Answer me then, what is it that, present in a body, makes it living?—

Cebes:: A soul.

Socrates:: And is that always so?—

Cebes:: Of course.

Socrates:: Whatever the soul occupies, it always brings life to it?—

Cebes:: It does.

Socrates:: Is there, or is there not, an opposite to life?—

Cebes:: There is.

Socrates:: What is it?—

Cebes:: Death.

Socrates:: So the soul will never admit the opposite of that which it brings along, as we agree from what has been said?

Cebes:: Most certainly.

Socrates:: Well, and what do we call that which does not admit the form of the even?—

Cebes:: The uneven.

Socrates:: What do we call that which will not admit the just and that which will not admit the musical?

Cebes:: The unmusical, and the other the unjust.

Socrates:: Very well, what do we call that which does not admit death?

Cebes:: The deathless.

Socrates:: Now the soul does not admit death?—

Cebes:: No.

Socrates:: So the soul is deathless?—

Cebes:: It is.

Socrates:: Very well. Shall we say that this has been proved, do you think?

Cebes:: Quite adequately proved, Socrates.

Socrates:: Well now, Cebes, if the uneven were of necessity indestructible, surely three would be indestructible?—

Cebes:: Of course.

Socrates:: And if the non-hot were of necessity indestructible, then whenever anyone brought heat to snow, the snow would retreat safe and unthawed, for it could not be destroyed, nor again could it stand its ground and admit the heat?—

Cebes:: What you say is true.

Socrates:: In the same way, if the non-cold were indestructible, then when some cold attacked the fire, it would neither be quenched nor destroyed, but retreat safely.—

Cebes:: Necessarily.

Socrates:: Must then the same not be said of the deathless? If the deathless is also indestructible, it is impossible for the soul to be destroyed when death comes upon it. For it follows from what has been said that it will not admit death or be dead, just as three, we said, will not be even nor will the odd; nor will fire be cold, nor the heat that is in the fire. But, someone might say, what prevents the odd, while not becoming even as has been agreed, from being destroyed, and the even to come to be instead? We could not maintain against the man who said this that it is not destroyed, for the uneven is not indestructible. If we had agreed that it was indestructible we could easily have maintained that at the coming of the even, the odd and the three have gone away and the same would hold for fire and the hot and the other things.—

Cebes:: Surely.

Socrates:: And so now, if we are agreed that the deathless is indestructible, the soul, besides being deathless, is indestructible. If not, we need another argument.—

Cebes:: There is no need for one as far as that goes, for hardly anything could resist destruction if the deathless, which lasts forever, would admit destruction.

Socrates:: All would agree, that the god, and the Form of life itself, and anything that is deathless, are never destroyed.—

Cebes:: All men would agree, by Zeus, to that, and the gods, I imagine, even more so.

Socrates:: If the deathless is indestructible, then the soul, if it is deathless, would also be indestructible?—

Cebes:: Necessarily.

Socrates:: Then when death comes to man, the mortal part of him dies, it seems, but his deathless part goes away safe and indestructible, yielding the place to death.—

Cebes:: So it appears.

Socrates:: Therefore the soul, Cebes, is most certainly deathless and indestructible and our souls will really dwell in the underworld.—

Cebes:: I have nothing more to say against that, Socrates, nor can I doubt your arguments. If Simmias here or someone else has something to say, he should not remain silent, for I do not know to what further occasion other than the present he could put it off if he wants to say or to hear anything on these subjects.

Simmias:: Certainly, I myself have no remaining grounds for doubt after what has been said; nevertheless, in view of the importance of our subject and my low opinion of human weakness, I am bound still to have some private misgivings about what we have said.

Socrates:: You are not only right to say this, Simmias, but our first hypotheses require clearer examination, even though we find them convincing. And if you analyze them adequately, you will, I think, follow the argument as far as a man can and if the conclusion is clear, you will look no further.—

Simmias:: That is true.

Socrates:: It is right to think then, gentlemen, that if the soul is immortal, it requires our care not only for the time we call our life, but for the sake of all time, and that one is in terrible danger if one does not give it that care. If death were escape from everything, it would be a great boon to the wicked to get rid of the body and of their wickedness together with their soul. But now that the soul appears to be immortal, there is no escape from evil or salvation for it except by becoming as good and wise as possible, for the soul goes to the underworld possessing nothing but its education and upbringing, which are said to bring the greatest benefit or harm to the dead right at the beginning of the journey yonder.

We are told that when each person dies, the guardian spirit who was allotted to him in life proceeds to lead him to a certain place, whence those who have been gathered together there must, after being judged, proceed to the underworld with the guide who has been appointed to lead them thither from here. Having there undergone what they must and stayed there the appointed time, they are led back here by another guide after long periods of time. The journey is not as Aeschylus' Telephus describes it. He says that only one single path leads to Hades, but I think it is neither one nor simple, for then there would be no need of guides; one could not make any mistake if there were but one path. As it is, it is likely to have many forks and crossroads; and I base this judgment on the sacred rites and customs here.

The well-ordered and wise soul follows the guide and is not without familiarity with its surroundings, but the soul that is passionately attached to the body, as I said before, hovers around it and the visible world for a long time, struggling and suffering much until it is led away by force and with difficulty by its appointed spirit. When the impure soul which has performed some impure deed joins the others after being involved in unjust killings, or committed other crimes which are akin to these and are actions of souls of this kind, everybody shuns it and turns away, unwilling to be its fellow traveler or its guide; such a soul wanders alone completely at a loss until a certain time arrives and it is forcibly led to its proper dwelling place. On the other hand, the soul that has led a pure and moderate life finds fellow travelers and gods to guide it, and each of them dwells in a place suited to it.

There are many strange places upon the earth, and the earth itself is not such as those who are used to discourse upon it believe it to be in nature or size, as someone has convinced me.

Simmias:: "What do you mean, Socrates? I have myself heard many things said about the earth, but certainly not the things that convince you. I should be glad to hear them."

Socrates:: Indeed, Simmias, I do not think it requires the skill of Glaucus to tell you what they are, but to prove them true requires more than that skill, and I should perhaps not be able to do so. Also, even if I had the knowledge, my remaining time would not be long enough to tell the tale. However, nothing prevents my telling you what I am convinced is the shape of the earth and what its regions are.

Simmias:: Even that is sufficient.

Socrates:: Well then, the first thing of which I am convinced is that if the earth is a sphere in the middle of the heavens, it has no need of air or any other force to prevent it from falling. The homogeneous nature of the heavens on all sides and the earth's own equipoise are sufficient to hold it, for an object balanced in the middle of something homogeneous will have no tendency to incline more in any direction than any other but will remain unmoved. This, is the first point of which I am persuaded.

Simmias:: And rightly so.

Socrates:: Further, the earth is very large, and we live around the sea in a small portion of it between Phasis and the pillars of Heracles, like ants or frogs around a swamp; many other peoples live in many such parts of it. Everywhere about the earth there are numerous hollows of many kinds and shapes and sizes into which the water and the mist and the air have gathered. The earth itself is pure and lies in the pure sky where the stars are situated, which the majority of those who discourse on these subjects call the ether. The water and mist and air are the sediment of the ether and they always flow into the hollows of the earth. We, who dwell in the hollows of it, are unaware of this and we think that we live above, on the surface of the earth. It is as if someone who lived deep down in the middle of the ocean thought he was living on its surface. Seeing the sun and the other heavenly bodies through the water, he would think the sea to be the sky; because he is slow and weak, he has never reached the surface of the sea or risen with his head above the water or come out of the sea to our region here, nor seen how much purer and more beautiful it is than his own region, nor has he ever heard of it from anyone who has seen it.

Our experience is the same: living in a certain hollow of the earth, we believe that we live upon its surface; the air we call the heavens, as if the stars made their way through it; this too is the same: because of our weakness and slowness we are not able to make our way to the upper limit of the air; if anyone got to this upper limit, if anyone came to it or reached it on wings and his head rose above it, then just as fish on rising from the sea see things in our region, he would see things there and, if his nature could endure to contemplate them, he would know that there is the true heaven, the true light and the true earth, for the earth here, these stones and the whole region, are spoiled and eaten away, just as things in the sea are by the salt water.

Nothing worth mentioning grows in the sea, nothing, one might say, is fully developed; there are caves and sand and endless slime and mud wherever there is earth—not comparable in any way with the beauties of our region. So those things above are in their turn far superior to the things we know. Indeed, if this is the moment to tell a tale, Simmias, it is worth hearing about the nature of things on the surface of the earth under the heavens.

Simmias:: At any rate, Socrates, we should be glad to hear this story.

Socrates:: Well then, my friend, in the first place it is said that the earth, looked at from above, looks like those spherical balls made up of twelve pieces of leather; it is multi-colored, and of these colors those used by our painters give us an indication; up there the whole earth has these colors, but much brighter and purer than these; one part is sea-green and of marvelous beauty, another is golden, another is white, whiter than chalk or snow; the earth is composed also of the other colors, more numerous and beautiful than any we have seen. The very hollows of the earth, full of water and air, gleaming among the variety of other colors, present a color of their own so that the whole is seen as a continuum of variegated colors. On the surface of the earth the plants grow with corresponding beauty, the trees and the flowers and the fruits, and so with the hills and the stones, more beautiful in their smoothness and transparency and color. Our precious stones here are but fragments, our cornelians, jaspers, emeralds and the rest. All stones there are of that kind, and even more beautiful. The reason is that there they are pure, not eaten away or spoiled by decay and brine, or corroded by the water and air which have flowed into the hollows here and bring ugliness and disease upon earth, stones, the other animals and plants. The earth itself is adorned with all these things, and also with gold and silver and other metals. These stand out, being numerous and massive and occurring everywhere, so that the earth is a sight for the blessed. There are many other living creatures upon the earth, and also men, some living inland, others at the edge of the air, as we live on the edge of the sea, others again live on islands surrounded by air close to the mainland. In a word, what water and the sea are to us, the air is to them and the ether is to them what the air is to us. The climate is such that they are without disease, and they live much longer than people do here; their eyesight, hearing and intelligence and all such are as superior to ours as air is superior to water and ether to air in purity; they have groves and temples dedicated to the gods, in which the gods really dwell, and they communicate with them by speech and prophecy and by the sight of them; they see the sun and moon and stars as they are, and in other ways their happiness is in accord with this.

This then is the nature of the earth as a whole and of its surroundings; around the whole of it there are many regions in the hollows; some are deeper and more open than that in which we live; others are deeper and have a narrower opening than ours, and there are some that have less depth and more width. All these are connected with each other below the surface of the earth in many places by narrow and broader channels, and thus have outlets through which much water flows from one to another as into mixing bowls; huge rivers of both hot and cold water thus flow beneath the earth eternally, much fire and large rivers of fire, and many of wet mud, both more pure and more muddy, such as those flowing in advance of the lava and the stream of lava itself in Sicily. These streams then fill up every and all regions as the flow reaches each, and all these places move up and down with the oscillating movement of the earth. The natural cause of the oscillation is as follows: one of the hollows of the earth, which is also the biggest, pierces through the whole earth; it is that which Homer mentioned when he said: “Far down where is the deepest pit below the earth…,” and which he elsewhere, and many other poets, call Tartarus; into this chasm all the rivers flow together, and again flow out of it, and each river is affected by the nature of the land through which it flows. The reason for their flowing into and out of Tartarus is that this water has no bottom or solid base but it oscillates up and down in waves, and the air and wind about it do the same, for they follow it when it flows to this or that part of the earth. Just as when people breathe, the flow of air goes in and out, so here the air oscillates with the water and creates terrible winds as it goes in and out. Whenever the water retreats to what we call the lower part of the earth, it flows into those parts and fills them up as if the water were pumped in; when it leaves that part for this, it fills these parts again, and the parts filled flow through the channels and through the earth and in each case arrive at the places to which the channels lead and create seas and marshes and rivers and springs. From there the waters flow under the earth again, some flowing around larger and more numerous regions, some round smaller and shallower ones, then flow back into Tartarus, some at a point much lower than where they issued forth, others only a little way, but all of them at a lower point, some of them at the opposite side of the chasm, some on the same side; some flow in a wide circle round the earth once or many times like snakes, then go as far down as possible, then go back into the chasm of Tartarus. From each side it is possible to flow down as far as the center, but not beyond, for this part that faces the river flow from either side is steep.

There are many other large rivers of all kinds, and among these there are four of note; the biggest which flows on the outside (of the earth) in a circle is called Oceanus; opposite it and flowing in the opposite direction is the Acheron; it flows through many other deserted regions and further underground makes its way to the Acherusian lake to which the souls of the majority come after death and, after remaining there for a certain appointed time, longer for some, shorter for others, they are sent back to birth as living creatures. The third river issues between the first two, and close to its source it falls into a region burning with much fire and makes a lake larger than our sea, boiling with water and mud. From there it goes in a circle, foul and muddy, and winding on its way it comes, among other places, to the edge of the Acherusian lake but does not mingle with its waters; then, coiling many times underground it flows lower down into Tartarus; this is called the Pyriphlegethon, and its lava streams throw off fragments of it in various parts of the earth. Opposite this the fourth river issues forth, which is called Stygion, and it is said to flow first into a terrible and wild region, all of it blue-gray in color, and the lake that this river forms by flowing into it is called the Styx. As its waters fall into the lake they acquire dread powers; then diving below and winding round it flows in the opposite direction from the Pyriphlegethon and into the opposite side of the Acherusian lake; its waters do not mingle with any other; it too flows in a circle and into Tartarus opposite the Pyriphlegethon. The name of that fourth river, the poets tell us, is Cocytus.

Such is the nature of these things. When the dead arrive at the place to which each has been led by his guardian spirit, they are first judged as to whether they have led a good and pious life. Those who have lived an average life make their way to the Acheron and embark upon such vessels as there are for them and proceed to the lake. There they dwell and are purified by penalties for any wrongdoing they may have committed; they are also suitably rewarded for their good deeds as each deserves. Those who are deemed incurable because of the enormity of their crimes, having committed many great sacrileges or wicked and unlawful murders and other such wrongs—their fitting fate is to be hurled into Tartarus never to emerge from it. Those who are deemed to have committed great but curable crimes, such as doing violence to their father or mother in a fit of temper but who have felt remorse for the rest of their lives, or who have killed someone in a similar manner, these must of necessity be thrown into Tartarus, but a year later the current throws them out, those who are guilty of murder by way of Cocytus, and those who have done violence to their parents by way of the Pyriphlegethon. After they have been carried along to the

Acherusian lake, they cry out and shout, some for those they have killed, others for those they have maltreated, and calling them they then pray to them and beg them to allow them to step out into the lake and to receive them. If they persuade them, they do step out and their punishment comes to an end; if they do not, they are taken back into Tartarus and from there into the rivers, and this does not stop until they have persuaded those they have wronged, for this is the punishment which the judges imposed on them.

Those who are deemed to have lived an extremely pious life are freed and released from the regions of the earth as from a prison; they make their way up to a pure dwelling place and live on the surface of the earth. Those who have purified themselves sufficiently by philosophy live in the future altogether without a body; they make their way to even more beautiful dwelling places which it is hard to describe clearly, nor do we now have the time to do so. Because of the things we have enunciated, Simmias, one must make every effort to share in virtue and wisdom in one's life, for the reward is beautiful and the hope is great.

No sensible man would insist that these things are as I have described them, but I think it is fitting for a man to risk the belief—for the risk is a noble one—that this, or something like this, is true about our souls and their dwelling places, since the soul is evidently immortal, and a man should repeat this to himself as if it were an incantation, which is why I have been prolonging my tale. That is the reason why a man should be of good cheer about his own soul, if during life he has ignored the pleasures of the body and its ornamentation as of no concern to him and doing him more harm than good, but has seriously concerned himself with the pleasures of learning, and adorned his soul not with alien but with its own ornaments, namely, moderation, righteousness, courage, freedom and truth, and in that state awaits his journey to the underworld.

Now you, Simmias, Cebes and the rest of you, will each take that journey at some other time but my fated day calls me now, as a tragic character might say, and it is about time for me to have my bath, for I think it better to have it before I drink the poison and save the women the trouble of washing the corpse.

Phaedo:: When Socrates had said this Crito spoke.

Crito:: Very well, Socrates, what are your instructions to me and the others about your children or anything else? What can we do that would please you most?—

Socrates:: Nothing new, Crito, but what I am always saying, that you will please me and mine and yourselves by taking good care of your own selves in whatever you do, even if you do not agree with me now, but if you neglect your own selves, and are unwilling to live following the tracks, as it were, of what we have said now and on previous occasions, you will achieve nothing even if you strongly agree with me at this moment.

Crito:: We shall be eager to follow your advice, but how shall we bury you?

Socrates:: In any way you like, if you can catch me and I do not escape you.

Phaedo:: And laughing quietly, looking at us, he said:

Socrates:: I do not convince Crito that I am this Socrates talking to you here and ordering all I say, but he thinks that I am the thing which he will soon be looking at as a corpse, and so he asks how he shall bury me. I have been saying for some time and at some length that after I have drunk the poison I shall no longer be with you but will leave you to go and enjoy some good fortunes of the blessed, but it seems that I have said all this to him in vain in an attempt to reassure you and myself too. Give a pledge to Crito on my behalf, the opposite pledge to that he gave the jury. He pledged that I would stay, you must pledge that I will not stay after I die, but that I shall go away, so that Crito will bear it more easily when he sees my body being burned or buried and will not be angry on my behalf, as if I were suffering terribly, and so that he should not say at the funeral that he is laying out, or carrying out, or burying Socrates. For know you well, my dear Crito, that to express oneself badly is not only faulty as far as the language goes, but does some harm to the soul. You must be of good cheer, and say you are burying my body, and bury it in any way you like and think most customary.

Phaedo:: After saying this he got up and went to another room to take his bath, and Crito followed him and he told us to wait for him. So we stayed, talking among ourselves, questioning what had been said, and then again talking of the great misfortune that had befallen us. We all felt as if we had lost a father and would be orphaned for the rest of our lives. When he had washed, his children were brought to him—two of his sons were small and one was older—and the women of his household came to him. He spoke to them before Crito and gave them what instructions he wanted. Then he sent the women and children away, and he himself joined us. It was now close to sunset, for he had stayed inside for some time. He came and sat down after his bath and conversed for a short while, when the officer of the Eleven came and stood by him and said:

Jailer:: “I shall not reproach you as I do the others, Socrates. They are angry with me and curse me when obeying the orders of my superiors, I tell them to drink the poison. During the time you have been here I have come to know you in other ways as the noblest, the gentlest and the best man who has ever come here. So now too I know that you will not make trouble for me; you know who is responsible and you will direct your anger against them. You know what message I bring. Fare you well, and try to endure what you must as easily as possible.”

Phaedo:: The officer was weeping as he turned away and went out. Socrates looked up at him and said:

Socrates:: “Fare you well also, we shall do as you bid us.”

Phaedo:: And turning to us he said:

Socrates:: “How pleasant the man is! During the whole time I have been here he has come in and conversed with me from time to time, a most agreeable man. And how genuinely he now weeps for me. Come, Crito, let us obey him. Let someone bring the poison if it is ready; if not, let the man prepare it.”

Crito:: But Socrates, I think the sun still shines upon the hills and has not yet set. I know that others drink the poison quite a long time after they have received the order, eating and drinking quite a bit, and some of them enjoy intimacy with their loved ones. Do not hurry; there is still some time.

Socrates:: It is natural, Crito, for them to do so, for they think they derive some benefit from doing this, but it is not fitting for me. I do not expect any benefit from drinking the poison a little later, except to become ridiculous in my own eyes for clinging to life, and be sparing of it when there is none left. So do as I ask and do not refuse me.

Phaedo:: Hearing this, Crito nodded to the slave who was standing near him; the slave went out and after a time came back with the man who was to administer the poison, carrying it made ready in a cup. When Socrates saw him he said:

Socrates:: “Well, my good man, you are an expert in this, what must one do?”—

Attendant:: ”Just drink it and walk around until your legs feel heavy, and then lie down and it will act of itself.”

Phaedo:: And he offered the cup to Socrates who took it quite cheerfully, Echecrates, without a tremor or any change of feature or color, but looking at the man from under his eyebrows as was his wont, asked:

Socrates:: “What do you say about pouring a libation from this drink? It is allowed?”—

Attendant:: ”We only mix as much as we believe will suffice.”

Socrates:: I understand, but one is allowed, indeed one must, utter a prayer to the gods that the journey from here to yonder may be fortunate. This is my prayer and may it be so.

Phaedo:: And while he was saying this, he was holding the cup, and then drained it calmly and easily. Most of us had been able to hold back our tears reasonably well up till then, but when we saw him drinking it and after he drank it, we could hold them back no longer; my own tears came in floods against my will. So I covered my face. I was weeping for myself, not for him—for my misfortune in being deprived of such a comrade. Even before me, Crito was unable to restrain his tears and got up. Apollodorus had not ceased from weeping before, and at this moment his noisy tears and anger made everybody present break down, except Socrates.

Socrates:: “What is this, you strange fellows. It is mainly for this reason that I sent the women away, to avoid such unseemliness, for I am told one should die in good-omened silence. So keep quiet and control yourselves.”

Phaedo:: His words made us ashamed, and we checked our tears. He walked around, and when he said his legs were heavy he lay on his back as he had been told to do, and the man who had given him the poison touched his body, and after a while tested his feet and legs, pressed hard upon his foot and asked him if he felt this, and Socrates said no. Then he pressed his calves, and made his way up his body and showed us that it was cold and stiff. He felt it himself and said that when the cold reached his heart he would be gone. As his belly was getting cold Socrates uncovered his head—he had covered it—and said—these were his last words—

Socrates:: ”Crito, we owe a cock to Asclepius; make this offering to him and do not forget.”—

Crito:: ”It shall be done, tell us if there is anything else.”

Phaedo:: But there was no answer. Shortly afterwards Socrates made a movement; the man uncovered him and his eyes were fixed. Seeing this Crito closed his mouth and his eyes.

Such was the end of our comrade, Echecrates, a man who, we would say, was of all those we have known the best, and also the wisest and the most upright.

# Phaedo.

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE.

Phaedo, *who is the narrator of the Dialogue to Echecrates of Phlius*. Socrates. Apollodorus. Simmias. Cebes. Crito. Attendant of the Prison.

Scene:—The Prison of Socrates.

Place of the Narration:—Phlius.

Echecrates:: Were you yourself, Phaedo, in the prison with Socrates on the day when he drank the poison?

Phaedo:: Yes, Echecrates, I was.

Echecrates:: I should so like to hear about his death. What did he say in his last hours? We were informed that he died by taking poison, but no one knew anything more; for no Phliasian ever goes to Athens now, and it is a long time since any stranger from Athens has found his way hither; so that we had no clear account.

Phaedo:: Did you not hear of the proceedings at the trial?

Echecrates:: Yes; some one told us about the trial, and we could not understand why, having been condemned, he should have been put to death, not at the time, but long afterwards. What was the reason of this?

Phaedo:: An accident, Echecrates: the stern of the ship which the Athenians send to Delos happened to have been crowned on the day before he was tried.

Echecrates:: What is this ship?

Phaedo:: It is the ship in which, according to Athenian tradition, Theseus went to Crete when he took with him the fourteen youths, and was the savior of them and of himself. And they are said to have vowed to Apollo at the time, that if they were saved they would send a yearly mission to Delos. Now this custom still continues, and the whole period of the voyage to and from Delos, beginning when the priest of Apollo crowns the stern of the ship, is a holy season, during which the city is not allowed to be polluted by public executions; and when the vessel is detained by contrary winds, the time spent in going and returning is very considerable. As I was saying, the ship was crowned on the day before the trial, and this was the reason why Socrates lay in prison and was not put to death until long after he was condemned.

Echecrates:: What was the manner of his death, Phaedo? What was said or done? And which of his friends were with him? Or did the authorities forbid them to be present—so that he had no friends near him when he died?

Phaedo:: No; there were several of them with him.

Echecrates:: If you have nothing to do, I wish that you would tell me what passed, as exactly as you can.

Phaedo:: I have nothing at all to do, and will try to gratify your wish. To be reminded of Socrates is always the greatest delight to me, whether I speak myself or hear another speak of him.

Echecrates:: You will have listeners who are of the same mind with you, and I hope that you will be as exact as you can.

Phaedo:: I had a singular feeling at being in his company. For I could hardly believe that I was present at the death of a friend, and therefore I did not pity him, Echecrates; he died so fearlessly, and his words and bearing were so noble and gracious, that to me he appeared blessed. I thought that in going to the other world he could not be without a divine call, and that he would be happy, if any man ever was, when he arrived there; and therefore I did not pity him as might have seemed natural at such an hour. But I had not the pleasure which I usually feel in philosophical discourse (for philosophy was the theme of which we spoke). I was pleased, but in the pleasure there was also a strange admixture of pain; for I reflected that he was soon to die, and this double feeling was shared by us all; we were laughing and weeping by turns, especially the excitable Apollodorus—you know the sort of man?

Echecrates:: Yes.

Phaedo:: He was quite beside himself; and I and all of us were greatly moved.

Echecrates:: Who were present?

Phaedo:: Of native Athenians there were, besides Apollodorus, Critobulus and his father Crito, Hermogenes, Epigenes, Aeschines, Antisthenes; likewise Ctesippus of the deme of Paeania, Menexenus, and some others; Plato, if I am not mistaken, was ill.

Echecrates:: Were there any strangers?

Phaedo:: Yes, there were; Simmias the Theban, and Cebes, and Phaedondes; Euclid and Terpsion, who came from Megara.

Echecrates:: And was Aristippus there, and Cleombrotus?

Phaedo:: No, they were said to be in Aegina.

Echecrates:: *Any* one else?

Phaedo:: I think that these were nearly all.

Echecrates:: Well, and what did you talk about?

Phaedo:: I will begin at the beginning, and endeavor to repeat the entire conversation. On the previous days we had been in the habit of assembling early in the morning at the court in which the trial took place, and which is not far from the prison. There we used to wait talking with one another until the opening of the doors (for they were not opened very early); then we went in and generally passed the day with Socrates. On the last morning we assembled sooner than usual, having heard on the day before when we quitted the prison in the evening that the sacred ship had come from Delos; and so we arranged to meet very early at the accustomed place. On our arrival the jailer who answered the door, instead of admitting us, came out and told us to stay until he called us. 'For the Eleven,' he said, 'are now with Socrates; they are taking off his chains, and giving orders that he is to die to-day.' He soon returned and said that we might come in. On entering we found Socrates just released from chains, and Xanthippe, whom you know, sitting by him, and holding his child in her arms. When she saw us she uttered a cry and said, as women will:

Xanthippe:: 'O Socrates, this is the last time that either you will converse with your friends, or they with you.'

Phaedo:: Socrates turned to Crito and said:

Socrates:: 'Crito, let some one take her home.'

Phaedo:: Some of Crito's people accordingly led her away, crying out and beating herself. And when she was gone, Socrates, sitting up on the couch, bent and rubbed his leg, saying, as he was rubbing:

Socrates:: How singular is the thing called pleasure, and how curiously related to pain, which might be thought to be the opposite of it; for they are never present to a man at the same instant, and yet he who pursues either is generally compelled to take the other; their bodies are two, but they are joined by a single head. And I cannot help thinking that if Aesop had remembered them, he would have made a fable about God trying to reconcile their strife, and how, when he could not, he fastened their heads together; and this is the reason why when one comes the other follows: as I know by my own experience now, when after the pain in my leg which was caused by the chain pleasure appears to succeed.

Cebes:: I am glad, Socrates, that you have mentioned the name of Aesop. For it reminds me of a question which has been asked by many, and was asked of me only the day before yesterday by Evenus the poet—he will be sure to ask it again, and therefore if you would like me to have an answer ready for him, you may as well tell me what I should say to him:—he wanted to know why you, who never before wrote a line of poetry, now that you are in prison are turning Aesop's fables into verse, and also composing that hymn in honor of Apollo.

Socrates:: Tell him, Cebes what is the truth—that I had no idea of rivaling him or his poems; to do so, as I knew, would be no easy task. But I wanted to see whether I could purge away a scruple which I felt about the meaning of certain dreams. In the course of my life I have often had intimations in dreams 'that I should compose music.' The same dream came to me sometimes in one form, and sometimes in another, but always saying the same or nearly the same words: 'Cultivate and make music,' said the dream.

And hitherto I had imagined that this was only intended to exhort and encourage me in the study of philosophy, which has been the pursuit of my life, and is the noblest and best of music. The dream was bidding me do what I was already doing, in the same way that the competitor in a race is bidden by the spectators to run when he is already running. But I was not certain of this; for the dream might have meant music in the popular sense of the word, and being under sentence of death, and the festival giving me a respite, I thought that it would be safer for me to satisfy the scruple, and, in obedience to the dream, to compose a few verses before I departed. And first I made a hymn in honor of the god of the festival, and then considering that a poet, if he is really to be a poet, should not only put together words, but should invent stories, and that I have no invention, I took some fables of Aesop, which I had ready at hand and which I knew—they were the first I came upon—and turned them into verse. Tell this to Evenus, Cebes, and bid him be of good cheer; say that I would have him come after me if he be a wise man, and not tarry; and that to-day I am likely to be going, for the Athenians say that I must.

Simmias:: What a message for such a man! having been a frequent companion of his I should say that, as far as I know him, he will never take your advice unless he is obliged.

Socrates:: Why,—is not Evenus a philosopher?

Simmias:: I think that he is.

Socrates:: Then he, or any man who has the spirit of philosophy, will be willing to die; but he will not take his own life, for that is held to be unlawful.

Phaedo:: Here he changed his position, and put his legs off the couch on to the ground, and during the rest of the conversation he remained sitting.

Cebes:: Why do you say that a man ought not to take his own life, but that the philosopher will be ready to follow the dying?

Socrates:: And have you, Cebes and Simmias, who are the disciples of Philolaus, never heard him speak of this?

Cebes:: Yes, but his language was obscure, Socrates.

Socrates:: My words, too, are only an echo; but there is no reason why I should not repeat what I have heard: and indeed, as I am going to another place, it is very meet for me to be thinking and talking of the nature of the pilgrimage which I am about to make. What can I do better in the interval between this and the setting of the sun?

Cebes:: Then tell me, Socrates, why is suicide held to be unlawful? as I have certainly heard Philolaus, about whom you were just now asking, affirm when he was staying with us at Thebes; and there are others who say the same, although I have never understood what was meant by any of them.

Socrates:: Do not lose heart and the day may come when you will understand. I suppose that you wonder why, when other things which are evil may be good at certain times and to certain persons, death is to be the only exception, and why, when a man is better dead, he is not permitted to be his own benefactor, but must wait for the hand of another.

Phaedo:: Cebes, laughing gently and speaking in his native Boeotian, said;

Cebes:: Fery true.

Socrates:: I admit the appearance of inconsistency in what I am saying; but there may not be any real inconsistency after all. There is a doctrine whispered in secret that man is a prisoner who has no right to open the door and run away; this is a great mystery which I do not quite understand. Yet I too believe that the gods are our guardians, and that we men are a possession of theirs. Do you not agree?

Cebes:: Yes, I quite agree.

Socrates:: And if one of your own possessions, an ox or an ass, for example, took the liberty of putting himself out of the way when you had given no intimation of your wish that he should die, would you not be angry with him, and would you not punish him if you could?

Cebes:: Certainly.

Socrates:: Then, if we look at the matter thus, there may be reason in saying that a man should wait, and not take his own life until God summons him, as he is now summoning me.

Cebes:: Yes, Socrates, there seems to be truth in what you say. And yet how can you reconcile this seemingly true belief that God is our guardian and we his possessions, with the willingness to die which you were just now attributing to the philosopher? That the wisest of men should be willing to leave a service in which they are ruled by the gods who are the best of rulers, is not reasonable; for surely no wise man thinks that when set at liberty he can take better care of himself than the gods take of him. A fool may perhaps think so—he may argue that he had better run away from his master, not considering that his duty is to remain to the end, and not to run away from the good, and that there would be no sense in his running away. The wise man will want to be ever with him who is better than himself. Now this, Socrates, is the reverse of what was just now said; for upon this view the wise man should sorrow and the fool rejoice at passing out of life.

Phaedo:: The earnestness of Cebes seemed to please Socrates, turning to us.

Socrates:: Here is a man who is always enquiring, and is not so easily convinced by the first thing which he hears.

Simmias:: And certainly the objection which he is now making does appear to me to have some force. For what can be the meaning of a truly wise man wanting to fly away and lightly leave a master who is better than himself? And I rather imagine that Cebes is referring to you; he thinks that you are too ready to leave us, and too ready to leave the gods whom you acknowledge to be our good masters.

Socrates:: Yes; there is reason in what you say. And so you think that I ought to answer your indictment as if I were in a court?

Simmias:: We should like you to do so.

Socrates:: Then I must try to make a more successful defense before you than I did before the judges. For I am quite ready to admit, Simmias and Cebes, that I ought to be grieved at death, if I were not persuaded in the first place that I am going to other gods who are wise and good (of which I am as certain as I can be of any such matters), and secondly (though I am not so sure of this last) to men departed, better than those whom I leave behind; and therefore I do not grieve as I might have done, for I have good hope that there is yet something remaining for the dead, and as has been said of old, some far better thing for the good than for the evil.

Simmias:: But do you mean to take away your thoughts with you, Socrates? Will you not impart them to us?—for they are a benefit in which we too are entitled to share. Moreover, if you succeed in convincing us, that will be an answer to the charge against yourself.

Socrates:: I will do my best. But you must first let me hear what Crito wants; he has long been wishing to say something to me.

Crito:: Only this, Socrates:—the attendant who is to give you the poison has been telling me, and he wants me to tell you, that you are not to talk much; talking, he says, increases heat, and this is apt to interfere with the action of the poison; persons who excite themselves are sometimes obliged to take a second or even a third dose.

Socrates:: Then let him mind his business and be prepared to give the poison twice or even thrice if necessary; that is all.

Crito:: I knew quite well what you would say; but I was obliged to satisfy him.

Socrates:: Never mind him.

And now, O my judges, I desire to prove to you that the real philosopher has reason to be of good cheer when he is about to die, and that after death he may hope to obtain the greatest good in the other world. And how this may be, Simmias and Cebes, I will endeavor to explain. For I deem that the true votary of philosophy is likely to be misunderstood by other men; they do not perceive that he is always pursuing death and dying; and if this be so, and he has had the desire of death all his life long, why when his time comes should he repine at that which he has been always pursuing and desiring?

Phaedo:: Simmias said laughingly:

Simmias:: Though not in a laughing humor, you have made me laugh, Socrates; for I cannot help thinking that the many when they hear your words will say how truly you have described philosophers, and our people at home will likewise say that the life which philosophers desire is in reality death, and that they have found them out to be deserving of the death which they desire.

Socrates:: And they are right, Simmias, in thinking so, with the exception of the words ‘they have found them out;’ for they have not found out either what is the nature of that death which the true philosopher deserves, or how he deserves or desires death. But enough of them:—let us discuss the matter among ourselves. Do we believe that there is such a thing as death?

Simmias:: To be sure.

Socrates:: Is it not the separation of soul and body? And to be dead is the completion of this; when the soul exists in herself, and is released from the body and the body is released from the soul, what is this but death?

Simmias:: Just so.

Socrates:: There is another question, which will probably throw light on our present enquiry if you and I can agree about it:—Ought the philosopher to care about the pleasures—if they are to be called pleasures—of eating and drinking?

Simmias:: Certainly not.

Socrates:: And what about the pleasures of love—should he care for them?

Simmias:: By no means.

Socrates:: And will he think much of the other ways of indulging the body, for example, the acquisition of costly raiment, or sandals, or other adornments of the body? Instead of caring about them, does he not rather despise anything more than nature needs? What do you say?

Simmias:: I should say that the true philosopher would despise them.

Socrates:: Would you not say that he is entirely concerned with the soul and not with the body? He would like, as far as he can, to get away from the body and to turn to the soul.

Simmias:: Quite true.

Socrates:: In matters of this sort philosophers, above all other men, may be observed in every sort of way to dissever the soul from the communion of the body.

Simmias:: Very true.

Socrates:: Whereas, Simmias, the rest of the world are of opinion that to him who has no sense of pleasure and no part in bodily pleasure, life is not worth having; and that he who is indifferent about them is as good as dead.

Simmias:: That is also true.

Socrates:: What again shall we say of the actual acquirement of knowledge?—is the body, if invited to share in the enquiry, a hinderer or a helper? I mean to say, have sight and hearing any truth in them? Are they not, as the poets are always telling us, inaccurate witnesses? and yet, if even they are inaccurate and indistinct, what is to be said of the other senses?—for you will allow that they are the best of them?

Simmias:: Certainly.

Socrates:: Then when does the soul attain truth?—for in attempting to consider anything in company with the body she is obviously deceived.

Simmias:: True.

Socrates:: Then must not true existence be revealed to her in thought, if at all?

Simmias:: Yes.

Socrates:: And thought is best when the mind is gathered into herself and none of these things trouble her—neither sounds nor sights nor pain nor any pleasure,—when she takes leave of the body, and has as little as possible to do with it, when she has no bodily sense or desire, but is aspiring after true being?

Simmias:: Certainly.

Socrates:: And in this the philosopher dishonors the body; his soul runs away from his body and desires to be alone and by herself?

Simmias:: That is true.

Socrates:: Well, but there is another thing, Simmias: Is there or is there not an absolute justice?

Simmias:: Assuredly there is.

Socrates:: And an absolute beauty and absolute good?

Simmias:: Of course.

Socrates:: But did you ever behold any of them with your eyes?

Simmias:: Certainly not.

Socrates:: Or did you ever reach them with any other bodily sense?—and I speak not of these alone, but of absolute greatness, and health, and strength, and of the essence or true nature of everything. Has the reality of them ever been perceived by you through the bodily organs? or rather, is not the nearest approach to the knowledge of their several natures made by him who so orders his intellectual vision as to have the most exact conception of the essence of each thing which he considers?

Simmias:: Certainly.

Socrates:: And he attains to the purest knowledge of them who goes to each with the mind alone, not introducing or intruding in the act of thought sight or any other sense together with reason, but with the very light of the mind in her own clearness searches into the very truth of each; he who has got rid, as far as he can, of eyes and ears and, so to speak, of the whole body, these being in his opinion distracting elements which when they infect the soul hinder her from acquiring truth and knowledge—who, if not he, is likely to attain to the knowledge of true being?

Simmias:: What you say has a wonderful truth in it, Socrates.

Socrates:: And when real philosophers consider all these things, will they not be led to make a reflection which they will express in words something like the following? 'Have we not found,' they will say, 'a path of thought which seems to bring us and our argument to the conclusion, that while we are in the body, and while the soul is infected with the evils of the body, our desire will not be satisfied? and our desire is of the truth. For the body is a source of endless trouble to us by reason of the mere requirement of food; and is liable also to diseases which overtake and impede us in the search after true being: it fills us full of loves, and lusts, and fears, and fancies of all kinds, and endless foolery, and in fact, as men say, takes away from us the power of thinking at all. Whence come wars, and fightings, and factions? whence but from the body and the lusts of the body? Wars are occasioned by the love of money, and money has to be acquired for the sake and in the service of the body; and by reason of all these impediments we have no time to give to philosophy; and, last and worst of all, even if we are at leisure and betake ourselves to some speculation, the body is always breaking in upon us, causing turmoil and confusion in our enquiries, and so amazing us that we are prevented from seeing the truth. It has been proved to us by experience that if we would have pure knowledge of anything we must be quit of the body—the soul in herself must behold things in themselves: and then we shall attain the wisdom which we desire, and of which we say that we are lovers; not while we live, but after death; for if while in company with the body, the soul cannot have pure knowledge, one of two things follows—either knowledge is not to be attained at all, or, if at all, after death. For then, and not till then, the soul will be parted from the body and exist in herself alone. In this present life, I reckon that we make the nearest approach to knowledge when we have the least possible intercourse or communion with the body, and are not surfeited with the bodily nature, but keep ourselves pure until the hour when God himself is pleased to release us. And thus having got rid of the foolishness of the body we shall be pure and hold converse with the pure, and know of ourselves the clear light everywhere, which is no other than the light of truth.' For the impure are not permitted to approach the pure. These are the sort of words, Simmias, which the true lovers of knowledge cannot help saying to one another, and thinking. You would agree; would you not?

Simmias:: Undoubtedly, Socrates.

Socrates:: But, O my friend, if this be true, there is great reason to hope that, going whither I go, when I have come to the end of my journey, I shall attain that which has been the pursuit of my life. And therefore I go on my way rejoicing, and not I only, but every other man who believes that his mind has been made ready and that he is in a manner purified.

Simmias:: Certainly.

Socrates:: And what is purification but the separation of the soul from the body, as I was saying before; the habit of the soul gathering and collecting herself into herself from all sides out of the body; the dwelling in her own place alone, as in another life, so also in this, as far as she can;—the release of the soul from the chains of the body?

Simmias:: Very true.

Socrates:: And this separation and release of the soul from the body is termed death?

Simmias:: To be sure.

Socrates:: And the true philosophers, and they only, are ever seeking to release the soul. Is not the separation and release of the soul from the body their especial study?

Simmias:: That is true.

Socrates:: And, as I was saying at first, there would be a ridiculous contradiction in men studying to live as nearly as they can in a state of death, and yet repining when it comes upon them.

Simmias:: Clearly.

Socrates:: And the true philosophers, Simmias, are always occupied in the practice of dying, wherefore also to them least of all men is death terrible. Look at the matter thus:—if they have been in every way the enemies of the body, and are wanting to be alone with the soul, when this desire of theirs is granted, how inconsistent would they be if they trembled and repined, instead of rejoicing at their departure to that place where, when they arrive, they hope to gain that which in life they desired—and this was wisdom—and at the same time to be rid of the company of their enemy. Many a man has been willing to go to the world below animated by the hope of seeing there an earthly love, or wife, or son, and conversing with them. And will he who is a true lover of wisdom, and is strongly persuaded in like manner that only in the world below he can worthily enjoy her, still repine at death? Will he not depart with joy? Surely he will, O my friend, if he be a true philosopher. For he will have a firm conviction that there, and there only, he can find wisdom in her purity. And if this be true, he would be very absurd, as I was saying, if he were afraid of death.

Simmias:: He would indeed.

Socrates:: And when you see a man who is repining at the approach of death, is not his reluctance a sufficient proof that he is not a lover of wisdom, but a lover of the body, and probably at the same time a lover of either money or power, or both?

Simmias:: Quite so.

Socrates:: And is not courage, Simmias, a quality which is specially characteristic of the philosopher?

Simmias:: Certainly.

Socrates:: There is temperance again, which even by the vulgar is supposed to consist in the control and regulation of the passions, and in the sense of superiority to them—is not temperance a virtue belonging to those only who despise the body, and who pass their lives in philosophy?

Simmias:: Most assuredly.

Socrates:: For the courage and temperance of other men, if you will consider them, are really a contradiction.

Simmias:: How so?

Socrates:: Well, you are aware that death is regarded by men in general as a great evil.

Simmias:: Very true.

Socrates:: And do not courageous men face death because they are afraid of yet greater evils?

Simmias:: That is quite true.

Socrates:: Then all but the philosophers are courageous only from fear, and because they are afraid; and yet that a man should be courageous from fear, and because he is a coward, is surely a strange thing.

Simmias:: Very true.

Socrates:: And are not the temperate exactly in the same case? They are temperate because they are intemperate—which might seem to be a contradiction, but is nevertheless the sort of thing which happens with this foolish temperance. For there are pleasures which they are afraid of losing; and in their desire to keep them, they abstain from some pleasures, because they are overcome by others; and although to be conquered by pleasure is called by men intemperance, to them the conquest of pleasure consists in being conquered by pleasure. And that is what I mean by saying that, in a sense, they are made temperate through intemperance.

Simmias:: Such appears to be the case.

Socrates:: Yet the exchange of one fear or pleasure or pain for another fear or pleasure or pain, and of the greater for the less, as if they were coins, is not the exchange of virtue. O my blessed Simmias, is there not one true coin for which all things ought to be exchanged?—and that is wisdom; and only in exchange for this, and in company with this, is anything truly bought or sold, whether courage or temperance or justice. And is not all true virtue the companion of wisdom, no matter what fears or pleasures or other similar goods or evils may or may not attend her? But the virtue which is made up of these goods, when they are severed from wisdom and exchanged with one another, is a shadow of virtue only, nor is there any freedom or health or truth in her; but in the true exchange there is a purging away of all these things, and temperance, and justice, and courage, and wisdom herself are the purgation of them. The founders of the mysteries would appear to have had a real meaning, and were not talking nonsense when they intimated in a figure long ago that he who passes unsanctified and uninitiated into the world below will lie in a slough, but that he who arrives there after initiation and purification will dwell with the gods. For 'many,' as they say in the mysteries, 'are the thyrsus-bearers, but few are the mystics,'—meaning, as I interpret the words, 'the true philosophers.' In the number of whom, during my whole life, I have been seeking, according to my ability, to find a place;—whether I have sought in a right way or not, and whether I have succeeded or not, I shall truly know in a little while, if God will, when I myself arrive in the other world—such is my belief. And therefore I maintain that I am right, Simmias and Cebes, in not grieving or repining at parting from you and my masters in this world, for I believe that I shall equally find good masters and friends in another world. But most men do not believe this saying; if then I succeed in convincing you by my defense better than I did the Athenian judges, it will be well.

Cebes:: I agree, Socrates, in the greater part of what you say. But in what concerns the soul, men are apt to be incredulous; they fear that when she has left the body her place may be nowhere, and that on the very day of death she may perish and come to an end—immediately on her release from the body, issuing forth dispersed like smoke or air and in her flight vanishing away into nothingness. If she could only be collected into herself after she has obtained release from the evils of which you were speaking, there would be good reason to hope, Socrates, that what you say is true. But surely it requires a great deal of argument and many proofs to show that when the man is dead his soul yet exists, and has any force or intelligence.

Socrates:: True, Cebes; and shall I suggest that we converse a little of the probabilities of these things?

Cebes:: I am sure that I should greatly like to know your opinion about them.

Socrates:: I reckon that no one who heard me now, not even if he were one of my old enemies, the Comic poets, could accuse me of idle talking about matters in which I have no concern:—If you please, then, we will proceed with the enquiry.

Suppose we consider the question whether the souls of men after death are or are not in the world below. There comes into my mind an ancient doctrine which affirms that they go from hence into the other world, and returning hither, are born again from the dead. Now if it be true that the living come from the dead, then our souls must exist in the other world, for if not, how could they have been born again? And this would be conclusive, if there were any real evidence that the living are only born from the dead; but if this is not so, then other arguments will have to be adduced.

Cebes:: Very true.

Socrates:: Then let us consider the whole question, not in relation to man only, but in relation to animals generally, and to plants, and to everything of which there is generation, and the proof will be easier. Are not all things which have opposites generated out of their opposites? I mean such things as good and evil, just and unjust—and there are innumerable other opposites which are generated out of opposites. And I want to show that in all opposites there is of necessity a similar alternation; I mean to say, for example, that anything which becomes greater must become greater after being less.

Cebes:: True.

Socrates:: And that which becomes less must have been once greater and then have become less.

Cebes:: Yes.

Socrates:: And the weaker is generated from the stronger, and the swifter from the slower.

Cebes:: Very true.

Socrates:: And the worse is from the better, and the more just is from the more unjust.

Cebes:: Of course.

Socrates:: And is this true of all opposites? and are we convinced that all of them are generated out of opposites?

Cebes:: Yes.

Socrates:: And in this universal opposition of all things, are there not also two intermediate processes which are ever going on, from one to the other opposite, and back again; where there is a greater and a less there is also an intermediate process of increase and diminution, and that which grows is said to wax, and that which decays to wane?

Cebes:: Yes.

Socrates:: And there are many other processes, such as division and composition, cooling and heating, which equally involve a passage into and out of one another. And this necessarily holds of all opposites, even though not always expressed in words—they are really generated out of one another, and there is a passing or process from one to the other of them?

Cebes:: Very true.

Socrates:: Well, and is there not an opposite of life, as sleep is the opposite of waking?

Cebes:: True.

Socrates:: And what is it?

Cebes:: Death.

Socrates:: And these, if they are opposites, are generated the one from the other, and have their two intermediate processes also?

Cebes:: Of course.

Socrates:: Now, I will analyze one of the two pairs of opposites which I have mentioned to you, and also its intermediate processes, and you shall analyze the other to me. One of them I term sleep, the other waking. The state of sleep is opposed to the state of waking, and out of sleeping waking is generated, and out of waking, sleeping; and the process of generation is in the one case falling asleep, and in the other waking up. Do you agree?

Cebes:: I entirely agree.

Socrates:: Then, suppose that you analyze life and death to me in the same manner. Is not death opposed to life?

Cebes:: Yes.

Socrates:: And they are generated one from the other?

Cebes:: Yes.

Socrates:: What is generated from the living?

Cebes:: The dead.

Socrates:: And what from the dead?

Cebes:: I can only say in answer—the living.

Socrates:: Then the living, whether things or persons, Cebes, are generated from the dead?

Cebes:: That is clear.

Socrates:: Then the inference is that our souls exist in the world below?

Cebes:: That is true.

Socrates:: And one of the two processes or generations is visible—for surely the act of dying is visible?

Cebes:: Surely.

Socrates:: What then is to be the result? Shall we exclude the opposite process? and shall we suppose nature to walk on one leg only? Must we not rather assign to death some corresponding process of generation?

Cebes:: Certainly.

Socrates:: And what is that process?

Cebes:: Return to life.

Socrates:: And return to life, if there be such a thing, is the birth of the dead into the world of the living?

Cebes:: Quite true.

Socrates:: Then here is a new way by which we arrive at the conclusion that the living come from the dead, just as the dead come from the living; and this, if true, affords a most certain proof that the souls of the dead exist in some place out of which they come again.

Cebes:: Yes, Socrates; the conclusion seems to flow necessarily out of our previous admissions.

Socrates:: And that these admissions were not unfair, Cebes, may be shown, I think, as follows: If generation were in a straight line only, and there were no compensation or circle in nature, no turn or return of elements into their opposites, then you know that all things would at last have the same form and pass into the same state, and there would be no more generation of them.

Cebes:: What do you mean?

Socrates:: A simple thing enough, which I will illustrate by the case of sleep. You know that if there were no alternation of sleeping and waking, the tale of the sleeping Endymion would in the end have no meaning, because all other things would be asleep too, and he would not be distinguishable from the rest. Or if there were composition only, and no division of substances, then the chaos of Anaxagoras would come again. And in like manner, my dear Cebes, if all things which partook of life were to die, and after they were dead remained in the form of death, and did not come to life again, all would at last die, and nothing would be alive—what other result could there be? For if the living spring from any other things, and they too die, must not all things at last be swallowed up in death?

Cebes:: There is no escape, Socrates; and to me your argument seems to be absolutely true.

Socrates:: Yes, Cebes, it is and must be so, in my opinion; and we have not been deluded in making these admissions; but I am confident that there truly is such a thing as living again, and that the living spring from the dead, and that the souls of the dead are in existence, and that the good souls have a better portion than the evil.

Cebes:: Your favorite doctrine, Socrates, that knowledge is simply recollection, if true, also necessarily implies a previous time in which we have learned that which we now recollect. But this would be impossible unless our soul had been in some place before existing in the form of man; here then is another proof of the soul's immortality.

Simmias:: But tell me, Cebes, what arguments are urged in favor of this doctrine of recollection. I am not very sure at the moment that I remember them.

Cebes:: One excellent proof is afforded by questions. If you put a question to a person in a right way, he will give a true answer of himself, but how could he do this unless there were knowledge and right reason already in him? And this is most clearly shown when he is taken to a diagram or to anything of that sort.

Socrates:: But if you are still incredulous, Simmias, I would ask you whether you may not agree with me when you look at the matter in another way;—I mean, if you are still incredulous as to whether knowledge is recollection?

Simmias:: Incredulous I am not; but I want to have this doctrine of recollection brought to my own recollection, and, from what Cebes has said, I am beginning to recollect and be convinced: but I should still like to hear what you were going to say.

Socrates:: This is what I would say:—We should agree, if I am not mistaken, that what a man recollects he must have known at some previous time.

Simmias:: Very true.

Socrates:: And what is the nature of this knowledge or recollection? I mean to ask, Whether a person who, having seen or heard or in any way perceived anything, knows not only that, but has a conception of something else which is the subject, not of the same but of some other kind of knowledge, may not be fairly said to recollect that of which he has the conception?

Simmias:: What do you mean?

Socrates:: I mean what I may illustrate by the following instance:—The knowledge of a lyre is not the same as the knowledge of a man?

Simmias:: True.

Socrates:: And yet what is the feeling of lovers when they recognize a lyre, or a garment, or anything else which the beloved has been in the habit of using? Do not they, from knowing the lyre, form in the mind's eye an image of the youth to whom the lyre belongs? And this is recollection. In like manner any one who sees Simmias may remember Cebes; and there are endless examples of the same thing.

Simmias:: Endless, indeed.

Socrates:: And recollection is most commonly a process of recovering that which has been already forgotten through time and inattention.

Simmias:: Very true.

Socrates:: Well; and may you not also from seeing the picture of a horse or a lyre remember a man? and from the picture of Simmias, you may be led to remember Cebes;

Simmias:: True.

Socrates:: Or you may also be led to the recollection of Simmias himself?

Simmias:: Quite so.

Socrates:: And in all these cases, the recollection may be derived from things either like or unlike?

Simmias:: It may be.

Socrates:: And when the recollection is derived from like things, then another consideration is sure to arise, which is—whether the likeness in any degree falls short or not of that which is recollected?

Simmias:: Very true.

Socrates:: And shall we proceed a step further, and affirm that there is such a thing as equality, not of one piece of wood or stone with another, but that, over and above this, there is absolute equality? Shall we say so?

Simmias:: Say so, yes and swear to it, with all the confidence in life.

Socrates:: And do we know the nature of this absolute essence?

Simmias:: To be sure.

Socrates:: And whence did we obtain our knowledge? Did we not see equalities of material things, such as pieces of wood and stones, and gather from them the idea of an equality which is different from them? For you will acknowledge that there is a difference. Or look at the matter in another way:—Do not the same pieces of wood or stone appear at one time equal, and at another time unequal?

Simmias:: That is certain.

Socrates:: But are real equals ever unequal? or is the idea of equality the same as of inequality?.

Simmias:: Impossible, Socrates.

Socrates:: Then these (so-called) equals are not the same with the idea of equality?

Simmias:: I should say, clearly not, Socrates.

Socrates:: And yet from these equals, although differing from the idea of equality, you conceived and attained that idea?

Simmias:: Very true.

Socrates:: Which might be like, or might be unlike them?

Simmias:: Yes.

Socrates:: But that makes no difference: whenever from seeing one thing you conceived another, whether like or unlike, there must surely have been an act of recollection?

Simmias:: Very true.

Socrates:: But what would you say of equal portions of wood and stone, or other material equals? and what is the impression produced by them? Are they equals in the same sense in which absolute equality is equal? or do they fall short of this perfect equality in a measure?

Simmias:: Yes, in a very great measure too.

Socrates:: And must we not allow, that when I or any one, looking at any object, observes that the thing which he sees aims at being some other thing, but falls short of, and cannot be, that other thing, but is inferior, he who makes this observation must have had a previous knowledge of that to which the other, although similar, was inferior?

Simmias:: Certainly.

Socrates:: And has not this been our own case in the matter of equals and of absolute equality?

Simmias:: Precisely.

Socrates:: Then we must have known equality previously to the time when we first saw the material equals, and reflected that all these apparent equals strive to attain absolute equality, but fall short of it?

Simmias:: Very true.

Socrates:: And we recognize also that this absolute equality has only been known, and can only be known, through the medium of sight or touch, or of some other of the senses, which are all alike in this respect?

Simmias:: Yes, Socrates, as far as the argument is concerned, one of them is the same as the other.

Socrates:: From the senses then is derived the knowledge that all sensible things aim at an absolute equality of which they fall short?

Simmias:: Yes.

Socrates:: Then before we began to see or hear or perceive in any way, we must have had a knowledge of absolute equality, or we could not have referred to that standard the equals which are derived from the senses?—for to that they all aspire, and of that they fall short.

Simmias:: No other inference can be drawn from the previous statements.

Socrates:: And did we not see and hear and have the use of our other senses as soon as we were born?

Simmias:: Certainly.

Socrates:: Then we must have acquired the knowledge of equality at some previous time?

Simmias:: Yes.

Socrates:: That is to say, before we were born, I suppose?

Simmias:: True.

Socrates:: And if we acquired this knowledge before we were born, and were born having the use of it, then we also knew before we were born and at the instant of birth not only the equal or the greater or the less, but all other ideas; for we are not speaking only of equality, but of beauty, goodness, justice, holiness, and of all which we stamp with the name of essence was in the dialectical process, both when we ask and when we answer questions. Of all this we may certainly affirm that we acquired the knowledge before birth?

Simmias:: We may.

Socrates:: But if, after having acquired, we have not forgotten what in each case we acquired, then we must always have come into life having knowledge, and shall always continue to know as long as life lasts—for knowing is the acquiring and retaining knowledge and not forgetting. Is not forgetting, Simmias, just the losing of knowledge?

Simmias:: Quite true, Socrates.

Socrates:: But if the knowledge which we acquired before birth was lost by us at birth, and if afterwards by the use of the senses we recovered what we previously knew, will not the process which we call learning be a recovering of the knowledge which is natural to us, and may not this be rightly termed recollection?

Simmias:: Very true.

Socrates:: So much is clear—that when we perceive something, either by the help of sight, or hearing, or some other sense, from that perception we are able to obtain a notion of some other thing like or unlike which is associated with it but has been forgotten. Whence, as I was saying, one of two alternatives follows:—either we had this knowledge at birth, and continued to know through life; or, after birth, those who are said to learn only remember, and learning is simply recollection.

Simmias:: Yes, that is quite true, Socrates.

Socrates:: And which alternative, Simmias, do you prefer? Had we the knowledge at our birth, or did we recollect the things which we knew previously to our birth?

Simmias:: I cannot decide at the moment.

Socrates:: At any rate you can decide whether he who has knowledge will or will not be able to render an account of his knowledge? What do you say?

Simmias:: Certainly, he will.

Socrates:: But do you think that every man is able to give an account of these very matters about which we are speaking?

Simmias:: Would that they could, Socrates, but I rather fear that to-morrow, at this time, there will no longer be any one alive who is able to give an account of them such as ought to be given.

Socrates:: Then you are not of opinion, Simmias, that all men know these things?

Simmias:: Certainly not.

Socrates:: They are in process of recollecting that which they learned before?

Simmias:: Certainly.

Socrates:: But when did our souls acquire this knowledge?—not since we were born as men?

Simmias:: Certainly not.

Socrates:: And therefore, previously?

Simmias:: Yes.

Socrates:: Then, Simmias, our souls must also have existed without bodies before they were in the form of man, and must have had intelligence.

Simmias:: Unless indeed you suppose, Socrates, that these notions are given us at the very moment of birth; for this is the only time which remains.

Socrates:: Yes, my friend, but if so, when do we lose them? for they are not in us when we are born—that is admitted. Do we lose them at the moment of receiving them, or if not at what other time?

Simmias:: No, Socrates, I perceive that I was unconsciously talking nonsense.

Socrates:: Then may we not say, Simmias, that if, as we are always repeating, there is an absolute beauty, and goodness, and an absolute essence of all things; and if to this, which is now discovered to have existed in our former state, we refer all our sensations, and with this compare them, finding these ideas to be pre-existent and our inborn possession—then our souls must have had a prior existence, but if not, there would be no force in the argument? There is the same proof that these ideas must have existed before we were born, as that our souls existed before we were born; and if not the ideas, then not the souls.

Simmias:: Yes, Socrates; I am convinced that there is precisely the same necessity for the one as for the other; and the argument retreats successfully to the position that the existence of the soul before birth cannot be separated from the existence of the essence of which you speak. For there is nothing which to my mind is so patent as that beauty, goodness, and the other notions of which you were just now speaking, have a most real and absolute existence; and I am satisfied with the proof.

Socrates:: Well, but is Cebes equally satisfied? for I must convince him too.

Simmias:: I think that Cebes is satisfied: although he is the most incredulous of mortals, yet I believe that he is sufficiently convinced of the existence of the soul before birth. But that after death the soul will continue to exist is not yet proven even to my own satisfaction. I cannot get rid of the feeling of the many to which Cebes was referring—the feeling that when the man dies the soul will be dispersed, and that this may be the extinction of her. For admitting that she may have been born elsewhere, and framed out of other elements, and was in existence before entering the human body, why after having entered in and gone out again may she not herself be destroyed and come to an end?

Cebes:: Very true, Simmias; about half of what was required has been proven; to wit, that our souls existed before we were born:—that the soul will exist after death as well as before birth is the other half of which the proof is still wanting, and has to be supplied; when that is given the demonstration will be complete.

Socrates:: But that proof, Simmias and Cebes, has been already given, if you put the two arguments together—I mean this and the former one, in which we admitted that everything living is born of the dead. For if the soul exists before birth, and in coming to life and being born can be born only from death and dying, must she not after death continue to exist, since she has to be born again?—Surely the proof which you desire has been already furnished. Still I suspect that you and Simmias would be glad to probe the argument further. Like children, you are haunted with a fear that when the soul leaves the body, the wind may really blow her away and scatter her; especially if a man should happen to die in a great storm and not when the sky is calm.

Echecrates:: Cebes answered with a smile:

Cebes:: Then, Socrates, you must argue us out of our fears—and yet, strictly speaking, they are not our fears, but there is a child within us to whom death is a sort of hobgoblin: him too we must persuade not to be afraid when he is alone in the dark.

Socrates:: Let the voice of the charmer be applied daily until you have charmed away the fear.

Cebes:: And where shall we find a good charmer of our fears, Socrates, when you are gone?

Socrates:: Hellas is a large place, Cebes, and has many good men, and there are barbarous races not a few: seek for him among them all, far and wide, sparing neither pains nor money; for there is no better way of spending your money. And you must seek among yourselves too; for you will not find others better able to make the search.

Cebes:: The search shall certainly be made. And now, if you please, let us return to the point of the argument at which we digressed.

Socrates:: By all means; what else should I please?

Cebes:: Very good.

Socrates:: Must we not ask ourselves what that is which, as we imagine, is liable to be scattered, and about which we fear? and what again is that about which we have no fear? And then we may proceed further to enquire whether that which suffers dispersion is or is not of the nature of soul—our hopes and fears as to our own souls will turn upon the answers to these questions.

Cebes:: Very true.

Socrates:: Now the compound or composite may be supposed to be naturally capable, as of being compounded, so also of being dissolved; but that which is uncompounded, and that only, must be, if anything is, indissoluble.

Cebes:: Yes; I should imagine so.

Socrates:: And the uncompounded may be assumed to be the same and unchanging, whereas the compound is always changing and never the same.

Cebes:: I agree.

Socrates:: Then now let us return to the previous discussion. Is that idea or essence, which in the dialectical process we define as essence or true existence—whether essence of equality, beauty, or anything else—are these essences, I say, liable at times to some degree of change? or are they each of them always what they are, having the same simple self-existent and unchanging forms, not admitting of variation at all, or in any way, or at any time?

Cebes:: They must be always the same, Socrates.

Socrates:: And what would you say of the many beautiful—whether men or horses or garments or any other things which are named by the same names and may be called equal or beautiful,—are they all unchanging and the same always, or quite the reverse? May they not rather be described as almost always changing and hardly ever the same, either with themselves or with one another?

Cebes:: The latter; they are always in a state of change.

Socrates:: And these you can touch and see and perceive with the senses, but the unchanging things you can only perceive with the mind—they are invisible and are not seen?

Cebes:: That is very true.

Socrates:: Well then, let us suppose that there are two sorts of existences—one seen, the other unseen.

Cebes:: Let us suppose them.

Socrates:: The seen is the changing, and the unseen is the unchanging?

Cebes:: That may be also supposed.

Socrates:: And, further, is not one part of us body, another part soul?

Cebes:: To be sure.

Socrates:: And to which class is the body more alike and akin?

Cebes:: Clearly to the seen—no one can doubt that.

Socrates:: And is the soul seen or not seen?

Cebes:: Not by man, Socrates.

Socrates:: And what we mean by ‘seen’ and ‘not seen’ is that which is or is not visible to the eye of man?

Cebes:: Yes, to the eye of man.

Socrates:: And is the soul seen or not seen?

Cebes:: Not seen.

Socrates:: Unseen then?

Cebes:: Yes.

Socrates:: Then the soul is more like to the unseen, and the body to the seen?

Cebes:: That follows necessarily, Socrates.

Socrates:: And were we not saying long ago that the soul when using the body as an instrument of perception, that is to say, when using the sense of sight or hearing or some other sense (for the meaning of perceiving through the body is perceiving through the senses)—were we not saying that the soul too is then dragged by the body into the region of the changeable, and wanders and is confused; the world spins round her, and she is like a drunkard, when she touches change?

Cebes:: Very true.

Socrates:: But when returning into herself she reflects, then she passes into the other world, the region of purity, and eternity, and immortality, and unchangeableness, which are her kindred, and with them she ever lives, when she is by herself and is not let or hindered; then she ceases from her erring ways, and being in communion with the unchanging is unchanging. And this state of the soul is called wisdom?

Cebes:: That is well and truly said, Socrates.

Socrates:: And to which class is the soul more nearly alike and akin, as far as may be inferred from this argument, as well as from the preceding one?

Cebes:: I think, Socrates, that, in the opinion of every one who follows the argument, the soul will be infinitely more like the unchangeable—even the most stupid person will not deny that.

Socrates:: And the body is more like the changing?

Cebes:: Yes.

Socrates:: Yet once more consider the matter in another light: When the soul and the body are united, then nature orders the soul to rule and govern, and the body to obey and serve. Now which of these two functions is akin to the divine? and which to the mortal? Does not the divine appear to you to be that which naturally orders and rules, and the mortal to be that which is subject and servant?

Cebes:: True.

Socrates:: And which does the soul resemble?

Cebes:: The soul resembles the divine, and the body the mortal—there can be no doubt of that, Socrates.

Socrates:: Then reflect, Cebes: of all which has been said is not this the conclusion?—that the soul is in the very likeness of the divine, and immortal, and intellectual, and uniform, and indissoluble, and unchangeable; and that the body is in the very likeness of the human, and mortal, and unintellectual, and multiform, and dissoluble, and changeable. Can this, my dear Cebes, be denied?

Cebes:: It cannot.

Socrates:: But if it be true, then is not the body liable to speedy dissolution? and is not the soul almost or altogether indissoluble?

Cebes:: Certainly.

Socrates:: And do you further observe, that after a man is dead, the body, or visible part of him, which is lying in the visible world, and is called a corpse, and would naturally be dissolved and decomposed and dissipated, is not dissolved or decomposed at once, but may remain for some time, nay even for a long time, if the constitution be sound at the time of death, and the season of the year favorable? For the body when shrunk and embalmed, as the manner is in Egypt, may remain almost entire through infinite ages; and even in decay, there are still some portions, such as the bones and ligaments, which are practically indestructible:—Do you agree?

Cebes:: Yes.

Socrates:: And is it likely that the soul, which is invisible, in passing to the place of the true Hades, which like her is invisible, and pure, and noble, and on her way to the good and wise God, whither, if God will, my soul is also soon to go,—that the soul, I repeat, if this be her nature and origin, will be blown away and destroyed immediately on quitting the body, as the many say? That can never be, my dear Simmias and Cebes. The truth rather is, that the soul which is pure at departing and draws after her no bodily taint, having never voluntarily during life had connection with the body, which she is ever avoiding, herself gathered into herself;—and making such abstraction her perpetual study—which means that she has been a true disciple of philosophy; and therefore has in fact been always engaged in the practice of dying? For is not philosophy the study of death?—

Cebes:: Certainly—

Socrates:: That soul, I say, herself invisible, departs to the invisible world—to the divine and immortal and rational: thither arriving, she is secure of bliss and is released from the error and folly of men, their fears and wild passions and all other human ills, and for ever dwells, as they say of the initiated, in company with the gods. Is not this true, Cebes?

Cebes:: Yes, beyond a doubt.

Socrates:: But the soul which has been polluted, and is impure at the time of her departure, and is the companion and servant of the body always, and is in love with and fascinated by the body and by the desires and pleasures of the body, until she is led to believe that the truth only exists in a bodily form, which a man may touch and see and taste, and use for the purposes of his lusts,—the soul, I mean, accustomed to hate and fear and avoid the intellectual principle, which to the bodily eye is dark and invisible, and can be attained only by philosophy;—do you suppose that such a soul will depart pure and unalloyed?

Cebes:: Impossible.

Socrates:: She is held fast by the corporeal, which the continual association and constant care of the body have wrought into her nature.

Cebes:: Very true.

Socrates:: And this corporeal element, my friend, is heavy and weighty and earthy, and is that element of sight by which a soul is depressed and dragged down again into the visible world, because she is afraid of the invisible and of the world below—prowling about tombs and sepulchers, near which, as they tell us, are seen certain ghostly apparitions of souls which have not departed pure, but are cloyed with sight and therefore visible.

Cebes:: That is very likely, Socrates.

Socrates:: Yes, that is very likely, Cebes; and these must be the souls, not of the good, but of the evil, which are compelled to wander about such places in payment of the penalty of their former evil way of life; and they continue to wander until through the craving after the corporeal which never leaves them, they are imprisoned finally in another body. And they may be supposed to find their prisons in the same natures which they have had in their former lives.

Cebes:: What natures do you mean, Socrates?

Socrates:: What I mean is that men who have followed after gluttony, and wantonness, and drunkenness, and have had no thought of avoiding them, would pass into asses and animals of that sort. What do you think?

Cebes:: I think such an opinion to be exceedingly probable.

Socrates:: And those who have chosen the portion of injustice, and tyranny, and violence, will pass into wolves, or into hawks and kites;—whither else can we suppose them to go?

Cebes:: Yes; with such natures, beyond question.

Socrates:: And there is no difficulty in assigning to all of them places answering to their several natures and propensities?

Cebes:: There is not.

Socrates:: Some are happier than others; and the happiest both in themselves and in the place to which they go are those who have practiced the civil and social virtues which are called temperance and justice, and are acquired by habit and attention without philosophy and mind.

Cebes:: Why are they the happiest?

Socrates:: Because they may be expected to pass into some gentle and social kind which is like their own, such as bees or wasps or ants, or back again into the form of man, and just and moderate men may be supposed to spring from them.

Cebes:: Very likely.

Socrates:: No one who has not studied philosophy and who is not entirely pure at the time of his departure is allowed to enter the company of the Gods, but the lover of knowledge only. And this is the reason, Simmias and Cebes, why the true votaries of philosophy abstain from all fleshly lusts, and hold out against them and refuse to give themselves up to them,—not because they fear poverty or the ruin of their families, like the lovers of money, and the world in general; nor like the lovers of power and honor, because they dread the dishonor or disgrace of evil deeds.

Cebes:: No, Socrates, that would not become them.

Socrates:: No indeed; and therefore they who have any care of their own souls, and do not merely live molding and fashioning the body, say farewell to all this; they will not walk in the ways of the blind: and when philosophy offers them purification and release from evil, they feel that they ought not to resist her influence, and whither she leads they turn and follow.

Cebes:: What do you mean, Socrates?

Socrates:: I will tell you. The lovers of knowledge are conscious that the soul was simply fastened and glued to the body—until philosophy received her, she could only view real existence through the bars of a prison, not in and through herself; she was wallowing in the mire of every sort of ignorance, and by reason of lust had become the principal accomplice in her own captivity. This was her original state; and then, as I was saying, and as the lovers of knowledge are well aware, philosophy, seeing how terrible was her confinement, of which she was to herself the cause, received and gently comforted her and sought to release her, pointing out that the eye and the ear and the other senses are full of deception, and persuading her to retire from them, and abstain from all but the necessary use of them, and be gathered up and collected into herself, bidding her trust in herself and her own pure apprehension of pure existence, and to mistrust whatever comes to her through other channels and is subject to variation; for such things are visible and tangible, but what she sees in her own nature is intelligible and invisible. And the soul of the true philosopher thinks that she ought not to resist this deliverance, and therefore abstains from pleasures and desires and pains and fears, as far as she is able; reflecting that when a man has great joys or sorrows or fears or desires, he suffers from them, not merely the sort of evil which might be anticipated—as for example, the loss of his health or property which he has sacrificed to his lusts—but an evil greater far, which is the greatest and worst of all evils, and one of which he never thinks.

Cebes:: What is it, Socrates?

Socrates:: The evil is that when the feeling of pleasure or pain is most intense, every soul of man imagines the objects of this intense feeling to be then plainest and truest: but this is not so, they are really the things of sight.

Cebes:: Very true.

Socrates:: And is not this the state in which the soul is most enthralled by the body?

Cebes:: How so?

Socrates:: Why, because each pleasure and pain is a sort of nail which nails and rivets the soul to the body, until she becomes like the body, and believes that to be true which the body affirms to be true; and from agreeing with the body and having the same delights she is obliged to have the same habits and haunts, and is not likely ever to be pure at her departure to the world below, but is always infected by the body; and so she sinks into another body and there germinates and grows, and has therefore no part in the communion of the divine and pure and simple.

Cebes:: Most true, Socrates.

Socrates:: And this, Cebes, is the reason why the true lovers of knowledge are temperate and brave; and not for the reason which the world gives.

Cebes:: Certainly not.

Socrates:: Certainly not! The soul of a philosopher will reason in quite another way; she will not ask philosophy to release her in order that when released she may deliver herself up again to the thraldom of pleasures and pains, doing a work only to be undone again, weaving instead of unweaving her Penelope's web. But she will calm passion, and follow reason, and dwell in the contemplation of her, beholding the true and divine (which is not matter of opinion), and thence deriving nourishment. Thus she seeks to live while she lives, and after death she hopes to go to her own kindred and to that which is like her, and to be freed from human ills. Never fear, Simmias and Cebes, that a soul which has been thus nurtured and has had these pursuits, will at her departure from the body be scattered and blown away by the winds and be nowhere and nothing.

Phaedo:: When Socrates had done speaking, for a considerable time there was silence; he himself appeared to be meditating, as most of us were, on what had been said;

only Cebes and Simmias spoke a few words to one another. And Socrates observing them asked what they thought of the argument, and whether there was anything wanting? For, said he;

Socrates:: There are many points still open to suspicion and attack, if any one were disposed to sift the matter thoroughly. Should you be considering some other matter I say no more, but if you are still in doubt do not hesitate to say exactly what you think, and let us have anything better which you can suggest; and if you think that I can be of any use, allow me to help you.

Simmias:: I must confess, Socrates, that doubts did arise in our minds, and each of us was urging and inciting the other to put the question which we wanted to have answered but which neither of us liked to ask, fearing that our importunity might be troublesome at such a time.

Socrates:: O Simmias, what are you saying? I am not very likely to persuade other men that I do not regard my present situation as a misfortune, if I cannot even persuade you that I am no worse off now than at any other time in my life. Will you not allow that I have as much of the spirit of prophecy in me as the swans? For they, when they perceive that they must die, having sung all their life long, do then sing more lustily than ever, rejoicing in the thought that they are about to go away to the god whose ministers they are. But men, because they are themselves afraid of death, slanderously affirm of the swans that they sing a lament at the last, not considering that no bird sings when cold, or hungry, or in pain, not even the nightingale, nor the swallow, nor yet the hoopoe; which are said indeed to tune a lay of sorrow, although I do not believe this to be true of them any more than of the swans. But because they are sacred to Apollo, they have the gift of prophecy, and anticipate the good things of another world; wherefore they sing and rejoice in that day more than ever they did before. And I too, believing myself to be the consecrated servant of the same God, and the fellow-servant of the swans, and thinking that I have received from my master gifts of prophecy which are not inferior to theirs, would not go out of life less merrily than the swans. Never mind then, if this be your only objection, but speak and ask anything which you like, while the eleven magistrates of Athens allow.

Simmias:: Very good, Socrates; then I will tell you my difficulty, and Cebes will tell you his. I feel myself (and I daresay that you have the same feeling), how hard or rather impossible is the attainment of any certainty about questions such as these in the present life. And yet I should deem him a coward who did not prove what is said about them to the uttermost, or whose heart failed him before he had examined them on every side. For he should persevere until he has achieved one of two things: either he should discover, or be taught the truth about them; or, if this be impossible, I would have him take the best and most irrefragable of human theories, and let this be the raft upon which he sails through life—not without risk, as I admit, if he cannot find some word of God which will more surely and safely carry him. And now, as you bid me, I will venture to question you, and then I shall not have to reproach myself hereafter with not having said at the time what I think. For when I consider the matter, either alone or with Cebes, the argument does certainly appear to me, Socrates, to be not sufficient.

Socrates:: I dare say, my friend, that you may be right, but I should like to know in what respect the argument is insufficient.

Simmias:: In this respect:—Suppose a person to use the same argument about harmony and the lyre—might he not say that harmony is a thing invisible, incorporeal, perfect, divine, existing in the lyre which is harmonized, but that the lyre and the strings are matter and material, composite, earthy, and akin to mortality? And when some one breaks the lyre, or cuts and rends the strings, then he who takes this view would argue as you do, and on the same analogy, that the harmony survives and has not perished—you cannot imagine, he would say, that the lyre without the strings, and the broken strings themselves which are mortal remain, and yet that the harmony, which is of heavenly and immortal nature and kindred, has perished—perished before the mortal. The harmony must still be somewhere, and the wood and strings will decay before anything can happen to that. The thought, Socrates, must have occurred to your own mind that such is our conception of the soul; and that when the body is in a manner strung and held together by the elements of hot and cold, wet and dry, then the soul is the harmony or due proportionate admixture of them. But if so, whenever the strings of the body are unduly loosened or overstrained through disease or other injury, then the soul, though most divine, like other harmonies of music or of works of art, of course perishes at once; although the material remains of the body may last for a considerable time, until they are either decayed or burnt. And if any one maintains that the soul, being the harmony of the elements of the body, is first to perish in that which is called death, how shall we answer him?

Phaedo:: Socrates looked fixedly at us as his manner was, and said with a smile:

Socrates:: Simmias has reason on his side; and why does not some one of you who is better able than myself answer him? for there is force in his attack upon me. But perhaps, before we answer him, we had better also hear what Cebes has to say that we may gain time for reflection, and when they have both spoken, we may either assent to them, if there is truth in what they say, or if not, we will maintain our position. Please to tell me then, Cebes, what was the difficulty which troubled you?

Cebes:: I will tell you. My feeling is that the argument is where it was, and open to the same objections which were urged before; for I am ready to admit that the existence of the soul before entering into the bodily form has been very ingeniously, and, if I may say so, quite sufficiently proven; but the existence of the soul after death is still, in my judgment, unproven. Now my objection is not the same as that of Simmias; for I am not disposed to deny that the soul is stronger and more lasting than the body, being of opinion that in all such respects the soul very far excels the body. Well then, says the argument to me, why do you remain unconvinced?—When you see that the weaker continues in existence after the man is dead, will you not admit that the more lasting must also survive during the same period of time? Now I will ask you to consider whether the objection, which, like Simmias, I will express in a figure, is of any weight. The analogy which I will adduce is that of an old weaver, who dies, and after his death somebody says:—He is not dead, he must be alive;—see, there is the coat which he himself wove and wore, and which remains whole and undecayed. And then he proceeds to ask of some one who is incredulous, whether a man lasts longer, or the coat which is in use and wear; and when he is answered that a man lasts far longer, thinks that he has thus certainly demonstrated the survival of the man, who is the more lasting, because the less lasting remains. But that, Simmias, as I would beg you to remark, is a mistake; anyone can see that he who talks thus is talking nonsense. For the truth is, that the weaver aforesaid, having woven and worn many such coats, outlived several of them; and was outlived by the last; but a man is not therefore proved to be slighter and weaker than a coat. Now the relation of the body to the soul may be expressed in a similar figure; and any one may very fairly say in like manner that the soul is lasting, and the body weak and short-lived in comparison. He may argue in like manner that every soul wears out many bodies, especially if a man live many years. While he is alive the body deliquesces and decays, and the soul always weaves another garment and repairs the waste. But of course, whenever the soul perishes, she must have on her last garment, and this will survive her; and then at length, when the soul is dead, the body will show its native weakness, and quickly decompose and pass away. I would therefore rather not rely on the argument from superior strength to prove the continued existence of the soul after death. For granting even more than you affirm to be possible, and acknowledging not only that the soul existed before birth, but also that the souls of some exist, and will continue to exist after death, and will be born and die again and again, and that there is a natural strength in the soul which will hold out and be born many times—nevertheless, we may be still inclined to think that she will weary in the labors of successive births, and may at last succumb in one of her deaths and utterly perish; and this death and dissolution of the body which brings destruction to the soul may be unknown to any of us, for no one of us can have had any experience of it: and if so, then I maintain that he who is confident about death has but a foolish confidence, unless he is able to prove that the soul is altogether immortal and imperishable. But if he cannot prove the soul's immortality, he who is about to die will always have reason to fear that when the body is disunited, the soul also may utterly perish.

Phaedo:: All of us, as we afterwards remarked to one another, had an unpleasant feeling at hearing what they said. When we had been so firmly convinced before, now to have our faith shaken seemed to introduce a confusion and uncertainty, not only into the previous argument, but into any future one; either we were incapable of forming a judgment, or there were no grounds of belief.

Echecrates:: There I feel with you—by heaven I do, Phaedo, and when you were speaking, I was beginning to ask myself the same question: What argument can I ever trust again? For what could be more convincing than the argument of Socrates, which has now fallen into discredit? That the soul is a harmony is a doctrine which has always had a wonderful attraction for me, and, when mentioned, came back to me at once, as my own original conviction. And now I must begin again and find another argument which will assure me that when the man is dead the soul survives. Tell me, I implore you, how did Socrates proceed? Did he appear to share the unpleasant feeling which you mention? or did he calmly meet the attack? And did he answer forcibly or feebly? Narrate what passed as exactly as you can.

Phaedo:: Often, Echecrates, I have wondered at Socrates, but never more than on that occasion. That he should be able to answer was nothing, but what astonished me was, first, the gentle and pleasant and approving manner in which he received the words of the young men, and then his quick sense of the wound which had been inflicted by the argument, and the readiness with which he healed it. He might be compared to a general rallying his defeated and broken army, urging them to accompany him and return to the field of argument.

Echecrates:: What followed?

Phaedo:: You shall hear, for I was close to him on his right hand, seated on a sort of stool, and he on a couch which was a good deal higher. He stroked my head, and pressed the hair upon my neck—he had a way of playing with my hair; and then he said:

Socrates:: To-morrow, Phaedo, I suppose that these fair locks of yours will be severed.

Phaedo:: Yes, Socrates, I suppose that they will.

Socrates:: Not so, if you will take my advice.

Phaedo:: What shall I do with them?

Socrates:: To-day and not to-morrow, if this argument dies and we cannot bring it to life again, you and I will both shave our locks: and if I were you, and the argument got away from me, and I could not hold my ground against Simmias and Cebes, I would myself take an oath, like the Argives, not to wear hair any more until I had renewed the conflict and defeated them.

Phaedo:: Yes; but Heracles himself is said not to be a match for two.

Socrates:: Summon me then and I will be your Iolaus until the sun goes down.

Phaedo:: I summon you rather not as Heracles summoning Iolaus, but as Iolaus might summon Heracles.

Socrates:: That will do as well. But first let us take care that we avoid a danger.

Phaedo:: Of what nature?

Socrates:: Lest we become misologists: no worse thing can happen to a man than this. For as there are misanthropists or haters of men, there are also misologists or haters of ideas, and both spring from the same cause, which is ignorance of the world. Misanthropy arises out of the too great confidence of inexperience;—you trust a man and think him altogether true and sound and faithful, and then in a little while he turns out to be false and knavish; and then another and another, and when this has happened several times to a man, especially when it happens among those whom he deems to be his own most trusted and familiar friends, and he has often quarreled with them, he at last hates all men, and believes that no one has any good in him at all. You must have observed this trait of character?

Phaedo:: I have.

Socrates:: And is not the feeling discreditable? Is it not obvious that such an one having to deal with other men, was clearly without any experience of human nature; for experience would have taught him the true state of the case, that few are the good and few the evil, and that the great majority are in the interval between them.

Phaedo:: What do you mean?

Socrates:: I mean as you might say of the very large and very small—that nothing is more uncommon than a very large or very small man; and this applies generally to all extremes, whether of great and small, or swift and slow, or fair and foul, or black and white: and whether the instances you select be men or dogs or anything else, few are the extremes, but many are in the mean between them. Did you never observe this?

Phaedo:: Yes, I have.

Socrates:: And do you not imagine that if there were a competition in evil, the worst would be found to be very few?

Phaedo:: Yes, that is very likely.

Socrates:: Yes, that is very likely; although in this respect arguments are unlike men—there I was led on by you to say more than I had intended; but the point of comparison was, that when a simple man who has no skill in dialectics believes an argument to be true which he afterwards imagines to be false, whether really false or not, and then another and another, he has no longer any faith left, and great disputers, as you know, come to think at last that they have grown to be the wisest of mankind; for they alone perceive the utter unsoundness and instability of all arguments, or indeed, of all things, which, like the currents in the Euripus, are going up and down in never-ceasing ebb and flow.

Phaedo:: That is quite true.

Socrates:: Yes, Phaedo and how melancholy, if there be such a thing as truth or certainty or possibility of knowledge—that a man should have lighted upon some argument or other which at first seemed true and then turned out to be false, and instead of blaming himself and his own want of wit, because he is annoyed, should at last be too glad to transfer the blame from himself to arguments in general: and for ever afterwards should hate and revile them, and lose truth and the knowledge of realities.

Phaedo:: Yes, indeed; that is very melancholy.

Socrates:: Let us then, in the first place, be careful of allowing or of admitting into our souls the notion that there is no health or soundness in any arguments at all. Rather say that we have not yet attained to soundness in ourselves, and that we must struggle manfully and do our best to gain health of mind—you and all other men having regard to the whole of your future life, and I myself in the prospect of death. For at this moment I am sensible that I have not the temper of a philosopher; like the vulgar, I am only a partisan. Now the partisan, when he is engaged in a dispute, cares nothing about the rights of the question, but is anxious only to convince his hearers of his own assertions. And the difference between him and me at the present moment is merely this—that whereas he seeks to convince his hearers that what he says is true, I am rather seeking to convince myself; to convince my hearers is a secondary matter with me. And do but see how much I gain by the argument. For if what I say is true, then I do well to be persuaded of the truth; but if there be nothing after death, still, during the short time that remains, I shall not distress my friends with lamentations, and my ignorance will not last, but will die with me, and therefore no harm will be done. This is the state of mind, Simmias and Cebes, in which I approach the argument. And I would ask you to be thinking of the truth and not of Socrates: agree with me, if I seem to you to be speaking the truth; or if not, withstand me might and main, that I may not deceive you as well as myself in my enthusiasm, and like the bee, leave my sting in you before I die.

And now let us proceed. And first of all let me be sure that I have in my mind what you were saying. Simmias, if I remember rightly, has fears and misgivings whether the soul, although a fairer and diviner thing than the body, being as she is in the form of harmony, may not perish first. On the other hand, Cebes appeared to grant that the soul was more lasting than the body, but he said that no one could know whether the soul, after having worn out many bodies, might not perish herself and leave her last body behind her; and that this is death, which is the destruction not of the body but of the soul, for in the body the work of destruction is ever going on. Are not these, Simmias and Cebes, the points which we have to consider?

Phaedo:: They both agreed to this statement of them.

Socrates:: And did you deny the force of the whole preceding argument, or of a part only?

Phaedo:: Of a part only, they replied.

Socrates:: And what did you think of that part of the argument in which we said that knowledge was recollection, and hence inferred that the soul must have previously existed somewhere else before she was enclosed in the body?

Phaedo:: Cebes said that he had been wonderfully impressed by that part of the argument, and that his conviction remained absolutely unshaken. Simmias agreed, and added that he himself could hardly imagine the possibility of his ever thinking differently.

Socrates:: But, you will have to think differently, my Theban friend, if you still maintain that harmony is a compound, and that the soul is a harmony which is made out of strings set in the frame of the body; for you will surely never allow yourself to say that a harmony is prior to the elements which compose it.

Simmias:: Never, Socrates.

Socrates:: But do you not see that this is what you imply when you say that the soul existed before she took the form and body of man, and was made up of elements which as yet had no existence? For harmony is not like the soul, as you suppose; but first the lyre, and the strings, and the sounds exist in a state of discord, and then harmony is made last of all, and perishes first. And how can such a notion of the soul as this agree with the other?

Simmias:: Not at all.

Socrates:: And yet there surely ought to be harmony in a discourse of which harmony is the theme?

Simmias:: There ought.

Socrates:: But there is no harmony in the two propositions that knowledge is recollection, and that the soul is a harmony. Which of them will you retain?

Simmias:: I think that I have a much stronger faith, Socrates, in the first of the two, which has been fully demonstrated to me, than in the latter, which has not been demonstrated at all, but rests only on probable and plausible grounds; and is therefore believed by the many. I know too well that these arguments from probabilities are impostors, and unless great caution is observed in the use of them, they are apt to be deceptive—in geometry, and in other things too. But the doctrine of knowledge and recollection has been proven to me on trustworthy grounds: and the proof was that the soul must have existed before she came into the body, because to her belongs the essence of which the very name implies existence. Having, as I am convinced, rightly accepted this conclusion, and on sufficient grounds, I must, as I suppose, cease to argue or allow others to argue that the soul is a harmony.

Socrates:: Let me put the matter, Simmias, in another point of view: Do you imagine that a harmony or any other composition can be in a state other than that of the elements, out of which it is compounded?

Simmias:: Certainly not.

Socrates:: Or do or suffer anything other than they do or suffer?

Phaedo:: He agreed.

Socrates:: Then a harmony does not, properly speaking, lead the parts or elements which make up the harmony, but only follows them.

Phaedo:: He assented.

Socrates:: For harmony cannot possibly have any motion, or sound, or other quality which is opposed to its parts.

Simmias:: That would be impossible.

Socrates:: And does not the nature of every harmony depend upon the manner in which the elements are harmonized?

Simmias:: I do not understand you.

Socrates:: I mean to say that a harmony admits of degrees, and is more of a harmony, and more completely a harmony, when more truly and fully harmonized, to any extent which is possible; and less of a harmony, and less completely a harmony, when less truly and fully harmonized.

Simmias:: True.

Socrates:: But does the soul admit of degrees? or is one soul in the very least degree more or less, or more or less completely, a soul than another?

Simmias:: Not in the least.

Socrates:: Yet surely of two souls, one is said to have intelligence and virtue, and to be good, and the other to have folly and vice, and to be an evil soul: and this is said truly?

Simmias:: Yes, truly.

Socrates:: But what will those who maintain the soul to be a harmony say of this presence of virtue and vice in the soul?—will they say that here is another harmony, and another discord, and that the virtuous soul is harmonized, and herself being a harmony has another harmony within her, and that the vicious soul is inharmonical and has no harmony within her?

Simmias:: I cannot tell; but I suppose that something of the sort would be asserted by those who say that the soul is a harmony.

Socrates:: And we have already admitted that no soul is more a soul than another; which is equivalent to admitting that harmony is not more or less harmony, or more or less completely a harmony?

Simmias:: Quite true.

Socrates:: And that which is not more or less a harmony is not more or less harmonized?

Simmias:: True.

Socrates:: And that which is not more or less harmonized cannot have more or less of harmony, but only an equal harmony?

Simmias:: Yes, an equal harmony.

Socrates:: Then one soul not being more or less absolutely a soul than another, is not more or less harmonized?

Simmias:: Exactly.

Socrates:: And therefore has neither more nor less of discord, nor yet of harmony?

Simmias:: She has not.

Socrates:: And having neither more nor less of harmony or of discord, one soul has no more vice or virtue than another, if vice be discord and virtue harmony?

Simmias:: Not at all more.

Socrates:: Or speaking more correctly, Simmias, the soul, if she is a harmony, will never have any vice; because a harmony, being absolutely a harmony, has no part in the inharmonical.

Simmias:: No.

Socrates:: And therefore a soul which is absolutely a soul has no vice?

Simmias:: How can she have, if the previous argument holds?

Socrates:: Then, if all souls are equally by their nature souls, all souls of all living creatures will be equally good?

Simmias:: I agree with you, Socrates.

Socrates:: And can all this be true, think you? For these are the consequences which seem to follow from the assumption that the soul is a harmony?

Simmias:: It cannot be true.

Socrates:: Once more, what ruler is there of the elements of human nature other than the soul, and especially the wise soul? Do you know of any?

Simmias:: Indeed, I do not.

Socrates:: And is the soul in agreement with the affections of the body? or is she at variance with them? For example, when the body is hot and thirsty, does not the soul incline us against drinking? and when the body is hungry, against eating? And this is only one instance out of ten thousand of the opposition of the soul to the things of the body.

Simmias:: Very true.

Socrates:: But we have already acknowledged that the soul, being a harmony, can never utter a note at variance with the tensions and relaxations and vibrations and other affections of the strings out of which she is composed; she can only follow, she cannot lead them?

Simmias:: It must be so.

Socrates:: And yet do we not now discover the soul to be doing the exact opposite—leading the elements of which she is believed to be composed; almost always opposing and coercing them in all sorts of ways throughout life, sometimes more violently with the pains of medicine and gymnastic; then again more gently; now threatening, now admonishing the desires, passions, fears, as if talking to a thing which is not herself, as Homer in the Odyssee represents Odysseus doing in the words—

> ‘He beat his breast, and thus reproached his heart:
> Endure, my heart; far worse hast thou endured!’

Do you think that Homer wrote this under the idea that the soul is a harmony capable of being led by the affections of the body, and not rather of a nature which should lead and master them—herself a far diviner thing than any harmony?

Simmias:: Yes, Socrates, I quite think so.

Socrates:: Then, my friend, we can never be right in saying that the soul is a harmony, for we should contradict the divine Homer, and contradict ourselves.

Simmias:: True.

Socrates:: Thus much, of Harmonia, your Theban goddess, who has graciously yielded to us; but what shall I say, Cebes, to her husband Cadmus, and how shall I make peace with him?

Cebes:: I think that you will discover a way of propitiating him; I am sure that you have put the argument with Harmonia in a manner that I could never have expected. For when Simmias was mentioning his difficulty, I quite imagined that no answer could be given to him, and therefore I was surprised at finding that his argument could not sustain the first onset of yours, and not impossibly the other, whom you call Cadmus, may share a similar fate.

Socrates:: Nay, my good friend, let us not boast, lest some evil eye should put to flight the word which I am about to speak. That, however, may be left in the hands of those above; while I draw near in Homeric fashion, and try the mettle of your words. Here lies the point:—You want to have it proven to you that the soul is imperishable and immortal, and the philosopher who is confident in death appears to you to have but a vain and foolish confidence, if he believes that he will fare better in the world below than one who has led another sort of life, unless he can prove this: and you say that the demonstration of the strength and divinity of the soul, and of her existence prior to our becoming men, does not necessarily imply her immortality. Admitting the soul to be long-lived, and to have known and done much in a former state, still she is not on that account immortal; and her entrance into the human form may be a sort of disease which is the beginning of dissolution, and may at last, after the toils of life are over, end in that which is called death. And whether the soul enters into the body once only or many times, does not, as you say, make any difference in the fears of individuals. For any man, who is not devoid of sense, must fear, if he has no knowledge and can give no account of the soul's immortality. This, or something like this, I suspect to be your notion, Cebes; and I designedly recur to it in order that nothing may escape us, and that you may, if you wish, add or subtract anything.

Cebes:: But as far as I see at present, I have nothing to add or subtract: I mean what you say that I mean.

Phaedo:: Socrates paused awhile, and seemed to be absorbed in reflection. At length he said:

Socrates:: You are raising a tremendous question, Cebes, involving the whole nature of generation and corruption, about which, if you like, I will give you my own experience; and if anything which I say is likely to avail towards the solution of your difficulty you may make use of it.

Cebes:: I should very much like to hear what you have to say.

Socrates:: Then I will tell you. When I was young, Cebes, I had a prodigious desire to know that department of philosophy which is called the investigation of nature; to know the causes of things, and why a thing is and is created or destroyed appeared to me to be a lofty profession; and I was always agitating myself with the consideration of questions such as these:—Is the growth of animals the result of some decay which the hot and cold principle contracts, as some have said? Is the blood the element with which we think, or the air, or the fire? or perhaps nothing of the kind—but the brain may be the originating power of the perceptions of hearing and sight and smell, and memory and opinion may come from them, and science may be based on memory and opinion when they have attained fixity. And then I went on to examine the corruption of them, and then to the things of heaven and earth, and at last I concluded myself to be utterly and absolutely incapable of these enquiries, as I will satisfactorily prove to you. For I was fascinated by them to such a degree that my eyes grew blind to things which I had seemed to myself, and also to others, to know quite well; I forgot what I had before thought self-evident truths; e.g. such a fact as that the growth of man is the result of eating and drinking; for when by the digestion of food flesh is added to flesh and bone to bone, and whenever there is an aggregation of congenial elements, the lesser bulk becomes larger and the small man great. Was not that a reasonable notion?

Cebes:: Yes, I think so.

Socrates:: Well; but let me tell you something more. There was a time when I thought that I understood the meaning of greater and less pretty well; and when I saw a great man standing by a little one, I fancied that one was taller than the other by a head; or one horse would appear to be greater than another horse: and still more clearly did I seem to perceive that ten is two more than eight, and that two cubits are more than one, because two is the double of one.

Cebes:: And what is now your notion of such matters?

Socrates:: I should be far enough from imagining that I knew the cause of any of them, by heaven I should; for I cannot satisfy myself that, when one is added to one, the one to which the addition is made becomes two, or that the two units added together make two by reason of the addition. I cannot understand how, when separated from the other, each of them was one and not two, and now, when they are brought together, the mere juxtaposition or meeting of them should be the cause of their becoming two: neither can I understand how the division of one is the way to make two; for then a different cause would produce the same effect,—as in the former instance the addition and juxtaposition of one to one was the cause of two, in this the separation and subtraction of one from the other would be the cause. Nor am I any longer satisfied that I understand the reason why one or anything else is either generated or destroyed or is at all, but I have in my mind some confused notion of a new method, and can never admit the other.

Then I heard some one reading, as he said, from a book of Anaxagoras, that mind was the disposer and cause of all, and I was delighted at this notion, which appeared quite admirable, and I said to myself: If mind is the disposer, mind will dispose all for the best, and put each particular in the best place: and I argued that if any one desired to find out the cause of the generation or destruction or existence of anything, he must find out what state of being or doing or suffering was best for that thing, and therefore a man had only to consider the best for himself and others, and then he would also know the worse, since the same science comprehended both. And I rejoiced to think that I had found in Anaxagoras a teacher of the causes of existence such as I desired, and I imagined that he would tell me first whether the earth is flat or round; and whichever was true, he would proceed to explain the cause and the necessity of this being so, and then he would teach me the nature of the best and show that this was best; and if he said that the earth was in the centre, he would further explain that this position was the best, and I should be satisfied with the explanation given, and not want any other sort of cause. And I thought that I would then go on and ask him about the sun and moon and stars, and that he would explain to me their comparative swiftness, and their returnings and various states, active and passive, and how all of them were for the best. For I could not imagine that when he spoke of mind as the disposer of them, he would give any other account of their being as they are, except that this was best; and I thought that when he had explained to me in detail the cause of each and the cause of all, he would go on to explain to me what was best for each and what was good for all. These hopes I would not have sold for a large sum of money, and I seized the books and read them as fast as I could in my eagerness to know the better and the worse.

What expectations I had formed, and how grievously was I disappointed! As I proceeded, I found my philosopher altogether forsaking mind or any other principle of order, but having recourse to air, and ether, and water, and other eccentricities. I might compare him to a person who began by maintaining generally that mind is the cause of the actions of Socrates, but who, when he endeavored to explain the causes of my several actions in detail, went on to show that I sit here because my body is made up of bones and muscles; and the bones, as he would say, are hard and have joints which divide them, and the muscles are elastic, and they cover the bones, which have also a covering or environment of flesh and skin which contains them; and as the bones are lifted at their joints by the contraction or relaxation of the muscles, I am able to bend my limbs, and this is why I am sitting here in a curved posture—that is what he would say; and he would have a similar explanation of my talking to you, which he would attribute to sound, and air, and hearing, and he would assign ten thousand other causes of the same sort, forgetting to mention the true cause, which is, that the Athenians have thought fit to condemn me, and accordingly I have thought it better and more right to remain here and undergo my sentence; for I am inclined to think that these muscles and bones of mine would have gone off long ago to Megara or Boeotia—by the dog they would, if they had been moved only by their own idea of what was best, and if I had not chosen the better and nobler part, instead of playing truant and running away, of enduring any punishment which the state inflicts. There is surely a strange confusion of causes and conditions in all this. It may be said, indeed, that without bones and muscles and the other parts of the body I cannot execute my purposes. But to say that I do as I do because of them, and that this is the way in which mind acts, and not from the choice of the best, is a very careless and idle mode of speaking. I wonder that they cannot distinguish the cause from the condition, which the many, feeling about in the dark, are always mistaking and misnaming. And thus one man makes a vortex all round and steadies the earth by the heaven; another gives the air as a support to the earth, which is a sort of broad trough. Any power which in arranging them as they are arranges them for the best never enters into their minds; and instead of finding any superior strength in it, they rather expect to discover another Atlas of the world who is stronger and more everlasting and more containing than the good;—of the obligatory and containing power of the good they think nothing; and yet this is the principle which I would fain learn if any one would teach me. But as I have failed either to discover myself, or to learn of any one else, the nature of the best, I will exhibit to you, if you like, what I have found to be the second best mode of enquiring into the cause.

Cebes:: I should very much like to hear.

Socrates:: —I thought that as I had failed in the contemplation of true existence, I ought to be careful that I did not lose the eye of my soul; as people may injure their bodily eye by observing and gazing on the sun during an eclipse, unless they take the precaution of only looking at the image reflected in the water, or in some similar medium. So in my own case, I was afraid that my soul might be blinded altogether if I looked at things with my eyes or tried to apprehend them by the help of the senses. And I thought that I had better have recourse to the world of mind and seek there the truth of existence. I dare say that the simile is not perfect—for I am very far from admitting that he who contemplates existences through the medium of thought, sees them only ‘through a glass darkly’ any more than he who considers them in action and operation. However, this was the method which I adopted: I first assumed some principle which I judged to be the strongest, and then I affirmed as true whatever seemed to agree with this, whether relating to the cause or to anything else; and that which disagreed I regarded as untrue. But I should like to explain my meaning more clearly, as I do not think that you as yet understand me.

Cebes:: No indeed, not very well.

Socrates:: There is nothing new in what I am about to tell you; but only what I have been always and everywhere repeating in the previous discussion and on other occasions: I want to show you the nature of that cause which has occupied my thoughts. I shall have to go back to those familiar words which are in the mouth of every one, and first of all assume that there is an absolute beauty and goodness and greatness, and the like; grant me this, and I hope to be able to show you the nature of the cause, and to prove the immortality of the soul.

Cebes:: You may proceed at once with the proof, for I grant you this.

Socrates:: Well, then I should like to know whether you agree with me in the next step; for I cannot help thinking, if there be anything beautiful other than absolute beauty should there be such, that it can be beautiful only in so far as it partakes of absolute beauty—and I should say the same of everything. Do you agree in this notion of the cause?

Cebes:: Yes, I agree.

Socrates:: I know nothing and can understand nothing of any other of those wise causes which are alleged; and if a person says to me that the bloom of color, or form, or any such thing is a source of beauty, I leave all that, which is only confusing to me, and simply and singly, and perhaps foolishly, hold and am assured in my own mind that nothing makes a thing beautiful but the presence and participation of beauty in whatever way or manner obtained; for as to the manner I am uncertain, but I stoutly contend that by beauty all beautiful things become beautiful. This appears to me to be the safest answer which I can give, either to myself or to another, and to this I cling, in the persuasion that this principle will never be overthrown, and that to myself or to any one who asks the question, I may safely reply, That by beauty beautiful things become beautiful. Do you not agree with me?

Cebes:: I do.

Socrates:: And that by greatness only great things become great and greater greater, and by smallness the less become less?

Cebes:: True.

Socrates:: Then if a person were to remark that A is taller by a head than B, and B less by a head than A, you would refuse to admit his statement, and would stoutly contend that what you mean is only that the greater is greater by, and by reason of, greatness, and the less is less only by, and by reason of, smallness; and thus you would avoid the danger of saying that the greater is greater and the less less by the measure of the head, which is the same in both, and would also avoid the monstrous absurdity of supposing that the greater man is greater by reason of the head, which is small. You would be afraid to draw such an inference, would you not?

Phaedo:: laughing Cebes said:

Cebes:: Indeed, I should.

Socrates:: In like manner you would be afraid to say that ten exceeded eight by, and by reason of, two; but would say by, and by reason of, number; or you would say that two cubits exceed one cubit not by a half, but by magnitude?—for there is the same liability to error in all these cases.

Cebes:: Very true.

Socrates:: Again, would you not be cautious of affirming that the addition of one to one, or the division of one, is the cause of two? And you would loudly asseverate that you know of no way in which anything comes into existence except by participation in its own proper essence, and consequently, as far as you know, the only cause of two is the participation in duality—this is the way to make two, and the participation in one is the way to make one. You would say: I will let alone puzzles of division and addition—wiser heads than mine may answer them; inexperienced as I am, and ready to start, as the proverb says, at my own shadow, I cannot afford to give up the sure ground of a principle. And if any one assails you there, you would not mind him, or answer him, until you had seen whether the consequences which follow agree with one another or not, and when you are further required to give an explanation of this principle, you would go on to assume a higher principle, and a higher, until you found a resting-place in the best of the higher; but you would not confuse the principle and the consequences in your reasoning, like the Eristics—at least if you wanted to discover real existence. Not that this confusion signifies to them, who never care or think about the matter at all, for they have the wit to be well pleased with themselves however great may be the turmoil of their ideas. But you, if you are a philosopher, will certainly do as I say.

Phaedo:: What you say is most true, said Simmias and Cebes, both speaking at once.

Echecrates:: Yes, Phaedo; and I do not wonder at their assenting. Any one who has the least sense will acknowledge the wonderful clearness of Socrates' reasoning.

Phaedo:: Certainly, Echecrates; and such was the feeling of the whole company at the time.

Echecrates:: Yes, and equally of ourselves, who were not of the company, and are now listening to your recital. But what followed?

Phaedo:: After all this had been admitted, and they had agreed that ideas exist, and that other things participate in them and derive their names from them, Socrates, if I remember rightly, said:—

Socrates:: This is your way of speaking; and yet when you say that Simmias is greater than Socrates and less than Phaedo, do you not predicate of Simmias both greatness and smallness?

Cebes:: Yes, I do.

Socrates:: But still you allow that Simmias does not really exceed Socrates, as the words may seem to imply, because he is Simmias, but by reason of the size which he has; just as Simmias does not exceed Socrates because he is Simmias, any more than because Socrates is Socrates, but because he has smallness when compared with the greatness of Simmias?

Cebes:: True.

Socrates:: And if Phaedo exceeds him in size, this is not because Phaedo is Phaedo, but because Phaedo has greatness relatively to Simmias, who is comparatively smaller?

Cebes:: That is true.

Socrates:: And therefore Simmias is said to be great, and is also said to be small, because he is in a mean between them, exceeding the smallness of the one by his greatness, and allowing the greatness of the other to exceed his smallness.

Phaedo:: He added, laughing;

Socrates:: I am speaking like a book, but I believe that what I am saying is true.

Phaedo:: Simmias assented.

Socrates:: I speak as I do because I want you to agree with me in thinking, not only that absolute greatness will never be great and also small, but that greatness in us or in the concrete will never admit the small or admit of being exceeded: instead of this, one of two things will happen, either the greater will fly or retire before the opposite, which is the less, or at the approach of the less has already ceased to exist; but will not, if allowing or admitting of smallness, be changed by that; even as I, having received and admitted smallness when compared with Simmias, remain just as I was, and am the same small person. And as the idea of greatness cannot condescend ever to be or become small, in like manner the smallness in us cannot be or become great; nor can any other opposite which remains the same ever be or become its own opposite, but either passes away or perishes in the change.

Cebes:: That is quite my notion.

Phaedo:: Hereupon one of the company, though I do not exactly remember which of them, said:

Someone:: In heaven's name, is not this the direct contrary of what was admitted before—that out of the greater came the less and out of the less the greater, and that opposites were simply generated from opposites; but now this principle seems to be utterly denied.

Phaedo:: Socrates inclined his head to the speaker and listened.

Socrates:: I like your courage in reminding us of this. But you do not observe that there is a difference in the two cases. For then we were speaking of opposites in the concrete, and now of the essential opposite which, as is affirmed, neither in us nor in nature can ever be at variance with itself: then, my friend, we were speaking of things in which opposites are inherent and which are called after them, but now about the opposites which are inherent in them and which give their name to them; and these essential opposites will never, as we maintain, admit of generation into or out of one another.

Phaedo:: At the same time, turning to Cebes, he said:

Socrates:: Are you at all disconcerted, Cebes, at our friend's objection?

Cebes:: No, I do not feel so; and yet I cannot deny that I am often disturbed by objections.

Socrates:: Then we are agreed after all, that the opposite will never in any case be opposed to itself?

Cebes:: To that we are quite agreed.

Socrates:: Yet once more let me ask you to consider the question from another point of view, and see whether you agree with me:—There is a thing which you term heat, and another thing which you term cold?

Cebes:: Certainly.

Socrates:: But are they the same as fire and snow?

Cebes:: Most assuredly not.

Socrates:: Heat is a thing different from fire, and cold is not the same with snow?

Cebes:: Yes.

Socrates:: And yet you will surely admit, that when snow, as was before said, is under the influence of heat, they will not remain snow and heat; but at the advance of the heat, the snow will either retire or perish?

Cebes:: Very true.

Socrates:: And the fire too at the advance of the cold will either retire or perish; and when the fire is under the influence of the cold, they will not remain as before, fire and cold.

Cebes:: That is true.

Socrates:: And in some cases the name of the idea is not only attached to the idea in an eternal connection, but anything else which, not being the idea, exists only in the form of the idea, may also lay claim to it. I will try to make this clearer by an example:—The odd number is always called by the name of odd?

Cebes:: Very true.

Socrates:: But is this the only thing which is called odd? Are there not other things which have their own name, and yet are called odd, because, although not the same as oddness, they are never without oddness?—that is what I mean to ask—whether numbers such as the number three are not of the class of odd. And there are many other examples: would you not say, for example, that three may be called by its proper name, and also be called odd, which is not the same with three? and this may be said not only of three but also of five, and of every alternate number—each of them without being oddness is odd; and in the same way two and four, and the other series of alternate numbers, has every number even, without being evenness. Do you agree?

Cebes:: Of course.

Socrates:: Then now mark the point at which I am aiming:—not only do essential opposites exclude one another, but also concrete things, which, although not in themselves opposed, contain opposites; these, I say, likewise reject the idea which is opposed to that which is contained in them, and when it approaches them they either perish or withdraw. For example; Will not the number three endure annihilation or anything sooner than be converted into an even number, while remaining three?

Cebes:: Very true.

Socrates:: And yet, the number two is certainly not opposed to the number three?

Cebes:: It is not.

Socrates:: Then not only do opposite ideas repel the advance of one another, but also there are other natures which repel the approach of opposites.

Cebes:: Very true.

Socrates:: Suppose that we endeavor, if possible, to determine what these are.

Cebes:: By all means.

Socrates:: Are they not, Cebes, such as compel the things of which they have possession, not only to take their own form, but also the form of some opposite?

Cebes:: What do you mean?

Socrates:: I mean, as I was just now saying, and as I am sure that you know, that those things which are possessed by the number three must not only be three in number, but must also be odd.

Cebes:: Quite true.

Socrates:: And on this oddness, of which the number three has the impress, the opposite idea will never intrude?

Cebes:: No.

Socrates:: And this impress was given by the odd principle?

Cebes:: Yes.

Socrates:: And to the odd is opposed the even?

Cebes:: True.

Socrates:: Then the idea of the even number will never arrive at three?

Cebes:: No.

Socrates:: Then three has no part in the even?

Cebes:: None.

Socrates:: Then the triad or number three is uneven?

Cebes:: Very true.

Socrates:: To return then to my distinction of natures which are not opposed, and yet do not admit opposites—as, in the instance given, three, although not opposed to the even, does not any the more admit of the even, but always brings the opposite into play on the other side; or as two does not receive the odd, or fire the cold—from these examples (and there are many more of them) perhaps you may be able to arrive at the general conclusion, that not only opposites will not receive opposites, but also that nothing which brings the opposite will admit the opposite of that which it brings, in that to which it is brought. And here let me recapitulate—for there is no harm in repetition. The number five will not admit the nature of the even, any more than ten, which is the double of five, will admit the nature of the odd. The double has another opposite, and is not strictly opposed to the odd, but nevertheless rejects the odd altogether. Nor again will parts in the ratio 3 : 2, nor any fraction in which there is a half, nor again in which there is a third, admit the notion of the whole, although they are not opposed to the whole: You will agree?

Cebes:: Yes, I entirely agree and go along with you in that.

Socrates:: And now, let us begin again; and do not you answer my question in the words in which I ask it: let me have not the old safe answer of which I spoke at first, but another equally safe, of which the truth will be inferred by you from what has been just said. I mean that if any one asks you 'what that is, of which the inherence makes the body hot,' you will reply not heat (this is what I call the safe and stupid answer), but fire, a far superior answer, which we are now in a condition to give. Or if any one asks you 'why a body is diseased,' you will not say from disease, but from fever; and instead of saying that oddness is the cause of odd numbers, you will say that the monad is the cause of them: and so of things in general, as I dare say that you will understand sufficiently without my adducing any further examples.

Cebes:: Yes, I quite understand you.

Socrates:: Tell me, then, what is that of which the inherence will render the body alive?

Cebes:: The soul.

Socrates:: And is this always the case?

Cebes:: Yes, of course.

Socrates:: Then whatever the soul possesses, to that she comes bearing life?

Cebes:: Yes, certainly.

Socrates:: And is there any opposite to life?

Cebes:: There is.

Socrates:: And what is that?

Cebes:: Death.

Socrates:: Then the soul, as has been acknowledged, will never receive the opposite of what she brings.

Cebes:: Impossible.

Socrates:: And now, what did we just now call that principle which repels the even?

Cebes:: The odd.

Socrates:: And that principle which repels the musical or the just?

Cebes:: The unmusical and the unjust.

Socrates:: And what do we call that principle which does not admit of death?

Cebes:: The immortal.

Socrates:: And does the soul admit of death?

Cebes:: No.

Socrates:: Then the soul is immortal?

Cebes:: Yes.

Socrates:: And may we say that this has been proven?

Cebes:: Yes, abundantly proven, Socrates.

Socrates:: Supposing that the odd were imperishable, must not three be imperishable?

Cebes:: Of course.

Socrates:: And if that which is cold were imperishable, when the warm principle came attacking the snow, must not the snow have retired whole and unmelted—for it could never have perished, nor could it have remained and admitted the heat?

Cebes:: True.

Socrates:: Again, if the uncooling or warm principle were imperishable, the fire when assailed by cold would not have perished or have been extinguished, but would have gone away unaffected?

Cebes:: Certainly.

Socrates:: And the same may be said of the immortal: if the immortal is also imperishable, the soul when attacked by death cannot perish; for the preceding argument shows that the soul will not admit of death, or ever be dead, any more than three or the odd number will admit of the even, or fire, or the heat in the fire, of the cold. Yet a person may say: 'But although the odd will not become even at the approach of the even, why may not the odd perish and the even take the place of the odd?' Now to him who makes this objection, we cannot answer that the odd principle is imperishable; for this has not been acknowledged, but if this had been acknowledged, there would have been no difficulty in contending that at the approach of the even the odd principle and the number three took their departure; and the same argument would have held good of fire and heat and any other thing.

Cebes:: Very true.

Socrates:: And the same may be said of the immortal: if the immortal is also imperishable, then the soul will be imperishable as well as immortal; but if not, some other proof of her imperishableness will have to be given.

Cebes:: No other proof is needed; for if the immortal, being eternal, is liable to perish, then nothing is imperishable.

Socrates:: Yes and yet all men will agree that God, and the essential form of life, and the immortal in general, will never perish.

Cebes:: Yes, all men—that is true; and what is more, gods, if I am not mistaken, as well as men.

Socrates:: Seeing then that the immortal is indestructible, must not the soul, if she is immortal, be also imperishable?

Cebes:: Most certainly.

Socrates:: Then when death attacks a man, the mortal portion of him may be supposed to die, but the immortal retires at the approach of death and is preserved safe and sound?

Cebes:: True.

Socrates:: Then, Cebes, beyond question, the soul is immortal and imperishable, and our souls will truly exist in another world!

Cebes:: I am convinced, Socrates, and have nothing more to object; but if my friend Simmias, or any one else, has any further objection to make, he had better speak out, and not keep silence, since I do not know to what other season he can defer the discussion, if there is anything which he wants to say or to have said.

Simmias:: But I have nothing more to say; nor can I see any reason for doubt after what has been said. But I still feel and cannot help feeling uncertain in my own mind, when I think of the greatness of the subject and the feebleness of man.

Socrates:: Yes, Simmias, that is well said: and I may add that first principles, even if they appear certain, should be carefully considered; and when they are satisfactorily ascertained, then, with a sort of hesitating confidence in human reason, you may, I think, follow the course of the argument; and if that be plain and clear, there will be no need for any further enquiry.

Simmias:: Very true.

Socrates:: But then, O my friends, if the soul is really immortal, what care should be taken of her, not only in respect of the portion of time which is called life, but of eternity! And the danger of neglecting her from this point of view does indeed appear to be awful. If death had only been the end of all, the wicked would have had a good bargain in dying, for they would have been happily quit not only of their body, but of their own evil together with their souls. But now, inasmuch as the soul is manifestly immortal, there is no release or salvation from evil except the attainment of the highest virtue and wisdom. For the soul when on her progress to the world below takes nothing with her but nurture and education; and these are said greatly to benefit or greatly to injure the departed, at the very beginning of his journey thither.

For after death, as they say, the genius of each individual, to whom he belonged in life, leads him to a certain place in which the dead are gathered together, whence after judgment has been given they pass into the world below, following the guide, who is appointed to conduct them from this world to the other: and when they have there received their due and remained their time, another guide brings them back again after many revolutions of ages. Now this way to the other world is not, as Aeschylus says in the Telephus, a single and straight path—if that were so no guide would be needed, for no one could miss it; but there are many partings of the road, and windings, as I infer from the rites and sacrifices which are offered to the gods below in places where three ways meet on earth. The wise and orderly soul follows in the straight path and is conscious of her surroundings; but the soul which desires the body, and which, as I was relating before, has long been fluttering about the lifeless frame and the world of sight, is after many struggles and many sufferings hardly and with violence carried away by her attendant genius; and when she arrives at the place where the other souls are gathered, if she be impure and have done impure deeds, whether foul murders or other crimes which are the brothers of these, and the works of brothers in crime—from that soul every one flees and turns away; no one will be her companion, no one her guide, but alone she wanders in extremity of evil until certain times are fulfilled, and when they are fulfilled, she is borne irresistibly to her own fitting habitation; as every pure and just soul which has passed through life in the company and under the guidance of the gods has also her own proper home.

Now the earth has divers wonderful regions, and is indeed in nature and extent very unlike the notions of geographers, as I believe on the authority of one who shall be nameless.

Simmias:: What do you mean, Socrates? I have myself heard many descriptions of the earth, but I do not know, and I should very much like to know, in which of these you put faith.

Socrates:: And I, Simmias, if I had the art of Glaucus would tell you; although I know not that the art of Glaucus could prove the truth of my tale, which I myself should never be able to prove, and even if I could, I fear, Simmias, that my life would come to an end before the argument was completed. I may describe to you, however, the form and regions of the earth according to my conception of them.

Simmias:: That will be enough.

Socrates:: Well then, my conviction is, that the earth is a round body in the centre of the heavens, and therefore has no need of air or of any similar force to be a support, but is kept there and hindered from falling or inclining any way by the equability of the surrounding heaven and by her own equipoise. For that which, being in equipoise, is in the centre of that which is equably diffused, will not incline any way in any degree, but will always remain in the same state and not deviate. And this is my first notion.

Simmias:: Which is surely a correct one.

Socrates:: Also I believe that the earth is very vast, and that we who dwell in the region extending from the river Phasis to the Pillars of Heracles inhabit a small portion only about the sea, like ants or frogs about a marsh, and that there are other inhabitants of many other like places; for everywhere on the face of the earth there are hollows of various forms and sizes, into which the water and the mist and the lower air collect. But the true earth is pure and situated in the pure heaven—there are the stars also; and it is the heaven which is commonly spoken of by us as the ether, and of which our own earth is the sediment gathering in the hollows beneath. But we who live in these hollows are deceived into the notion that we are dwelling above on the surface of the earth; which is just as if a creature who was at the bottom of the sea were to fancy that he was on the surface of the water, and that the sea was the heaven through which he saw the sun and the other stars, he having never come to the surface by reason of his feebleness and sluggishness, and having never lifted up his head and seen, nor ever heard from one who had seen, how much purer and fairer the world above is than his own. And such is exactly our case: for we are dwelling in a hollow of the earth, and fancy that we are on the surface; and the air we call the heaven, in which we imagine that the stars move. But the fact is, that owing to our feebleness and sluggishness we are prevented from reaching the surface of the air: for if any man could arrive at the exterior limit, or take the wings of a bird and come to the top, then like a fish who puts his head out of the water and sees this world, he would see a world beyond; and, if the nature of man could sustain the sight, he would acknowledge that this other world was the place of the true heaven and the true light and the true earth. For our earth, and the stones, and the entire region which surrounds us, are spoilt and corroded, as in the sea all things are corroded by the brine, neither is there any noble or perfect growth, but caverns only, and sand, and an endless slough of mud; and even the shore is not to be compared to the fairer sights of this world. And still less is this our world to be compared with the other. Of that upper earth which is under the heaven, I can tell you a charming tale, Simmias, which is well worth hearing.

Simmias:: And we, Socrates, shall be charmed to listen to you.

Socrates:: The tale, my friend, is as follows:—In the first place, the earth, when looked at from above, is in appearance streaked like one of those balls which have leather coverings in twelve pieces, and is decked with various colors, of which the colors used by painters on earth are in a manner samples. But there the whole earth is made up of them, and they are brighter far and clearer than ours; there is a purple of wonderful luster, also the radiance of gold, and the white which is in the earth is whiter than any chalk or snow. Of these and other colors the earth is made up, and they are more in number and fairer than the eye of man has ever seen; the very hollows (of which I was speaking) filled with air and water have a color of their own, and are seen like light gleaming amid the diversity of the other colors, so that the whole presents a single and continuous appearance of variety in unity. And in this fair region everything that grows—trees, and flowers, and fruits—are in a like degree fairer than any here; and there are hills, having stones in them in a like degree smoother, and more transparent, and fairer in color than our highly-valued emeralds and sardonyxes and jaspers, and other gems, which are but minute fragments of them: for there all the stones are like our precious stones, and fairer still. The reason is, that they are pure, and not, like our precious stones, infected or corroded by the corrupt briny elements which coagulate among us, and which breed foulness and disease both in earth and stones, as well as in animals and plants. They are the jewels of the upper earth, which also shines with gold and silver and the like, and they are set in the light of day and are large and abundant and in all places, making the earth a sight to gladden the beholder’s eye. And there are animals and men, some in a middle region, others dwelling about the air as we dwell about the sea; others in islands which the air flows round, near the continent; and in a word, the air is used by them as the water and the sea are by us, and the ether is to them what the air is to us. Moreover, the temperament of their seasons is such that they have no disease, and live much longer than we do, and have sight and hearing and smell, and all the other senses, in far greater perfection, in the same proportion that air is purer than water or the ether than air. Also they have temples and sacred places in which the gods really dwell, and they hear their voices and receive their answers, and are conscious of them and hold converse with them; and they see the sun, moon, and stars as they truly are, and their other blessedness is of a piece with this.

Such is the nature of the whole earth, and of the things which are around the earth; and there are divers regions in the hollows on the face of the globe everywhere, some of them deeper and more extended than that which we inhabit, others deeper but with a narrower opening than ours, and some are shallower and also wider. All have numerous perforations, and there are passages broad and narrow in the interior of the earth, connecting them with one another; and there flows out of and into them, as into basins, a vast tide of water, and huge subterranean streams of perennial rivers, and springs hot and cold, and a great fire, and great rivers of fire, and streams of liquid mud, thin or thick (like the rivers of mud in Sicily, and the lava streams which follow them), and the regions about which they happen to flow are filled up with them. And there is a swinging or see-saw in the interior of the earth which moves all this up and down, and is due to the following cause:—There is a chasm which is the vastest of them all, and pierces right through the whole earth; this is that chasm which Homer describes in the words,—

> 'Far off, where is the inmost depth beneath the earth;'

and which he in other places, and many other poets, have called Tartarus. And the see-saw is caused by the streams flowing into and out of this chasm, and they each have the nature of the soil through which they flow. And the reason why the streams are always flowing in and out, is that the watery element has no bed or bottom, but is swinging and surging up and down, and the surrounding wind and air do the same; they follow the water up and down, hither and thither, over the earth—just as in the act of respiration the air is always in process of inhalation and exhalation;—and the wind swinging with the water in and out produces fearful and irresistible blasts: when the waters retire with a rush into the lower parts of the earth, as they are called, they flow through the earth in those regions, and fill them up like water raised by a pump, and then when they leave those regions and rush back hither, they again fill the hollows here, and when these are filled, flow through subterranean channels and find their way to their several places, forming seas, and lakes, and rivers, and springs. Thence they again enter the earth, some of them making a long circuit into many lands, others going to a few places and not so distant; and again fall into Tartarus, some at a point a good deal lower than that at which they rose, and others not much lower, but all in some degree lower than the point from which they came. And some burst forth again on the opposite side, and some on the same side, and some wind round the earth with one or many folds like the coils of a serpent, and descend as far as they can, but always return and fall into the chasm. The rivers flowing in either direction can descend only to the centre and no further, for opposite to the rivers is a precipice.

Now these rivers are many, and mighty, and diverse, and there are four principal ones, of which the greatest and outermost is that called Oceanus, which flows round the earth in a circle; and in the opposite direction flows Acheron, which passes under the earth through desert places into the Acherusian lake: this is the lake to the shores of which the souls of the many go when they are dead, and after waiting an appointed time, which is to some a longer and to some a shorter time, they are sent back to be born again as animals. The third river passes out between the two, and near the place of outlet pours into a vast region of fire, and forms a lake larger than the Mediterranean Sea, boiling with water and mud; and proceeding muddy and turbid, and winding about the earth, comes, among other places, to the extremities of the Acherusian lake, but mingles not with the waters of the lake, and after making many coils about the earth plunges into Tartarus at a deeper level. This is that Pyriphlegethon, as the stream is called, which throws up jets of fire in different parts of the earth. The fourth river goes out on the opposite side, and falls first of all into a wild and savage region, which is all of a dark blue color, like lapis lazuli; and this is that river which is called the Stygian river, and falls into and forms the Lake Styx, and after falling into the lake and receiving strange powers in the waters, passes under the earth, winding round in the opposite direction, and comes near the Acherusian lake from the opposite side to Pyriphlegethon. And the water of this river too mingles with no other, but flows round in a circle and falls into Tartarus over against Pyriphlegethon; and the name of the river, as the poets say, is Cocytus.

Such is the nature of the other world; and when the dead arrive at the place to which the genius of each severally guides them, first of all, they have sentence passed upon them, as they have lived well and piously or not. And those who appear to have lived neither well nor ill, go to the river Acheron, and embarking in any vessels which they may find, are carried in them to the lake, and there they dwell and are purified of their evil deeds, and having suffered the penalty of the wrongs which they have done to others, they are absolved, and receive the rewards of their good deeds, each of them according to his deserts. But those who appear to be incurable by reason of the greatness of their crimes—who have committed many and terrible deeds of sacrilege, murders foul and violent, or the like—such are hurled into Tartarus which is their suitable destiny, and they never come out. Those again who have committed crimes, which, although great, are not irremediable—who in a moment of anger, for example, have done some violence to a father or a mother, and have repented for the remainder of their lives, or, who have taken the life of another under the like extenuating circumstances—these are plunged into Tartarus, the pains of which they are compelled to undergo for a year, but at the end of the year the wave casts them forth—mere homicides by way of Cocytus, parricides and matricides by Pyriphlegethon—and they are borne to the Acherusian lake, and there they lift up their voices and call upon the victims whom they have slain or wronged, to have pity on them, and to be kind to them, and let them come out into the lake. And if they prevail, then they come forth and cease from their troubles; but if not, they are carried back again into Tartarus and from thence into the rivers unceasingly, until they obtain mercy from those whom they have wronged: for that is the sentence inflicted upon them by their judges. Those too who have been pre-eminent for holiness of life are released from this earthly prison, and go to their pure home which is above, and dwell in the purer earth; and of these, such as have duly purified themselves with philosophy live henceforth altogether without the body, in mansions fairer still, which may not be described, and of which the time would fail me to tell.

Wherefore, Simmias, seeing all these things, what ought not we to do that we may obtain virtue and wisdom in this life? Fair is the prize, and the hope great!

A man of sense ought not to say, nor will I be very confident, that the description which I have given of the soul and her mansions is exactly true. But I do say that, inasmuch as the soul is shown to be immortal, he may venture to think, not improperly or unworthily, that something of the kind is true. The venture is a glorious one, and he ought to comfort himself with words like these, which is the reason why I lengthen out the tale. Wherefore, I say, let a man be of good cheer about his soul, who having cast away the pleasures and ornaments of the body as alien to him and working harm rather than good, has sought after the pleasures of knowledge; and has arrayed the soul, not in some foreign attire, but in her own proper jewels, temperance, and justice, and courage, and nobility, and truth—in these adorned she is ready to go on her journey to the world below, when her hour comes. You, Simmias and Cebes, and all other men, will depart at some time or other. Me already, as a tragic poet would say, the voice of fate calls. Soon I must drink the poison; and I think that I had better repair to the bath first, in order that the women may not have the trouble of washing my body after I am dead.

Phaedo:: When he had done speaking, Crito said:

Crito:: And have you any commands for us, Socrates—anything to say about your children, or any other matter in which we can serve you?

Socrates:: Nothing particular, Crito: only, as I have always told you, take care of yourselves; that is a service which you may be ever rendering to me and mine and to all of us, whether you promise to do so or not. But if you have no thought for yourselves, and care not to walk according to the rule which I have prescribed for you, not now for the first time, however much you may profess or promise at the moment, it will be of no avail.

Crito:: We will do our best: And in what way shall we bury you?

Socrates:: In any way that you like; but you must get hold of me, and take care that I do not run away from you.

Phaedo:: Then he turned to us, and added with a smile:—

Socrates:: I cannot make Crito believe that I am the same Socrates who have been talking and conducting the argument; he fancies that I am the other Socrates whom he will soon see, a dead body—and he asks, How shall he bury me? And though I have spoken many words in the endeavor to show that when I have drunk the poison I shall leave you and go to the joys of the blessed,—these words of mine, with which I was comforting you and myself, have had, as I perceive, no effect upon Crito. And therefore I want you to be surety for me to him now, as at the trial he was surety to the judges for me: but let the promise be of another sort; for he was surety for me to the judges that I would remain, and you must be my surety to him that I shall not remain, but go away and depart; and then he will suffer less at my death, and not be grieved when he sees my body being burned or buried. I would not have him sorrow at my hard lot, or say at the burial, Thus we lay out Socrates, or, Thus we follow him to the grave or bury him; for false words are not only evil in themselves, but they infect the soul with evil. Be of good cheer then, my dear Crito, and say that you are burying my body only, and do with that whatever is usual, and what you think best.

Phaedo:: When he had spoken these words, he arose and went into a chamber to bathe; Crito followed him and told us to wait. So we remained behind, talking and thinking of the subject of discourse, and also of the greatness of our sorrow; he was like a father of whom we were being bereaved, and we were about to pass the rest of our lives as orphans. When he had taken the bath his children were brought to him—(he had two young sons and an elder one); and the women of his family also came, and he talked to them and gave them a few directions in the presence of Crito; then he dismissed them and returned to us.

Now the hour of sunset was near, for a good deal of time had passed while he was within. When he came out, he sat down with us again after his bath, but not much was said. Soon the jailer, who was the servant of the Eleven, entered and stood by him, saying:—

Jailer:: To you, Socrates, whom I know to be the noblest and gentlest and best of all who ever came to this place, I will not impute the angry feelings of other men, who rage and swear at me, when, in obedience to the authorities, I bid them drink the poison—indeed, I am sure that you will not be angry with me; for others, as you are aware, and not I, are to blame. And so fare you well, and try to bear lightly what must needs be—you know my errand.

Phaedo:: Then bursting into tears he turned away and went out.

Socrates looked at him and said:

Socrates:: I return your good wishes, and will do as you bid.

Phaedo:: Then turning to us, he said;

Socrates:: How charming the man is: since I have been in prison he has always been coming to see me, and at times he would talk to me, and was as good to me as could be, and now see how generously he sorrows on my account. We must do as he says, Crito; and therefore let the cup be brought, if the poison is prepared: if not, let the attendant prepare some.

Crito:: Yet, the sun is still upon the hill-tops, and I know that many a one has taken the draught late, and after the announcement has been made to him, he has eaten and drunk, and enjoyed the society of his beloved; do not hurry—there is time enough.

Socrates:: Yes, Crito, and they of whom you speak are right in so acting, for they think that they will be gainers by the delay; but I am right in not following their example, for I do not think that I should gain anything by drinking the poison a little later; I should only be ridiculous in my own eyes for sparing and saving a life which is already forfeit. Please then to do as I say, and not to refuse me.

Phaedo:: Crito made a sign to the servant, who was standing by; and he went out, and having been absent for some time, returned with the jailer carrying the cup of poison. Socrates said:

Socrates:: You, my good friend, who are experienced in these matters, shall give me directions how I am to proceed.

Jailer:: You have only to walk about until your legs are heavy, and then to lie down, and the poison will act.

Phaedo:: At the same time he handed the cup to Socrates, who in the easiest and gentlest manner, without the least fear or change of color or feature, looking at the man with all his eyes, Echecrates, as his manner was, took the cup and said:

Socrates:: What do you say about making a libation out of this cup to any god? May I, or not?

Jailer:: We only prepare, Socrates, just so much as we deem enough.

Socrates:: I understand: but I may and must ask the gods to prosper my journey from this to the other world—even so—and so be it according to my prayer.

Phaedo:: Then raising the cup to his lips, quite readily and cheerfully he drank off the poison. And hitherto most of us had been able to control our sorrow; but now when we saw him drinking, and saw too that he had finished the draught, we could no longer forbear, and in spite of myself my own tears were flowing fast; so that I covered my face and wept, not for him, but at the thought of my own calamity in having to part from such a friend. Nor was I the first; for Crito, when he found himself unable to restrain his tears, had got up, and I followed; and at that moment, Apollodorus, who had been weeping all the time, broke out in a loud and passionate cry which made cowards of us all. Socrates alone retained his calmness:

Socrates:: What is this strange outcry? I sent away the women mainly in order that they might not misbehave in this way, for I have been told that a man should die in peace. Be quiet then, and have patience.

Phaedo:: When we heard his words we were ashamed, and refrained our tears; and he walked about until, as he said, his legs began to fail, and then he lay on his back, according to the directions, and the man who gave him the poison now and then looked at his feet and legs; and after a while he pressed his foot hard, and asked him if he could feel; and he said;

Socrates:: No.

Phaedo:: and then his leg, and so upwards and upwards, and showed us that he was cold and stiff. And he felt them himself, and said:

Socrates:: When the poison reaches the heart, that will be the end.

Phaedo:: He was beginning to grow cold about the groin, when he uncovered his face, for he had covered himself up, and said—they were his last words—he said:

Socrates:: Crito, I owe a cock to Asclepius; will you remember to pay the debt?

Crito:: The debt shall be paid; is there anything else?

Phaedo:: There was no answer to this question; but in a minute or two a movement was heard, and the attendants uncovered him; his eyes were set, and Crito closed his eyes and mouth.

Such was the end, Echecrates, of our friend; concerning whom I may truly say, that of all the men of his time whom I have known, he was the wisest and justest and best.

# Phaedo.

Translated and edited by Henry Morley. 1783

or, a dialogue on the immortality of the soul.

Echecrates and Phaedo.

Echecrates:: Phaedo, were you present when Socrates drank the poison? Or did any one give you an account how he behaved in that juncture?

Phaedo:: I was present.

Echecrates:: What were his last words then, and how expired he? You'll oblige me much with the narration; for the Philasians have but little correspondence with the Athenians, and 'tis a long time since we had any stranger from Athens to inform us how things went. We only heard that he died after drinking the poison, but could not understand any particulars concerning his death.

Phaedo:: What! Did you not hear how he was arraigned?

Echecrates:: Yes, truly, somebody told us that; and we thought it strange that his sentence was so long in being put in execution after his trial.

Phaedo:: That happened only accidentally, for the day before his trial, the stern of the sacred ship which the Athenians send every year to Delos, was crowned for the voyage.

Echecrates:: What is that sacred ship?

Phaedo:: If you credit the Athenians, it is the same ship in which Theseus transported the four teen young children to Crete, and brought them safe back again; and 'tis said the Athenians at that time vowed to Apollo, that if the children were preserved from the impending danger, they would send every year to Delos presents and victims aboard the vessel, and this they do ever since. As soon as the ship is cleared, and ready to put to sea, they purify the city, and observe an inviolable law for putting none to death before the return of the ship. Now sometimes it stays long out, especially if the winds be contrary. This festival, which is properly called Theoria, commences when the priest of Apollo has crowned the stern of the ship. Now, as I told you, this happened on the day preceding Socrates trial. And ’twas upon that account that he was kept so long in prison after his commitment.

Echecrates:: And during his imprisonment, what did he do? What said he? Who was with him? Did the judges order him to be kept from visits? and did he die without the assistance of his friends?

Phaedo:: Not at all; several of his friends stayed with him to the last minute.

Echecrates:: If you re at leisure, pray relate the whole story.

Phaedo:: At present I have nothing to do, and so shall endeavor to satisfy your demands. Be sides, I take the greatest pleasure in the world in speaking, or hearing others speak, of Socrates.

Echecrates:: Assure yourself, Phaedo, you shall not take more pleasure in speaking than I in hearing. Begin, pray; and above all, take care to omit nothing.

Phaedo:: You’ll be surprised when you hear what a condition I was then in. I was so far from being sensibly touched with the misfortune of a friend whom I loved very tenderly, and who died before my eyes, that I envied his circumstances, and could not forbear to admire the goodness, sweetness, and tranquility that appeared in all his discourses, and the bravery he showed upon the approach of death.

Everything that I saw furnishes me with a proof that he did not pass to the shades below without the assistance of some deity, that took care to conduct him, and put him in possession of that transcendent felicity of the blessed. But as, on one hand, these thoughts stifled all the sentiments of compassion that might seem due at such a mortifying sight; so, on the other hand, they lessened the pleasure I was wont to have in hearing all his other discourses, and affected me with that sorrowful reflection that, in the space of a minute, this divine man would leave us for ever. Thus was my heart crossed with contrary motions, that I could not define. ’twas not properly either pleasure or grief, but a confused mixture of these two passions, which produced almost the same effect in all the bystanders. One while we melted into tears, and another while gave surprising signs of real joy and sensible pleasure. Above all, Apollodorus distinguished himself upon this occasion; you know his humor.

Echecrates:: Nobody knows it better.

Phaedo:: In him was the difference of these motions most observable. As for me, and all the rest, our behavior was not so distinguishing, as being mixed with the trouble and confusion I spoke of just now.

Echecrates:: Who was there then besides yourself?

Phaedo:: There were no other Athenians, but Apollodorus, Critobulus, and his father Crito, Hermogenes, Epigenes, Aeschines, Antisthenes, Ctesippus, Menexemus, and a few more. Plato was sick.

Echecrates:: Were there no strangers?

Phaedo:: Yes; Simmias the Theban, with Cebes and Phedondes; and from Megara, Euclides and Terpsion.

Echecrates:: What! were not Aristippus and Cleombrotus there?

Phaedo:: No, sure; for ’tis said, they were at Aegina.

Echecrates:: Who was there besides?

Phaedo:: I believe I have named most of those that were there.

Echecrates:: Let me hear then what his last discourses were.

Phaedo:: I shall endeavor to give you a full account, for we never missed one day in visiting Socrates. To this end, we met every morning in the place where he was tried, which joined to the prison; and there we waited till the prison doors were opened; at which time we went straight to him, and commonly passed the whole day with him. On the day of his execution, we came thither sooner than ordinary, having heard, as we came out of the city, that the ship was returned from Delos. When we arrived, the jailer that used to let us in came to us, and desired we would stay a little, and not go in till he came to conduct us. “For,” said he, “the eleven magistrates are now untying Socrates, and acquainting him that he must die on this day.” When we came in, we found Socrates untied, and his wife Xantippe (you know her) sitting by him with one of his children in her arms; and as soon as she spied us, she fell a-crying and making a noise, as you know women commonly do on such occasions.

Xanthippe:: Socrates, this is the last time your friends shall see you.

Phaedo:: Upon which Socrates, turning to Crito, said;

Socrates:: Crito, pray send this woman home.

Phaedo:: Accordingly ’twas done. Crito’s folks carried Xantippe off, who beat her face and cried bitterly. In the meantime, Socrates, sitting upon the bed, softly strokes the place of his leg where the chain had been tied, and says;

Socrates:: To my mind what men call pleasure is a pretty odd sort of a thing, which agrees admirably well with pain; though people believe ’tis quite contrary, because they cannot meet in one and the same subject. For whoever enjoys the one, must unavoidably be possessed of the other, as if they were naturally joined.

Had Aesop been aware of this truth, perhaps he had made a fable of it; and had told us that God designing to reconcile these two enemies, and not being able to compass His end, contented Himself with tying them to one chain; so that ever since the one follows the other, according to my experience at this minute. For the pain occasioned by my chain is now followed with a great deal of pleasure.

Cebes:: I am infinitely glad that you have mentioned Aesop, for by so doing you have put it in my head to ask you a question that many have asked me of late, especially Evenus. The question relates to your poems in turning the fables of sop into verse, and making a hymn to Apollo. They want to know what moved you, that never made verses before, to turn poet since you came into the prison. If Evenus asks the same question of me again, as I know he will, what would you have me to say?

Socrates:: You have nothing to do, but to tell him the plain matter of fact as it stands, namely, that I did not at all mean to rival him in poetry, for I knew such an attempt was above my reach; but only to trace the meaning of some dreams, and put myself in a capacity of obeying, in case poetry happened to be the music that they allotted for my exercise. For you must know that all my lifetime I have had dreams which always recommended the same thing to me, sometimes in one form, and sometimes in another. 'Socrates,' said they, 'apply yourself to music.' This I always took for a simple exhortation, like that commonly given to those who run races, ordering me to pursue my wonted course of life, and carry on the study of wisdom, that I made my whole business, which is the most perfect music. But since my trial, the festival of Apollo having retarded the execution of my sentence, I fancied these dreams might have ordered me to apply myself to that vulgar and common sort of music; and since I was departing this world, I thought it safer to sanctify myself by obeying the gods, and essaying to make verses, than to disobey them. Pursuant to this thought, my first essay was a hymn to the god whose festival was then celebrated. After that, I considered that a true poet ought not only to make discourses in verse, but likewise fable. Now finding myself not disposed to invent new fables, I applied myself to those of Aesop, and turned those into verse that came first into my mind.

This, my dear Cebes, is the answer you re to give Evenus assuring him that I wish him all happiness; and tell him that if he be wise he'll follow me. For in all appearance I am to make my exit this day, since the Athenians have given orders to that effect.

Simmias:: What sort of counsel is that you give to Evenus? I have seen that man often; and by what I know of him, I can promise you, he'll never follow you with his will.

Socrates:: What! is not Evenus a philosopher?

Simmias:: I think so.

Socrates:: Then, he, and all others that are worthy of that profession, will be willing to follow me. I know he will not kill himself, for that, they say, is not lawful.

Phaedo:: Having spoken these words, he drew his legs off the bed, and sat down upon the ground, in which posture he entertained us the whole remaining part of the day. Cebes put the first question to him, which was this;

Cebes:: How do you reconcile this, Socrates, that 'tis not lawful to kill ones self, and at the same time that a philosopher ought to follow you?

Socrates:: What! did neither you nor Simmias ever hear your friend Philolaus discourse that point?

Cebes:: No, he never explained him self clearly upon that point.

Socrates:: As for me, I know nothing but what I have heard, and shall not grudge to communicate all that I have learned. Besides, there's no exercise so suitable for a man upon the point of death, as that of examining and endeavoring thoroughly to know what voyage this is that we must all make, and making known his own opinion upon it.

Cebes:: What is the ground of that assertion, that 'tis not lawful for a man to kill him self? I have often heard Philolaus and others say that it was an ill action, but I never heard them say more.

Socrates:: Have patience, you shall know more presently, and perhaps you'll be surprised to find it an eternal truth that never changes, whereas most other things in this world alter according to their circumstances; this is still the same, even in the case of those to whom death would be more agreeable than life. Is it not a surprising thing that such men are not allowed to possess themselves of the good they want, but are obliged to wait for another deliverer?

Cebes:: Jupiter only knows that.

Socrates:: This may seem unreasonable to you, but after all, it is not so. The discourses we are entertained with every day in our ceremonies and mysteries, that is to say, that God has put us in this life, as in a post which we cannot quit with out His leave, etc.—these, I say, and such-like expressions, may seem hard, and surpass our understanding. But nothing is easier to be understood or better said than this, that the gods take care of men, and that men are one of the possessions that belong to the gods. Is not this true?

Cebes:: Very true.

Socrates:: Would not you yourself, be angry if one of your slaves killed himself without your order; and would not you punish him severely if you could?

Cebes:: Yes, doubtless.

Socrates:: By the same reason, a man should not kill himself, but should wait for an express order from God for making his exit, like this sent me now.

Cebes:: That stands to reason, but your saying that a philosopher ought nevertheless to die, is what I think strange, and I cannot reconcile these two opinions, especially if it be true what you said but now, that the gods take care of men, as being their property; for that a philosopher should not be troubled to be without the gods for his guardians, and to quit a life where such perfect beings—the better governors of the world—take care of him, seems very unreasonable to me. Do they imagine they will be more capable to govern themselves when left to themselves? I can easily conceive that a fool may think it his duty to flee from a good master, at any rate; and will not be convinced that he ought to stick to what if good, and never lose sight of it. But I affirm that a wise man will desire never to quit a dependence upon a perfecter being than himself. From whence I infer the contrary of what you advanced, and conclude that the wise are sorry to die, and fools are fond of death.

Phaedo:: Socrates seemed to be pleased with Cebes wit; and, turning to us, told us that

Socrates:: Cebes has always something to object, and takes care not to assent at first to what is told him.

Simmias:: Indeed, I must say I find a great deal of reason in what Cebes advances. What can the sages pretend to gain by quitting better masters than themselves, and willingly depriving themselves of their aid? Do you mind that? ’Tis you alone that he addresses himself to, meaning to reprove you for your insensibility in being so willing to part with us, and quit the gods, who, according to your own words, are such good and wise governors.

Socrates:: You are in the right of it, I see you mean to oblige me to make formal defenses, such as I gave in at my trial.

Simmias:: That’s the very thing.

Socrates:: Then, you must satisfy your selves, so that this my last apology may have more influence upon you than my former had upon my judges. For my part, if I thought I should not find in the other world gods as good, and as wise, and men infinitely better than we, 'twould be a piece of injustice in me not to be troubled at death. But be it known to you, Simmias, and you, Cebes, that I hope to arrive at the assembly of the just. Indeed, in this point, I may flatter myself; but as for my finding, in the other world, matters infinitely good and wise, that I can assure you of, as much as things of that nature will bear; and therefore it is that death is no trouble to me, hoping that there is something reserved for the dead after this life, and that the good meet with better treatment in the world to come than the bad.

Simmias:: How! would you have quitted this life without communicating those sentiments to us? This methinks will be a common good; and if you convince us of all that you believe with reference to this point, you have made a sufficient apology.

Socrates:: That is what I design to try, but I would first hear what Crito has to say. I thought he had a mind to offer something a short time ago.

Crito:: I have nothing to say, but what your executioner has been pushing me on to tell you this great while, that you ought to speak as little as you can, for fear of over-heating yourself, since nothing is more contrary to the operation of poison; insomuch that, if you continue to speak so, you'll be obliged to take two or three doses.

Socrates:: Let him do his office. Let him make ready two doses of poison, or three if he will.

Crito:: I knew you would give me that answer, but still he importunes me to speak to you.

Socrates:: Pray let that alone, and suffer me to explain before you, who are my judges, for what reasons a man enlightened by philosophy Ought to die with courage, and a firm hope that in the other world he shall enjoy a felicity beyond anything in this. Pray do you, Simmias and Cebes, listen to my arguments.

True philosophers make it the whole business of their lifetime to learn to die. Now, 'tis extremely ridiculous for them, after they run out a whole course incessantly in order to compass that one end, to flinch and be afraid when it comes up to them, when they are Justin a capacity of obtaining it after a long and painful search.

Phaedo:: Whereupon Simmias laughed, and told him;

Simmias:: In earnest, Socrates, you make me laugh, not withstanding the small occasion I have to laugh in this juncture. For I am certain the greatest part of those who hear you talk so, will say you talk much better of the philosophers than you believe. Above all, the Athenians would be glad that all the philosophers would learn that lesson so well as to die in effect; and they'll be ready to tell you death is the only thing they are worthy of.

Socrates:: Simmias, our Athenians would so speak the truth without knowing it to be such. For they are ignorant in what manner philosophers desire to die, or how they are worthy of it. But let us leave the Athenians to them selves, and talk of things within our own company. Does death appear to be anything to you?

Simmias:: Yes, without doubt.

Socrates:: Is it not, the separation of soul and body so that the body has one separate being, and the soul another?

Simmias:: Just so.

Socrates:: Lets try, then, my dear Simmias, if your thoughts and mine agree, by what means we shall set the object of our present inquiry in a clearer light. Do you think a philosopher courts what the world calls pleasure, as that of eating and drinking, and so on?

Simmias:: Not at all, Socrates.

Socrates:: Nor that of love?

Simmias:: By no means.

Socrates:: Do you think that they pursue or mind the other pleasures relating to the body, such as good clothes, handsome shoes, and the other ornaments of the body? Whether do you think they value or slight those things, when necessity does not enforce their use?

Simmias:: In my mind, a true philosopher must needs contemn them.

Socrates:: Then you believe, that the body is not at all the object of the care and business of a philosopher; but, on the contrary, that his whole business is to separate himself from it, and mind only the concerns of his soul?

Simmias:: Most certainly.

Socrates:: Thus, ’tis plain upon the whole that a philosopher labors in a more distinguishing manner than other men to purchase the freedom of his soul, and cut off all commerce between it and the body. I am likewise of the opinion, Simmias, that most men will grant that whoever avoids those corporeal things, and takes no pleasure in them, is not worthy to live; and that he who does not use the pleasures of the body is near to death.

Simmias:: You speak truth, Socrates.

Socrates:: But what shall we say of the acquiring of prudence? Is the body an obstacle or not, when employed in that work? I'll explain my meaning by an example; Have seeing and hearing anything of truth in them, and is their testimony faithful? Or are the poets in the right in singing that we neither see nor hear things truly? For, if these two senses of seeing and hearing are not true and trusty, the other which are much weaker, will be far less such. Do not you think so?

Simmias:: Yes, without doubt.

Socrates:: When does the soul, then, find out the truth? We see that while the body is joined in the inquiry, this body plainly cheats and seduces it.

Simmias:: That is true.

Socrates:: Is it not by reasoning that the soul embraces truth? And does it not reason better than before, when 'tis not encumbered by seeing or hearing, pain or pleasure? When shut up within itself, it bids adieu to the body, and entertains as little correspondence with it as possible, and pursues the knowledge of things without touching them.

Simmias:: That is incomparably well spoken.

Socrates:: Is it not, especially upon this occasion, that the soul of a philosopher despises and avoids the body, and wants to be by itself?

Simmias:: I think so.

Socrates:: What shall we say, then, my dear Simmias, of all the objects of the soul? For instance, shall we call justice something or nothing?

Simmias:: We must certainly give it the title of Some thing.

Socrates:: Shall we not likewise call it Good and Fine?

Simmias:: Ay, doubtless.

Socrates:: But did you ever see these objects with the eye of your body? Or with any other sense? Did you ever touch any of those things I now speak of, such as magnitude, health, fortitude, and, in a word, the essence of all other things? Is the truth of them discovered by the body? Or is it not certain that whoever puts himself in a condition to examine them more narrowly, and trace them to the bottom, will better compass the end, and know more of them?

Simmias:: That's very true.

Socrates:: Now the simplest and purest way of examining things is to pursue every particular thought alone, without offering to support our meditation by seeing, or backing our reasonings by any other corporeal sense; by employing the naked thought without any mixture, and so endeavoring to trace the pure and genuine essence of things without the ministry of the eyes or ears; the soul being, if I may so speak, entirely disengaged from the whole mass of body, which only cumbers the soul, and cramps it in the quest of wisdom and truth, as often as it is admitted to the least correspondence with it. If the essence of things be ever known, must it not be in the manner above mentioned?

Simmias:: Right, Socrates; you have spoke incomparably well.

Socrates:: Is it not a necessary consequence from this principle, that true philosophers should have such language among themselves? This life is a road that's apt to mislead us and our reason in our inquiries, because, while we have a body, and while our soul is drowned in so much corruption, we shall never attain the object of our wishes, in other words, truth. The body throws a thousand obstacles and crosses in our way, by demanding necessary food; and then the diseases that ensue do quite disorder our inquiry. Besides, it fills us with love, desires, fears, and a thousand foolish imaginations, insomuch that there is nothing truer than the common saying, 'That the body will never conduct us to wisdom.' What is it that gives rise to wars, and occasions seditions and dueling? Is it not the body and its desires? In effect, all wars take rise from the desire of riches, which we are forced to heap up for the sake of our body, in order to supply its wants, and serve it like slaves. 'Tis this that cramps our application to philosophy. And the greatest of all our evils is that when it has given us some respite, and we are set upon meditation, it steals in and interrupts our meditation all of a sudden. It cumbers, troubles, and surprises us in such a manner that it hinders us from descrying the truth. Now we have made it out, that in order to trace the purity and truth of anything, we should lay aside the body, and only employ the soul to examine the objects we pursue. So that we can never arrive at the wisdom we court till after death. Reason is on our side. For if it is impossible to know anything purely while we are in the body, one of these two things must be true; either the truth is never known, or it is known after death; because at that time the soul will be left to itself, and freed of its burden, and not before. And while we are in this life, we can only approach to the truth in proportion to our removing from the body, and renouncing all correspondence with it that is not of mere necessity, and keeping ourselves clear from the contagion of its natural corruption, and all its filth, till God Himself comes to deliver us. Then, indeed, being freed from all bodily folly, we shall converse, in all probability, with men that enjoy the same liberty, and shall know within our selves the pure essence of things, which perhaps is nothing but the truth. But he who is not pure is not allowed to approach to purity itself. This, my dear Simmias, as I take it, should be the thought and language of true philosophers. Are not you of the same mind?

Simmias:: Most certainly, Socrates.

Socrates:: Then, my dear Simmias, whoever shall arrive where I am now going, has great reason to hope that he will there be possessed of what we look for here with so much care and anxiety; so that the voyage I am now sent upon fills me with a sweet and agreeable hope. And it will have the same effect upon all who are persuaded that the soul must be purged before it knows the truth. Now the purgation of the soul, as we were saying but just now, is only its separation from the body, its accustoming itself to retire and lock itself up, renouncing all commerce with it as much as possible, and living by itself, whether in this or the other world, without being chained to the body.

Simmias:: All that is true, Socrates.

Socrates:: Well! what we call death, is not that the disengagement and separation of the body from the soul?

Simmias:: Most certainly.

Socrates:: Are not the true philosophers the only men that seek after this disengagement? and is not that separation and deliverance their whole business?

Simmias:: So I think, Socrates.

Socrates:: Is it not a ridiculous fancy, that a man that has lived in the expectation of death, and during his whole lifetime has been preparing to die, upon his arrival at the point of desired death, should think to retire, and be afraid of it. Would not that be a very scandalous apostasy?

Simmias:: How should it be otherwise?

Socrates:: 'Tis certain, then, Simmias, that death is so far from being terrible to true philosophers that 'tis their whole business to die; which may be easily inferred thus; if they slight and contemn their body, and passionately desire to enjoy their soul by itself, is it not a piece of extravagance to decline going to that place, where those who get to it, hope to obtain the good things they have wished for all their life time? For they desired wisdom, and a deliverance from the body, as being their burden, and the object of their hatred and contempt. Do not many upon the loss of their mistresses, wives, or children, willingly cut the thread of life, and convey them selves into the other world, merely upon the hope of meeting there, and cohabiting with the persons they love? And shall a true lover of wisdom, and one that firmly hopes to attain the perfection of it in the other world, shall he be startled by death, and be unwilling to go to the place that will furnish him with what his soul loves? Doubtless, my dear Simmias, if he be a true philosopher, he'll go with a great deal of pleasure; as being persuaded that there's no place in the regions below that can furnish him with that pure wisdom that he's in quest of. Now, if things stand thus, would it not be a piece of extravagance in such a man to fear death?

Simmias:: To be sure, it would be so with a witness.

Socrates:: And consequently, when a man shrinks and retires at the point of death, it is a certain evidence that he loves not wisdom, but his own body, or honor, or riches, or perhaps all three together.

Simmias:: 'Tis so, Socrates.

Socrates:: Then, Simmias, does not what we call Fortitude belong in a peculiar manner to philosophers? And does not Temperance, or that sort of wisdom that consists in controlling our desires, and living soberly and modestly, suit admirably well with those who contemn their bodies, and live philosophically?

Simmias:: That is certain, Socrates.

Socrates:: Were you to inspect the fortitude and temperance of other men, you'll find 'em very ridiculous.

Simmias:: How so, Socrates?

Socrates:: You know, all other men look upon death as the greatest affliction.

Simmias:: That's true.

Socrates:: When those you call stout suffer death with some courage, they do it only for fear of some greater evil.

Simmias:: That I must grant.

Socrates:: And by consequence, all men, bating the philosophers, are only stout and valiant through fear. And is it not ridiculous to believe a man to be brave and valiant that is only influenced by fear and timorousness?

Simmias:: You are in the right, Socrates.

Socrates:: Is not the case the same with your temperate persons? ’Tis only intemperance makes them such. Though at first view this may seem impossible, yet it is no more than what daily experience shows to be the result of that foolish and ridiculous temperance. For such persons disclaim one pleasure only for fear of being robbed of other pleasures that they covet, and which have an ascendant over them. They’ll cry out to you as long as you will, that intemperance consists in being ruled and over awed by our passions; but at the same time that they give you this fine definition, ’tis only their subjection to some predominant pleasures that make them discard others. Now this is much what I have just said, that they are only temperate through intemperance.

Simmias:: That is very clear, Socrates.

Socrates:: Let us not be imposed upon, my dear Simmias; the straight road to virtue does not lie in shifting pleasures for pleasures, fears for fears, or one melancholy thought for another, and imitating those who change a large piece of money for many small ones. But wisdom is the only true and unalloyed coin, for which all others must be given in exchange. With that piece of money we purchase all fortitude, temperance, justice. In a word, that virtue is always true that accompanies wisdom, without any dependence upon pleasures, grief, fears, or any other passions. Whereas all other virtues stripped of wisdom, which run upon a perpetual exchange, are only shadows of virtue. True virtue is really and in effect a purgation from all these sorts of passions. Temperance, justice, fortitude, and prudence, or wisdom itself, are not exchanged for passions, but cleanse us of them. And it is pretty evident, that those who instituted the purifications called by us Teletes, in other words, perfect expiations, were persons of no contemptible rank, men of great genius, who in the first ages meant by such riddles to give us to know that whoever enters the other world without being initiated and purified shall be hurled headlong into the vast abyss; and that whoever arrives there after due purgation and expiation shall be lodged in the apartment of the gods. For, as the dispensers of these expiations say, There are many who bear the Thyrsus, but few that are possessed by the spirit of God. Now those who are thus possessed, as I take it, are the true philosophers. I have tried all means to be lifted in that number, and have made it the business of my whole life to compass my end. If it please God, I hope to know in a minute that my efforts have not been ineffectual, and that success has crowned my endeavors. This, my dear Simmias, and my dear Cebes, is the apology with which I offer to justify my not [being troubled or afflicted for parting with you, and quitting my governors in this life; hoping to find good friends and rulers there, as well as here. This the vulgar cannot digest. However, I shall be satisfied if my defenses take better with you than they did with my judges.

Phaedo:: Socrates having thus spoken, Cebes took up the discourse to this purpose.

Cebes:: Socrates, I subscribe to the truth of all you have said, There is only one thing that men look upon as incredible, that is to say, what you advanced of the soul. For almost every body fancies that when the soul parts from the body it is no more, it dies along with it; in the very minute of parting it vanishes, like a vapor or smoke which flies off, and disperses, and has no existence. For if it subsisted by itself, were gathered and retired into itself, and freed from all the above-mentioned evils, there were a fair and promising prospect ascertaining the truth of what you have said. But, that the soul lives after the death of a man, that it is sensible, that it acts and thinks, that, I say, needs both insinuation and solid proofs to make it go down.

Socrates:: You say right, Cebes, but how shall we manage the affair? Shall we in this interview examine whether that is probable or not?

Cebes:: I shall be very glad, to hear your thoughts upon the matter.

Socrates:: At least, I cannot think that any man hearing us, though he were a comedian, would upbraid me with raillery, and charge me with not speaking of such things as concern us very much. If you have a mind that we should trace this affair to the bottom, my opinion is that we should proceed in the following method, in order to know whether the souls of the dead have a being in the other world or not.

’Tis a very ancient opinion, that souls quitting this world repair to the infernal regions, and return after that to live in the world. If it be so, that men return to life after death, it follows necessarily that during that interval their souls are lodged in the lower regions; for if they had not a being they could not return to this world. For this will be a sufficient proof of what we affirm, if we be convinced that the living spring from the dead; if otherwise, then we must look out for other proofs.

Cebes:: That is certain.

Socrates:: But to assure ourselves of this truth, ’tis not sufficient to examine the point upon the comparison with men; but likewise upon that with other animals, plants, and whatever has a vegetable principle. By that means we shall be convinced that all things are born after the same manner—that is, whatever has a contrary—owes its first rise to its contrary. For instance, hand some is the contrary to ugly, and just to unjust. And the same is the case of an infinite number of other things. Now, lets see if it be absolutely necessary that whatever has a contrary should spring from that contrary. As when a thing becomes bigger, of necessity it must formerly have been lesser before it acquired that magnitude. And when it dwindles into a lesser form, it must needs have been greater before its diminution. In like manner the strongest arises from the weakest, and the swiftest from the slowest.

Cebes:: That’s a plain truth.

Socrates:: And pray, when a thing becomes worse, was it not formerly better? and when it grows just, is it not because it was formerly more unjust?

Cebes:: Yes, surely, Socrates.

Socrates:: Then it is sufficiently proved that everything is generated by its contrary.

Cebes:: Sufficiently, Socrates.

Socrates:: But is not there always a certain medium between these two contraries? There are two births, or two processions, one of this from that, and another of that from this. The medium between a greater and a lesser thing is increase and diminution. The same is the case of what we call mixing, separating, heating, cooling, and all other things in infinitum. For though it some times falls out that we have not terms to express those changes and mediums, vet experience shows that by an absolute necessity things take rise from one another, and pass reciprocally from one to another through a medium.

Cebes:: There's no doubt of that.

Socrates:: And what, has not life likewise its contrary, as awaking has sleeping?

Cebes:: Without doubt.

Socrates:: What is the contrary?

Cebes:: Death.

Socrates:: Since these two things are contrary, do not they take rise one from the other? And between these two are there not two generations, or two processions?

Cebes:: Why not?

Socrates:: But, I am about to tell you how the new-mentioned combination stands, and to show you the origin and progress of each of these two things which make up the compound. Pray tell [me how awaking and sleeping are related? Does not sleep beget watchfulness and watching sleep? And is not the generation of sleep the falling asleep? and that of watching the awaking?

Cebes:: All very clear.

Socrates:: Now, pray view the combination of life and death. Is not death the contrary of life?

Cebes:: Yes.

Socrates:: And does not the one breed the other?

Cebes:: Yes.

Socrates:: What is it that life breeds?

Cebes:: Death.

Socrates:: What is it that death breeds?

Cebes:: It must certainly be life.

Socrates:: Then, all living things and men are bred from death.

Cebes:: So I think.

Socrates:: And, by consequence, our souls are lodged in the infernal world after our death.

Cebes:: The consequence seems just.

Socrates:: But of these two generations, one, that is to say, death, is very palpable; it discovers itself to the eye, and is touched by the hand.

Cebes:: Most certainly.

Socrates:: Shall we not then attribute to death the virtue of producing its contrary, as well as to life? Or shall we say that nature is lame and maimed on that score?

Cebes:: There’s an absolute necessity, of ascribing to death the generation of its contrary.

Socrates:: What is that contrary?

Cebes:: Reviving, or returning to life.

Socrates:: If there is such a thing as returning to life, ’tis nothing else but the birth of the dead returning to life. And thus we agree that the living are as much the product of the dead, as the dead are of the living. Which is an incontestable proof that the souls of the dead must remain in some place or other, from whence they return to life.

That, as I take it, Cebes, is a necessary consequence from the principles we have agreed on.

And, as I take it, Cebes, these principles are well grounded. Consider them yourself. If all these contraries had not their productions and generations in their turns, which make a circle; and if there were nothing but one birth, and one direct product from one to the other contrary, without the return of the last contrary to the first that produce it; were it not so, all things would terminate in the same figure, and be affected in the same manner, and at last cease to be born.

Cebes:: How do you say, Socrates?

Socrates:: There's no difficulty in conceiving what I now say. If there was nothing but sleep, and if sleep did not produce watching, 'tis plain that everything would be an emblem of the fable of Endymion, and nothing would be seen anywhere, because the same thing must happen to them which happened to Endymion, that is to say, they must always sleep. If every thing were mingled without any subsequent separation, we should quickly see Anaxagoras's doctrine fulfilled, and all things jumbled together. At the same rate, my dear Cebes, if all living things died, and being dead, continued such without reviving, would not all things unavoidably come to an end at last, insomuch that there would not be a living thing left in being? For if living things did not arise from dead ones when the living ones die, of necessity all things must at last be swallowed up by death, and entirely annihilated.

Cebes:: It is necessarily so, all that you have said seems to be incontestable.

Socrates:: As I take it, Cebes, there is no objection made against those truths, neither are we mistaken in receiving them; for ’tis certain there is a return to life; ’tis certain that the living rise out of the dead; that the souls departed have a being, and upon their returning to this life, the good souls are in a better, and the bad ones in a worse condition.

Cebes:: What you now advance, is only a necessary consequence of another principle that I have often heard you lay down, that is to say, that all our acquired knowledge is only remembrance. For if that principle be true, we must necessarily have learnt at another time what we call to mind in this. Now that’s impossible, unless our soul had a being before its being invested with this human form. So that this same principle concludes the immortality of the soul.

Simmias:: But, Cebes, what demonstration have we of that principle? Pray refresh my memory with it, for at present it is out of my head.

Cebes:: There’s a very pretty demonstration for it, all men being duly interrogated, find out all things of themselves, which they could never do without knowledge and right reason. Put them at unawares upon the figure of geometry, and other things of that nature, they’ll presently perceive that ’tis as ’tis said.

Socrates:: Simmias, if you will not rely upon this experience, pray try, whether the same method will not bring you over to our sentiments. Do you find great difficulty in believing that learning is only remembering?

Simmias:: I do not find very much, but I would gladly learn that remembrance you speak of. By what Cebes has said, I almost remember it, and I begin to believe it; but that shall not hinder me from hearing with pleasure the arguments you can offer for it.

Socrates:: I argue thus. We all agree, that in order to remember, a man must have known before what he then calls to mind.

Simmias:: Most certainly.

Socrates:: And let us likewise agree upon this, that knowledge coming in a certain manner is remembrance. I say, in a certain manner; for instance, when a man by feeling, hearing, or perceiving a thing by any of the senses knows what it is that thus strikes the senses, and at the same time imagines to him self another thing, independent of that knowledge, by virtue of a quite different knowledge, do not we justly say that the man remembers the thing that comes thus into his mind?

Simmias:: How do you say?

Socrates:: I say, for example, that we know a man by one sort of knowledge, and a harp by another.

Simmias:: That's certain.

Socrates:: Well, then, do not you know what happens to lovers, when they see the harp, habit, or any other thing, that their friends or mistresses used to make use of? It is just as I said but now. Upon seeing and knowing the harp they form in their thoughts the image of the person to whom the harp belongs. This is remembrance. Thus it often falls out that one seeing Simmias, thinks of Cebes. I could cite a thousand instances.

This, then, is remembrance, especially when the things called to mind are such as had been forgot through length of time, or being out of sight.

Simmias:: That is very certain.

Socrates:: But, upon seeing the picture of a horse or harp, may not one call to mind the man? and upon seeing the picture of Simmias, may not one think of Cebes?

Simmias:: Sure enough.

Socrates:: Much more, upon seeing the picture of Simmias, will he call to mind Simmias himself?

Simmias:: Ay, with ease.

Socrates:: From all these instances we infer that remembrance is occasioned sometimes by things that are like the thing remembered, and sometimes by things that are unlike. But when one remembers a thing by virtue of a likeness, does it not necessarily come to pass that the mind at first view discovers whether the picture does resemble the thing designed lamely or perfectly?

Simmias:: It must needs be so.

Socrates:: Then pray mind whether your thoughts of what I am about to say agree with mine. Is not there something that we call equality? I do not speak of the equality between one tree and another, one stone and another, and several other things that are alike; I speak of the abstracted equality of things. Shall we call that something or nothing?

Simmias:: Surely, we must call it something; but that will only come to pass when we mean to speak philosophically and of marvelous things.

Socrates:: But then do we know this equality?

Simmias:: Without doubt.

Socrates:: From whence do we derive that knowledge? Is it not from the things we mentioned but now? 'Tis upon seeing equal trees, equal stones, and several other things of the nature, that we form the idea of that equality, which is not either the trees or the stones, but something abstracted from all subjects. Do not you find it such? Pray take notice. The stones and the trees are always the same, and yet do not they sometimes appear unequal?

Simmias:: Sure enough.

Socrates:: What! Do equal things appear unequal? Or, does equality take up the form of inequality?

Simmias:: By no means, Socrates.

Socrates:: Then equality, and the thing which is equal, are two different things?

Simmias:: Most certainly.

Socrates:: But after all, these equal things, which are different from equality, furnish us with the idea and knowledge of that abstracted equality.

Simmias:: That's true.

Socrates:: The case is the same, whether this equality bears a resemblance to the things that occasioned its idea or not.

Simmias:: Most certainly.

Socrates:: When, upon seeing one thing, you call to mind another, 'tis no matter if it be like it or not; still it is remembrance.

Simmias:: Without doubt.

Socrates:: But what shall we say to this, when we behold trees or other things that are equal, are they equal according to the idea or not?

Simmias:: Very far from it.

Socrates:: Then we agree upon this. When a man sees a thing before him, and thinks it would be equal to another thing, but at the same time is far from being so perfectly equal as the equality of which he has the idea, then, I say, he who thinks thus must necessarily have known beforehand this intellectual being which the thing resembles, but imperfectly.

Simmias:: There's an absolute necessity for that.

Socrates:: And is not the case the same when we compare things equal with the equality?

Simmias:: Sure enough, Socrates.

Socrates:: Then of necessity we must have known that equality before the time in which we saw the equal things, and thereupon thought that they all tender to be equal as equality itself, but could not reach it.

Simmias:: That is certain.

Socrates:: But we likewise agree upon this, that this thought can be derived from nothing else but one of our senses, from seeing, touching, or feeling one way or other. And the same conclusion will hold of all things, whether intellectual or sensible.

Simmias:: All things will equally conclude for what you design.

Socrates:: Then 'tis from the senses themselves that we derive this thought; that all the objects of our senses have a tendency towards this intellectual equality, but come short of it. Is it not?

Simmias:: Yes, without doubt, Socrates.

Socrates:: In effect, Simmias, before we began to see, feel, or use our senses, we must have had the knowledge of this intellectual equality, else we could not be capable to compare it with the sensible things, and perceive that they have all a tendency towards it, but fall short of its perfection.

Simmias:: That is a necessary consequence from the premises.

Socrates:: But it is not certain, that immediately after our birth we saw, we heard, and made use of our other senses?

Simmias:: Very true.

Socrates:: Then it follows, that before that time we had the knowledge of that equality?

Simmias:: Without doubt.

Socrates:: And by consequence we were possessed of it before we were born.

Simmias:: So I think.

Socrates:: If we possessed it before we were born, then we knew things before we were born, and immediately after our birth; knew not only what is equal, what great, what small, but all other things of that nature. For what we now advance of equality is equally applicable to goodness, justice, sanctity, and, in a word, to all other things that have a real existence. So that of necessity we must have known all these things before we came into this world.

Simmias:: That’s certain.

Socrates:: And being possessed of that knowledge, if we did not forget apace every day, we should not only be born with it, but retain it all our lifetime. For to know is only to preserve the knowledge we have received, and to lose it. And to forget is to lose the knowledge we enjoy before.

Simmias:: That’s certain, Socrates.

Socrates:: Now if, after having possessed that knowledge before we were born, and having lost it since, we come to retrieve it by the ministry of our senses which we call learning, shall we not justly entitle it Remembrance?

Simmias:: With a great deal of reason, Socrates.

Socrates:: For we have agreed upon this, that ’tis very possible that a man seeing, hearing, or perceiving one thing by any one of his senses, should frame to himself the imagination of another thing that he had forgot; to which the thing perceived by the senses has some relation, whether it resembles the other or not. So that one of two things must necessarily follow; either we were born with that knowledge, and preserved it all along, or else retrieved it after wards by way of remembrance. Which of these two do you pitch upon, Simmias? Are we born with that knowledge, or do we call it to mind after having had it, and forgot it?

Simmias:: Indeed, Socrates, I do not know which to choose at present.

Socrates:: But mind what I am about to say to you, and then let us see which you’ll choose. A man that knows anything, can he give a reason for his knowledge or not?

Simmias:: Doubtless he can, Socrates.

Socrates:: And you think all men can give a reason for what we have been speaking of?

Simmias:: I wish they could, but I m afraid to-morrow we shall have none here that's capable to do it.

Socrates:: Then you think all men have not this knowledge?

Simmias:: No, surely.

Socrates:: Do they call to mind, then, the things they have known?

Simmias:: That may be.

Socrates:: At what time did our souls learn that knowledge? It cannot be since we were men.

Simmias:: No, surely.

Socrates:: Then it must be some time before that.

Simmias:: Yes, without doubt.

Socrates:: And, by consequence, Simmias, our souls had a being before that time, that is to say, before they were invested with a human form, while they knew and understood.

Simmias:: Unless you'll allow, Socrates, that we learned it in the minute of our birth. There is no other time left.

Socrates:: Be it so, my dear Simmias, but at what other time did we lose it? For we did not bring it into the world with us, as we concluded but now. Did we lose it in the same minute that we obtained it? Or can you assign any other time?

Simmias:: No, Socrates, I did not perceive that what I said was to no purpose.

Socrates:: Then, Simmias, this must be a standing truth. That if the objects of our daily conversation have a real existence, I mean, if justice, goodness, and all that essence with which we compare the objects of our senses, and which having an existence before us, proves to be of the same nature with our own essence, and is the standard by which we measure all things. I say, if all these things have a real existence, our soul is likewise entitled to existence, and that before we were born; and if these things have no being, then all our discourses are useless. Is it not a standing truth, and withal a just and necessary consequence, that the existence of our souls before our birth stands and falls with that of those things?

Simmias:: That consequence, seems to me to be equally just and wonderful, and the result of the whole discourse affords something very glorious and desirable on our behalf, since it concludes that before we were born our souls had an existence, as well as that intelligible essence you mentioned but now. For my part, I think there s nothing more evident, and more sensible, than the existence of all these things, goodness, justice, and so on, and you have sufficiently made it out.

Socrates:: Now for Cebes, for Cebes must likewise be convinced.

Simmias:: I believe, though he is the stiffest man upon earth, and very much proof against arguments, yet he'll own your proof to be very convincing. In the meantime, though I am sufficiently convinced that our souls had a being before we were born, I have not yet heard sufficient proof for its continuing after our death. For that popular opinion, which Cebes mentioned but now, remains in all its force, that is to say, that after the death of men the soul disperses and ceases to be. And indeed I cannot see why the soul should not be born, or proceed from some part or other, and have a being before it animates the body in this life; and when it removes from the body, ceases to be, and makes its exit as well as the body.

Cebes:: You speak well, Simmias, to my mind, Socrates has only proved the half of what he proposed. 'Tis true he demonstrated that the soul has a being before the body; but to complete his demonstration he should have proved that our soul has an existence after death, as well as before this life.

Socrates:: But I have demonstrated it to you both, and you'll be sensible of it, if you join this last proof with what you acknowledge before, that is to say, that the living rise from the dead. For if 'tis true that our soul was in being before we were born, then, of necessity, when it comes to life it proceeds, so to speak, from the bosom of death; and why should it not lie under the same necessity of being after death, since it must return to life? Thus, what you speak of is made out. But I perceive both of you desire to sound this matter to the bottom; and are apprehensive, like children, that when the soul departs the body the winds run away with it, and disperses it, especially when a man dies in an open country, in a place exposed to the winds.

Phaedo:: Whereupon Cebes, smiling, replied;

Cebes:: Pray, then, Socrates, try to discuss our fears, or rather convince us, as if we feared nothing. Though, indeed, there be some among us who lie under those childish apprehensions. Persuade us, then, not to fear death as a vain phantom.

Socrates:: As for that, you must employ spells and exorcisms every day till you be cured.

Cebes:: But pray, Socrates, where shall we meet with an excellent conjurer, since you are going to leave us?

Socrates:: Greece is large enough, and well stored with learned men. Besides, there are a great many barbarous nations which you must scour in order to find out the conjurer, without sparing either labor or charges, for you cannot employ your money in a better cause. You must likewise look for one among yourselves, for ’tis possible there may he none found more capable to perform those enchantments than yourselves.

Cebes:: We shall obey your order, Socrates, in looking out for one; but in the meanwhile, if you please, let us resume our former discourse.

Socrates:: With all my heart, Cebes.

Cebes:: Well said, Socrates.

Socrates:: The first question we ought to ask ourselves, is, What sort of things they are that are apt to be dissipated, what things are liable to that accident, and what part of those things? Then we must inquire into the nature of the soul, and form our hopes or fears accordingly.

Cebes:: That’s very true.

Socrates:: Is it not certain, that only compounded things, or such as are of a compoundable nature, admit of being dissipated at the same rate that they were compounded? If there are any uncompounded beings, they alone are free from this accident, and naturally incapable of dissipation.

Cebes:: That, I think, is very clear.

Socrates:: Is it not very likely that things which are always the same, and in the same condition, are not at all compounded? and that those which are liable to perpetual changes, and are never the same, are certainly compounded.

Cebes:: I am of your mind, Socrates.

Socrates:: Let us betake ourselves to the things we were speaking of but now, the existence whereof is never contested either in question or answer. Are these always the same, or do they sometimes change? Equality, beauty, goodness, and every singular thing,—i.e., the essence itself—do these receive the least alteration, or are they so pure and simple that they continue always the same, without undergoing the least change?

Cebes:: Of necessity, they must continue still the same without alteration.

Socrates:: And all these fine things, such as men, horses, habits, movables, and a great many other things of the same nature, are they entirely opposite to the former, that they never continue in the same condition, either with reference to themselves or others, but are subject to perpetual alterations

Cebes:: They never continue in the same condition.

Socrates:: Now these are the things that are visible, touchable, perceptible by some other sense; whereas the former, which continue still the same, can only be reached by thought, as being immaterial and invisible.

Cebes:: That's true, Socrates.

Socrates:: If you please, I'll in stance in two things—the one visible, the other invisible; one still the same, and the other betraying continual alterations.

Cebes:: With all my heart.

Socrates:: Let us see, then. Are not we compounded of a body and a soul; or is there any other ingredient in our composition?

Cebes:: No, surely.

Socrates:: Which of the two kinds of things does our body most resemble?

Cebes:: All men own that it is most conformable to the visible sort.

Socrates:: And pray, my dear Cebes, is our soul visible or invisible?

Cebes:: At least ’tis not visible to men.

Socrates:: But when we speak of visible or invisible things, we mean with reference to men, without minding any other nature. Once more, then, is the soul visible or not?

Cebes:: ’Tis not visible.

Socrates:: Then ’tis immaterial and invisible?

Cebes:: Yes.

Socrates:: And by consequence the soul is more conformable than the body to the invisible kind of things, and the body suits better with the visible?

Cebes:: There is an absolute necessity for that.

Socrates:: When the soul makes use of the body in considering anything, by seeing, hearing, or any other sense (that being the sole function of the body, to consider things by the senses), should not we then say that the body draws the soul upon mutable things? In this condition it strays, frets, staggers, and is giddy like a man in drink, by reason of its being engaged in matter. Whereas, when it pursues things by itself without calling in the body, it betakes itself to what is pure, immortal, immutable; and as being of the same nature, dwells constantly upon it while it is master of itself. Then its errors are at an end, and it is always the same, as being united to what never changes; and this passion of the soul is what we call wisdom or prudence.

Cebes:: That's admirably well spoken, Socrates, and a very great truth.

Socrates:: After all, then, what sort of things does the soul seem to resemble most?

Cebes:: To my mind, Socrates, there is no man so stupid and stiff as not to be obliged, by your method of arguing, to acknowledge that the soul bears a greater resemblance and conformity to the immutable being, than to that which is always upon the change.

Socrates:: And as for the body?

Cebes:: It bears a greater resemblance to the other.

Socrates:: Lets try another way. During the conjunction of body and soul, nature orders the one to obey and be a slave, and the other to command and hold the empire. Which of these two characters is most suitable to the Divine Being, and which to that is mortal? Are not you sensible that the divine is only capable of commanding and ruling, and what mortal is only worthy of obedience and slavery?

Cebes:: Sure enough.

Socrates:: Which of these two, then, agrees best with the soul?

Cebes:: 'Tis evident, Socrates, that our soul resembles what is divine, and our body what is mortal.

Socrates:: You see, then, my dear Cebes, the necessary result of all is, that our soul bears a strict resemblance to what is divine, immortal, intellectual, simple, indissolvable; and is always the same, and always like, and that our body does perfectly resemble what is human, mortal, sensible, compounded, dissolvable, always changing, and never like itself. Can anything be alleged to destroy that consequence or to make out the contrary?

Cebes:: No, surely, Socrates.

Socrates:: Does not it, then, suit with the body to be quickly dissolved, and with the soul to be always indissolvable, or something very near it?

Cebes:: That is a standing truth.

Socrates:: Accordingly you see every day, when a man dies, his visible body, that continues exposed to our view, and which we call the corpse, that alone admits of dissolution, alteration, and dissipation; this, I say, does not immediately undergo any of these accidents, but continues a pretty while in its entire form, or in its flower, if I may so speak, especially in this season. Bodies embalmed after the manner of those in Egypt remain entire for an infinity of years, and even in those that corrupt, there are always some parts, such as the bones, nerves, and the like, that continue in a manner immortal. Is not this true?

Cebes:: Very true.

Socrates:: Now as for the soul, which is an invisible being, that goes to a place like itself, marvelous, pure, and invisible, in the infernal world; and returns to a God full of goodness and wisdom, which I hope will be the fate of my soul in a minute, if it please God. Shall a soul of this nature, and created with all these advantages, be dissipated and annihilated, as soon as it parts from the body, as most men believe? No such thing, my dear Simmias, and my dear Cebes. I’ll tell you what will rather come to pass, and what we ought to believe steadily. If the soul retain its purity without any mixture of filth from the body, as having entertained no voluntary correspondence with it, but on the contrary, having always avoided it, and recollected itself within itself in continual meditations; that is, in studying the true philosophy, and effectually learning to die; for philosophy is a preparation to death; I say, if the soul departs in this condition, it repairs to a being like itself, a being That's divine, immortal, and full of wisdom; in which it enjoys an inexpressible felicity, as being freed from its errors, its ignorance, its fears, its amours, that tyrannized over it, and all the other evils pertaining to human nature; and as 'tis said of those who have been initiated into holy mysteries, it truly passes a whole course of eternity with the gods? Ought not this to be the matter of our belief?

Cebes:: Sure enough, Socrates.

Socrates:: But if the soul depart full of uncleanness and impurity, as having been all along mingled with the body, always employed in its service, always possessed by the love of it, wheedled and charmed by its pleasures and lusts, insomuch that it is believed there was nothing real or true beyond what is corporeal, what may be seen, touched, drank, or eaten, or what is the object of carnal pleasures, that it hated, dreaded, and avoided what the eyes of the body could not descry, and all that is intelligible, and can only be enjoyed by philosophy. Do you think, I say, that a soul in this condition can depart pure and simple from the body?

Cebes:: No, surely, Socrates, That’s impossible.

Socrates:: On the contrary, it departs stained with corporeal pollution, which was rendered natural to it by its continual commerce and too intimate union with the body, at a time when it was its constant companion, and was still employed in serving and gratifying it.

Cebes:: Most certainly.

Socrates:: This pollution, my dear Cebes, is a gross, heavy, earthy, and visible mass; and the soul loaded with such a weight, is dragged into that visible place, not only by the weight, but by its own dreading the light and the invisible place; and, as we commonly say, it wanders in the churchyards, round the tombs, where dark phantoms and apparitions are often seen, such as these souls that did not depart the body in purity or simplicity, but polluted with that earthy and visible matter that makes them degenerate into a visible form.

Cebes:: That is very likely, Socrates.

Socrates:: Yes without doubt, Cebes; and ’tis also likely that ’tis not the good but the bad souls that are forced to wander in those places of impurity, where they suffer for their former ill-life, and continue to wander, till through the love they have to this corporeal mass, which always follows them, they engage again in a new body, and in all probability plunge themselves into the same manners and passions as were the occupation of the first life.

Cebes:: How do you say, Socrates?

Socrates:: I say, Cebes, that for instance those who made their belly their god, and loved nothing but indolence and impurity, without any shame, and without any reserve; those enter into the bodies of asses or such like creatures. Do not you think this very probable?

Cebes:: Yes, surely, Socrates.

Socrates:: And those souls which loved only injustice, tyranny, and rapine, are employed to animate the bodies of wolves, hawks, and falcons. Where else should souls of that stamp go?

Cebes:: Nowhere else, Socrates.

Socrates:: The case of all the rest is much the same. They go to animate the bodies of beasts of different species, according as they resemble their first courses.

Cebes:: According to these principles, it cannot be otherwise.

Socrates:: The happiest of all these men, whose souls are sent to the most agreeable place, are those who have always made a profession of popular and civil virtues, which are called temperance and justice, to which they have brought themselves only by habit and exercise, without any assistance from philosophy and the mind.

Cebes:: How can they be so happy, then?

Socrates:: 'Tis probable that after their death their souls arc joined to the bodies of politic and meek animals, such as bees, wasps, and ants; or else return to human bodies, and become temperate and wise men. But as for approaching to the nature of God, that is not at all allowed to those who did not live philosophically, and whose souls did not depart with all their purity. The great privilege is reserved for the love of true wisdom. And 'tis upon the consideration of this, my dear Simmias, and my dear Cebes, that the true philosophers renounce the desires of the body, and keep themselves up from its lusts; they are not apprehensive of the ruin of their families, or of poverty, as the vulgar are, and those who are wedded to their riches; they fear neither ignominy nor reproach, as those do who court only dignities and honor. In a word, they renounce all things and even themselves.

Cebes:: It would not be suitable for them to do otherwise.

Socrates:: No, surely, In the like manner, all those who value their souls, and do not live for the body, depart from all such lusts, and follow a different course from those insensible creatures that do not know where they go. They are persuaded that they ought not to do anything contrary to philosophy, or harbor anything that destroys its purifications and retards their liberty; and accordingly resign themselves to its conduct, and follow it whithersoever it leads them.

Cebes:: How do you say, Socrates?

Socrates:: I'll explain it to you. The philosophers, finding their soul tied and chained to the body, and by that means obliged to employ the body in the pursuit of objects which it cannot follow alone, so that it still floats in an abyss of ignorance, are very sensible that the force of this bond lies in its own desires, insomuch that the prisoner itself helps to lock up the chains. They are sensible that philosophy, coming to seize upon the soul in this condition, gently instructs and comforts it, and endeavors to disengage it, by giving it to know that the eye of the body is full of illusion and deceit, as well as all its other senses, by advertising it not to use the body farther than necessity requires; and advising it to recollect and shut up itself within itself; to receive no disposition but its own after it has examined within itself the intrinsic nature of every thing, and-stripped it of the covering that conceals it from our eyes, and to continue fully persuaded that whatever is tried by all its other senses, being different from the former discovery, is certainly false; now whatever is tried by the corporeal senses is visible. And what it views by itself without the ministry of the body is invisible and unintelligible. So that the soul of a true philosopher, being convinced that it should not oppose its own liberty, disclaims as far as is possible the pleasures, lusts, fears, and sorrows of the body; for it knows that when one has enjoyed many pleasures or given way to extreme grief or timorousness, or given himself to his desires, he not only is afflicted by the sensible evils known to all the world, such as the loss of health or estate, but is doomed to the last and greatest of evils—an evil that is so much the more dangerous and terrible that it is not obvious to our senses.

Cebes:: What evil is that, Socrates?

Socrates:: ’Tis this; that the soul, being forced to rejoice or be afflicted upon any occasion, is persuaded that what causes its pleasure or grief is a real and true thing, though, at the same time it is not; and such is the nature of all sensible and visible things that are capable to occasion joy or grief.

Cebes:: That is certain, Socrates.

Socrates:: Are not these passions, then, the chief instruments particularly that imprison and mew up the soul within the body?

Cebes:: How’s that, Socrates?

Socrates:: Every pleasure, every melancholy thought, being armed with a strong and keen nail, nails the soul to the body with such force that it becomes material and corporeal, and fancies there are no real and true objects but such as the body accounts so; for as it entertains the same opinions and pursues the same pleasures with the body, so it is obliged to the same actions and habits. For which reason it cannot descend in purity to the lower world, but is daubed all over with the pollution of the body itself, and quickly re-enters another body, where it takes root as if it had been sown, and puts a period to all commerce with the pure, simple, and divine essence.

Cebes:: That is very certain, Socrates.

Socrates:: These are the motives that oblige the true philosophers to make it their business to acquire temperance and fortitude, and not such motives as the vulgar think of. Are not you of my opinion, Cebes?

Cebes:: Yes, surely.

Socrates:: All true philosophers will still be of that mind. Their souls will never entertain such a thought as if philosophy should disengage it to the end that when 'tis freed it should follow its pleasures, and give way to its fears and sorrows; that it should put on its chains again, and always want to begin again, like Penelope's web. On the contrary, it continues in a perfect tranquility and freedom from passion, and always follows reason for its guide, without departing from its measures; it incessantly contemplates what is true, divine, immutable, and above opinion, being nourished by this pure truth; it is convinced that it ought to follow the same course of life while it is united to the body; and hopes that after death, being surrendered to that immortal being as its source, twill be freed from all the afflictions of the human nature. After such a life, and upon such principles, my dear Simmias and Cebes, what should the soul be afraid of? Shall it fear that upon its departure from the body the winds will dissipate it and run away with it, and that annihilation will be its fate?

Phaedo:: Socrates having thus spoken, he stopped for a while, seeming to be altogether intent upon what he had said. Most of us were in the same condition; Cebes and Simmias had a short conference together. At last Socrates, perceiving their conference, asked them what they were speaking of.

Socrates:: Do you think, that my arguments were lame? I think, indeed, there is room left for a great many doubts and objections, if any will take the pains to retail them out. If you are speaking of anything else I have nothing to say. But though you have no doubts, pray tell me freely whether you think of any better demonstration, and make me a companion in your inquiry, if you think I can assist you to compass your end.

Simmias:: I'll tell you, the naked truth. It is some time since Cebes and I thought of some doubts; and, being desirous to have them resolved, pushed on one another to propose them to you. But we were both afraid to importune you and propose disagreeable questions in the unseasonable hour of your present misfortune.

Socrates:: Oh, my dear Simmias, certainly I should find great difficulty in persuading other men that I find no misfortune in my present circumstances, since I cannot get you to believe it. You think that upon the score of fore knowledge and divining I am infinitely inferior to the swans. When they perceive approaching death they sing more merrily than before, because of the joy they have in going to the God they serve. But men, through the fear of death, reproach the swans, in saying that they lament their death and tune their grief in sorrowful notes. They forget to make this reflection, that no fowl sings when 'tis hungry, or cold, or sad; nay, not the nightingale, the swallow, or the lapwing, whose music they say is a true lamentation and the effect of grief. But, after all, these fowls do not all sing out of grief; and far less the swans, which by reason of their belonging to Apollo are diviners, and sing more joyfully on the day of their death than before, as foreseeing the good that awaits them in the other world. And, as for me, I think I serve Apollo as well as they. I am consecrated to that God as well as they; I have received from our common Master the art of divining as well as they, and I am as little concerned for making my exit as they are. So that you may freely propose what doubts you please, and put questions to me as long as the eleven magistrates suffer me to be here.

Simmias:: You say well, Socrates, since 'tis so I will suppose my doubts first, and then Cebes shall give in his. I agree with you that 'tis impossible, or, at least, very difficult, to know the truth in this life; and that it is the property of a lazy and dull head not to weigh exactly what he says or to supersede the examination before he has made all his efforts, and be obliged to give over by insurmountable difficulties. For one of these two things must be done, we must either learn the truth from others or find it out ourselves, If both ways fail us, amidst all human reasons, we must pitch upon the strongest and most forcible, and trust to that as to a ship while we pass through this stormy sea, and endeavor to avoid its tempests and shelves; till we find out one more firm and sure, such as a promise or revelation upon which we may happily accomplish the voyage of this life as in a vessel that fears no danger. I shall therefore not be ashamed to put the questions to you, now that you allow me; and shall avoid the reproach I might one day cast upon myself of not having told you my thoughts upon this occasion. When I survey what you spoke to me and to Cebes I must own I do not think your proofs sufficient.

Socrates:: Perhaps you have reason, my dear Simmias; but where does their insufficiency appear?

Simmias:: In this; that the same things might be asserted of the harmony of a harp. For one may reasonably say that the harmony of a harp, well stringed and well tuned, is invisible, immaterial, excellent, and divine; and that the instrument and its strings are the body, the compounded earthy and mortal matter. And if the instrument were cut in pieces or its strings broken, might not one with equal reason affirm that this harmony remains after the breaking of the harp and has no end? For, since it is evident that the harp remains after the strings are broken, or that the strings, which are likewise mortal, continue after the harp is broken or dismounted, it must needs be impossible, might one say, that this immortal and divine harmony should perish before that which is mortal and earthly; nay, it is necessary that this harmony should continue to be without the least damage when the body of the harp and its strings are gone to nothing. For, without doubt, Socrates, you are sensible that we hold the soul to be something that resembles a harmony; and that as our body is a being composed of hot and cold, dry and moist, so our soul is nothing else but the harmony resulting from the just proportion of these mixed qualities. Now, if our soul is only a sort of harmony, 'tis evident that when our body is overstretched, or unbended by diseases, or any other disorder, of necessity our soul, with all its divinity, must come to an end, as well as the other harmonies which consist in sounds or are the effect of instruments; and that the remains of every body continue for a considerable time, till they be burnt or moldered away. This, you see, Socrates, might be alleged in opposition to your arguments, that if the soul be only a mixture of the qualities of our body it perishes first in what we call death.

Phaedo:: Then Socrates looked upon us all, one after another, as he did often, and began to smile.

Socrates:: Simmias speaks with reason, his question is well put; and if any one of you has a greater dexterity in answering his objections than I have, why do you not do if? For he seems thoroughly to understand both my arguments, and the exceptions they are liable to. But before we answer him, 'tis proper to hear what Cebes has to object, that while he speaks we may have time to think upon what we are to say; and after we have heard them both, that we may yield if their reasons are uniform and valid, and if otherwise, may stand by our principles to the utmost. Tell us, then, Cebes, what is it that hinders you from agreeing with what I have laid down?

Cebes:: I'll tell you, your demonstration seems to be lame and imperfect; it is faulty upon the same head that we took notice of before. That the soul has a being before its entrance into the body, is admirably well said, and I think sufficiently made out; but I can never be persuaded that it has likewise an existence after death. At the same time, I cannot subscribe to Simmias s allegation, that the soul is neither stronger nor more durable than the body, for to me it appears to be infinitely more excellent. But why, then, says the objection, do you refuse to believe it? Since you see with your eyes, that when a man is dead his weakest part remains still, is it not there fore absolutely necessary that the more durable part should last yet longer t Pray take notice if I answer this objection right. For to let you into my meaning, I must use resemblance or comparison, as well as Simmias. Your allegation, to my mind, is just the same, as if upon the death of an old tailor one should say, this tailor is not dead, he has a being still somewhere or other; and for proof of that, there's the suit of clothes he wore, which he made for himself, so that he's still in being. If any one should not be convinced by this proof, he would not fail to ask him, whether the man or the clothes he wears is most durable? To which, of necessity, he must answer that the man is; and upon this ground, your philosopher would pretend to demonstrate that since the less durable possession of the tailor is still in being, by stronger consequence he himself is so too. Now, my dear Simmias, the parallel is not just. Pray hear what I have to answer to it.

'Tis evident, at first view, that the objection is ridiculous. For the tailor, having used several suits of clothes, died after them, and only before the last suit, which he had not time to wear, and though the suit survived the man, if I may so speak, yet we cannot say the man is weaker or less durable than the suit of clothes. This simile is near enough, for as the man is to this suit of clothes, so is the soul to the body; and whoever applies to the soul and body what is said of the man and his suit of clothes will speak to the purpose. For he’ll make the soul more durable, and the body a weaker being, and less capable to hold out for a long time. He’ll add, that e very soul wears several bodies, especially if it lives several years. For the body wastes while the man is yet alive, and the soul still forms to itself a new habit of body out of the former that decays; but when the last comes to die, it has then its last habit on, and dies before its consummation; and when the soul is dead, the body quickly betrays the weakness of its nature, since it corrupts and molders away very speedily. So that we cannot put such confidence in your demonstration, as to hold it for a standing truth that our souls continue in being after death. For supposing it were granted that our soul has not a being antecedent to our birth, but that, for anything we know, the souls of some continue in being after death; and that ’tis very possible they may return again to the world, and be born again, so to speak, several times, and die at last; for the strength and advantage of the soul beyond the body, consists in this, that it can undergo several births, and wear several bodies one after another, as a man does a suit of clothes; supposing, I say, that all this were granted, still it cannot be denied, but that in all those repeated births it decays and wastes, and at last comes to an end in one of the deaths. How ever, ’tis impossible for any man to discern in which of the deaths ’tis totally sunk. Since things stand thus, whoever does not fear death must be senseless, unless he can demonstrate that the soul is altogether immortal and incorruptible. For otherwise every dying man must of necessity be afraid for his soul, for fear the body it is quitting be its last body, and it perishes without any hopes of return.

Phaedo:: Having heard them propose these objections, we were very much troubled, as we afterwards told them, that at a time when we were just convinced by Socrates' arguments, they should come to amuse us with their objections, and throw us into a fit of unbelief and jealousy, not only of all that had been said to us by Socrates, but likewise of what he might say for the future; for we would always be apt to believe that either we were not proper judges of the points in debate, or else that his propositions were in themselves incredible.

Echecrates:: Indeed, Phaedo, I can easily pardon your trouble upon that account. For I myself, while I heard you relate the matter, was saying to my self, what shall we believe hereafter, since Socrates' arguments, which seemed so valid and convincing, are become doubtful and uncertain? In effect that objection of Simmias's, that the soul is only a harmony, moves me wonderfully, and always did so. It awakes in me the memory of my being formerly of the same opinion. So that my belief is unhinged, and I want new proofs to convince me that the soul does not die with the body. Wherefore, prithee tell me, Phaedo, in the name of God, how Socrates came off, whether he seemed to be as much nettled as you, or if he maintained his opinion with his wonted temper; and in fine, whether his demonstration gave you full satisfaction, or seemed chargeable with imperfections? Pray tell me the whole story, without omitting the minutest circumstance.

Phaedo:: I protest to you, Echecrates, I admire Socrates all my lifetime, and upon this occasion admired him more than ever. That such a man as he had his answers in readiness is no great surprisal; but my greatest admiration was to see, in the first place, with what calmness, patience, and good humor he received the objections of these youngsters; and then how dexterously he perceived the impression they had made upon us, and cured us of the same. He rallied us like men put to flight after a defeat, and inspired us with a fresh ardor to turn our heads and renew the charge.

Echecrates:: How was that?

Phaedo:: I am about to tell you. As I sat at his right hand upon a little stool lower than his, he drew his hand over my head, and taking hold of my hair that hung down upon my shoulders, as he was wont to do for his diversion;

Socrates:: Phaedo, will not you cut this pretty hair to-morrow?

Phaedo:: 'Tis probable I shall.

Socrates:: If you take my advice, you will not stay so long.

Phaedo:: How do you mean?

Socrates:: Both you and I, ought to cut our hair, if our opinion be so far dead that we cannot raise it again. Were I in your place, and defeated, I would make a vow, as the men of Argos did, never to wear my hair before I conquered these arguments of Simmias and Cebes.

Phaedo:: But, Socrates, you have forgotten the old proverb, that Hercules himself is not able to engage two.

Socrates:: And why, do you not call on me to assist you as your Iolas, while 'tis yet time?

Phaedo:: And accordingly I do call on you, not as Hercules did Iolas, but as Iolas did Hercules.

Socrates:: 'Tis no matter for that, 'tis all one. Above all, let us be cautious to avoid one great fault.

Phaedo:: What fault?

Socrates:: That, of being reason-haters, for such there are, as well as men-haters. The former is the greatest evil in the world, and arises from the same source with the hatred of man. For the latter comes from one mans plighting his faith for another man, without any precaution or inquiry, whom he always took for a true-hearted, solid, and trusty man, but finds him at last to be a false, faithless cheat; and thus being cheated in several such instances, by those whom he looked on as his best friends, and at last weary of being so often noosed, he equally hates all men, and is convinced there is not one that is not wicked and perfidious. Are not you sensible that this man-hating is formed at this rate by degrees?

Phaedo:: Yes, surely.

Socrates:: Is it not a great scandal, then, and a superlative crime, to converse with men without being acquainted with the art of trying them and knowing them? For if one were acquainted with this art, he would see how things stand, and would find that the good and the wicked are very rare, but those in the middle region swarm in infinite numbers.

Phaedo:: How do you say, Socrates?

Socrates:: I say, Phaedo, the case of the good and bad is much the same with that of very large or very little men. Do not you see that there's nothing more uncommon than a very big or a very little man? The case is the same with reference to dogs, horses, and all other things; and may likewise be applied to swiftness and slowness, handsomeness and deformity, whiteness and blackness. Are not you convinced that in all these matters the two extremes are very uncommon, and the medium is very common?

Phaedo:: I perceive it very plainly, Socrates.

Socrates:: If a match were proposed for wickedness, would not there be very few that could pretend to the first rank?

Phaedo:: That's very likely, Socrates.

Socrates:: It is certainly so. But upon this score the case of reason and men is not exactly the same. I'll follow you step by step. The only resemblance of the two lies in this, that when a man unskilled in the art of examination entertains a reason as true, and afterwards finds it to be false, whether it be so in itself or not, and when the same thing happens to him often—as indeed it does to those who amuse themselves in disputing with the sophisters, that contradict everything—he at last believes himself to be extraordinary well skilled, and fancies he's the only man that has perceived there's nothing true or certain, either in things or reasons, but that all is like Euripus, in a continual flux and reflux, and that nothing continues so much as one minute in the same state.

Phaedo:: That is the pure truth, Socrates.

Socrates:: Is it not, then, a very deplorable misfortune, my dear Phaedo, that while there are true, certain, and very comprehensive reasons, there should be men found who, after they have suffered them to pass, call them again in question upon hearing these frivolous disputes, where sometimes truth and falsehood comes uppermost; and instead of charging themselves without these doubts, or blaming their want of art, cast the blame at last upon the reasons themselves; and, being of a sour temper, pass their life in hating and calumniating all reason, and by that means rob themselves both of truth and knowledge?

Phaedo:: That's certainly a most deplorable thing.

Socrates:: We ought to be very cautious, that this misfortune be not our lot, and that we are not prepossessed by this thought, that there s nothing solid or true in all arguments whatsoever. We should rather be persuaded that 't is ourselves who are wanting in solidity and truth and use our utmost efforts to recover that solidity and justness of thought. This is a duty incumbent upon you, who have time yet to live; and likewise upon me, who am about to die; and I am much afraid that upon this occasion I have been so far from acting the part of a true philosopher, that I have behaved myself like a disputant overborne with prejudice, as all those ignorants do who in their disputes do not mind the perception of the truth, but mean only to draw their hearers over to their opinions. The only difference between them and me is, that convincing my audience of the truth of what I advance is not my only aim—indeed, I shall be infinitely glad if that come to pass—but my chief scope is to persuade myself of the truth of these things; for I argue thus, my dear Phaedo, and you'll find that this way of arguing is highly useful. If my propositions prove true, it is well done to believe them; and if after my death they be found false, I still reap that advantage in this life, that I have been less affected by evils which commonly accompany it. But I shall not remain long under this ignorance. If I were, I should reckon it a great misfortune; but by good luck it will quickly be dispelled. Being fortified by these thoughts, my dear Simmias and Cebes, I make account to answer your objections; and if you take my advice, you'll rely less upon the authority of Socrates than that of the truth. If what I am about to advance appear true, embrace it; if other wise, attack it with all your force. Thus, I shall neither deceive myself, nor impose upon you by the influence of zeal and goodwill, or quit you like a wasp that leaves its sting in the wound it has made.

To begin, then, pray see if I remember rightly what was objected. Simmias, as I take it, rejects our belief only because he fears our souls, not-with-standing their being divine and more excellent, will die before our bodies, as being only a sort of harmony. And, Cebes, if I mistake not, granted that the soul is more durable than the body, but thinks it possible that the soul, after having used several bodies, may die at last, when it quits the last body, and that this death of the soul is a true death. Are not these the two points I am to examine, my dear Simmias and Cebes?

Phaedo:: When they had all agreed that the objections were justly summed up, he continued thus;—

Socrates:: Do you absolutely reject all that I have said, or do you acknowledge part of it to be true?

Phaedo:: They answered that they did not reject the whole.

Socrates:: But what, is your opinion of what I told you, that is to say, that learning is only remembrance, and that, by a necessary consequence, the soul must have an existence before its conjunction with the body?

Cebes:: As for me, I perceived the evidence of it at first view, and do not know any principles of more certainty and truth.

Simmias:: I am of the same mind, and should think it very strange if ever I changed my opinion.

Socrates:: But, my dear Theban, you must needs change it, if you retain your opinion that harmony is compounded, and that the soul is a sort of harmony, arising from the due union of the qualities of the body; for ’tis presumed you would not believe yourself if you said that harmony has a being before those things of which it is composed.

Simmias:: Sure enough. I would not believe myself if I did.

Socrates:: Do not you see, then, that you are not of a piece with yourself when you say the soul had a being before it came to animate the body; and at the same time, that it is compounded of things that had not then an existence? Do not you compare the soul to a harmony? And is it not evident that the harp, the strings, and the very discordant sounds exist before the harmony, which is an effect that results from all these things that perishes sooner than they? Does this latter part of your discourse suit with the first?

Simmias:: Not at all.

Socrates:: And yet, if ever a discourse be all of a piece, it ought to be such when harmony is its subject.

Simmias:: That’s right.

Socrates:: But yours is not so. Lets hear, then, which of these two opinions you side with; whether is learning only remembrance, or is the soul a sort of harmony?

Simmias:: I side with the first.

Socrates:: And that opinion I have explained to you, without having any recourse to demonstrations full of similes and examples, which are rather colors of the truth, and therefore please the people best; but as for me, I am of opinion that all discourses proving their point by similes are full of vanity, and apt to seduce and deceive, unless one be very cautious, whether it relate to geometry or any other science; whereas the discourse I made for proving that knowledge is remembrance is grounded upon a very credible hypothesis; for I told you that the soul exists as well as its essence before it comes to animate the body. By essence, I mean the principle from which it derives its being, which has? other name but that which is. And this proof I take to be good and sufficient.

Simmias:: By that reason, I must not listen either to myself or others, who assert the soul to be a sort of harmony.

Socrates:: In earnest, Simmias, do you think that a harmony, or any other composure, can be anything different from the parts of which it is compounded

Simmias:: By no means, Socrates.

Socrates:: Or, can it do or suffer what those parts do not?

Phaedo:: Simmias answered that it could not.

Socrates:: Then, a harmony does not precede, but follow the thing it is composed of.; and it cannot have sounds and motions, or any thing else contrary to its parts.

Simmias:: No, surely.

Socrates:: But what, is not all harmony only such in proportion to the concord of its parts?

Simmias:: I do not well understand you.

Socrates:: I mean, according as the parts have more or less of concord, the harmony is more or less a harmony, is it not?

Simmias:: Yes, surely.

Socrates:: Can we say of the soul, at the same rate, that a small difference makes a soul to be more or less a soul?

Simmias:: No, surely, Socrates.

Socrates:: How is it, then, in the name of God? Do not we say, for example, that such a soul endowed with understanding and virtue is good, and another filled with folly and mischief is wicked? Is not this right?

Simmias:: Yes, surely.

Socrates:: But those who hold the soul to be a harmony, what will they call these qualities of the soul, that vice, and that virtue? Will they say, the one s harmony, and the other discord? That a virtuous and good soul, being harmony in its nature, is entitled to another harmony, and that a vicious wicked soul wants that addition, harmony?

Simmias:: I cannot be positive, but indeed 'tis very probable the patrons of that opinion may advance some such thing.

Socrates:: But we concluded, that one soul is not more or less a soul than another; that is, that it is not more or less a harmony, than another harmony.

Simmias:: I own it.

Socrates:: And since it is not more or less a harmony then it has not more or less concord? Is it not so?

Simmias:: Yes, surely, Socrates.

Socrates:: And since it has not more or less of concord, can one have more harmony than another, or must the harmony of them all be equal?

Simmias:: Questionless it must be equal.

Socrates:: Since one soul cannot be more or less a soul than another, by the same reason, it cannot have more or less of concord.

Simmias:: That's true.

Socrates:: Then it follows necessarily that one soul cannot have either more harmony or discord than another?

Simmias:: I agree to it.

Socrates:: And by consequence, since the soul is of that nature, it cannot have more virtue or vice than another; if so be that vice is discord, and virtue harmony?

Simmias:: That is a standing truth.

Socrates:: Or, would not right reason rather say that vice could find no place in the soul, if so be the soul is harmony? for harmony, continuing in its perfect nature, is not capable of discord.

Simmias:: There is no question of that.

Socrates:: In like manner the soul, while perfectly a soul, is not capable of vice.

Simmias:: According to the principles we agreed upon, I cannot see how it should.

Socrates:: From the same very principles it will follow, that the souls of all animals are equally good, since they are equally souls.

Simmias:: So I think.

Socrates:: But do you think that it stands with right reason, if the hypothesis of the souls being a harmony be true?

Simmias:: No, surely, Socrates.

Socrates:: Then I ask you, Simmias, if of all the parts of a man the soul is not best entitled to command, especially when she is prudent and wise?

Simmias:: There is no other part can pretend to it.

Socrates:: Does it command by giving way to the passions of the body, or by resisting them? As, for example, when the body is seized with thirst in the cold fit of a fever, does not the soul restrain it from drinking? Or when ’tis hungry, does it not restrain from eating? As well as in a thousand other instances, which manifestly show that the soul curbs the passions of the body. Is it not so?

Simmias:: Without question.

Socrates:: But we agreed above that the soul being a sort of harmony, can never sound contrary to the sound of those things which arise, or lower, or move it, nor have other passions different from those of its parts; and that it is necessarily obliged to follow them, as being incapable to guide them.

Simmias:: ’Tis certain we agreed upon that, how could we avoid it?

Socrates:: But, is it not evident that the conduct of the soul is the downright contrary? That it governs and rules those very things which are alleged for ingredients in its composition; that it thwarts and attacks them almost all its lifetime; that it is every way their mistress, punishing and repressing some by the harder measures of pain, school-exercises, and physic; and treating others more gently, as contenting itself with threatening or insulting over its lusts, passion, and fear. In a word, we see the soul speaks to the body, as something of a different nature from itself, which Homer was sensible of, when in his Odyssey, he tells that 'Ulysses beating his breast, rebuked his heart, and said to it, Support thyself, you hast stood out against harder and more difficult things than these.'

Do you think the poet spoke that under the apprehensions of the souls being a harmony to be managed and conducted by the body? Or do you not rather believe that he knew it was the soul s part to command, and that it is of a nature more divine than harmony?

Simmias:: Yes, Socrates; I swear I am persuaded Homer knew that truth.

Socrates:: And, by consequence, my dear Simmias, there is not the least color of reason for the souls being a harmony; should we assert it to be such we should contradict both Homer, that divine poet, and likewise ourselves.

Phaedo:: Simmias yielded, and Socrates proceeded thus.

Socrates:: I think we have sufficiently tempered and moderated this Theban harmony, so that it will do us no harm. But Cebes, how shall we do to appease and disarm this Cadmus? How shall we hit on a discourse duly qualified with a persuasive force?

Cebes:: If you'll be at the pains, Socrates, you can easily find such a discourse. The last you had against the harmony of the soul moved me mightily, and indeed beyond my expectation; for when Simmias proposed his doubts, I thought nothing short of a prodigy or miracle could solve them, and I was mightily surprised when I saw he could not stand the first attack. So that now it will be no surprisal to m to see Cadmus undergo the same fate.

Socrates:: My dear Cebes, do not you speak too big upon the matter, lest envy should overturn all I have said, and render it useless and ineffectual. But That's in the hands of God. As for us, let us approach one another, as Homer says, and try our strength and arms. What you want comes all to this point; You would have the immortality and incorruptibility of the soul demonstrated, to the end that a philosopher who dies bravely in the hopes of being infinitely more happy in the other world than in this, may not hope in vain. You say, the souls being a durable and divine substance, existing before its joining the body, does not conclude its immortality; and the only inference that it will bear is, that it lasts a great while longer, and was in being many ages before us, during which it knew and did several things, but without immortality; for on the contrary, the first minute of its descent into the body is the commencement of its death, or, as it were, a disease to it; for it passes this life in anguish and trouble, and at last is quite swallowed up and annihilated by what we call death. You add that 'tis the same thing, whether it animates a body only once, or returns to it several times, since that does not alter the occasion of our fears, forasmuch as all wise men ought still to fear death, while they are uncertain of the immortality of their souls. This, I take it, is the sum of what you said; and I repeat it so often, on purpose that nothing may escape my view, and that you may have the opportunity of adding or impairing as you please.

Cebes:: At present, I have nothing to alter; that is the just sum of all I have yet said.

Phaedo:: Socrates was silent a pretty while, as being drowned in profound meditation.—

Socrates:: At last, Cebes, ’tis truly not a small matter that you demand; for in order to a just satisfaction, there s a necessity of making a narrow inquiry into the cause of generation and corruption. If you please, I’ll tell you what happened to me upon this very matter; and if what I say seem useful to you, you shall be at liberty to make use of it to support your sentiments.

Simmias:: With all my heart.

Socrates:: Pray give ear, then. In my youth I had an insatiable desire to learn that science which is called natural history; for I thought it was something great and divine to know the causes of every thing, of their generation, death, and existence. And I spared no pains, nor omitted any means, for trying, in the first place, if a certain corruption of hot and cold will, as some pretend, give being and nourishment to animals; if the blood makes the thought, if air or fire, or the brain alone is the cause of our senses of seeing, hearing, smelling, and so on, if memory and opinion take their rise from these senses, and if knowledge be the result of memory and opinion. Then I wanted to know the causes of their corruption, and extended my curiosity both to the heavens and the cavities of the earth, and would fain have known the cause of all the phenomena we meet with. At last, after a great deal of trouble, I found myself strangely unqualified for such inquiries; and of this I am about to give you a sensible proof. This fine study made me so blind in the things I knew more evidently before, according to my own and other persons thoughts, that I quite forgot all that I had known from several subjects, particularly that of a mans growth. I thought ’twas evident to the whole world that a man grows only by eating and drinking; for flesh being added to flesh, bones to bones, and all the other parts joined to their similar parts by nourishment, make a small bulk to swell and grow, so that a little man becomes a large. This was my thought, do you think ’twas just?

Cebes:: Yes, surely.

Socrates:: Mind what follows. I thought likewise that I knew the reason why one man is taller than another by the head, and one horse higher than another; and with reference to plainer and more sensible things, I thought, for instance, that ten was more than eight, because two was added to it; and that two cubits were larger than one because they contained one-half more.

Cebes:: And what are your present thoughts of those things?

Socrates:: I am so far, from thinking that I know the cause of all these things, that when one is added to one, I do not believe I can tell whether it is that very one to which the other is added that becomes two, or whether the one is added, and the one to which the addition was made make two together? For, in their separate state, each of them was one, and not two, and after their being placed one by the other they became two. Neither can I tell how, upon the division of anything, what was formerly one becomes two, from the very minute of division; for that cause is quite contrary to that which makes one and one become two. There, this one and this one become two by reason of their being placed near, and added the one to the other; but here this one thing becomes two by reason of its division and separation. Far less do I pretend to know whence this one thing comes, and by this method, in other words, by physical reasons, I cannot find how the least thing takes rise or perishes, or how it exists. But without so much ceremony, I mix another method of my own with this, for by this I can learn nothing. Having one day heard somebody reading a book of Anaxagoras s, who said the divine intellect was the cause of all beings, and drew them upon their proper ranks and classes, I was ravished with joy. I perceived there was nothing more certain than this principle, that the intellect is the cause of all things. For I justly thought that this intellect, having methodized all things and ranked them in their classes, planting everything in the place and condition that was best and most useful to it, in which it could best do and suffer whatever the intellect had allotted to it; and I apprehended that the result of this principle was, that the only thing a man ought to look for, either for himself or others, is this better and more useful thing; for having once found what is best and most useful, he'll necessarily know what is worst, since there is but one knowledge both for the one and the other. Upon this score I was infinitely glad that I had found such a master as Anaxagoras, who I hoped would give a satisfactory account of the cause of all things; and would not only tell me, for in stance, that the earth is broad or round, but like wise assign the necessary cause, obliging it to be so; who would point out to me what is best, and at the same time give me to understand why it was so. In like manner, if he affirmed the seat of the earth to be in the centre of the world, I expected he would give me a reason why it was so; and after I should have received sufficient instruction from him, designed never to admit of any other cause for a principle.

I prepared some question to be put to him concerning the sun, moon, and the stars, in order to know the reasons of their revolutions, motions, and other accidents, and why what each of them does is always the best; for I could not imagine that after he had told me that the intellect ranked them, and drew them up in order, he could give me no other reason of that order than this, that it was best. And I flattered myself with hopes, that after he had assigned both the general and particular causes, he would give me to know wherein the particular good of every individual thing, as well as the common good of all things, consists. I would not have parted with these hopes for all the treasures of the world.

Socrates:: So I bought his books with a great deal of impatience, and made it my business to peruse them as soon as possible I could, in order to a speedy knowledge of the good and evil of all this; but I found myself frustrated of my mighty hopes, for as soon as I had made a small progress in the perusal I found the author made no use of this intellect, and assigned no reason of that fine order and disposition; but assigned, as causes, the air, whirl winds, the waters, and other things equally absurd.

His whole performance seemed to reach no farther, than if a man should say, that Socrates does all by the intellect; and after that, meaning to give a reason for my actions, should say, for instance, to-day I am set upon my bed, because my body is composed of bones and nerves; the bones being hard and solid are separated by the joints; and the nerves, being capable to bend and unbend themselves, tie the bones to the flesh and the skin, which receives and includes both the one and the other; that the bones being disengaged at the joints, the nerves, which bend and unbend, enable me to fold my legs as you see; and that, forsooth, is the reason that I sit in this posture. Or if a man pretending to assign the cause of my present conference with you should insist only upon the second causes, the voice, the air, hearing, and such other things, and should take no notice of the true cause, that is to say, that the Athenians thought it fit to condemn me, and that by the same reason I thought it fitter for me to be here, and patiently wait the execution of my sentence, for I can safely swear that these nerves and these bones should long ere now have been translated to Megara, or Boeotia, if that had been fitted for me, and if I had not been persuaded that it was better and fitter for me to endure the punishment I am doomed to by my country, than to flee like a slave or a banished person. As I take it, ’tis highly ridiculous to assign such causes upon such an occasion, and to rest satisfied in them.

If it be replied, that without bones and nerves, and such other things, I could not do what I mean to do, the allegation is true. But it savors of the greatest absurdity to fancy that these bones or nerves should be the cause of my actions, rather than the choice of what is best; and that my intellect is employed on that score, for that were to sink the difference between the cause and the thing, without which the cause could not be such, And yet the vulgar people, who take things by hearsay, and see by other peoples eyes, as if they walked in thick darkness, take the true cause of things to be of that nature. Pursuant to this notion, some surround the earth with a vortex that turns eternally round, and suppose it to be fixed in the centre of the universe; others conceive it to be a broad and large trough, which has the air for its base and foundation. And as for the power of Him who ranked and disposed of everything to its best advantage, that is not in their view, and they don t believe that He is entitled to any divine virtue. They fancy they know of a stronger and more immortal Atlas, more capable to support all things. And this good and immortal tie that is only capable to unite and comprehend all things, they take for a chimera.

I am of their mind, but would willingly list myself a disciple to any that could tell me the cause, let it be what it will. But since I could not compass the knowledge of it, neither by myself nor others, if you please I'll give you an account of a second trial I made-in order to find it.

Cebes:: I am very desirous to hear it.

Socrates:: After I had wearied myself in examining all things, I thought it my duty to be cautious of avoiding what happens to those who contemplate an eclipse of the sun; for they lose the sight of it, unless they be careful to view its reflection in water or any other medium. A thought much like to that came into my head, and I feared? should lose the eyes of my soul if I viewed objects with the eyes of my body, or employed any of my senses in endeavoring to know them. I thought I should have recourse to reason, and contemplate the truth of all things as reflected from it. ’Tis possible the simile I use in explaining myself is not very just, for I myself cannot affirm that he who beholds things in the glass of reason sees them more by reflection and similitude than he? who beholds them in their operations. However, the way I followed was this; from that time for ward I grounded all upon the reason that seemed to be best, and took all for truth that I found conformable to it, whether in things or causes. And what was not conformable I rejected, as being false. I’ll explain my meaning more distinctly, for I fancy you do not yet understand me.

Cebes:: I’ll swear, I do not well under stand you.

Socrates:: But after all, I advance no new thing. This is no more than what I have said a thousand times, and particularly in the foregoing dispute; for all that I aim at is to demonstrate what sort of cause this is that I sought after so carefully. I begin with his qualities, which are so much talked of, and which I take for the foundation. I say, then, there is something that is good, fine, just, and great of itself. If you grant me this principle, I hope by it to demonstrate the cause, and make out the immortality of the soul.

Cebes:: I grant it, you cannot be too quick in perfecting your demonstration.

Socrates:: Mind what follows, and see if you agree to it as I take it. If there is anything fine, besides fineness itself, it must be such by partaking of that first good;

and so of all the other qualities. Are you of this opinion?

Cebes:: I am.

Socrates:: I protest, I cannot well understand all the other learned causes that are commonly given us. But if any man ask me what makes a thing fine, whether the liveliness of its colors, or the just proportion of its parts, and the like, I waive all these plausible reasons, which serve only to confound me, and without ceremony or art, make answer, and perhaps too simply, that its fineness is only owing to the presence, or approach, or communication of the original fine being, whatever be the way of that communication. For I am not yet certain in what manner it is; I only know certainly that all these fine things are rendered such by the presence of this fine being. While I stand by this principle I reckon I cannot be deceived, and I am persuaded that I may safely make answer to all questions whatsoever, that all fine things owe their fineness to the presence of! the above-mentioned being. Are not you of the same mind?

Cebes:: Yes, surely, Socrates.

Socrates:: Are not great and small things rendered such in like manner? If one told you that such a thing is larger than another by the head, would not you think the expression far from being exact? and would not you make answer, that whatever is larger is rendered such by magnitude itself, and what is smaller owes its littleness to littleness itself? For if you said that such a thing is greater or smaller than another by the head, I fancy you would fear being censured for making both the greater and lesser thing to be such by the same cause; and besides, for using such an expression as seems to imply that the head, which is a small part, makes the largeness of the greater, which in effect is a monster; for what can be more absurd than to say that a small matter makes a thing large? Would not you fear such objections?

Cebes:: Yes, surely.

Socrates:: By the same reason would not you be afraid to say that ten are more than eight, and surpasses it by two? and would not you rather say that ten are more than eight by quantity? In like manner, of two cubits, would not you say they are larger than one by magnitude, rather than by the half? For still there's the same occasion of fear.

Cebes:: You say well.

Socrates:: But when one is added to one, or a thing divided into halves, would not you avoid saying that in the former case addition makes one and one two? and in the latter, division makes one thing become two? And would not you protest that you know no other cause of the existence of things than the participation of the essence That's peculiar to every subject, and consequently no other reason why one and one makes two, but the participation of quality, as one is one by the participation of unity? Would not you discard these additions, divisions, and all the other fine answers, and leave them to those who know more than you do? And, for fear of your own shadow, as the proverb goes, or rather of your ignorance, would not you confine yourself to this principle? And if any one attacked it, would not you let it stand without deigning him an answer till you had surveyed all the consequences to see if they are of a piece or not? And if afterwards you should be obliged to give a reason for them, would not you do it by having recourse to some of these other hypotheses that should appear to be the best, and so proceed from hypothesis to hypothesis till you lighted upon somebody that satisfied you as being a sure and standing truth? At the same time, you would be loth to perplex and confound all things, as those disputants do who call all things in question? 'Tis true, these disputants perhaps are not much concerned for the truth, and by thus mingling and perplexing all things by an effect of their profound knowledge they are sure to please themselves. But as for you, if you are true philosophers, you will do as I say.

Phaedo:: Simmias and Cebes jointly replied, That he said well.

Echecrates:: Indeed, Phaedo, I think it no wonder; for to my mind Socrates explained his principles with a wonderful neatness sufficient to make an impression upon any man of common sense.

Phaedo:: All the audience thought the same.

Echecrates:: Even we who have it only at second hand find it so. But what was said next?

Phaedo:: If I remember right, after they had granted that the species of things have a real subsistence, and that the things participating of their nature take their denomination from them, then, I say, Socrates interrogated Cebes as follows;

Socrates:: If your principle be true, when you say Simmias is larger than Socrates and lesser than Phaedo, do not you imply that both magnitude and littleness are lodged at the same time in Simmias?

Cebes:: Yes.

Socrates:: But do not you own that this proposition, Simmias is bigger than Socrates, is not absolutely and in itself true? For Simmias is not bigger because he is Simmias, but because he is possessed of magnitude. Neither is Simmias lesser than Phaedo because Phaedo is Phaedo, but because Phaedo is big when compared to Simmias, who is little.

Cebes:: That’s true.

Socrates:: Thus, Simmias is called both big and little, as being between two; by par taking of bigness he is bigger than Socrates, and by partaking also of littleness he is lesser than Phaedo.

Phaedo:: Then he smiled, and said;

Socrates:: Methinks I have insisted too long on these things, but I should not have amused myself with these large strokes had it not been to convince you more effectually of the truth of my principle. For, as I take it, not only magnitude itself cannot be at the same time big and small, but, besides, the magnitude that is in us does not admit of littleness, and has no mind to be surpassed, for cither the magnitude flees and yields its place when it sees its enemy approaching, or else it vanishes and perishes entirely; and, when once it has received it, it desires to continue as it is. As I, for instance, having received littleness, while I am as you see me, cannot but be little. For that which is big does never attempt to be little. And in like manner littleness never encroaches upon magnitude. In a word, any of the contraries, while it is what it is, is never to be found with its contrary; but either disappears or perishes when the other comes in.

Phaedo:: Cebes agreed to it, but one of the company, I forgot who, addressed himself to Socrates thus; In the name of all the gods, did not you say contrary to what you now advance? Did not you conclude upon this, that greater things take rise from the lesser, and the lesser from the greater; and, in a word, that contraries do still produce their contraries? Whereas now, as I take it, you allege that can never be.

Phaedo:: Whereupon Socrates put his head further out of the bed, and having heard the objection, said to him;

Socrates:: Indeed, you do well to put us in mind of what we said; but you do not perceive the difference between the former and the latter. In the former we asserted that every contrary owes its being to its contrary, and in the latter we teach that a contrary is never contrary to itself, neither in us, nor in the course of nature. There we spoke of things that had contraries, meaning to call every one of them by their proper names, but here we speak of such things as give a denomination to their subjects, which, we told you, could never admit of their contraries.

Phaedo:: Then turning to Cebes;

Socrates:: Did not this objection, likewise give you some trouble?

Cebes:: No, indeed, Socrates, I can assure you that few things are capable to trouble me at present.

Socrates:: Then we agreed upon this simple proposition, that a contrary can never be contrary to itself.

Cebes:: That is true.

Socrates:: But what do you say to this? Is cold and heat anything?

Cebes:: Yes, surely.

Socrates:: What, is it like snow and fire?

Cebes:: No, surely, Socrates.

Socrates:: Then you own that heat is different from fire, and cold from snow?

Cebes:: Without question, Socrates.

Socrates:: I believe you'll likewise own that when the snow receives heat it is no more what it was, but either gives way, or disappears for good and all, when the heat approaches. In like manner the fire will either yield or be extinguished when the cold prevails upon it; for then it cannot be fire and cold together.

Cebes:: 'Tis so.

Socrates:: There are also some contraries that not only give name to their species, but likewise impart it to other things different from it, which preserve its figure and form while they have a being. For instance, must not an odd thing have always the same name?

Cebes:: Yes, surely.

Socrates:: Is that the only thing that is so called? Or, is not there some other things different from it, which must needs be called by the same name, by reason that it belongs to its nature never to be without odds? For instance, must not the ternary number be called not only by its own name, but; likewise by the name of an odd number; though at the same time to be odd and to be three are two different things? Now, such is the nature of the number three, five, and all other odd numbers; each of them is always odd, and yet their nature is not the same with the nature of the odd. In like manner, even numbers, such as two, four, eight, are all of them even, though at the same time their nature is not that of the even. Do not you own this?

Cebes:: How can I do otherwise?

Socrates:: Pray, mind what I infer from hence. ’Tis, that not only these contraries, which are incapable of receiving their contraries, but all other things which are not opposite one to another, and yet have always their contraries; all these things, I say, are incapable of receiving a form opposite to their own; and either disappear to perish upon the appearance of the opposite form. For instance; Number three will sink a thousand times rather than become an even number, while it continues to be three. Is it not so?

Cebes:: Yes, surely.

Socrates:: But after all, two are not contrary to three.

Cebes:: No, surely.

Socrates:: Then the contrary species are not the only things that refuse admission to their contraries; since, as you see other things that are not contrary cannot abide the approach of that which has the least shadow of contrariety.

Cebes:: That is certain.

Socrates:: Do you desire, then, that I should define them as clear as possible?

Cebes:: Ay, with all my heart, Socrates.

Socrates:: Must not contraries be such things as give such a form to that in which they are lodged, that it is not capable of giving admission to another That’s contrary to them?

Cebes:: How do you say?

Socrates:: I say as I said but now; Wherever the idea or form of three is lodged, that thing must of necessity continue, not only to be three, but to be odd.

Cebes:: Who doubts that?

Socrates:: And by consequence ’tis impossible for the idea or form that’s contrary to its constituent form, ever to approach.

Cebes:: That’s a plain case.

Socrates:: Well, is not the constituent form an odd?

Cebes:: Yes.

Socrates:: Is not even the form that’s contrary to odd?

Cebes:: Yes.

Socrates:: Then the form of even is never lodged in three?

Cebes:: No, surely.

Socrates:: Then three is incapable of being even.

Cebes:: Most certainly.

Socrates:: And that, because three is odd?

Cebes:: Yes, surely.

Socrates:: Now, this is the conclusion I meant to prove, that some things that are not contrary to one another are as incapable of that other thing, as if it were truly a contrary; as, for instance, though three is not contrary to an even number, yet it can never admit of it. For two brings always something contrary to an odd number, like fire to cold, and several other things. Would not you agree, then, to this definition, that a contrary does not only refuse admission to its contrary, but like wise to that which, being not contrary, brings upon it something of a contrary name, which by that sort of contrariety destroys its form?

Cebes:: I pray you let me hear that again, for ’tis worth the while to hear it often.

Socrates:: I say number five will never be an even number; just as ten, which is its double, will never be odd; no more than three-fourths, or a third part, or any other part of a whole, will ever admit of the form and idea of the whole. Do you understand me? do you take me up, and do you agree with what I say?

Cebes:: I understand you; I apprehend you to a miracle; and I agree with you too.

Socrates:: Since you understand me, pray answer me as I do you; that is, answer me, not what I ask, but something else, according to the idea and example I have given you; I mean, that besides the true and certain way of answering spoken of already, I have yet another in my view that springs from that, and is fully as sure. For instance, if you ask me what it is that being in the body, makes it hot, I would not give you this ignorant, though sure answer, that ’tis heat; but would draw a more particular answer from what we have been speaking of, and would tell you that it is fire. And if you should ask what it is that makes the body sick, I would not say ’twas the disease, but the fever. If you ask me what makes a number odd, I would not tell you that it is the oddness, but unity; and so of the rest. Do you understand what I mean?

Cebes:: I understand you perfectly well.

Socrates:: Answer me, then, what makes the body live?

Cebes:: The soul.

Socrates:: Is the soul always the same?

Cebes:: How would it be otherwise?

Socrates:: Does the soul, then, carry life along with it into all the bodies it enters?

Cebes:: Most certainly.

Socrates:: Is there anything that’s contrary to life, or is there nothing?

Cebes:: Yes, death is the contrary of life.

Socrates:: Then the soul will never receive that which is contrary to what it carries in its bosom; That’s a necessary consequence from our principles.

Cebes:: ’Tis a plain consequence.

Socrates:: But what name do we give to that which refuses admission to the idea and form of evenness?

Cebes:: ’Tis the odd number.

Socrates:: How do we call that which never receives justice, and that which never receives good?

Cebes:: The one is called injustice, and the other evil.

Socrates:: And how do you call that which never admits of death?

Cebes:: Immortal.

Socrates:: Does the soul admit of death?

Cebes:: No.

Socrates:: Then the soul is immortal.

Cebes:: Most certainly.

Socrates:: Is that fully demonstrated, or was the demonstration imperfect?

Cebes:: It is fully made out, Socrates.

Socrates:: If an odd number of necessity were incorruptible, would not three be so too?

Cebes:: Who doubts it?

Socrates:: If whatever is without heat were necessarily incorruptible, would not snow, when put to the fire, withdraw itself safe from the danger? For since it cannot perish, it will never receive the heat, notwithstanding its being held to the fire.

Cebes:: What you say is true.

Socrates:: In like manner, if that which is not susceptible of cold were by a natural necessity exempted from perishing, though a whole river were thrown upon the fire, it would never go out, but on the contrary would come off with its full force.

Cebes:: There is an absolute necessity for that.

Socrates:: Then of necessity we must say the same of what is immortal. If that which is immortal is incorruptible, though death approach to the soul, it shall never fall in the attack; for, as we said but now, the soul will never receive death, and will never die, just as three, or any odd number, will never be even; fire will never be cold, nor its heat be turned to coldness.

Perhaps some may answer that ’tis true the odd can never become even, by the accession of what is even, while it continues odd; but what should hinder the even to take up the room of the odd when it comes to perish? To this objection it cannot be answered that the odd does not perish, for it is incorruptible. Had we established its incorruptibility, we should justly have maintained, that notwithstanding the attacks of the even, the odd of three would still come off without loss; and we should have asserted the same of fire, heat, and such other things, should not we?

Cebes:: Most certainly.

Socrates:: And, by consequence, if we agree upon this, that every immortal thing is incorruptible, it will necessarily follow, not only that the soul is immortal, but that it is incorruptible. And if we cannot agree upon that, we must look out for another proof.

Cebes:: There is no occasion for that, Socrates, for what is it that should avoid corruption and death, if an immortal and eternal being be liable to them?

Socrates:: All the world will agree, that God, and life itself, and whatever ’tis that is immortal, does not perish.

Cebes:: At least, all men will profess so.

Socrates:: The consequence is absolutely necessary and certain. And by consequence, when a man comes to die, his mortal and corruptible part dies; but the immortal part goes off safe, and triumphs over death.

Cebes:: That’s plain and evident.

Socrates:: Then, my dear Cebes, if there be any such thing as an immortal and incorruptible being, such is the soul; and by consequence our souls shall live hereafter.

Cebes:: I have nothing to object, and cannot but yield to your arguments. But if Simmias, or any of the company, has anything to offer, they’ll do well not to stifle it; for when will they find another occasion for discoursing and satisfying themselves upon these important subjects?

Simmias:: For my part, I cannot but subscribe to what Socrates has said. But I own that the greatness of the subject, and the natural weakness of man, occasion within me a sort of distrust and incredulity.

Socrates:: You have not only spoken well, but besides, notwithstanding the apparent certainty of our first hypothesis, ’tis needful you should resume them, in order to a more leisurely view, and to convince yourself more clearly and effectually. If you understand them sufficiently, you'll willingly second my thoughts as much as possible for a man to do; and when you are once fully convinced, you'll need no other proof.

Cebes:: That's well said.

Socrates:: There's one thing more, my friends, that is a very just thought, that is to say, that if the soul is immortal, it stands in need of cultivating and improvement, not only in the time that we call the time of life, but for the future, or what we call the time of eternity; for if you think justly upon this point you'll find it very dangerous to neglect the soul. Were death the dissolution of the whole man, it would be a great advantage to the wicked after death to be rid at once of their body, their soul, and their vices-But forasmuch as the soul is immortal, the only way to avoid those evils and obtain salvation is to become good and wise; for it carries nothing along with it but its good or bad actions, and its virtues or vices, which are the cause of its eternal happiness or misery, commencing from the first minute of its arrival in the other world. And 'tis said that after the death of every individual person, the Demon or Genius, that was partner with it and conducted it during life, leads it to a certain place, where all the dead are obliged to appear, in order to be judged, and from thence are conducted by a guide to the world below. And, after they have there received their good or bad deserts, and continued there their appointed time, another conductor brings them back to this life, after several revolutions of ages. Now this road is not a plain united road, else there would be no occasion for guides, and nobody would miss their way; but there are several by ways and cross-ways, as I conjecture from the method of our sacrifices and religious ceremonies. So that a temperate, wise soul follows its guide, and is not ignorant of what happens to it; but the soul That's nailed to its body, as I said just now, that is inflamed with the love of it, and has been long its slave, after much struggling and suffering in this visible world, is at last dragged along against its will by the Demon allotted for its guide. And when it arrives at that rendezvous of all souls, if it has been guilty of any impurity, or polluted with murder, or has committed any of those atrocious crimes that desperate and lost souls are commonly guilty of, the other souls abhor it, and avoid its company; it finds neither companion nor guide, but wanders in a fearful solitude and horrible desert, till after a certain time necessity drags it into the mansions it deserves; whereas the temperate and pure soul has the gods themselves for its guides and conductors, and goes to cohabit with them in the mansions of pleasure prepared for it. For, my friends, there are several marvelous places in the earth; and 'tis not at all such as the describers of it are wont to make it, as I was taught by one who knew it very well.

Simmias:: How do you say, Socrates? I have likewise heard several things of the earth, but not what you have heard. Wherefore I wish you would be pleased to tell us what you know.

Socrates:: To recount that to you, my dear Simmias, I do not believe we have any occasion for Glaucus's art. But to make out the truth of it is a more difficult matter, and I question if all Glaucus's art can reach it. Such an attempt is not only above my reach, but supposing it were not, the short time I have left me will not suffer me to embark in so long a discourse. All that

I can do is to give you a general idea of this earth, and the places it contains.

Simmias:: That will be enough.

Socrates:: In the first place, I am persuaded that if the earth is placed in the middle of heaven (the air), as they say it is, it stands in no need of air, or any other support to prevent its fall; for heaven itself is wrapped equally about it, and its own equilibrium is in the middle of a thing that presses equally upon it, cannot incline to either side, and consequently stands firm and immovable. This I am convinced of.

Simmias:: You have reason to be so.

Socrates:: I am farther persuaded that the earth is very large and spacious, and that we only inhabit that part of it which reaches from the river Phasis to the Straits of Gibraltar, upon which we are scattered like so many ants dwelling in holes, or like frogs that reside in some marsh near the sea. There are several other nations that inhabit its other parts that are unknown to us; for all over the earth there are holes of all sizes and figures, always filled with gross air, and covered with thick clouds, and over-flown by the waters that rush in on all sides.

There is another pure earth above the pure heaven where the stars are, which is commonly called Ether. The earth we inhabit is properly nothing else but the sediment of the other, and its grosser part which flows continually into those holes. We are immured in those cells, though we are not sensible of it, and fancy we inhabit the upper part of the pure earth, much after the same rate as if one living in the depths of the sea should fancy his habitation to be above the waters, and when he sees the sun and other stars through the waters, should fancy the sea to be the heavens, and by reason of his heaviness and weakness, having never put forth his sea head or raised him self above the waters, should never know that the place we inhabit is purer and nearer than his, and should never meet with any person to inform him. This is just our condition; we are mewed up within some hole of the earth, and fancy we live at the top of all; we take the air for the true heavens, in which the stars run their rounds. And the cause of our mistake is our heaviness and weakness, that keep us from surmounting this thick and muddy air. If any could mount up with wings to the upper surface, he would no sooner put his head out of the gross air but he would behold what's transacted in those blessed mansions, just as the fishes skipping above the surface of the waters see what's done in the air in which we breathe. And if he were a man fit for long contemplation, he would find it to be the true heaven and the true light; in a word, to be the true earth. For this earth that we inhabit, those stones, and all places are entirely corrupted and gnawed, just as whatever is in the sea is corroded by the sharpness of the salts. And the sea produces nothing That's perfect or valuable. It contains nothing but caves and mud; and wherever any ground is found, there's nothing but deep sloughs, nothing comparable to what we have here. Now the things in the other mansions are more above what we have here, than what we have here is above what we meet with in the sea. And in order to make you conceive the beauty of this pure earth situated in the heavens, if you please, I'll tell you a pretty story That's worth your hearing.

Simmias:: We shall hear it, with a great deal of pleasure.

Socrates:: First of all, my dear Simmias, if one looks upon this earth from a high place, they say it looks like one of our packs covered with twelve welts of different colors. For it is varied with a greater number of different colors, of which those made use of by our painters are but sorry patterns. For the colors of this earth are infinitely more clean and lively. One is an admirable purple another a color of gold, more sparkling than gold itself; a third a white more lively than the snow; and so on of all the rest, the beauty whereof leaves our colors here far behind it. The chinks of this earth are filled with water and air, which make up an infinity of admirable shadows, so wonderfully diversified by that infinite variety of colors.

In this so perfect an earth everything has a perfection answerable to its qualities. The trees, flowers, fruits, and mountains are charmingly beautiful; they produce all sorts of precious stones of an incomparable perfection, clearness, and splendor; those we esteem so much here, such as emeralds, jasper, and sapphire, are but small parcels of them. There is not one in that blessed earth that is not infinitely more pretty than of ours. The cause of all which is, that all these precious stones are pure, neither gnawed nor spoiled by the sharpness of the salts, or the corruption of the sediment or dregs that fall from thence into our lower earth, where they assemble, and infect not only the stones and the earth, but the plants and animals, with all sorts of pollution and diseases.

Besides all these beauties now mentioned, this blessed earth is enriched with gold and silver, which being scattered all over in great abundance, casts forth a charming splendor on all sides, so that a sight of this earth is a view of the blessed. It is inhabited by all sorts of animals, and by men, some of whom are cast into the centre of the earth, and others are scattered about the air, as we are above the sea. There are some also that inhabit the isles formed by the air near the continent. For there the air is the same thing that water and sea are here; and the aether does them the same service that the air does to us. Their seasons are so admirably well tempered that their life is much longer than ours, and always free from distempers; and as for their sight, hearing, and all their other senses, and even their intellect itself, they surpass us as far as the aether they breathe in exceeds our gross air for simplicity and purity. They have sacred groves, and temples actually inhabited by the gods, who give evidence of their presence by oracles, divinations, inspirations, and all other sensible signs, and who converse with them. They see the sun and moon without an intervening medium, and view the stars as they are in them selves. And all the other branches of their felicity are proportional to these.

This is the situation of the earth, and this is the matter of all that surrounds it. All about it there are several abysses in its cavities, some of which are deeper and more open than the country we in habit; others are deeper, but not so open; and some again have a more extensive breadth, but a lesser depth. And these abysses are bored through in several parts, and have pipes communicating one with another, through which there runs, just as in the caves of Mount Ætna, a vast quantity of water, very large and deep rivers, springs of cold and hot waters, fountains, and rivers of fire, and other rivers of mud, some thinner and some thicker and more muddy, like those torrents of mud and of fire that are cast out from Mount Ætna.

These abysses are filled with these waters in proportion to their falling out of one into another.

All these sources move both downwards and upwards, like a vessel hung above the earth, which vessel is naturally one, and indeed the greatest of these abysses. It goes across the whole earth, and is open on two sides. Homer speaks of it when he says, 'I'll throw it into the obscure Tartarus, that s a great way from hence, the deepest abyss under the earth.' Homer is not the only author that called this place by the name of Tartarus; most of the other poets did the same.

All the rivers rendezvous in this abyss, and run out from thence again. Each of these rivers is tinctured with the nature of the earth through which it runs. And the reason of their not stagnating in these abysses is this, that they find no ground, but roll and throw their waters upside down. The air and wind that girds them about does the same, for it follows them when they rise above the earth, and when they descend towards us. And just as in the respiration of animals there is an incessant ingress and egress of air, so the air that mingles with the waters accompanies them in their ingress and egress, and raises raging winds.

When these waters fall into this lower abyss, they diffuse themselves into all the channels of the springs and rivers, and fill them up, just as if one were drawing up water with two pails, one of which fills as the other empties. For these waters, flowing from hence, fill up our channels; from whence diffusing themselves all about, they fill our seas, rivers, lakes, and fountains. After that they disappear, and diving into the earth, some with a large compass, and others by small turnings, repair to Tartarus, where they enter by other passages than those they came out by, and much lower. Some re-enter on the same side, and others on the opposite to that of their egress; and some again enter on all sides after they have made one or several turns round the earth, like serpents folding their bodies into several rolls; and having gained entrance, rise up to the middle of the abyss, but cannot reach farther, by reason that the other half is higher than the level. They form several very great and large currents; but there are four principal ones, the greatest of which is the outermost of all, and is called the Ocean.

Opposite to that is Acheron, which runs through the desert place, and diving through the earth, falls into the marsh, which from it is called the Acherusian Lake, whither all souls repair upon their departure from this body; and having stayed there all the time appointed, some a shorter, some a longer time, are sent back to this world to animate beasts.

Between Acheron and the ocean there runs a third river, which retires again not far from its source, and falls into a vast space full of fire; there it forms a lake greater than our sea, in which the water mixed with mud boils, and setting out from thence all black and muddy, runs along the earth to the end of the Acherusian Lake, without mixing with its waters; and after having made several turnings under the earth, throws itself underneath Tartarus; and this is the naming river called Phlegethon, the streams whereof are seen to fly up on the earth in several places.

Opposite to this is the fourth river, which fall first into a horrible wild place, of a bluish color, called by the name of Stygian, where it forms the formidable Lake of Styx; and after it Las tinctured itself with horrible qualities from the water of that lake, dives into the earth, where it makes several turns, and directing its course over against Phlegethon, at last meets it in the Lake of Acheron, where it does not mingle its waters with those of the other rivers, but after it has run its round on the earth, throws itself into Tartarus by a passage opposite to that of Phlegethon. This fourth river is called by the poets Cocytus. Nature having thus disposed of all these things, when the dead arrive at that place whither their Demon leads them, they are all tried and judged, both those that lived a holy and just life, and those who wallowed in injustice and impiety.

Those who are found to have lived neither entirely a criminal, nor absolutely an innocent life, are sent to Acheron. There they embark in boats, and are transported to the Acherusian Lake, where they dwell, and suffer punishment proportionable to their crimes; till at last being purged and cleansed from their sins, and set at liberty, they receive the recompense of their good actions.

Those whose sins are incurable, and who have been guilty of sacrilege and murder, or such other crimes, are by a just and fatal destiny thrown headlong into Tartarus, where they are kept prisoners for ever.

But those who are found guilty of curable (venial) sins, though very great ones, such as offering of violence to their father or mother in a passion, or killing a man, and repenting for it all their life time, must of necessity be likewise cast into Tartarus; but after a years abode there, the tide throws the homicides back into Cocytus, and the parricides into Phlegethon, which draws them into the Acherusian Lake. There they cry out bitterly, and invoke those whom they have killed or offered violence to, to aid them, and conjure them to for give them, and to suffer them to pass the lake, and give them admittance. If they are prevailed with, they pass the lake, and are delivered from their misery; if not, they are cast again into Tartarus, which throws them back into these rivers; and this continues to be repeated till they have satisfied the injured persons. For such is the sentence pronounced against them.

But those who have distinguished themselves by a holy life are released from these earthly places, these horrible prisons, and received above into that pure earth where they dwell; and those of them who are sufficiently purged by philosophy live for ever without their body, and are received into yet more admirable and delicious mansions, which I cannot easily describe, neither do the narrow limits of my time allow me to launch into that subject.

What I told you but now is sufficient, my dear Simmias, to show that we ought to labor all our lifetime to purchase virtue and wisdom, since we have so great a hope and so great a reward pro posed to us.

No man of sense can pretend to assure you that all these things are just as I have said; but all thinking men will be positive that the state of the soul, and the place of its abode after death, is absolutely such as I represent it to be, or at least very near it, provided the soul be immortal; and will certainly find it worth his danger to run the risk; for what danger is more inviting? One must needs be charmed with that blessed hope; and for this reason I have dilated a little upon this subject.

Every one who during his lifetime renounced the pleasures of the body, who looked upon the appurtenances of the body as foreign ornaments, and siding with the contrary party, pursued only the pleasures of true knowledge, and beautified his soul, not with foreign ornaments, but with ornaments suitable to its nature, such as temperance, justice, fortitude, liberty, and truth;—such a one, being firmly confident of the happiness of his soul, ought to wait peaceably for the hour of his removal, as being always ready for the voyage whenever his fate calls him.

As for you, my dear Simmias, Cebes, and all you of this company, you shall follow me when your hour comes. Mine is now, and, as a tragic poet would say, the surly pilot calls me aboard; where fore ’tis time I should go to the bath, for I think ’tis better to drink the poison after I am washed, in order to save the women the trouble of washing me after I am dead.

Phaedo:: Socrates having thus spoke, Crito addressed himself to Socrates thus;

Crito:: Alas, then! in God’s name be it. But what orders do you give me and the rest here present with reference to your children or your affairs, that by putting them in execution we may at least have the comfort of obliging you?

Socrates:: What I now recommend to you, Crito, is what I always recommended, that is, to take care of yourselves. You cannot do your selves a more considerable piece of service, nor oblige me and my family more, than to promise me at this time so to do. Whereas, if you neglect yourselves, and refuse to form your lives according to the model I proposed to you, and follow it, as it were, by the footsteps, all your protestations and offers of service will be altogether useless to me.

Crito:: We shall do our utmost, Socrates, to obey you. But how will you be buried?

Socrates:: Just as you please, if you can but catch me, and if I do not give you the slip.

Phaedo:: At the same time, looking upon us with a gentle smile;

Socrates:: I cannot compass my end, in persuading Crito that this is Socrates who discourses with you, and methodizes all the parts of this discourse; and still he fancies that Socrates is the thing that shall see death by-and-by. He confounds me with my corpse, and in that view asks how I must be buried? And this long discourse that I made to you but now, in order to make it out, that as soon as I shall have taken down the poison I shall stay no longer with you, but shall part from hence, and go to enjoy the felicity of the blessed—in a word, all that I have said for your consolation and mine is to no purpose, but is all lost with reference to him. I beg of you that you will be bail for me to Crito, but after a contrary manner to that in which he offered to bail me to my judges, for he engaged that I would not be gone. Pray engage for me that I shall be no sooner dead but I shall be gone, to the end that poor Crito may bear my death more steadfastly; and when he sees my body burnt or interred, may not despair, as if I suffered great misery, and say at my funeral that Socrates is interred. For you must know, my dear Crito, that speaking amiss of death is not only a fault in the way of speaking, but likewise wounds the soul. You should have more courage and hope, and say that my body is to be interred. That you may inter as you please, and in the manner That's most conformable to our laws and customs.

Phaedo:: Having spoke thus, he rose, and went into the next room to bathe. Crito followed him, and he desired we should attend him. Accordingly we all attended him, and entertained ourselves one while with a repetition and farther examination of what he had said, another while in speaking of the miserable state that was before us. For we all looked upon ourselves as persons deprived of our good father, that were about to pass the rest of our life in an orphan state.

After he came out of the bath, they brought his children to him, for he had three—two little ones, and one that was pretty big; and the women of his family came all in to him. He spoke to them some time in the presence of Crito, gave them their orders, and ordered them to retire, carry his children along with them, and then come back to us. 'twas then towards sun-setting, for he had been a long while in the little room.

When he came in, he sat down upon his bed, without saying much; for much about the same time the officer of the eleven magistrates came in, and drawing near to him;

Jailer:: Socrates, I have no occasion to make the same complaint of you that I have every day of those in the same condition; for as soon as I come to acquaint them by orders from the eleven magistrates that they must drink the poison, they are incensed against me and curse me. But as for you, ever since you came into this place, I have found you to be the most even-tempered, the calmest, and the best man that ever entered this prison; and I am confident that at present you are not angry with me; doubtless you are angry with none but those who are the cause of your misfortune. You know them without naming. On this occasion, Socrates, you know what I come to tell you. Farewell! Endeavor to bear this necessity with a constant mind.

Phaedo:: Having spoke thus, he began to cry, and, turning his back upon us, retired a little.

Socrates:: Farewell, my friend, I'll follow the counsel you give.

—Mind, what honesty is in that fellow. During my imprisonment he came often to see me, and conversed with me. He s more worth than all the rest. How heartily he cries for me! Let us obey him with a handsome mien, my dear Crito; if the poison be brewed, let him bring it; if not, let him brew it himself.

Crito:: But methinks, Socrates, the sun shines upon the mountains, and is not yet set; and I know several in your circumstances did not drink the poison till a long time after the order was given; that they supped very well, and enjoyed anything they had a mind to. Wherefore I conjure you not to press so hard; you have yet time enough.

Socrates:: Those who do as you say, Crito, have their own reasons; they think it is just as much time gained. And I have likewise my reasons for not doing so; for the only advantage I can have by drinking it later is only to make myself ridiculous to myself, in being so foolishly fond of life as to pretend to husband it in the last minute when there’s no more to come. Go, then, my dear Crito, and do as I bid you do, and do not vex me any longer.

Phaedo:: Whereupon Crito gave the sign to the slave who waited just by. The slave went out, and after he had spent some time in brewing the poison, returned, accompanied by him who was to give it, and brought it all together in one cup. Socrates seeing him come in;

Socrates:: That’s very well, my friend, but what must I do? For you know best, and ’tis your business to direct me.

Jailer:: You have nothing else to do, but whenever you have drank it to walk until you find your legs stiff, and then to lie down upon your bed. This is all you have to do.

Phaedo:: And at the same time he gave him the cup. Socrates took it, not only without any commotion or change of color or countenance, but with joy; and looking upon the fellow with a steady and bold eye, as he was wont to do;

Socrates:: What do you say of this mixture, is it allowable to make a drink offering of it?

Jailer:: Socrates, we never brew more at once than what serves for one dose.

Socrates:: I understand you, but at least is it lawful for me to pray to the gods that they would bless the voyage and render it happy. This I beg of them with all my soul.

Phaedo:: Having said this he drank it off with an extraordinary calmness and an inexpressible tranquility.

We had until this time, almost all of us, the power to refrain from tears; but when we saw him drink it off we were no longer masters of ourselves. In spite of all my efforts I was forced to cover myself with my mantle, that I might freely regret my condition; for ’twas not Socrates misfortune, but my own that I deplored in reflecting what a friend I was bereft of. Crito, who likewise could not abstain from crying, had prevented me, and risen up. And Apollodorus, who scarce ceased to cry during the whole conference, did then howl and cry aloud, insomuch that he moved everybody. Only Socrates himself was not at all moved. On the contrary, he chid them.

Socrates:: What are you doing, my friends? What! such fine men as you are! Oh, where is virtue? Was it not for this reason that I sent off those women, for fear they should have fallen into these weaknesses? for I always heard it said that a man ought to die in peace and blessing God. Be easy, then, and show more steadiness and courage.

Phaedo:: These words filled us with confusion, and obliged us to suppress our tears.

In the meantime he continued to walk, and when he felt his legs stiff he lay down on his back, as the man had commanded him. At the same time the same man that gave him the poison came up to him, and, after looking upon his legs and feet, bound up his feet with all his strength, and asked him if he felt it. He said

Socrates:: No.

Phaedo:: Then he bound up his legs; and, having carried his hand higher, gave us the signal that he was quite cold. Socrates likewise felt himself with his hand, and told us that when the cold came up to his heart he should leave us. All his lower belly was already frozen. And then uncovering himself (for he was covered);

Socrates:: Crito, we owe a cock to Aesculapius; discharge this vow for me, and do not forget it.

Phaedo:: (these were his last words)

Crito:: It shall be done. But see if you have anything else to say to us.

Phaedo:: He made no answer, but after a little space of time expired. The man, who was still by him, having uncovered him, received his last looks which continued fixed upon him. Crito, seeing that advanced and shut his mouth and eyes.

This, Echecrates, was the end of our friend, a man who, beyond all dispute, was the best, and most sensible, and the honestest of all our acquaintance.

# Phædo.

## or
## The Immortality Of The Soul.

Translated by Charles S. Stanford. 1854

CHARACTERS IN THE DIALOGUE.

Echecrates, Phædo, Socrates, Apollodorus,
Simmias, Crito, the Officer of the Prison.

Echecrates:: Were you. in personal attendance, Phædo, upon Socrates, on that day in which he drank the hemlock in prison, or did you hear of the matter from another?

Phaedo:: I was there myself, Echecrates.

Echecrates:: What was the purport of his conversation before he died, and what was the manner of his death?—for I should be glad to hear, since none of the citizens of Phlius at all frequent Athens at present, nor has any foreigner arrived here from thence, for a long time, who could give any more distinct account than that he died from the draught of poison, but of the attendant circumstances he could say nothing.

Phaedo:: Did you not hear of the trial either how it proceeded?

Echecrates:: Yes; one brought me intelligence of this, and I am surprised that as it terminated some time since, he appears to have died so long subsequent to it. How did this happen, Phaedo?

Phaedo:: Owing to accident, Echecrates; for the poop of the vessel which the Athenians are accustomed to send to Delos chanced to be crowned upon the day preceding the trial.

Echecrates:: What does this vessel mean?

Phaedo:: It is the same, as the Athenians say, in which Theseus once set out with fourteen in the flower of youth, for Crete, whom he managed to preserve, and was also saved himself. They made a vow, it is said, to Apollo upon that occasion, that in event of their preservation they would dispatch a solemn deputation to Delos, which, ever since then, up to the present time, they send out yearly in honor of the god. When they commence the celebration of this ceremony then, the usage is, during the interval between the arrival of the vessel at Delos, and its return hither, to purify the city and to allow no public execution; but this interval is at times of some duration, when the winds are unfavorable. The commencement of the embassy is notified by the priest of Apollo crowning the poop of the ship, and this happened, as I mentioned, on the day preceding the trial. On this account Socrates had a long interval in prison, between the trial and his death.

Echecrates:: But, Phaedo, what were the particulars of his decease? What was said, and done, and which of his intimates were present with him? Or did the Eleven prevent their attendance, and did he die forsaken by his friends?

Phaedo:: By no means; there were some, indeed several, present.

Echecrates:: Be pleased now to give me the most distinct possible account of each particular, unless you have some business on hands.

Phaedo:: I am quite at leisure, and shall endeavor to tell you all, for to call Socrates to mind, whether speaking myself or listening to another, is ever most delightful to me.

Echecrates:: Even such as yourself, Phædo, have you to listen to you; but try, with all possible accuracy, to enumerate to me everything.

Phaedo:: In truth I was strangely affected upon my arrival. No feeling of compassion struck me, as one who stood by to witness the last moments of a dearly familiar friend, for the man appeared to me, Echecrates, at perfect ease, both in his manner and discourse, with such an intrepid and noble bearing he met his death; so much so, that it struck me he was not descending to the Shades but by divine direction, and that he, if ever there were one, should be blest in his arrival there. For this reason I was not moved, in any degree, to the compassion which would be natural to one present at a scene so sorrowful, nor yet did I experience the pleasure, as when we were engaged, according to our custom, in philosophical pursuits, although our discourse partook of some such character, but an altogether unaccountable affection seized me, and a species of unusual, mixed feeling, compounded alike of pleasure and of pain, upon reflecting how very soon he was about to die. And all present were almost similarly disposed, now indeed smiling, and again in tears, but one especially amongst us, Apollodorus; you doubtless know the man and his character.

Echecrates:: How should I not?

Phaedo:: He indeed resigned himself entirely to these emotions, and the rest, with myself, were perturbed alike.

Echecrates:: But who besides were present, Phaedo?

Phaedo:: Of our countrymen this Apollodorus was present, Critobulus and his father Crito; besides Hermogenes and Epigenes, Æschines and Antisthenes. There were also Ctesippus of the Paianian tribe, Menexenus, and some others of our countrymen; but Plato, I believe, was ill.

Echecrates:: Were any strangers present?

Phaedo:: Yes; Simmias of Thebes, Cebes and Phaedondes, and from Megara, Euclides and Terpsion.

Echecrates:: Tell me: Were Aristippus and Cleombrotus there?

Phaedo:: No truly; they were said to be in Ægina.

Echecrates:: Was any one else present?

Phaedo:: I believe those whom I mentioned were almost all that were present.

Echecrates:: Well now; what was the subject of your conversation?

Phaedo:: I shall endeavor to narrate to you every thing from the commencement. We were constantly in the habit, both the rest and myself, of visiting Socrates on the preceding days; assembling together at the tribunal where the trial took place, for it was contiguous to the prison, we used to wait every day until the prison was opened, conversing with each other, for it was not opened very early; but as soon as it was so we went in to Socrates and generally passed the day with him. Upon that occasion we assembled at an earlier hour, because on the preceding day, when we were going out of the prison, we understood that the vessel had arrived from Delos, upon which we agreed to return as early as possible on the following day to the usual place. We did so; and the jailer who used to admit us, coming out, requested us to wait and not seek for admission until he should direct; “For,” said he, “the Eleven are unbinding Socrates, and acquainting him that he must die to-day.” But after a little time he returned and desired us to enter.

When we had come in we found Socrates just unfettered, and Xantippe—you know her—sitting beside him with his little son. As soon as she observed us she wept aloud, and expressed herself in the customary manner of her sex, saying;

Xanthippe:: “Socrates, now for the last time your friends converse with you and you with them.”

Phaedo:: Upon which Socrates, looking at Crito, said;

Socrates:: “Crito, let some one conduct her home.”

Phaedo:: And some of Crito’s retinue led her away weeping and lamenting bitterly.

But Socrates sitting up in the bed, bended his leg and rubbed it with his hands, and while doing so, observed;

Socrates:: “How strange, my friends, this thing appears to be which mankind calls pleasure, and how wonderful it is disposed towards that which seems to be its opposite, pain; since they are not inclined both to befall a man at once, but should any pursue and attain the one, he is almost invariably compelled to admit the other, as if they being two were connected by one head. And it seems to me that if Æsop had turned his mind to this he would have composed a fable to the effect that the deity being anxious to reconcile those contending principles, when he failed in the attempt, joined their heads together, so that whomsoever the one should visit the other arrives with immediately after. Even so it appears to me, since I suffered pain in my leg before by reason of the chain, but pleasure seems to have followed in succession now.”

Cebes:: “By Jove, Socrates, you have done well to remind me, for several others have asked me already, and Evenus very lately, respecting the poems you have composed, your versification of Æsop’s Fables, and the hymn to Apollo, with what object you wrote them after you had come here, having never executed anything of the kind before. If you are at all concerned then in my being enabled to give

Evenus an answer when he questions me again, for I know well he will do so, tell me what I am to say."

Socrates:: "Tell him the truth, Cebes, that I did not write them with a view to any competition with him, or his productions, for this I knew should not be any easy task, but investigating the purport of certain dreams, and acquitting my conscience if this perchance were a branch of the liberal arts which they enjoined me to attend to. But the dreams were of the following character: the same vision came repeatedly during the course of my past life, appearing at various times under various forms, but always with the same injunction, "Socrates, adopt and cultivate the liberal arts." And I indeed imagined that it was animating and encouraging me, as those who cheer on racers at the games, to continue the pursuit in which I had been previously engaged; and that in like manner the vision urged upon me the course in which I was engaged; that is, the study of the liberal arts, since philosophy indeed is the most refined of the liberal arts, and I was intently occupied in this. But now, when the trial was over, and the festival of the deity was delaying my death, I thought that in case the vision had intended by its frequent injunctions the composition of popular poetry, I should not disobey but attempt it. For I deemed it was safer not to depart from hence before I had acquitted my conscience in the composition of some poems in obedience to the dream. Consequently, I first composed one on the deity whose festival was at hand; but after this token of respect to the god, with the impression that it became a poet, if he aspired to the name, to write fictions and not true narratives, besides my not being skilled in the fabulous, I, upon this account, turned into verse the first which occurred of those fables of Æsop which I remembered and was well acquainted with. "Tell this then, Cebes, to Evenus, and wish him health and strength, and say, that if he is wise, he will follow me; but I depart as it appears this day, for the Athenians ordain it so."

Simmias:: "What is this, Socrates, which you enjoin upon Evenus? I have often met the man before now, and from my general conception of his character he certainly will not willingly take your advice."

Socrates:: "But, is not Evenus a philosopher?"

Simmias:: "To me he seems so."

Socrates:: "Therefore, both Evenus shall be willing, and every one who participates worthily in this study of philosophy; he shall not certainly, however, lay violent hands upon himself, for this, as it is said, is not to be allowed."

Phaedo:: Upon saying this he let his legs down from the bed on the ground, and sitting in this posture he proceeded with the remainder of the discussion.

Cebes:: "How, Socrates, say you this, that it is not allowable for one to lay hands upon himself, but that a philosopher should be desirous of following one who is going to die?"

Socrates:: "What, Cebes, have not you and Simmias been informed on such subjects after your familiar intimacy with Philolaus?"

Cebes:: "Not very distinctly, Socrates."

Socrates:: "But I merely speak of these things from hearsay, what I happen then to have heard there is no objection to my telling. For it is perhaps especially suited to one who is on the eve of departing to another world, to inquire into, and speculate upon his migration thither, of what nature we suppose it to be. What else could one engage in during the time that intervenes till sunset?"

Cebes:: “Why then, Socrates, do they say that it is not allowable for one to dispatch himself? For I have heard, as you asked just now, both from Philolaus when he was in the habit of intercourse with us, and from some others beside, that it was not right to do this; but I never heard anything distinctly from any one on the subject.”

Socrates:: “You must pursue your inquiry then, for perhaps you might hear (what you wish). Probably, however, it shall appear strange to you if this alone, of all things, is unexceptionably true (that death is better than life), and that never at any time, as is the case with the rest of human affairs, it should occur that at some times and to some persons only, death is better than life. But it appears strange to you, perhaps, that it is not lawful for those men to whom death is preferable, to confer this favor upon themselves, but that they must await another benefactor.”

Phaedo:: Upon this, Cebes with a gentle smile, speaking in the dialect of his country, said;

Cebes:: “I swear by Jupiter it seems so.”

Socrates:: “And indeed, at first sight it would appear to be unreasonable; still it has, perhaps, some good grounds. The maxim conveyed in the mysteries, upon this subject, to the effect that we of the human race are in a species of prison, and that it is unlawful to set one’s self at liberty and escape from it, seems to me too affected and by no means easy to penetrate. This, however, appears to me to be urged with good reason, that the gods are our guardians and that we mortals are part of the household property of the gods. Do you agree with me or not?”

Cebes:: “I do.”

Socrates:: “Therefore, if one of your slaves were to put himself to death without your having signified to him that you wished him to die, should you not be indignant at him, and if you had any means of punishment should you not inflict it?”

Cebes:: “Certainly.”

Socrates:: “Perhaps then in this point of view it is not unreasonable to insist that one should not dispatch himself before the deity imposes upon him a necessity of the kind, such as he has imposed at present upon me.”

Cebes:: “But, this appears natural enough With respect, however, to what you said just now that philosophers should show a ready inclination to die; this seems to be absurd, if what we lately admitted is good sense, that the deity is our guardian, and that we are his servants. For that the wisest individuals should feel no dissatisfaction at their departure from this tutelage in which the best of all possible governors, the gods, direct them, is quite against reason. Since no one surely imagines that when he is thus set at liberty he will take better care of himself; some senseless being might perhaps be so convinced that he ought to fly from his master, and would not reflect that he should not abandon a good one, but by all means continue to abide with him, consequently he would inconsiderately leave him, while the rational man would be anxious to remain for ever with one superior to himself. Thus, Socrates, the direct contrary of what was just now allowed is likely to be the case; for it becomes the wise to feel dissatisfied at death, but the foolish to rejoice.”

Phaedo:: Socrates, hearing this, appeared to be delighted at the ingenuity of Cebes, and. turning his eyes towards us, observed;

Socrates:: “Cebes is always starting some points, and is not at all disposed at once to give in to what one has asserted.”

Simmias:: “But, Socrates, to me, now, Cebes appears to urge something of importance; for with what object would men who are really wise fly from those masters who are better than themselves, and thoughtlessly abandon them? Cebes also seems to me to direct this argument against yourself, because you bear so quietly your abandonment of us, and those good governors, as you yourself admit, the gods.”

Socrates:: “You speak fairly, and I understand you to mean that I should enter upon my defense in this case as at the tribunal.”

Simmias:: “Exactly so.”

Socrates:: “Come now, let me essay to plead my cause more persuasively than I did before the judges. For, Simmias and Cebes, were it not that I believe I shall arrive amongst other deities, both wise and good, and further, amongst men who have departed this life, far better than those here, I should be wrong in feeling no discontent at death; but now you are well aware that I expect to arrive amongst good men; yet I would not altogether insist upon this; that I should fall in, however, with admirable masters, the gods, be assured that I should insist on this, if on anything else of the kind. Wherefore I am not equally discontented (as if I thought the matter were otherwise), and I indulge in good hopes that there is something in reserve for those who die, and that, as was said long since, it is far better for the good than the evil.”

Simmias:: “What then, Socrates, do you meditate departing from us, reserving this consideration to yourself, or would you impart it to us also? For this blessing seems to me a common concern to both, and it shall serve, at the same time, as your defense, if you should convince us of what you assert.”

Socrates:: “I shall endeavor to do so, but let us, in the first place, attend to Crito here, and see what it is that he, for some time now, seems anxious to say.”

Crito:: “What else, Socrates, than what the person who is to minister the poison to you told me something since, that I should tell you to argue as little as possible. For he says that those who engage in dispute become too warm, and one should not let anything of the kind interfere with the progress of the poison, otherwise, those who did so were sometimes compelled to take two or three draughts.”

Socrates:: “Take your leave of him, and let him attend to his own peculiar province, to supply two draughts, or even three, if it be so required.”

Crito:: “Indeed, I knew you would speak nearly to this effect, but he is troubling me this some time.”

Socrates:: “Do not mind him.”

“But I wish now to unfold to you, as being my judges, the reason why a man, who has in good earnest devoted his life to philosophy, appears to be full of confidence when on the eve of death, and to cherish a favorable hope that he shall secure the greatest possible blessings in another life, after he shall have departed from this. How this, then, should be so, Simmias and Cebes, I shall endeavor to explain.

“As many as engage with sincerity in the study of philosophy, appear to leave all others in the dark as to the fact of their applying themselves diligently to no other object than dying and death. If this be true, it surely were absurd throughout their entire life to have nothing else in view but this, and when it had come to feel dissatisfied at what they had formerly so earnestly desired and studied to attain.”

Phaedo:: Upon this Simmias, smiling, said;

Simmias:: “By Jove, Socrates, you have made me smile, being by no means at present inclined to do so. For I imagine that the multitude, if they heard this observation, would suppose that it had been justly made in reference to philosophers, and would agree unanimously with you, our own fellow-countrymen in particular, that true philosophers have a desire for death, and they have not left them (the multitude) indeed in the dark as to the fact of their deserving it.”

Socrates:: “And they would say the truth, Simmias, with the exception of their not being left in the dark; for they are quite ignorant in what sense true philosophers desire to die, and in what sense they merit it, and what kind of death. But let us, taking leave of them, address ourselves to each other. Do we imagine death to be anything?”

Simmias:: “Something, surely.”

Socrates:: “Whether is it anything else than the separation of the soul from the body? And is this death, the body being apart by itself, disunited from the soul, and the soul disunited from the body, existing apart by itself? Is death anything but this?”

Simmias:: “Nothing else than this.”

Socrates:: “Observe now, my good friend, whether you and I agree in our view of the ease, for from hence I think we shall come to a better understanding on the subject of our inquiry. Does it seem to you to be consistent with the character of a philosopher to be solicitous about pleasures, as they are called, of this kind, eating and drinking for instance?”

Simmias:: “By no means, Socrates.”

Socrates:: “Well, then; about the pleasures of love?”

Simmias:: “Not at all”

Socrates:: “Well; does such a character appear to you to hold in estimation any other bodily luxuries?—for example, the possession of distinguished robes, sandals and other personal ornaments; whether does he appear to you to value or despise it, at least so far as absolute necessity may not require him to use them?”

Simmias:: “A true philosopher, appears to me to hold them in contempt.”

Socrates:: “Are you, therefore, wholly of opinion that the concern of such a character is not about the body, but that as far as he can, he stands apart from this, and is altogether devoted to the soul?”

Simmias:: “I am so.”

Socrates:: “In matters of this kind, then, is it not in the first place the philosopher evidently, who above all other men, principally absolves the soul from its communion with the body.”

Simmias:: “So it appears.”

Socrates:: “And the generality of mankind, Simmias, are of opinion, that he who has no pleasure in such things, and does not partake of them, deserves not to live, but that he makes a close approach towards death who feels no concern in any of those pleasures which arise from the body.”

Simmias:: “You say so with great truth.”

Socrates:: “But what of the acquisition of wisdom; is the body an obstacle or not, if one should take it along with him as a partner in his search? What I mean to say is this: do the sight and hearing convey any certainty to mankind, or are they such as the poets incessantly report them, who say that we neither hear nor see anything as it is? And if, indeed, of our corporeal senses these are neither accurate nor distinct, scarcely could the rest be so, for they are all far inferior to these. Do they not' seem so to you?”

Simmias:: “They do, indeed.”

Socrates:: “When, then, does the soul attain to the truth? For when it attempts to investigate anything along with the body, it is plain that it is then led astray by it.”

Simmias:: “You say true.”

Socrates:: “Is it not then by reasoning, if by anything, that reality is made manifest to the soul?”

Simmias:: “Certainly.”

Socrates:: “But it reasons most effectually when none of the corporeal senses harass it; neither hearing, sight pain, or pleasure of any kind; but it retires as much as possible within itself, and aims at the knowledge of what is real, taking leave of the body, and as far as it can, abstaining from any union or participation with it.”

Simmias:: “Even so.”

Socrates:: “Does not the soul of the philosopher in this instance, therefore, show the greatest contempt, for the body, and shrink from it, while it seeks to be left alone to itself?”

Simmias:: “It appears so.”

Socrates:: “What, then, do you say of what follows, Simmias? Do we assert that justice is anything or not?”

Simmias:: “We say that it is, by Jove.”

Socrates:: “And beauty and goodness also?”

Simmias:: “Why not?”

Socrates:: “Did you ever see anything of the kind with your eyes?”

Simmias:: “Never.”

Socrates:: “Have you laid hold of them with any other of your bodily senses?—but I am speaking (not of goodness and beauty only, but) generally, of magnitude, health, strength, and in a word, of the essence of every thing, that is, the real existence of each—whether is their truest character discovered by means of the body, or does the case stand thus; that whoever amongst us prepares with the greatest caution and accuracy to reflect upon that particular thing by itself about which he is inquiring, he must make the nearest approach to a knowledge of it?”

Simmias:: “By all means, indeed.”

Socrates:: “Would he then accomplish this with the least possible alloy, who comes with the aid of the purest reflection to the investigation of every essence, neither employing the sight in the process of reflection, nor bringing in any other sense to share in the process of reasoning, but who using reflection alone and unalloyed, endeavors to investigate every reality by itself and unmixed, abstaining as much as possible from the use of the eyes, and in a word, of every part of the body, as confounding the soul, and preventing, when united to it, its attainment to wisdom and truth? Is not such an one, if any, likely to arrive at what really exists?”

Simmias:: “You speak, Socrates, with amazing truth.”

Socrates:: “It is necessary therefore, that in consequence of all this a certain impression must strike those who are genuine philosophers, of such a nature that they would express themselves mutually to this effect:—A by-path, as it were, appears to conduct us, (out of the common track,) with reason for our guide, in this research; because so long as we are encumbered with the body, and our soul is contaminated by so great corruption, we shall never fully attain to that which we desire, but this we assert to be the truth. For the body imposes upon us innumerable constraints on account of its necessary support—moreover, should any maladies befall it, they too impede the ardent pursuit of truth, while it fills us up with lusts, desires, fears, chimeras of every kind, and unbounded folly; so that, as is truly observed, there is never, in fact, any possibility by reason of it of our progressing in wisdom. Besides, it is nothing else except the body, and its appetites, that occasions wars, seditions, and contentions; since all wars originate with us through the passion for amassing wealth, and we are compelled to acquire it on account of the body, slaves as we are to our attendance on it; so that owing to the body, and by reason of these its affections, we have no time to spare for philosophy.

"But the last and worst of all is, that if we should obtain any spare time from it, and turn our attention to the investigation of any subject, obtruding itself suddenly, on all occasions, in the midst of our research, it causes disturbance and commotion, and confounds us so that we are disqualified by it for the discernment of the truth. In reality, then, it has been demonstrated to us, that if we are ever likely to arrive at a clear intelligence of anything we must be separated from the body, and contemplate with the soul itself all objects as they are; and then, in all likelihood, we shall enjoy that wisdom which we desire and profess to be enamored of, when we have departed from this life, as the argument points out, but not while we live here. For if it is impossible to have any clear intelligence in conjunction with the body, one of two things must follow, either that it is in no case practicable to acquire knowledge, or it is so after death, for then the soul shall be apart from the body, completely independent, but not before. While we are living also, as it appears, we shall make the nearer advances to knowledge the more that we avoid all connection and union with the body—unless when absolute necessity requires—shrink from the contagion of its nature, and keep ourselves pure from its pollutions until the Deity himself shall absolve us from its influence. Thus being undefiled, delivered from the irrationality of the body, in all likelihood we shall be classed with others of a similar stamp, and we shall, of ourselves, have cognizance of every unmixed essence; but this is probably the truth, since it is not allowed the impure to be conversant with what is pure. Such, Simmias, are the expressions which I believe to be incumbent on all true lovers of wisdom to use amongst each other, and the opinions they should entertain; does it not seem so to you?"

Simmias:: "By all means, Socrates."

Socrates:: "Therefore, if this, my friend, be true, there are great hopes for one who shall arrive where I am setting out for now, that there, if anywhere, he shall acquire this abundantly on account of which I have endured such great anxiety during my life past; so that this departure which has been prescribed me now abounds for me in favorable hope, as it should for any Athenian who deems his mind to have been so regulated that it was the same as cleansed from its impurity."

Simmias:: "Such is indeed the case."

Socrates:: "But does not the purification consist in this, as was observed in an early stage of the discussion, in separating the soul as much as possible from the body, and inuring it to gather and collect itself independently from all parts of the human frame, and to dwell, so far as it can, both at the present and through all future time completely by itself, ransomed as it were from the shackles of the body?"

Simmias:: "Certainly so."

Socrates:: “Is this, therefore, called death, this deliverance and separation of the soul from the body?”

Simmias:: “By all means.”

Socrates:: “But the true philosophers alone are mainly desirous at all times to set it free, as I asserted; and this is the identical study of philosophers, the deliverance and separation of the soul from the body, or is it not?”

Simmias:: “So it seems to be.”

Socrates:: “Therefore, as I said at the outset, should it appear ridiculous for a man who throughout his existence had so studied to live as if on the very confines of death, to feel annoyed as soon as it had actually come?—Should not this be absurd?”

Simmias:: “How not?”

Socrates:: “In fact then, Simmias, true philosophers are earnestly intent on death, and to them, of all mankind, death is least formidable. But judge from this. If they show an unqualified hostility against the body, and are desirous to keep the soul entirely by itself, but when the time for this arrives they should give way to dread and discontent, should not their folly be extreme, since they would not depart delighted to that place where on their arrival they have the prospect of attaining to that which they were enamored of through life—but they were enamored of wisdom,—and of being liberated from any further association with that to which they were averse? Whether, for the sake of human objects of affection, wives and sons deceased, have numbers of their own free choice desired to descend to Orcus, induced by this very hope of seeing and living together there with those for whom they longed; and shall one who is seriously enamored of wisdom, and who has strongly entertained a similar expectation that he could find it nowhere else deserving of the name except in

Orcus, be indignant at the approach of death, and depart thither in displeasure? We must suppose that he would gladly go, my friend, if he is indeed a philosopher, for he will be firmly convinced of this, that nowhere else but there shall he find wisdom unalloyed. If this be so, as I declared just now, should it not be the height of folly in such a man to be afraid of death?"

Simmias:: "It should be so, by Jove."

Socrates:: "Therefore, should not this be a sufficiently strong proof against a man whom you observed to be dissatisfied when about to die, that he was not a lover of wisdom but of the body. But the same man is perhaps a lover of riches and honors, and looks to the attainment of one or the other of these, or probably both."

Simmias:: "The case stands altogether as you state it."

Socrates:: "Does not fortitude then so called, Simmias, chiefly belong to those who are disposed to the study of philosophy?"

Simmias:: "By all means."

Socrates:: "So likewise that temperance, which even the multitude call by its right name, and which consists in not being transported by the passions, but moderating them with coolness and composure, does it not chiefly belong to those alone who hold the body in contempt, and live in the study of philosophy?"

Simmias:: "Necessarily so."

Socrates:: "For if, you are inclined to reflect upon the fortitude and temperance of others, they shall appear to you absurd."

Simmias:: "How so, Socrates?"

Socrates:: "Are you not aware, that all others reckon death amongst the great evils?"

Simmias:: “Certainly they do.”

Socrates:: “Is it then through dread of greater evils that the brave amongst them endure death, whenever they do so?”

Simmias:: “It is so.”

Socrates:: “Therefore all, except the philosophers, are courageous through the act and principle of fear; and yet it is strange enough that one should be courageous through fear and timidity.”

Simmias:: “It is surely.”

Socrates:: “What then; are not those of well regulated morals amongst them affected thus?—Are they not temperate through a kind of intemperance? and impossible as we assert this to be, nevertheless it so happens that they have an affection similar to this—that which arises from their senseless temperance; for, dreading to be deprived of other pleasures, which they anxiously desire, they abstain from some while they are under the dominion of others, and though they call it intemperance to be governed by pleasures of any kind, yet it happens to be the case with them, that while under the control of pleasures generally, they merely exercise a control over some. But this is analogous to what was said just now, that in a manner they are made temperate through intemperance.”

Simmias:: “So it seems, indeed.”

Socrates:: “My dear Simmias, let us beware lest this be not a correct exchange with virtue, the commutation of pleasures with pleasures, pains with pains, and fear with fear, the greater too with the less, like pieces of money, while wisdom is the only sterling coin for which we ought to exchange all things; and for this, and with it, all things in reality are bought and sold, both fortitude, temperance, and justice; and true virtue, in sum, is inseparable from wisdom, whether pleasures, fears, and all things else of the kind, are present or absent; but where they are distinctly separated from wisdom, and mutually interchanged for each other, take care lest this species of virtue be not a mere semblance, and, in reality, servile, while it possesses nothing sound or sincere, whereas true virtue is a complete purification from all the passions, and temperance, justice, fortitude, and wisdom itself, form the prelude, as it were, to this cleansing from pollution. Wherefore, these celebrated characters who established our initiatory ceremonies appear to have had no mean understanding, but, in fact, to have obscurely hinted long since that whoever descends to Orcus uninitiated and uncleansed, shall grovel in mire; but he who is purified and initiated upon his arrival there, shall abide with the gods. For, say those who preside at the mysteries, Many indeed bear the wand, but the inspired are few; and these latter are, in my judgment, none other than the true philosophers, to be enrolled with whom I left no means untried, so far as I was competent through life, but in every way endeavored to effect it. Whether I directed my endeavors right, and at all prevailed, I shall know distinctly, if the Deity should please, when I shall have descended there, some short time hence as it appears to me.

“Such is the defense I make to you, Simmias and Cebes, for my naturally feeling no displeasure or discontent at taking leave of you and those who are in authority over me here, being convinced that I shall there, no less than here, fall in with excellent masters and friends; but with the multitude this obtains no credence. If then, in the course of this explanation, I appear more deserving of belief to you than to the judges of Athenians it is well.”

Phaedo:: Upon Socrates having thus expressed himself, Cebes rejoined;

Cebes:: “All else that you have said, Socrates, appears to me to be advanced with reason, but those observations upon the soul, meet amongst mankind with the strongest disbelief, being afraid (as they are) lest, on its departure from the body, it should no longer exist, but should perish, and be annihilated upon the same day on which a man dies; and being dispersed immediately on its separation and egress from the body, like a breath or smoke, it should vanish, and have no further being; otherwise, if it existed anywhere independent, concentred within itself, and removed from the sphere of those evils which you have enumerated just now, great indeed, and cheering should be the hope that that which you say is true. But this requires, probably, no small persuasiveness and proof that the soul of a deceased man exists, and is capable of certain faculties and reflection.”

Socrates:: “You say true, Cebes; but what are we to do? Are you willing that we should converse together upon these points, as to the probability that the case stands thus or not?”

Cebes:: “For my part, I should gladly hear what opinion you entertain upon them.”

Socrates:: “I do not imagine, that any one, not if he were even a comic poet, would now say that I am trifling, and conversing upon extraneous subjects. If you approve, then, let us examine the question.”

“But let us examine it in this point of view, whether the souls of the deceased survive in Qrcus or not. There is indeed an old tradition which we have called to mind, that souls which set out thither from hence do survive, and return hither again, and come to life from death. If this be so, then, that the living are reproduced from the dead, must it not be that our souls are in existence there? For if they existed no longer, they could not surely be reproduced; and in support of the truth of this it will be sufficiently strong testimony if it appears palpably clear, that the living are produced from no other source whatever than from the dead. If such be not the case, we must recur to other proofs."

Cebes:: "I agree with you."

Socrates:: "Do not then, examine this matter merely in reference to mankind, if you are anxious to understand it more distinctly, but in reference to all animals and plants, and whatever things, in sum, are generated; let us direct our attention to all, and see if they are, without exception, produced in no other way than contraries from contraries, in the case of those which have any such opposite quality, as, for example, fair is the contrary of foul, justice of injustice, and so in ten thousand other instances. Let us then consider this, whether it is absolutely necessary in the case of as many things as have a contrary, that this contrary should arise from no other source than from a contrary to itself. For instance, when anything becomes greater, must it not follow, that from being previously less it subsequently became greater?"

Cebes:: "Yes"

Socrates:: "So too, if anything becomes less, shall it become so subsequent to its being previously greater?"

Cebes:: "Such is the case."

Socrates:: "And weaker from stronger, swifter from slower?"

Cebes:: "Certainly."

Socrates:: "Well then; if anything becomes worse is it from better, and if juster from more unjust?"

Cebes:: "Why should it not?"

Socrates:: “We are then sufficiently assured of this, that all things are so produced, contraries from contraries?”

Cebes:: “Sufficiently so.”

Socrates:: “But further; is there something of this nature m them; for instance, two stages of generation between each pair, as all contraries imply two extremes, from the one to the other, and from the other back again to it? For between the greater and the less intervenes the process of increase and diminution; and do we, therefore, call the one the act of increasing and the other that of diminishing?”

Cebes:: “Yes.”

Socrates:: “So, therefore, with the act of separating and of mixing, of growing cold and growing warm, and all things similarly, even though we should not have names to designate them by at times, still must they not in fact be at all times so disposed as to be produced from each other and that their generation should be reciprocal?”

Cebes:: “By all means.”

Socrates:: “What then, has life any contrary, as sleeping has its contrary, waking?”

Cebes:: “Certainly.”

Socrates:: “What is it?”

Cebes:: “Death”

Socrates:: “Are not these then produced from each other, since they are contraries, and the stages of generation between them are two, since they are two themselves.”

Cebes:: “How should it be otherwise?”

Socrates:: “I shall tell you then, one combination of contraries amongst those which I mentioned just now, both itself and its stages of generation, but do you tell me the other. I say then, that sleeping is one thing, and waking another, and that waking is produced from sleeping and sleeping from waking, and that the stages of their generation are, the one falling asleep, and the other awakening. Is this sufficiently clear or not?”

Cebes:: “Quite so indeed.”

Socrates:: “Do you now tell me likewise in regard to life and death. Do you not say that death is the contrary of life?”

Cebes:: “I say so.”

Socrates:: “And that they are produced from each other?”

Cebes:: “Yes.”

Socrates:: “What then is that which is produced from life?”

Cebes:: “Death.”

Socrates:: “And that which is produced from death?”

Cebes:: “I must allow, to be life.”

Socrates:: “Then, Cebes, from the dead are living things and living men produced?”

Cebes:: “It seems so.”

Socrates:: “Therefore, our souls exist in Orcus (after death).”

Cebes:: “I think so.”

Socrates:: “Of their stages of generation, then, is not one, at least, obviously distinct? For dying is surely an intelligible idea, is it not?”

Cebes:: “Certainly it is.”

Socrates:: “How then, shall we do? Shall we not oppose in turn to this, the contrary process of generation, but shall nature fail in this? Or must we allow some process of generation contrary to dying?”

Cebes:: “By all means.”

Socrates:: “What is it then?”

Cebes:: “Reviving.”

Socrates:: “Therefore, if reviving is granted, this should be the process of generation from the dead to the living, namely, reviving?”

Cebes:: “Certainly.”

Socrates:: “We allow then in this way that the living are produced from the dead, no less than the dead from the living; but such being the case, it appeared to me to furnish adequate proof that the souls of the deceased exist somewhere, from whence they return again to life.”

Cebes:: “Such, Socrates, appears to me to be the necessary result from what has been admitted,”

Socrates:: “Observe now, Cebes, that we have not, in my judgment, made these admissions without reason; for if those things which are produced, were not continually to alternate with each other as if revolving in a circle, but the generation were direct from the one (contrary), merely to its opposite, nor should take a circuit and come round again to the first, are you aware that all things at last should assume the same figure, submit to the same affection, and cease to be produced at all?”

Cebes:: “How say you this?”

Socrates:: “There is no difficulty in comprehending what I say; but if, for instance, falling asleep be granted, and that awaking, which is produced from sleeping, were not to alternate with it, be assured that all things coming to an end, would render the fable of Endymion a mere jest, and he should no longer be considered of importance, because all things else should be influenced by an affection such as he was, by sleep; further, if all things were confounded together, and never divided asunder, the theory of Anaxagoras should soon be realized, all should be chaos.

Thus, my dear Cebes, if all things which had partaken of life should die, and when dead should remain in the same state of death, and not revive again, should there not be an unavoidable necessity that everything should [perish at last, and nothing revive? For if living things were produced from anything else (than what had died), and those living things should die, what remedy would there be against all things being finally destroyed by death?"

Cebes:: "None whatever, Socrates, in my mind, but to me you seem to speak the clearest truth."

Socrates:: "Such, Cebes, the case unquestionably seems to me, and that we do not acknowledge these things under the influence of delusion, but there is in reality a reviving and producing of the living from the dead, a surviving of the souls of the deceased, and, happiness for the good, but misery for the evil amongst them."

Cebes:: "And indeed, according to that argument, if a true one, which you are in the habit of advancing so frequently, that our knowledge is nothing else but reminiscence, according to this, I say, we must have learned! at some former period what we remember now. But this is impossible, unless our souls existed before they appeared in this mortal guise; so that in this way the soul appears somewhat immortal."

Simmias:: "But, Cebes, what proofs have you of this? Remind me, for I do not well recollect just now."

Cebes:: "To comprise all, in one most admirable argument, (it is proved thus) because when men are questioned, if one puts the question fairly, they describe things as they really are; yet if they had not innate discernment, and right reason, they should be quite incapable of this. Further, if one were to try them with geometrical figures, or anything else of the kind, he has the clearest evidence that the case is so”

Socrates:: “If you do not give in to this, Simmias, see if you will coincide with us upon considering the subject thus. You hesitate to admit that knowledge, so called, is reminiscence?”

Simmias:: “I do not hesitate indeed, but I require to be made sensible of this very thing, which is the subject of the argument, namely, to be reminded: and though from what Cebes, commenced to say, I even now nearly remember and am inclined to agree, nevertheless, I would now hear how you essay to argue the subject.”

Socrates:: “In some measure thus; we allow doubtless, that if one be reminded of anything, he must have known it at some time before”

Simmias:: “Certainly.”

Socrates:: “Do we allow this also, that when knowledge comes after a certain manner, it is reminiscence? But the manner I speak of is this: if one who has either seen, or heard, or has perceived by any other sense, some one object, should not only have a knowledge of this, but should form a notion of another of which the knowledge was not the same, but quite distinct, do we not with justice affirm that he remembered that of which he so received the notion?”

Simmias:: “How do you mean?”

Socrates:: “Thus, for example; the cognizance of a man is quite different from that of a lyre.”

Simmias:: “Why not?”

Socrates:: “Are you aware then, that lovers, when they see a lyre, a piece of dress, or anything else which their favorites are accustomed to use, are thus affected; they recognize the lyre, and form in their minds the image of the girl to whom the lyre belonged? But this is reminiscence; just as any one seeing Simmias is as constantly reminded of Cebes, and so in ten thousand similar instances.”

Simmias:: “Ten thousand indeed, by Jove.”

Socrates:: "Therefore, is not reminiscence something of this nature, especially when one is thus affected with regard to these things which he has forgotten in the lapse of time, and from having lost sight of them?”

Simmias:: “By all means.”

Socrates:: “Well then, is it the case that one who sees a horse in a painting, and a lyre likewise, is reminded of a human being, and that one who sees Simmias in a painting is reminded of Cebes?”

Simmias:: “Certainly so.”

Socrates:: “And must not one who sees Simmias in a painting, call to mind Simmias himself?”

Simmias:: “It is so indeed.”

Socrates:: “Does it not happen, then, according to all this, that reminiscence arises partly from similitude, and partly from contrast?”

Simmias:: “It does so.”

Socrates:: “But when one remembers any thing from similitude, is it not necessary that he should be still further affected, so as to consider whether this, as far as regards the likeness, comes short in any respect or not, of that which he remembered?”

Simmias:: “Necessarily so.”

Socrates:: “Observe now, if this be so. Do we allow any such thing as equality. I do not mean as between one log or stone, and another log or stone, nor anything of the kind, but something else distinct from all these, equality in the abstract,—do we allow that there is anything of this kind or not?”

Simmias:: “Truly, by Jove, we do allow it, and to a very great extent too.”

Socrates:: “Do we understand what that abstract equality is?”

Simmias:: “Certainly.”

Socrates:: “Whence did we derive our knowledge of it? Was it not from what we spoke of just now, that seeing logs or stones or some other objects equal, from these we formed the notion of the former, which is quite distinct from these? Does it not appear to you to be distinct? Consider the matter thus. Do not stones which are equal, and logs which are at times the same, appear at one time to be equal, and another time not?”

Simmias:: “Certainly.”

Socrates:: “What then? That which is equal in itself does it ever appear unequal, or does equality seem inequality?”

Simmias:: “Never, Socrates, at any time.”

Socrates:: “Therefore, those things which are equal, and equality in the abstract, are not the same.”

Simmias:: “By no means do they appear so to me, Socrates.”

Socrates:: “Nevertheless, from those equal things, which are quite distinct from that abstract equality, have you not formed your notions and derived your knowledge of it?”

Simmias:: “You say very truly.”

Socrates:: “From some similitude, therefore, or dissimilitude in them?”

Simmias:: “Certainly.”

Socrates:: “But, it makes no difference. When looking at one thing, then, you form from the sight of it the notion of another, whether like or unlike of necessity that very process must be reminiscence.

Simmias:: “No doubt.”

Socrates:: “But what of the following? Are we affected in any such wise with regard to the equality of the logs, or the equal things which we spoke of just now? Do they appear to us to be equal as equality in itself is, or do they fall short of it in any degree so as not to be such as equality in itself is, or in no degree whatever?”

Simmias:: “They fall short in a great degree indeed.”

Socrates:: “Do we therefore allow that when one, upon seeing any object, has perceived that it aims (as this object which I look at now) at being like to some other existing object, but falls short of it and cannot become any thing such as it is, since it is far inferior to it, it is necessary for one perceiving this to have known beforehand that to which he asserts it to bear a resemblance, but still to be far short of a complete one?”

Simmias:: “It must be so.”

Socrates:: “What then? Are we similarly affected, or not, with regard to objects that are equal, and equality in the abstract?”

Simmias:: “We are by all means so.”

Socrates:: “Therefore we must have had a previous knowledge of equality before that time when having first seen equal objects, we perceived that all these aimed at a resemblance to equality, but came short of it.”

Simmias:: “Such is the case.”

Socrates:: “But we allow this also that it is impossible to have formed a perception of, or to perceive this by any other means than by the sight, touch, or some other of the senses; for I assert the same of all.”

Simmias:: “It comes to the same thing, Socrates, as far at least as regards that which the argument tends to establish.”

Socrates:: “But we must perceive, then, by the senses, that all things which come under the senses aim at this abstract equality, and are at the same time inferior to it; or how else shall we say it is?”

Simmias:: “It is even thus.”

Socrates:: “Therefore, before we began to see and hear, and use our other senses, we must have had knowledge of the nature of this abstract equality, if we were likely so to refer to it those equal objects which come under the senses, as to conclude that they all aimed at being such as the former, but fell short of it far.”

Simmias:: “This is a necessary consequence, Socrates, of what was said before.”

Socrates:: “Do we not then after our birth immediately see and hear, and exercise our other senses?”

Simmias:: “Assuredly.”

Socrates:: “But previous to the exercise of these, as we said, we must have had a knowledge of equality?”

Simmias:: “Yes”

Socrates:: “Therefore we must have had it, as it appears, before we were born?”

Simmias:: “It seems so.”

Socrates:: “If, then, having received this knowledge before we were born, we were born with it, should we not have known both previous to our birth, and immediately after, not only what is equal, and greater and smaller, but all things of the kind? For our present discussion is not rather on the subject of equality than on that which is beautiful in itself, good, just, and holy, and, in a word, about all things upon which we set the seal of real existence, both in the questions which we ask, and the replies which we return. So that we must have had knowledge of all these before we were born."

Simmias:: "Such is the case."

Socrates:: "And if having once attained to it we did not as constantly lose it, we should be always born with this knowledge, and retain it always through life; for to know is this, to retain knowledge when one has received it and never to lose it. Do we not call this oblivion, Simmias, the loss of knowledge?"

Simmias:: "Assuredly we call it so, Socrates."

Socrates:: "But if having attained to it before we are born we lose it at our birth, and afterwards, when we exercise our senses upon such things, we recover the knowledge which at one time we previously possessed, would not that which we call learning be the recovering of our own proper knowledge? And if we said that this was to remember, would we call it by its proper name?"

Simmias:: "Certainly."

Socrates:: "For this seemed possible, for one having perceived anything by the sight or hearing, or exercise of any other sense, to form a notion of something different from this, which he had forgotten, and to which this approached nearly as a contrast, or similitude. Wherefore, in a word, one of two things must occur; either we are all born possessing this knowledge, and we retain it through life, or those whom we set down as learning after, do nothing else than remember, and knowledge must be reminiscence."

Simmias:: "Such, Socrates, is certainly the case."

Socrates:: “Which of the two then, Simmias, do you choose? That we should be born with this knowledge, or subsequently remember what we had previously known?”

Simmias:: “At present, Socrates, I am unable to choose.”

Socrates:: “What now? Can you choose in this case, and what is your opinion concerning it? Can one who has the knowledge give an account of what he knows or not?

Simmias:: “There is a strong necessity for it, Socrates.”

Socrates:: “Do all men appear to you to be competent to give an account of those things which we were speaking of just now?”

Simmias:: “I could wish they were, but I am far more apprehensive that at this time to-morrow there will be no longer any one here who can do this with effect”

Socrates:: “Do not all men then, Simmias, seem to you to be acquainted with those things?”

Simmias:: “By no means.”

Socrates:: “Do they remember, then, what they once learned?”

Simmias:: “It must be so.”

Socrates:: “When did our soul attain to this knowledge? Not, surely, since we were born into the world.”

Simmias:: “Assuredly not.”

Socrates:: “Previously then?”

Simmias:: “Yes.”

Socrates:: “Therefore, Simmias, our souls existed before they appeared in this human form, separately from the body, and were possessed of intelligence.”

Simmias:: “Unless, perhaps, we receive this knowledge, Socrates, at our birth; for this period yet remains.”

Socrates:: “Be it so, my friend; but at what other period (than this) do we lose it? For we are not born with it indeed, as we admitted just now. Do we then lose it at the very moment we receive it? Or can you mention any other time?”

Simmias:: “Not at all, Socrates; I was not aware that I was saying what imports nothing.”

Socrates:: “Does the case then stand thus between us, Simmias? If those things which we are constantly speaking of really exist, the beautiful, the good, and every essence of a similar kind, and to such we refer all those objects that come under the senses, being aware that these essences had a previous existence and were our own, and with them compare these objects, it follows of necessity that as these exist, so our souls also exist before we are born; but if these do not exist, then has this argument been urged in vain. Is such the case, and is there an equal necessity that these objects should exist and our souls also before we are born, and if not the former neither the latter?”

Simmias:: “In the highest degree, Socrates, there seems to be this necessity, and the argument has an excellent tendency in establishing that our souls exist in like manner previous to our being born, as also the essence of which you are speaking now. Since for my part I hold nothing to be so evidently clear as this, that all such things to the utmost certainty exist, both the beautiful, the good, and the rest which you mentioned just now; and so far as I am concerned, the case is sufficiently proved.”

Socrates:: “But how does it strike Cebes? For we must convince Cebes too.”

Simmias:: “Just as satisfactorily, as far as I can judge, although he is the most pertinacious of mankind in his mistrust of argument. Still I think that he has been sufficiently convinced of this, that our souls existed before we were born.”

“Whether when we die, however, it shall still exist, does not appear to me, Socrates, to have been demonstrated, but that question raised by the multitude, which Cebes mentioned just now, lest at the same time with the decease of the man, the soul should be dispersed, and this should be the end of its existence, is still in the way. For what is to prevent its being born indeed, and made up from some place or other, and existing before it merged into the human body, but when it departs and is separated from this, then to die itself and be destroyed?”

Cebes:: “You say well, Simmias, for but half, as it were, of what is necessary appears to have been proved, that our souls existed before we were born; but it is requisite to prove further that whenever we die, it shall exist no less than before we were born, if the demonstration is to be made complete.”

Socrates:: “This has been demonstrated indeed, Simmias and Cebes, already, if you are satisfied to connect together this argument with that which we concluded on before, that everything living is produced from the dead. For if the soul has a pre-existence, and it is necessary that on its birth and entrance into life, it should be produced from no other source whatever than from dying and being dead; how must it not of necessity exist even after death, since it must needs be reproduced? That which you require, then, has been already proved.”

“However, both you and Simmias appear to me as if you would gladly examine into this argument at still greater length, and that you entertain a childish fear lest the wind should in good earnest disperse and dissipate the soul on its departure from the body, especially if one should not happen to die in a calm, but in anything of a great storm."

Cebes:: "Endeavor then, to convince us, as if we really dreaded this, or rather as if we entertained no such dread at all, although, perhaps, there is within us something of the child, which fills us with such fears. Let us then endeavor to persuade it not to be afraid of death, as of unsightly specters."

Socrates:: "You must soothe it by charms then, until you have subdued its fears by them."

Cebes:: "Whence then, Socrates, shall we procure a charmer skilful in such arts, now that you are leaving us?"

Socrates:: "Greece is wide indeed, Cebes, in which such skilful men abound, but there are also many barbarian countries, all of which you ought to search through, seeking such a charmer, sparing neither wealth nor toil, since there is nothing upon which you could more suitably expend your money. But it is necessary that you should yourselves examine into the matter amongst each other, for you could not, perhaps, easily find any more competent than you are, to enter on this office."

Cebes:: "This shall be done indeed, but let us return from whence we digressed, if so it please you."

Socrates:: "It pleases me indeed; how should it not?"

Cebes:: "You speak fairly."

Socrates:: "Therefore, we ought to put to ourselves a question of this nature, what is that to which it is suitable to undergo this affection, that of being dispersed, and for what have we reason to fear lest it should be so affected, and for what have we not? And next to consider which of the two the soul is, and thence to feel confident or alarmed in behalf of our souls?"

Simmias:: "You speak truly."

Socrates:: “Whether then is it suitable to that which has been compounded, and that which is naturally compound, to be thus affected, to be dissolved in the same manner in which it was compounded; but if there be anything simple, to this alone, if anything, it is unsuitable to be thus affected?”

Cebes:: “So it seems to me to be.”

Socrates:: “Therefore, whatever things continue always the same, and in the same condition, these above all is it natural to regard as simple, but those things which are variable and never the same, that such should be compound?”

Cebes:: “So at least it appears to me.”

Socrates:: “Let us then, return to the subject of the former part of our discourse. This essence, which in the course of our questions and answers we defined by saying that it is, whether is it always in the same condition and the same, or is it variable? Whether, too, do absolute equality, absolute beauty, and every absolute essence which really exists, admit of any change whatever? Or is every one of those essences which really exists, a simple and unmixed existence, always in the same condition and the same, and does it never in any degree whatever allow of any alteration?”

Cebes:: “They must remain in the same condition and the same, Socrates.”

Socrates:: “But what are we to say of those many beautiful things, for instance, human beings, horses, garments, or anything else whatever of the kind, whether they are equal or beautiful, or of all things synonymous with such? Whether do they continue the same, or, in direct contrariety to the former, are they, in a word, never at any time the same, neither with themselves nor with each other?”

Cebes:: “Such is their contrariety, they never are secure from change.”

Socrates:: “These latter then you might either touch, or see, or perceive by any other of the senses, but the former, which remain the same, it is impossible to apprehend in any other way than by reflection, and such as these are invisible and concealed from sight.”

Cebes:: “You assert, what is strictly true.”

Socrates:: “May we then suppose, two species of existences, the one visible, but the other invisible?”

Cebes:: “Let us suppose them.”

Socrates:: “And that the invisible is always the same, but the visible never at any time so?”

Cebes:: “Let us, suppose this also.”

Socrates:: “Come now, is any thing else the case than that one part of us consists of body and the other of soul?”

Cebes:: “Nothing else.”

Socrates:: “To which of the two, then, shall we say that the body bears the greater resemblance, and is the more closely allied?”

Cebes:: “To the visible, as must be plain to every one.”

Socrates:: “But what of the soul? Is it visible or invisible?”

Cebes:: “It is not visible to mankind at least, Socrates.”

Socrates:: “But we were speaking surely of what is visible, and what is not so according to the nature of man. Or do you think it was with a view to any other?”

Cebes:: “It was according to the nature of man.”

Socrates:: “What then do we assert of the soul? That it is visible or invisible?”

Cebes:: “Invisible.”

Socrates:: “Is it then immaterial?”

Cebes:: “Yes.”

Socrates:: “Does the soul therefore bear a greater resemblance to the immaterial than the body, but the latter resemble more the visible?”

Cebes:: “It is imperatively so, Socrates.”

Socrates:: “Did we not likewise lay this down a short time since, that when the soul makes use of the body to investigate anything, either by the sight, hearing, or any other sense,—for to consider an object through means of the senses, is the same as through means of the body,—it is then indeed forced by the body in the direction of those things which are for ever subject to change, upon which it becomes distracted and confused, and reels as if inebriated, because it is involved in matters of this kind?”

Cebes:: “It is certainly so.”

Socrates:: “But when it considers any subject by itself, does it proceed in the direction of what is pure, everlasting, immortal, and immutable, and, as if closely allied to this, does it abide with it ever when it is left to itself and is empowered to do so, and is it relieved of its distraction, and, as being placed in connection with things like itself, is it always identical, and unchangeable with regard to them? And is this condition of the soul called wisdom?”

Cebes:: “You speak, Socrates, with the utmost fairness and truth.”

Socrates:: “To which species of the two, then, both from what was said before, and that just now, does the soul appear to be more like and the more closely allied?”

Cebes:: “Every one, Socrates, even the dullest, would in my mind allow, from this mode of investigation, that the soul in every respect bears a greater resemblance to that which is always the same, than to that which is not.”

Socrates:: “But what of the body?”

Cebes:: “It more resembles the latter.”

Socrates:: “But view it also in this light; that when the soul and body are together, nature enjoins submission and-obedience on the one, and on the other authority and command. In this light again, which of the two seems to you to resemble the divine, and which the human? Does it not appear to you that the divine is naturally adapted to govern and guide, but the human to be governed and to serve?”

Cebes:: “So it seems.”

Socrates:: “Which, then, does the soul resemble?”

Cebes:: “It is evident, Socrates, that the soul resembles the divine, but the body the human.”

Socrates:: “Observe then, Cebes, if such be our conclusion from all that has been said, that the soul bears the strongest resemblance to that which is divine, immortal, intelligent, uniform, indissoluble, always the same and identical with itself; but that the body resembles most that which is human, mortal, unintelligent, multiform, soluble, and at no time identical with itself. 'Dan we object to this conclusion, my dear Cebes, that it is not fairly drawn?”

Cebes:: “We cannot, Socrates.”

Socrates:: “What then? When these things are so, is it not natural for the body to be speedily dispersed, and, for the soul to be altogether indissoluble, or very near it?”

Cebes:: “Why not?”

Socrates:: “You perceive, then, that when a man dies, that part of him which is visible, the body which is exposed to the sense of sight; that which we call the corpse, whose nature it is to be dissolved, to fall asunder and be dissipated, does not immediately undergo any of these affections, but lasts for a tolerably long time, and particularly so, if he should die with his body in full vigor, and at a similarly healthy time of life. For when the body has collapsed and been embalmed, like those who are embalmed in Egypt, it lasts nearly entire for an inconceivable time. But some parts of the body, even though it should decay, the bones, for instance, sinews, and everything of a similar nature, are, nevertheless, in a word, incorruptible; are they not?”

Cebes:: “Yes.”

Socrates:: “Is the soul, then, the invisible, that which departs into a region of like nature with itself, excellent, pure, into that which is Hades or invisible in good earnest, to abide with a good and wise deity, (whither, if God will, my own soul too must soon depart,) is this soul of ours, I say, being such in itself and in its nature, on its separation from the body straightway, as the multitude say, likely to be dissipated and destroyed? Far from it, my dear Simmias and Cebes; the case is much more likely to stand thus: if indeed it shall have departed pure, bringing with it nothing belonging to the body as having no voluntary communication with it through life, but flying from it and gathered up within itself as making this its constant care,—but this means nothing else than to philosophize aright, and in reality to study how to die composedly. For would not this (to philosophize right) be studying how to die?”

Cebes:: “By all means, indeed.”

Socrates:: “Therefore being so disposed, does it go hence to that which resembles itself, which is invisible, divine, immortal, and wise; on its arrival at which, its condition is one of perfect happiness, being set far apart from error, ignorance, fears, unbridled passions, and the rest of human miseries; and, as is said of the initiated, abiding really for ever with the gods? Must we say that it is so, Cebes, or otherwise?”

Cebes:: “We must allow it to be so.”

Socrates:: “But, in my opinion, if it shall have departed from the body polluted and impure, in consequence of its constant communication with the body, its subservience and attachment to this, and its being imposed on by it, and by its desires and pleasures, so far as to imagine that there is nothing real except what is corporeal, which one may touch and see, eat and drink, and make use of for sensual purposes; but that which is obscured from the sight, and invisible, which is intellectual and comprehensible by the aid of philosophy, being inured to the hatred, terror, and abandonment of this, think you that a soul which is so disposed, would be likely to depart independent and uncontaminated?”

Cebes:: “Not by any means.”

Socrates:: “But enmeshed by the corporeal, which familial intercourse and union with the body has naturalized to it by continued communication and great assiduity”

Cebes:: “Certainly.”

Socrates:: “This, then, my friend, we must regard as oppressive, earth-formed, and visible, of which a soul of such a character being possessed, is weighed down. and forced back again into the visible world through dread of the invisible and of Hades, to linger, as they say, about the sepulchers and tombs, round which some shadowy phantoms of souls have, been seen, such specters as these souls present which have not departed pure from life retaining a portion of that which is visible on account of which they are seen themselves.”

Cebes:: “This is very likely, Socrates.”

Socrates:: “Most likely, Cebes; and further, that these are not the souls of the good, but of the evil; which are compelled to wander about such places, to make atonement for their former wicked mode of life. And they wander about for so long until, at the instigation of the corporeal part which accompanies them, they are again enclosed in a body. But they are involved, as is natural, in similar dispositions to those which they may have indulged in during their former life.”

Cebes:: “What kind of dispositions do you mean, Socrates?”

Socrates:: “That those, for instance, who have been devoted to the exercise of gluttony, insolence and intemperance, and who have taken no thought to check them, should be clothed with the form of asses, and such like beasts, is natural enough; do you not think so?”

Cebes:: “You say what is highly probable indeed.”

Socrates:: “But that those who have set the highest price upon injustice, tyranny, and violence, should be clothed in the forms of wolves, hawks, and kites. Into what shape else can we say that such should merge?”

Cebes:: “Without question, into such shapes as these.”

Socrates:: “Is it then evident in all other instances whither each soul departs according to the similarity of its practices?”

Cebes:: “It is evident; how should it not?”

Socrates:: “Are not those therefore, the happiest amongst this class and do they not proceed into the happiest region, who have practiced those popular and social virtues which they call moderation and justice, which result from habit and exercise independently of philosophy and reflection?”

Cebes:: “In what respect are these the happiest?”

Socrates:: “Because it is probable that they shall transmigrate into a like social and civilized class; of bees perhaps, or wasps, or ants, or even back again into the same human species, and upright characters shall be produced from them.”

Cebes:: “Probably so.”

Socrates:: “But it is not lawful for any one, but one who has practiced philosophy, and departed completely pure from life, to arrive at the rank of the Gods; (not for any) except the true philosopher. On this account, my friends Simmias and Cebes, those who philosophize aright abstain from the gratification of all the bodily appetites, persevere in doing so, and do not resign themselves to them; not being apprehensive of the loss of property, and of poverty, as the multitude are, and the avaricious; nor dreading the disgrace and disrepute of a low estate, like those who aspire after civil offices and dignities, do they on that account stand aloof from them.”

Cebes:: “Surely it would not become them to act otherwise, Socrates.”

Socrates:: “Assuredly not, by Jove; wherefore they who have some concern for their souls, who do not pass their lives in the culture of the body, bidding adieu to all the rest, do not proceed in the same route with them, as being ignorant whither they are going, but impressed with the conviction that resistance should not be offered to philosophy, to the deliverance and purification she affords them, they submit to her direction, and follow her whithersoever she leads the way.”

Cebes:: “How so, Socrates?”

Socrates:: “I shall tell you. The lovers of wisdom are aware that philosophy having taken to herself the soul, which was obviously shackled down and cemented to the body, and compelled to view objects through this as through a dungeon, but not of and by itself, which lay groveling too in utter ignorance; and having observed the influence of this prison-house, how eagerly it is directed towards making the prisoner, as far as possible, a party concerned in riveting 1 his own chains;—the lovers of wisdom, I say then, are aware that philosophy having taken to herself their souls when in this state, gently admonishes and endeavors to liberate them, showing that the observation of objects by the aid of the eyes is replete with illusion, and that likewise by the aid of the ears, and the other senses, and advising a disengagement from these, so far as it may not be absolutely necessary to use them, and urging a concentrating and condensing of the soul within itself, and besides a distrust of everything else except itself with regard whatsoever real, independent essence it may of itself perceive, but whatsoever it may observe, by any other means (than itself), which varies according to those variable means, is in no wise to look on it as true; since such indeed is sensible and visible, but what the soul itself perceives is intelligible and immaterial. The soul of the true philosopher, then, convinced that it ought not to withstand this deliverance, abstains accordingly from pleasures, desires, griefs and fears, so far as it is able, reflecting that when one yields to the excess of joy, fear, sorrow, or desire, he suffers not in consequence merely such evil as one might suppose to result from sickness, or extravagance in gratifying his appetites, but that which of all evils is the gravest and the worst, this he suffers and is not conscious of it."

Cebes:: "What is this, Socrates?"

Socrates:: "That the soul of every man is compelled to give way to the extremes of joy and grief, and further, to the impression that this on account of which it is so strongly affected is most real, and most true, though it is not so. But things like these are principally visible things, are they not?"

Cebes:: "Certainly, indeed."

Socrates:: "Is the soul when under the influence of such affections, then chiefly shackled by the body?"

Cebes:: "How so?"

Socrates:: "Because every pleasure and pain, with a nail as it were, nails and fastens it to the body, and makes it of the nature of the body, while it believes those things to be true which the body asserts to be so. For, from its conformity of opinions, and identity of pleasures, with those of the body, it is forced, I imagine to become identified with its manners and habits, insomuch, that it never can arrive in Hades pure, but must always depart polluted by the body, so that it speedily sinks again into another body, and grows again as if it had been sown, whence it is deprived of all communion with that which is pure, unspotted, and divine."

Cebes:: "You say most truly, Socrates."

Socrates:: "On this account then, Cebes, the true lovers of wisdom are temperate and firm, not for the reason which the multitude give. Do you agree with them?"

Cebes:: "Surely I do not."

Socrates:: “No, truly. But the soul of the philosopher would adopt this line of reasoning, and would not imagine that philosophy indeed ought to set it free, and when she did so, that it should resign itself again to pleasures and to pains, to bind it down and make her service void, as if engaged upon a kind of Penelope’s web, but with her plan reversed; on the contrary, calming the passions to rest, taking reason for its guide, being ever intent upon this, the contemplation of what is true, divine, and unchangeable, and being nourished by it, it thinks that while it lives it ought to live conformably, and when it departs from life, having attained to that which is congenial to and like itself, it shall be released from mortal miseries. From such a regimen as this, Simmias and Cebes, we have no cause to fear that the soul, having attended to it strictly, should dread, lest falling asunder at its departure from the body, it should be dissipated and dispersed by the winds, and exist no more.”

Phaedo:: After Socrates had thus expressed himself, silence ensued for a considerable time, and both Socrates himself, as he appeared, was engaged in meditation upon the subject that had been so discussed, as were also many amongst ourselves. But Cebes and Simmias were conversing for a while together, and Socrates observing them, asked;

Socrates:: “What think you of what has been said? Does it appear to have been urged with sufficient effect? For it still presents many doubts and objections, if one would pursue them in adequate detail. If, then, you are engaged in the consideration of any other subject, I have nothing to say; but if you entertain any doubts upon this, do not hesitate yourselves to express and enumerate them, if you think the subject could be placed in a more effective point of view, and to call me in also to your assistance, if you imagine that with my aid you shall have better success.”

Simmias:: “Indeed, Socrates, I shall tell you the truth. For some time past each of us being in doubt, is pushing forward and urging the other to question you, on account of our anxiety to hear indeed, and at the same time a hesitation to give you any trouble, as it may not be agreeable to you in your present distress.”

Phaedo:: Hearing this, he smiled sweetly, and said;

Socrates:: “How strange, Simmias! With difficulty, indeed, could I persuade other men that I do not regard my present condition as a calamity, when I am unable to convince even you; but you are apprehensive lest I should be more morosely disposed now than during the former portion of my life. It seems, too, that I appear to you inferior in the art of divination to the swans, who when they perceive that they must die, though given to song before, then sing the most of all, delighted at the prospect of their departure to the deity whose ministers they are. But mankind say falsely of the swans that it is through dread of death, and assert that they sing from grief, bewailing their decease, and do not reflect that no bird sings when it is hungry, or cold, or afflicted with any other pain, not even the nightingale, or swallow, or hoopoe, which sing, they say, a dirge-like strain for grief; but neither do they appear to me to sing for grief, nor swans, but as pertaining to Apollo they are skilled in the divining art, and having a foreknowledge of the bliss in Hades, they express their joy in song on that day rather than at any previous time. But I believe myself to be a fellow-servant of the swans, and consecrated to the same divinity, and that I am no less gifted by my master in the art of divination, nor am I departing life with less good grace than they. On this account, then, you ought to speak and ask me what you please, while the Athenian Eleven give you leave.”

Simmias:: “You say well, and I shall tell you whence my doubts arise; and he, too, how far he rejects what has been urged. To me it appears, Socrates, and perhaps to you with regard to such matters, that it is either impossible or very difficult to arrive at certainty in the present life, at the same time that it shows a very imbecile character not to examine in every way into what is said concerning them, so as never to desist until one is quite exhausted in the extent of his research. For in regard to such matters it is necessary to accomplish some one of these things; either to learn from others how they stand, or find out upon investigation by one’s self, having laid hold on the very best indeed of human reasonings, and the least likely to be confuted, to sail through life embarking in this, as one who risks himself upon a raft, unless one could effect a safer and less hazardous passage in a more secure conveyance, that of some heaven-sent reason. For my part, then, I shall not be ashamed to question you, as you propose, nor shall I have to blame myself in time to come, because I did not say what my opinion is. For, Socrates, when I consider both by myself and with Cebes what has been said, it does not at all appear to me to have been adequately proved.”

Socrates:: “Perhaps, my friend, your views are just; but say where the inadequacy lies.”

Simmias:: “In this, I think, that one might use the same argument in respect to harmony, and a lyre and its chords, that the harmony indeed in a well-tuned lyre is something invisible, incorporeal, very beautiful and divine, but the lyre itself, and its chords, are bodies, and corporeal, compound, earthly, and akin to mortality. When any one, then, has broken the lyre, or cut or rent the chords, were he to insist upon the same line of argument as you, he should assert it to be necessary for that harmony still to exist, | and not have been destroyed; for there could be no possibility that the lyre should still exist with its chords torn asunder; and the chords too, which are mortal, (should exist,) but that the harmony of like nature with and allied to the immortal and divine, should perish, being destroyed prior to that which is mortal; but he should assert (I say) that the harmony must still exist somewhere, and that the woodwork and the strings should be decayed before it suffered any change. I think that you have yourself too, Socrates, perceived this, that we suppose for the most part the soul to be something of this nature, that our bodies being, as it were, set in order, and evenly balanced by heat, cold, dryness, and moisture, our souls are a mixture of some such qualities, and a harmony arising from them, when they are duly and justly combined with each other. If, then, the soul is a harmony, it is evident that when our bodies are immoderately relaxed, or overstrained by diseases or any other ills, the soul must immediately perish, divine as it is, like other harmonies, both those of musical sounds, and those which result from all the works of skilful artisans, but the relics of each individual body must last for a long time until it has been burned or decayed. Consider now what answer we shall make to this argument; if one should require it to be admitted that the soul being a mixture of those qualities in the body, is the first to perish in that which is called death?”

Phaedo:: Upon this, Socrates looking steadfastly at us, as he generally used to do, and smiling, said;

Socrates:: “In truth, Simmias speaks justly. If there is one among you then more ready than me, why did he not answer him? For he seems to have impugned the argument with no mean success. However, it appears to me that we ought to hear from Cebes yet before we make our answer, what charge he has to make against the argument, that during the interval we may consult what we shall say, and then when we have heard them, either to give up to them, if they seem to speak reasonably, or if not, to support the argument. Come then, Cebes, tell what it is that perplexed you, so as to occasion your mistrust.”

Cebes:: “I shall tell you. The argument seems to me to remain in the same place, and to be liable to the same objections which we made before. For, that our souls existed before they merged into this human form, I do not deny to have been very interestingly, and, if it be not too fulsome to add, most convincingly proved; but that it exists anywhere after we die, does not so clearly appear. I do not indeed give in to the objection of Simmias, that the soul is not stronger and more durable than the body, for it seems to me to excel by far all things of the kind. ‘Why then,’ might the argument say, ‘do you still disbelieve, when you see that on the death of the individual, that which is weaker still exists? But it does not seem necessary to you that the more durable should be still during this interval preserved.’ Observe, if I urge anything of weight in answer to this; but, as it appears, I too, as well as Simmias, must avail myself of an illustration of some kind. This subject seems to me to be treated in like manner as one would advance a similar argument in the case of an aged weaver deceased, and say that the man has not perished, but exists probably somewhere, and, as a proof, should adduce the garment which he wore and had woven himself, which was safe, and had not been destroyed; and if one were to doubt him, he would ask whether of the two is the more durable—the human species or the garment which is constantly wanted and worn; but when one answers that the human species is far more durable, he would imagine that it had been proved beyond all question that the man is alive, since that which is less durable was not destroyed. But I do not think that it is so, Simmias; and attend now to what I say. Every one must suppose that one who asserted this, asserted an absurdity. For this weaver having worn out and woven many such garments, perished subsequently to these, however numerous, but prior I imagine to the last, and yet the man is not, on this account, inferior to and frailer than the garment. But the soul, I think, might admit of this same illustration in reference to the body, and any one who applies a similar argument to them would seem to me to express himself correctly, to the effect that the soul is something durable, but the body frailer and more transitory. But he would farther say, that every soul wore out a number of bodies, especially if it lived many years; for if the body is in a state of decline and decay while the man is still alive, but the soul is always weaving anew that part which is worn out, it must follow, of necessity, that when the soul perishes it must have its last garment then, and be destroyed previous to this alone; but on the destruction of the soul, the body must then display the weakness of its nature, and quickly rot away. Wherefore it is not by any means right for one to place implicit faith in this argument, and to feel confident that when we die our souls still exist somewhere. For if one should concede to another who insisted upon still more than you, admitting to him that not only did our souls exist before we were born, but that when we die, there is nothing to prevent the souls of some from existing, and being likely to exist, and being repeatedly born and dying again,—for so strong is it by nature, that the soul can bear up against repeated births;—conceding this, I say, he would not vet allow but that it becomes exhausted after a number of births, and perishes at last altogether in some one of the deaths. But he would say that no one was aware of the precise death and precise dissolution of the body which occasion the destruction o the soul, for it is impossible for any one of us whosoever to be made sensible of it. If this be so, it applies to every one who is bold at the approach of death, that he entertains this confidence on foolish grounds, unless he can prove that the soul is absolutely immortal and incorruptible; otherwise it follows of course, that one who is on the eve of death must be alarmed on his soul's account, lest it should perish altogether on its immediate disunion from the body."

Phaedo:: Upon this, all of us who were listening to what they said, were, as we afterwards told each other, most unpleasantly affected; because they seemed to disturb our minds anew, after we had been fully convinced by the preceding arguments, and to reduce us to a mistrust not only of the pre-established reasonings, but of what was likely to be urged in future, on the grounds of our being incompetent judges, or the uncertainty of the facts themselves.

Echecrates:: By the Gods! Phaedo, I make all allowance for you; for, in some degree, a like reflection strikes myself. What reasoning shall we trust henceforward, since that which Socrates advanced, with such strong semblance of conviction, has now lost all claim on our belief? For this doctrine, that our souls are a kind of harmony, makes a wonderful impression on me at all times as well as now, and it reminded me, as it were, while being developed, that such had been a previous impression of my own. Wherefore I require, as if at the very commencement, some other argument which shall convince me that the soul does not die with the dead. Tell me, then, in the name of Jove, how Socrates followed up the argument?—and whether he, as you say of yourselves, was obviously disconcerted, or not so, but calmly bore the argument out?—and did he do so efficiently or imperfectly? Tell me everything as accurately as you can.

Phaedo:: In truth, Echecrates, often as I admired Socrates, I was never more delighted than in being with him on that occasion. That he was able to make a reply is not, perhaps, so surprising; but this I was particularly struck with in the first instance—the pleasure, affability, and approbation, with which he attended to the argument of the young men; in the next place, his sharpness in perceiving how we were affected by their objections; then how skillfully he applied his remedies—recalled us when, as it were, routed and overcome—and encouraged us to accompany him in a concise consideration of the subject.

Echecrates:: How was that?

Phaedo:: I shall tell you. I was sitting beside the bed, upon a low seat; but he was sitting somewhat higher than I was. Stroking my head, then, gently, and taking hold of the hair which fell down my neck—for he was accustomed, on occasion, to amuse himself so with my hair—he said;

Socrates:: "To-morrow, perhaps, Phædo, you will cut off these comely locks."

Phaedo:: "Likely so, Socrates."

Socrates:: "Not, if you take my advice."

Phaedo:: "What would you have me do?"

Socrates:: "To-day, I shall cut off mine, and you these locks of yours, in case our argument should perish, and we prove unable to revive it. Were I, too, you, and the argument were to escape me, I should bind myself by oath, like the Argives, never to allow my hair to grow until I gained the victory in my contest with the argument of Simmias and Cebes."

Phaedo:: “But, Hercules himself, even, is said not to have been a match for two.”

Socrates:: “Call upon me, then, as an Iolaus, while it is yet daylight.”

Phaedo:: “I do call upon you, then, not as Hercules upon Iolaus, but Iolaus upon him.”

Socrates:: “It will come to the same thing.”

Socrates:: “But, first of all, let us beware, lest we meet with some mischance.”

Phaedo:: “What mischance?”

Socrates:: “That, of becoming haters of reasoning, as some become haters of men, since there is no greater mishap than this for one to meet with, to hate reasoning. But the hatred of reasoning and hatred of mankind arise from a similar source. For the latter arises in the mind from an excessive and artless confidence in any one, and the impression that a man is altogether sincere, upright and honest; then, after a little, the discovery that he is vicious, faithless, and changing with the occasion. When one has frequently experienced this, especially at the hands of those men whom he believed to be his dearest and most familiar friends, in the end, after numerous disappointments, he hates the whole race, and is convinced that nothing upright whatsoever is in existence at all. Do you not think that this feeling arises so?”

Phaedo:: “Certainly.”

Socrates:: “Is it not a shame, then, and plain, too, that such a person endeavors to deal with man-kind without any judgment on human affairs; for, if he had dealt with them with judgment, such as it really is he should have felt the case to be, that the excessively good and evil are but few in either extreme; but the middle class is very numerous.”

Phaedo:: “How do you mean?”

Socrates:: “Just as in the case, of things that are small and large in extremes. Do you think that there is anything more rare than to discover a man, a dog, or anything whatsoever which is great or small in extremes? Or, again, swift or slow, beautiful or ugly, white or black? Do you not perceive that of all such things the extremes are rare and scarce, but the means are plentiful and abundant?”

Phaedo:: “It is certainly so.”

Socrates:: “Think you then, if a trial were proposed for a prize in vice, that, in such a case, but very few would appear pre-eminent?”

Phaedo:: “It is likely so.”

Socrates:: “Very likely; yet reasonings do not in this particular resemble the case of mankind, for I merely in this instance was following as you led the way; but so far they bear a resemblance, as in the case where one yields assent to an argument as true, without any judgment in reasoning, and it appears to him a little after to be false, standing to reason at one time and not so at another, and again changing and variable; and especially in the case of those who are conversant with sophistical reasonings, you are aware that in the end they imagine themselves to have become the wisest of all, and alone to have perceived that neither in material things is there any thing perfect or certain, nor in (abstract) reasonings, but that all existing things are absolutely, like the Euripus, subject to a continual flux and reflux, and never remain in any place for any time.”

Phaedo:: “What you say, is strictly true.”

Socrates:: “It should, surely, then, Phaedo, be a deplorable grievance, if, when a true, certain and intelligible mode of reasoning actually exists, yet in consequence of one's falling in with such a description of arguments as while they remain the same, appear still to be true at one time and at another not, he should not lay the blame upon himself nor upon his own want of judgment, but in the end through vexation should gladly transfer all censure from himself upon the arguments, and pass the remainder of his life in hatred and abuse of them, while he is blinded to the truth and knowledge of what really exists."

Phaedo:: "By Jove, it is grievous indeed."

Socrates:: "In the first place, then, let us beware of this, and let us not be persuaded that there is a chance of there being nothing sound in arguments, but much rather that we are not yet in sound condition, but must exert ourselves with manly resolution and energy to become so, you and the rest indeed on account of your whole life to come, but I on account of death itself, since I am in danger of deporting myself at present upon the very subject in question, not as a philosopher, but as a caviler, like those who are exceedingly uninformed. For they, when they are disputing about anything, pay no attention to the bearings of the question on which the argument is based, but make this their principal object, the point of view in which what they have laid down shall appear to those present. And I seem to myself to be likely to differ from such on the present occasion merely in so far; for I shall not endeavor to affect that what I say shall appear to those present to be true, unless the conviction should arise incidentally, but how it shall appear to wear the strongest character of reality to myself. For I am reflecting, my beloved friend, (and observe with what partiality to myself,) that, if what I assert be true, it is well to be persuaded of it; but, if there is nothing that survives the dead, I shall yet, for the period previous to my death, on this account, occasion less annoyance to those present by my complaints. This state of ignorance, however, shall not continue long—it would be bad if so—but in a little time hence shall come to an end. Thus prepared, Simmias and Cebes, I proceed to bear my argument out; but do you, if you will take my advice giving little heed to Socrates but much rather to the truth, if I appear to you to express what is true, agree to it; but, if not, by every argument oppose it, taking good care that I shall not, having deceived at once both myself and you, depart, like the bee, having left a sting behind.”

“But, to proceed. Remind' me, in the first place, of what you said, in case I should appear to have forgotten it. Simmias, then, as I judge, is in doubt, and fears lest the soul, although it is more divine and beautiful than the body, should perish before it, as being in the similitude of a harmony. But, Cebes, indeed, seemed to allow me this, that the soul is more durable than the body, yet nobody knows but that the soul, after the repeated wearing out of several bodies, and having left the last body, then perishes itself; and that this very thing is death, the destruction of the soul, since the body is always in a state of decay. Is this, Simmias and Cebes, what we are to inquire into?”

Phaedo:: They both agreed that it was.

Socrates:: “Whether, then, do you reject all the preceding arguments, or some of them indeed, and not others?”

Phaedo:: “Some we do,” they replied, “and others we do not”

Socrates:: “What say you, then, with regard to that argument in which we asserted that knowledge is reminiscence; and that such being the case, our souls must, of necessity, have existed somewhere before they were imprisoned in the body?”

Cebes:: “For my part, I was wonderfully convinced by it then, and I still cling to it closer than to any other”

Simmias:: “And I indeed, am possessed by the same feeling, and should be much surprised if I ever entertained a different opinion upon this subject.”

Socrates:: “But you must, my Theban friend, entertain a different opinion if this impression be firmly fixed with you, that harmony indeed is something compounded, and that the soul, like a kind of harmony, is composed of the concordant qualities of the body. For you will not surely allow yourself to say that the harmony existed, duly compounded, prior to the existence of these materials from which it should have been composed Or will you approve of your asserting this?”

Simmias:: “By no means, Socrates.”

Socrates:: “Do you observe, then, that this is the natural consequence of what you assert when you say that the soul existed before it merged into the human form and body, but that it is composed of what does not yet exist? However, this harmony of yours is not anything like to that to which you compare it, but the lyre and the chords, and the tones, as yet discordant, come into existence first, and last of all, the harmony is produced and perishes the first. How shall this proposition then accord with the former?”

Simmias:: “Not in any way.”

Socrates:: “And yet, if it is the rule in any other argument, surely one regarding harmony should not admit of discord?”

Simmias:: “It is right that it should not.”

Socrates:: “This argument of yours, then, is not in perfect accord; but observe which of the two propositions do you prefer? that knowledge is reminiscence, or the soul a harmony?”

Simmias:: “The former by much, Socrates, for the latter arose in my mind independently of any demonstration, in consequence of a kind of verisimilitude and speciousness, from which source the opinions of many are derived; but for my part, I am convinced that the arguments which establish their demonstrations by means of verisimilitudes, both in geometry and all other instances, are futile, and especially deceptive, should one be not upon his guard against them. But the argument respecting reminiscence and knowledge has been advanced upon a principle well deserving of assent. For in this way our soul was said to exist previous to its merging into the body, since to it belongs the essence which bears the name of that which is. This principle I have, I am persuaded, fully and fitly admitted; it follows then, as it would appear, of necessity, that I must neither allow myself nor any other to assert that the soul is a harmony.”

Socrates:: “What if you view the question in this light, Simmias, does it appear to you to be suited to harmony, or to any other composition to be otherwise disposed than those materials are from which it is produced?”

Simmias:: “By no means.”

Socrates:: “Nor yet to do or suffer anything contrary to what those materials do or suffer.”

Phaedo:: He agreed.

Socrates:: “It is not therefore suitable for harmony to take the lead of those things of which it is composed, but to follow them.”

Phaedo:: He consented.

Socrates:: “It is, then, far from being the case, that harmony is contrariwise produced, or sends forth sounds or in any respect is opposed to its component parts.”

Simmias:: “Far from it.”

Socrates:: “What then? Is not every harmony naturally so far a harmony as it has been duly arranged?”

Simmias:: “I do not understand you.”

Socrates:: “Whether, if it should be more fully and effectively arranged, supposing such a case possible, should not the harmony be fuller and more effective, but if it were in an inferior degree, and less efficiently so, should not the harmony be inferior and less efficient?”

Simmias:: “Certainly.”

Socrates:: “Is this then the case with regard to the soul, that, even in the least degree possible, one soul is more fully and effectively this very thing, a soul, or in an inferior degree and less efficiently so than another?”

Simmias:: “Not by any possibility.”

Socrates:: “Come now, by Jove; is one soul said to be possessed of intelligence and virtue, and to be good, and another of ignorance and vice, and to be evil? And is this said with reason?”

Simmias:: “With reason, no doubt.”

Socrates:: “What shall any one of those who pronounce the soul to be a harmony, assert those things to be which exist in the soul, virtue and vice? Will they call the one harmony and the other discord; and assert the one soul, the good, to be duly attempered, and to contain within itself, being a harmony, a second harmony, but the other to be itself discordant and to contain no second harmony in it?”

Simmias:: “For my part, I cannot say so; but it is plain that the advocate of the principle would assert something of the kind.”

Socrates:: “But, it has been already admitted that one soul is not more or less a soul than another; and this amounts to an acknowledgment that one harmony is not more fully and effectively, nor in an inferior degree, nor less efficiently a harmony than another. Is it so?”

Simmias:: “Certainly indeed.”

Socrates:: “And that a harmony which is neither in a greater nor in a less degree a harmony, is not in a greater or a less degree arranged to become so. Is this the case?”

Simmias:: “It is so.”

Socrates:: “But that which has not been in a greater or a less degree so arranged, does it partake of harmony in a greater or less degree, or has it a just proportion?”

Simmias:: “A just one.”

Socrates:: “Therefore, when one soul is not this very thing, a soul, in a greater or less degree than another soul, it has not been in any respect more or less harmonized?”

Simmias:: “Even so.”

Socrates:: “But such being its condition, it cannot partake in a greater degree of harmony or discord than another?”

Simmias:: “Certainly not.”

Socrates:: “But again, when such is its condition, can one soul partake to a greater extent of vice or virtue than another, if vice indeed be discord, and virtue harmony?”

Simmias:: “It cannot.”

Socrates:: “But the rather, Simmias, according to right reason, no soul at all shall partake of vice, if indeed it be a harmony. For a harmony which is essentially this very thing, a harmony, never at any time could partake of discord.”

Simmias:: “Assuredly not.”

Socrates:: “Neither indeed could a soul, which is essentially a soul, of vice.”

Simmias:: “How could it, indeed, from what has been already established?”

Socrates:: “According to this mode of reasoning, then, shall all the souls of all animals be equally good, provided they are equally disposed by nature to be this very thing, souls?”

Simmias:: “So, Socrates, it seems to me at least.”

Socrates:: “Think you, that such a position could be fairly urged, and that our reasoning should be subject to such inferences, if the hypothesis be true that the soul is a harmony?”

Simmias:: “Not by any means.”

Socrates:: “What, then; of all these things which are in man, is there anything else except the soul which you assert to exercise supreme authority, especially when it is a prudent one?”

Simmias:: “Nothing else.”

Socrates:: “Whether by yielding to the bodily affections, or by resisting them?—I mean, for instance, as in the case of heat and thirst besetting the body, by urging it in an opposite direction, not to drink, and when hunger besets it not to eat; in innumerable other examples, besides, we observe the soul resisting the bodily affections. Do we not?”

Simmias:: “Certainly we do.”

Socrates:: “But did we not allow, in the course of our previous reasonings, that the soul, if it were a harmony, could not breathe any tones at variance with the tension, relaxation, vibration, and any other affection to which the elements were liable of which it was composed, but should follow them, and never at any time become their guide?”

Simmias:: “We did admit it; how should we do otherwise?”

Socrates:: “What then? Does it not seem to us to act an opposite part now, in its control of all those qualities of which one might pretend it was composed, in its resisting them through the whole course almost of life, and exercising authority in every way over them; punishing some more severely and with pains, (according to the principles of the gymnastic and healing art,) but others more mildly; rebuking indeed in part, but in part suggesting warnings to the desires, the angry passions, and the fears, as if, being a distinct existence, it conferred with another object distinct from itself? Something like what Homer has represented in the Odyssey, when he speaks of Ulysses, who, ‘Striking his breast, in such terms chid his heart, Bear up, my heart; thou hast already borne much worse.’ Think you that Homer composed this with the impression, that the soul was a '"harmony and capable of being led by the bodily affections, and not as being competent to lead and govern them, and as being something far more divine in its nature than is consistent with a harmony?”

Simmias:: “By Jove, Socrates, I agree with you.”

Socrates:: “Therefore, my excellent friend, it is by no means correct to assert, that the soul is a kind of harmony; for as it appears, we should not agree with Homer, the divine poet, nor with ourselves.”

Phaedo:: He allowed that it was so.

Socrates:: “Very well; as it would seem, the Theban Harmonia has been sufficiently reconciled. But, with regard to Cadmus, how and by what course of reasoning shall we satisfy him?”

Cebes:: “You appear to me, to be likely to invent some means; at least you have succeeded in this argument against the harmony strangely contrary to my expectation.

For, while Simmias was explaining on what points he doubted, I wondered much if one could be able to do anything with his arguments; however, he appeared in the most unaccountable manner to shrink from the very first onset of your reply. So that I should not be surprised if the same thing should befall the argument of Cadmus.”

Socrates:: “My good friend, speak not in such a laudatory strain, lest some envious power should overturn the argument I am about to urge. These matters, indeed, shall be the province of the gods, but let us, ‘advancing hand to hand.’ like Homer’s heroes, try if you advance anything of consequence. But this is the sum of what you seek after;—You require that our souls should be proved to be imperishable and immortal, if a philosopher, on the eve of death, full of confidence and expectation that after his decease he shall be far happier than if he had died having passed through any other life (than that of a philosopher), is to entertain this confidence on wise and prudent grounds. But the demonstration that the soul is something potent and divine, and that it was yet in existence before we were born ourselves, you say there is nothing to prevent all this from signifying, not that the soul is immortal, but only that it has long duration, and pre-existed for an immeasurable time, and was both conversant with, and engaged in the execution of many things; yet nothing the more was the soul immortal, but its very entrance into the human body, like a disease, was the very origin of its decay, so that it passes through this life in misery, and perishes finally in that which is called death. But you assert, it makes no difference whether the soul is united to a body once or frequently, as far as regards our several apprehensions; for it is right that he should feel afraid unless he is a fool, who is not fully aware and cannot advance a satisfactory argument in favor of the immortality of the soul. Such, Cebes, I think is the character of your objections, and I purposely make frequent repetition of them, that nothing may escape us, and, if you wish, you may add to or take from them.”

Cebes:: “For my part, at present, I neither wish to subtract from, nor add to them; but they are just what I would urge.”

Phaedo:: Socrates then, after some delay, and pondering somewhat to himself, said;

Socrates:: “You inquire, Cebes, into no easy matter, for it is absolutely necessary to discuss the origin of generation and corruption. I shall then, if you please, recount to you how I was affected myself upon these subjects, then if any thing that I say should appear available to you, you shall adopt it to produce conviction in the matter of your discourse.”

Cebes:: “I wish, indeed, to hear you.”

Socrates:: “Attend then, as I intend to tell you. When I was a young man, Cebes, I had a wonderful fondness for that wisdom which they call a knowledge of nature. For this appeared to me to be a consummate wisdom, to be acquainted with the causes of every thing, why it is produced, why it perishes, why it continues in existence; and I used to turn my attention constantly from side to side upon my first investigation of such questions as these,—whether, when heat and cold are in a state of corruption, as some asserted, then animated beings are produced, whether it is owing to the blood that we think, or, whether it is owing to air or fire, or to none of these things, but it is the brain which produces the sensations of hearing, sight, and smell, and from these arise memory, and opinion, and from memory, and opinion, in a state of rest, in the same manner, knowledge is produced. Upon considering, further, the decay of these things, and the affections incidental to the heavens and the earth, I looked upon myself at last as so unsuited to this investigation that nothing could be more so. But of this I shall give you satisfactory proof; for the things which I formerly with certainty knew, as far at least as I appeared to myself and to others, I was then, in consequence of this investigation, so utterly blinded to, that I lost all knowledge of what I supposed myself to be acquainted with before in many other particulars, besides that of the mode of the growth of man. For previous to this I had supposed it evident to every one that it was owing to eating and drinking; since when by reason of nourishment flesh has been added to flesh, bones to bones, and so, in like manner, to every thing else has been added what is of similar nature to it; then the bulk which is (originally) small becomes afterwards great, and thus a man of little size proceeds to become large. Such were my opinions then; do I not seem to you to have entertained them justly?"

Cebes:: "To me, at least, you do."

Socrates:: "But consider the matter still further. I supposed myself sufficiently ascertained of the fact, when a man of large stature stood by one of small, that he exceeded him by a head, and so with one horse and another; and still more obviously than this, ten appeared to me to exceed eight by the addition of two, and two cubits to exceed one cubit by an excess of half."

Cebes:: "But now, what is your opinion on these matters?"

Socrates:: "I am far, by Jove, from thinking, that I am in any degree conversant with the cause of these things, who cannot satisfy myself even in this—whether, when to one a person has added one, that one to which it was added has become two; or, that one added, and that to which it was added, have become two, on account of the addition of the one to the other. For I wonder if, when each of them was separate, each separately was one, and they were not then two. But when they are joined together, this is the cause of their becoming two, namely, their conjunction by being approximated to each other. Neither, indeed, if any person should divide one (from the other), can I yet be persuaded that this, on the other hand, is the cause, namely, their division, of their becoming two. For this is quite an opposite cause to the former of their becoming two; since then it was because they were mutually conjoined, and added the one to the other; but now it is because the one is divided and separated from the other. Neither am I persuaded yet, according to this system of inquiry, that I know why one is one, nor in a word, anything else, why it is produced, perishes, or exists; but I proceed to compound at random some other system, while I by no means approve of this."

"But having heard a certain person reading once in a book, as he said, by Anaxagoras, to the effect that it is Mind which regulates and is the cause of all things, I was, indeed, delighted with such a theory of causation; and it appeared to me in a manner to be quite just, for Mind to be the cause of everything; and I supposed, if such were the case, that the regulating Mind sets all things in order, and disposes them severally in such a mode as they may best abide in. Should one, then, desire to investigate the cause of everything, how it is produced, or perishes, or exists, he must find out this respecting it, in what manner it is best for it either to exist, or, in any other way, to be passively or actively affected; but, from this mode of consideration, a man must look to nothing else, so far as concerns himself and others, but what is most excellent and the best.

Besides, it is necessary for this same person to be acquainted with what is worst, since the knowledge of both one and other is the same. With such impressions, I was delighted to think that I had found an instructor to my mind, Anaxagoras, in the cause of things existing, and that he would explain to me, in the first instance, whether the earth is flat or round, and, when he had explained this, would develop the cause and necessity of its form, going upon the principle of all things being for the better, and consequently that it should be such, for the better, as he would describe it; and, further, if he asserted that it occupied the centre, that he would unfold how it is for the better that it does so; and, if he would make all these things clear to me, I was fully prepared so as to require no more any other species of cause. With regard to the sun, I was, in like manner, determined to make inquiry; and with regard to the moon and the rest of the planets, their mutual velocity, revolutions, and other affections, in what manner, on occasions, it is best for each of them to be affected, both actively and passively. For I never at all supposed that, when he had declared those things to be controlled by Mind, he would adduce any other cause in their case than that it is so best for them to be arranged as they are; I thought, therefore, that he, ascribing a cause to each thing in particular, and all things in common, would explain in full what was best for each and the general good of all. And I should not, for a great consideration, have parted with my hopes; but, having taken up the work with the greatest earnestness, I perused it as hastily as I could, that I might the sooner be acquainted with the best and the worst.

"I was baffled, however, in this wonderful hope, when, in the course of my study, I observe the man making no use whatever of Mind, nor adducing any causes for the regulation of all things, otherwise than assigning the air, atmosphere and water, as causes; besides many other things equally absurd. And to me he appeared to bear the closest resemblance to one who would say, ‘Socrates commits all his actions through the operation of Mind;’ and, upon attempting to explain the causes of my several actions, would assert, in the first instance, that the reason why I am now sitting here is because my body is composed of bones and sinews, and the bones are hard indeed, and have their diaphyses separately, one from the other; but the sinews are capable of tension and relaxation, enfolding the bones along with the flesh and skin, which binds them together; when the bones, then, play freely in their joints, the extension and contraction of the sinews give me the power of bending my limbs, and for this reason I am sitting here now in such a posture; and again, he would assign other causes of a like nature for my conversing with you, alleging as causes the sound of the voice, the air, and the faculty of hearing, omitting all mention of the real causes, that since the Athenians thought it better to condemn me, on this account it appeared preferable to me to sit here, and the more honest course to stay and endure the penalty they have prescribed, since, by the Dog, these sinews and bones should have been long ago in Megara or Bœotia, borne thither with the impression that it would be for the best, had I not judged it to be more upright and honorable to undergo whatever punishment the state might direct in preference to escaping by flight like a slave. But to denominate such things causes is exceedingly absurd; yet, if one were to say, that without having such things as bones and sinews, and such like, as I am possessed of, I should not be able to do what I pleased, he would assert the truth; but to assert that it is through them that I effect what I do, and so far act under the influence of mind, and not from the choice of what is best, should be the highest and most palpable absurdity. For how silly is it that one should be incapable of distinguishing that the real cause is one thing, and that, without which the cause could not ever be a cause, is another; which the majority, feeling for, as it were, in the dark, appear to me, while they call it by a name quite foreign from the true, to designate as the very cause itself. Wherefore, one indeed, encompassing the earth with a vortex of the heavens, makes the earth to remain fixed (in the centre), while another supports it like a broad kneading-trough upon the air, as a base; but the power by which these things are so maintained in the best possible way in which they could be disposed, this they neither inquire into, nor do they suppose that it involves a kind of superhuman skill, but they imagine that they have found a more powerful, a more enduring, and a more comprehensive Atlas than this; and what is really excellent and suitable, they believe to be incapable of uniting and combining anything whatever. I should therefore have gladly become the disciple of any one, in order to understand the nature of a cause like this; but when I was disappointed of it, and could not find it out of myself, nor learn it from another, would you wish me to show you, Cebes, in what manner I set about a second voyage for the discovery of this cause?"

Cebes:: "Most anxiously I wish it."

Socrates:: "It seemed to me, subsequently, when I had exhausted myself in the investigation of things existing, that I should beware lest I should be affected like those who regard attentively an eclipse of the sun; for some destroy their sight unless they look at its reflection in the water, or some similar medium. With some such feeling then was I impressed, and I feared lest I should altogether be blinded in my soul while examining objects by the sight, and endeavoring to grasp them with each of the senses. I thought then that I should have recourse to the reasons of things, and discover in them the truth of their existence. Perhaps, however, this similitude does not hold good to the full extent of the comparison; for I do not altogether admit that he who considers things in their reasons, is contemplating them more by means of images than he who contemplates them in their effects; I proceeded then in the following way, to lay down, on every occasion, that principle which I judged the most incontrovertible and whatever things shall appear to me to coincide with this I set down as true, as well in causation ns in the case of all things else, but whatever things do not coincide as false. But I am anxious to explain to you more clearly what I mean, for I do not think you understand me now."

Cebes:: "No, by Jove, not well."

Socrates:: "Yet, I am not saying anything new, but what always upon other occasions, and in our past discussions, I have never ceased to say. For I proceed to try and explain to you that species of cause which I have concerned myself about, and revert to those much talked of subjects with which I also set out, supposing that there is beauty in the abstract, goodness, greatness, and all such things, which if you grant me and allow to exist I hope from hence to discover and demonstrate to you the cause of the immortality of the soul."

Cebes:: "Then come to your conclusion at once, as I grant you this."

Socrates:: "Observe now, what follows from the preceding; if you agree with me on the subject. For it appears to me if there is anything else beautiful besides beauty itself, it is beautiful for no other reason than because it partakes of that (abstract) beauty; and so I assert of everything. Do you agree to such a kind of cause as this?"

Cebes:: "I do."

Socrates:: "I do not yet, understand, nor am I able to conceive those other subtle causes; but if one were to account to me for the beauty of anything, either from its blooming color or figure, or anything else of the kind, I bid adieu to extraneous reasons, for I am confounded by all such, but I simply, artlessly, and foolishly perhaps, confine myself to this, that nothing else renders it beautiful but either the presence or participation of that (abstract) beauty, or by whatever means and in whatever manner it is communicated, for upon this I do not yet insist, but merely that through beauty all things beautiful are made so. Since this appears to me to be the safest answer to make to myself and any other also; and holding firmly by this I do not think that I shall ever fall, but that it is safe for me, and every person whosoever to reply, that through beauty things beautiful are made so. Does it not seem so to you?"

Cebes:: "It does."

Socrates:: "And that through magnitude great things are great, and greater things greater; and through parvitude things less are less?"

Cebes:: "Yes."

Socrates:: "Nor yet would you approve if any said that one is greater than another by the head, and that the less is less by this very same; but you would maintain that you mean nothing else than that every one thing greater than another is greater on no other account than that of magnitude; and on this account, its magnitude, it is greater, but the less is less on no other account than its parvitude, and on this account, its parvitude, it is less: dreading, I imagine, lest any argument of a contrary kind should oppose you, in case you should assert any one to be greater and less by the head, (to the effect that,) in the first instance, the greater is the greater, and the less is the less, owing to the very same thing; and in the next place, that the greater individual is the greater in consequence of the head which is small, but this were indeed a wonder for one to be great owing to something small. Would you not be afraid of this?”

Phaedo:: Upon which, Cebes, smiling, replied;

Cebes:: “I should indeed.”

Socrates:: “Would you not be afraid to say, that ten is more than eight by two, and owes its excess to this, and not to number? And that two cubits are greater than one cubit by half, and not from magnitude? For the fear is the same.”

Cebes:: “Certainly.”

Socrates:: “What then? When to one has been added one, would you not hesitate to say whether the addition is the cause of being two, or the division when it has been divided? And would you not loudly insist that you are not aware of any other mode whatever in which each thing exists than by a participation in the essence peculiar to each, of which it partakes, and in this case you are not aware of any other cause of their becoming two, except a participation in duality, of which that must partake which is likely to be two, and in unity whatsoever is likely to be one, but these divisions and additions, and such other subtleties you would bid adieu to, leaving replies upon such matters to wiser than yourself; and would you, being in dread, as the proverb says, of your own shadow and inexperience, clinging firmly to the security which the principle affords, make answer accordingly? But should any one attack this self-same principle, would you not take leave of him, and decline to answer until you had considered the consequences derived from it, whether they agree or differ from each other? And when you should be required to enter upon an explanation of it, would you render it in this manner, by laying down another further principle, whichever may appear the best of the more general, until you have arrived at some satisfactory result, and would you not, at the same time, avoid making confusion, like the contentious disputants, in treating of the first cause and its consequences, if you were anxious to attain to the truth of things? For those disputants have no consideration, perhaps, nor concern about this subject; since they are quite contented, while in their wisdom they throw all things into a general disorder, to be nevertheless competent to please themselves; but you, if you really belong to the class of philosophers, would act, I imagine, as I advise."

Phaedo:: "You speak most truly," replied Simmias and Cebes together.

Echecrates:: By Jove, Phaedo, they said so justly; for he seems to me to have explained the subject with wonderful clearness to one of even limited intelligence.

Phaedo:: Such, indeed, was the impression, Echecrates, of all present.

Echecrates:: And such our own, though absent then, at hearing your recital now. But what was the subject of the subsequent discourse?

Phaedo:: As I remember when these concessions had been made him, and it was admitted that every idea actually exists, and that other things participate in them so as to receive their name, he afterwards asked;

Socrates:: "if you assert these matters to be so, whether, when you say that Simmias is greater than Socrates but less than Phaedo, do you not then affirm that both magnitude and parvitude are in Simmias?”

Cebes:: “I do”

Socrates:: “Do you allow, however, that Simmias, exceeding Socrates is not actually true, as it is said to be in words? For Simmias is not adapted by nature to exceed him in consequence of his being Simmias, but of the magnitude which he has; nor, again, does he exceed Socrates, because Socrates is Socrates, but because Socrates has parvitude in comparison with his magnitude.”

Cebes:: “True”

Socrates:: “Neither, indeed, is Simmias exceeded by Phædo, because Phædo is Phædo, but because Phædo has magnitude in comparison with the parvitude of Simmias.”

Cebes:: “Such is the case.”

Socrates:: “Thus, then, Simmias has the name of being both small and great, since he is between the two, surpassing the parvitude of the one by his magnitude, but yielding to the other a magnitude which surpasses his own parvitude.”

Phaedo:: Upon this he said with a smile;

Socrates:: “I appear to express myself with the accuracy of a written contract, but still things are as I say.”

Phaedo:: Cebes agreed.

Socrates:: “But I urge them for this reason, because I wish you to be of the same opinion with myself. For it appears to me not only that magnitude itself is never disposed to be at the same time great and small, but r that the magnitude also in ourselves never admits the small, nor is disposed to be surpassed; but one of the two cases occurs, either that it retires and withdraws upon the approach of its contrary, the small, or ceases to exist when it has actually come; but it is not disposed, abiding and admitting parvitude, to be any thing else than what it was before, as I, for instance, having sustained the reception of parvitude, and still continuing to be the same person that I am, am this small person, but that which is great, while it is so, never endures to be small. In like manner the small in us is not disposed at any time to become or to be great, nor any other of things contrary, while it continues to be what it was, to become and be its contrary at the same time, but it retires, indeed, or perishes in this contingency."

Cebes:: "Thus in every way, it appears to me."

Phaedo:: Then some one of those present, (but who he was I do not clearly recollect,) when he heard this, said;

Someone:: "In the name of the gods was not the very contrary of what is now asserted laid down in the previous part of the discussion, that the greater is produced from the less, and the less from the greater, and this positively is the mode of generating contraries from contraries? But now it seems to me to be asserted that this never can be so."

Phaedo:: Upon which, Socrates, having moved his head forward and listened to him, said;

Socrates:: "You have reminded me like a man, however you do not observe the distinction between what is advanced now and what was so then. For then it was argued that a contrary thing is produced from a contrary; but now that contrariety itself can never become its own contrary, neither that which is in ourselves, nor that which is in nature. For, then, my friend, we were speaking of those things which involve their contraries, calling them by the name of the former; but now we are speaking of those former (contrary essences), by reason of which, being inherent, the things so called retain their name; but those we never at any time asserted to be disposed to admit of mutual generation.”

Phaedo:: At the same time, looking at Cebes, he said;

Socrates:: “Have any of these things he mentioned troubled you at all?”

Cebes:: “I am not disposed to be so, although I by no means deny that there are many things which perplex me.”

Socrates:: “We plainly, then, agreed to acknowledge this, that a contrary can never be its own contrary,”

Cebes:: “By all means.”

Socrates:: “But observe further if you will agree with me in this. Is there anything you call heat and cold?”

Cebes:: “Certainly.”

Socrates:: “The same as snow and fire?”

Cebes:: “Assuredly not.”

Socrates:: “Is heat then something different from fire, and cold something different from snow?”

Cebes:: “Yes.”

Socrates:: “But this, I think, is evident to you, that snow, while it is snow, can never, having admitted heat, as we said before, continue too be what it was, snow and hot, but on the approach of heat it will either give way to it or be destroyed.”

Cebes:: “Certainly so”

Socrates:: “And fire, on the other hand, on the approach of cold must either give way to it or be destroyed, nor can it ever endure, having admitted cold, to continue to be what it was, fire and cold.”

Cebes:: “You say true.”

Socrates:: “It happens, therefore, in respect to some such things, that not only the same idea is always designated by the same name, but something else too, which is not indeed the former, but retains its form always so long as it exists. But perhaps what I mean will be still clearer in the following example. The odd (in numbers) must always bear this name which now we give it; must it not?"

Cebes:: "Certainly."

Socrates:: "Must it alone of all things bear this name, for I ask you this also, or is there anything else which is not the same as the odd, yet which we must designate by this name, as well as by its own, because its nature is such as that it never can at any time dispense with the odd? Such I assert to be the case with the number three and many other numbers. But observe now regarding the number three; does it not appear to you that it must be designated always by its own name, as well as by that of the odd, which is not the same as the number three? But still such is the nature of the number three, five, and the entire half of number, that not being the same as the odd, each of them is yet always odd. On the other hand, two, four, and the other whole series of number, though not the same as the even, are nevertheless each of them even. Do you allow this or not?"

Cebes:: "How should I not."

Socrates:: "Observe now, what I wish to prove. But it is this, that not only do contraries appear not to receive each other, but as many things also as though not contrary to each other always involve contraries, such do not either appear to receive that idea which is contrary to the idea existing in themselves, but on its approach they perish or recede. Shall we not insist that the number three should perish first, and submit to anything else whatever, before it would endure while it was yet three to become even?"

Cebes:: “Certainly, indeed.”

Socrates:: “Nor yet, is the number two the contrary of the number three.”

Cebes:: “Surely not.”

Socrates:: “Therefore, not only ideas that are contrary do not await the approach of their contraries, but some other things also do not endure the approach of those which are really contraries.”

Cebes:: “You say very truly.”

Socrates:: “Do you wish then, if we can, that we should define what the nature of these things is?”

Cebes:: “Certainly.”

Socrates:: “Would they then be such as to compel whatever they occupied, not only itself to retain its own idea, but always that of something which is itself a contrary?”

Cebes:: “How do you mean?”

Socrates:: “As we said just now. For you are doubtless aware that whatever the idea of three may have occupied, it is not only necessary for that to be three, but odd besides?”

Cebes:: “Certainly.”

Socrates:: “At such, we say now, the idea contrary to the form which effected this, can never at all arrive.”

Cebes:: “No, surely.”

Socrates:: “But did the idea of odd make it so?”

Cebes:: “Yes.”

Socrates:: “And contrary to this is the idea of even?”

Cebes:: “Yes.”

Socrates:: “The idea of even then shall never arrive at being three.”

Cebes:: “Never surely.”

Socrates:: “Therefore three has not any share in even?”

Cebes:: “Not any.”

Socrates:: “Three, then, is uneven?”

Cebes:: “Yes.”

Socrates:: “That, therefore, which I proposed to determine—what things they are which, though contrary to any contrary, yet do not admit it, as for instance, now the number three, though not being the contrary of the even, does not the more admit it, for it always brings a contrary; against it, as the number two to the odd, fire to cold, and in many other examples—see now if you determine thus, not only that a contrary does not admit a contrary, but that also which brings any contrary against whatever it approaches, can never, at any time, receive the contrary of that which is so brought. But think over it again, for it is profitable to give it constant attention. Five will not admit the idea of even, nor ten, its double, the idea of odd; this double too, indeed, which is itself contrary to something else, will not, nevertheless, admit the idea of odd, no more than three-halves, the half, the third, and all such like will admit the idea of the whole, if you follow and agree with me in opinion that the case is so.”

Cebes:: “Most distinctly, I follow and agree with you.”

Socrates:: “But, answer me again as from the beginning; and do not reply in the same terms of my question, but in different, after my example. I say this, because I perceive, besides the certain mode of answering which I spoke of at first, another certainty (in answering), arising from what has just been said. For, if you were to ask me, owing to the existence of what in the body it shall be warm, I shall not make you that safe, unlearned answer, that it is owing to heat, but a more subtle one from what has been laid down just now, that it is owing to fire; nor if you should ask me, owing to the existence of what in the body, shall it be sick? I will not answer that it is owing to disease, but to a fever; nor if, owing to the existence of what in number, it shall be odd? I will not say, owing to oddness, but to unity, and so on. But observe now if you sufficiently understand what I mean."

Cebes:: "Quite so."

Socrates:: "But, answer me, owing to the existence of what in a body shall it be a living body?"

Cebes:: "To the existence of soul."

Socrates:: "Is this then invariably the case?"

Cebes:: "How should it not?"

Socrates:: "Whatever, therefore, the soul may have occupied, does it always bring it life?

Cebes:: "It does, indeed."

Socrates:: "Is there anything contrary to life or not?"

Cebes:: "There is."

Socrates:: "What is it?"

Cebes:: "Death."

Socrates:: "Therefore, the soul can never, at any time, admit the contrary of that which it always brings with it, as has been allowed from previous proof?"

Cebes:: "And most convincingly."

Socrates:: "What, then? What do we now call that which does not admit the idea of the even?"

Cebes:: "Odd."

Socrates:: "And that which does not admit the just, nor the graceful?"

Cebes:: "The one ungraceful, and the other unjust."

Socrates:: "Be it so. But by what name do we call that which does not admit death?"

Cebes:: “Immortal.”

Socrates:: “Does the soul, then, not admit death?”

Cebes:: “No.”

Socrates:: “Is the soul, therefore, immortal?”

Cebes:: “Immortal.”

Socrates:: “Be it so. Shall we say then that this has been now demonstrated? Or how think you of it?”

Cebes:: “Most satisfactorily, Socrates.”

Socrates:: “What, then, Cebes? If it is necessary that the odd must be imperishable, must not the number three be imperishable?”

Cebes:: “Why not?”

Socrates:: “If, then, that which is without heat must of necessity be imperishable, when any one applies heat to snow, should not the snow withdraw safe and unmelted? For it could not, indeed, be destroyed, nor yet would it stay to admit the heat.”

Cebes:: “You say truly.”

Socrates:: “In like manner, I imagine, if that which is without cold were imperishable, when one should move any cold body to the fire, it should never be extinguished nor destroyed, but should depart quite whole.”

Cebes:: “It must be so.”

Socrates:: “Must we not, express ourselves in like manner in regard to that which is immortal? If, indeed, that which is immortal is also imperishable, it is impossible for the soul to perish, when death comes against it: for from what has been already laid down, it shall not admit death, nor become dead, just as three, we said, shall never be even, nor yet the odd (be even), nor shall fire be cold, neither, indeed, the heat that is in the fire. But some one may say, granting that the odd does not become even on the approach of the even, as has been allowed, what is there to prevent, on the annihilation of the odd, the even succeeding in its stead? With one who urged such an objection, we cannot contend that it is not annihilated, for the odd is not imperishable, otherwise if we established this, we could have easily argued, that on the approach of the even, the odd, and the three (merely) disappear; and so we could have argued with regard to fire, heat, and the rest. Could we not?"

Cebes:: "Certainly, indeed."

Socrates:: "And so now, consequently, with regard to the, immortal; if we allow it to be imperishable, the soul, in addition to its being immortal, must be imperishable likewise; otherwise we must have recourse to another argument."

Cebes:: "But there is no necessity, as far as regards this at least; for scarcely could anything reject decay if that which is immortal and eternal shall endure it."

Socrates:: "The Deity, indeed, and life itself, and if there is anything else immortal, must be confessed by all to be at no time annihilated,"

Cebes:: "By all men, indeed, by Jove, and still more, as I imagine, by the gods."

Socrates:: "Since, then, the immortal is also incorruptible, must not the soul, since it is immortal, be likewise imperishable?"

Cebes:: "There is strong necessity for it."

Socrates:: "Therefore on the approach of death to man, that which is mortal of him dies, as it appears; but that which is immortal departs safe and incorrupt, having withdrawn from death."

Cebes:: "So it appears."

Socrates:: "Unquestionably, then, Cebes, the soul is immortal and imperishable, and our souls shall, in reality, exist in Hades."

Cebes:: "I cannot, for my part, Socrates, say anything against this, nor refuse consenting to your arguments. But if Simmias here, or any other has aught to say, it were better not be silent, since I know not to what other time, beyond the present, one could defer it, if he wished to speak or hear further on such subjects."

Simmias:: "Nor yet am I, disposed at all to dissent from what has been said; however, from the grandeur of the subject of our discussion, and my low estimate of human weakness, I am forced to remain still (to a degree) incredulous upon the matter in debate."

Socrates:: "You do not, Simmias, speak on other things only, but on this also well, and credible as these first principles may be, they must yet be reviewed with greater care; and when you have sifted them sufficiently, you will, as I imagine, adopt my course of reasoning, as far as it is possible for man to do so, and if once this very case becomes distinctly plain you will inquire no further."

Simmias:: "You speak true."

Socrates:: "But it is right, my friends, for us to reflect that since the soul is immortal it requires our anxious care, not merely for this interval which we call life, but always; and we must now suppose the danger to be great should one neglect it. For if death were a deliverance from every thing, it should be great gain for the wicked to be delivered, by death, at once from the body and their iniquity along with the soul; but now, since the soul appears to be immortal, it can have no other refuge nor safety from evil except in remaining as good and wise as possible. For the soul descends to Orcus with nothing else but the results of its mode of discipline and education, which are said to be either of the greatest advantage or injury to the departed, at the very outset of his journey thither. But it is thus said; that each man’s demon, who was assigned to him while living, proceeds to conduct him, after death, to a certain place where they must assemble together for judgment, and proceed to Orcus, accompanied by that guide upon whom it was enjoined to lead them there from hence. But having there received their deserts, and remained for the time prescribed, the guide conducts them back again after many and long revolutions of ages. But the passage is not such as the Telephus of Æschylus describes it; for he says, ‘It is a simple path that leads to Orcus;’ but to me it appears to be neither simple nor one, for there had been no need of guides since no one could possibly go astray when there is but the one road. But it seems now to have numbers of sections and circuits; I say this from conjecture, in consequence of the funeral sacrifices and ceremonies here. The soul, then, that is temperate and wise, follows willingly its guide, and is fully conscious of its immediate destiny; but that which has a passionate desire for the body, as I said before, clinging to it devotedly for a long time, in a visible quarter, after violent resistance and intense suffering, is forcibly, and with difficulty, led away by its appointed demon. But on its arrival amongst the other souls, impure indeed and guilty of some such crime as the participation in unrighteous murders, or the commission of any such iniquities as are similar to them, and the work of congenial souls, every one flies and turns away from it with aversion, and shrinks from becoming either its fellow-traveler or guide, but it strays about involved in utter perplexity, until a certain period has elapsed, on the expiration of which it is of necessity carried into an abode suitable to it; but the soul that has led a pure and well-regulated life, having the gods for associates and guides, proceeds to inhabit a region adapted to each like itself.”

“But there are many and wonderful regions in the earth, and it is itself, neither in regard to its nature or magnitude, such as it is supposed by those who are in the habit of describing it, as I have heard a certain person declare.”

Simmias:: “How do you mean, Socrates? For I have heard a good deal respecting the earth; not, however, those things which you are persuaded of, so that I would gladly hear them.”

Socrates:: “But, indeed, Simmias, it does not seem to me to require the art of Glaucus to narrate what these things are; but to prove them true seems to me more difficult than is consistent with the art of Glaucus, and I should, perhaps, be just as incompetent to do so, as even had I the knowledge the remaining portion of my life appears to be inadequate to the extended nature of the subject. What I am persuaded, however, that the form of the earth is, and what its different regions, there is nothing to prevent my telling.”

Simmias:: “But this, is enough.”

Socrates:: “I am convinced then, in the first place, that if the earth is of a spherical form in the centre of the universe, it has no need of air, nor any other sustaining force to prevent its falling, but the similitude of the universe on all sides to itself, and the equilibrium of the earth itself is quite sufficient to support it; for anything in a state of equilibrium being placed in the centre of something like itself, cannot incline more or less to any side, but being alike on all sides remains unmoved. This I am in the first place convinced of.”

Simmias:: “And justly.”

Socrates:: “Besides, that it is of considerable size, and that we are inhabiting a very small portion of it, from Phasis as far as the pillars of Hercules, dwelling by the sea like ants or frogs about a marsh; and that there are many others in different directions who inhabit numbers of such regions as our own. For in every direction round the earth there are numerous cavities, diversified both in their shape and size, into which water, clouds, and air flow together; but the pure earth itself rests still in the pure firmament, in which are the stars, and which the majority of those who are accustomed to treat of such subjects call by the name of aether, of which the former are but the grounds, and are perpetually flowing into these cavities of the earth. Therefore, that we are unconscious to ourselves of our inhabiting the cavities of the earth, and imagine that we are dwelling upon its surface, just as if one who lived in the midst of the bottom of the sea were to suppose that he was living on the sea, and observing the sun and the rest of the planets through the water, would imagine the sea to be sky, but owing to indolence and imbecility should have never arrived at the surface of the sea, nor, having risen and emerged from the sea, have beheld the region here, how much purer and more beautiful it is than that with them, nor should have ever heard of it from one who had beheld it. But we are just affected the same way, for while dwelling in some cavity of the earth we imagine that we live upon its surface, and call the air sky, as if through this, being the firmament, the planets moved. And this amounts to our being incompetent, through imbecility and indolence, to arrive at the upper part of the air, since if one were to ascend to its surface, or reach it by the assistance of wings, he should behold on his emerging,—as with us the fishes emerging from the sea observe what is here—so, I say, one should behold the things that are there, and if our nature were capable of enduring the sight, one should perceive that that is in reality the heavens, in reality the light, and in reality the earth. For this (our) earth, indeed, and stones, and the whole region here, are decayed and corroded, as things are in the sea by the brine; and nothing at all worthy of consideration exists in the sea, nor, in a word, has it any thing perfect, but there are submarine caverns, and sand, and slime in abundance, and filth wherever there may be earth also; and they are not in any degree to be compared with the specimens of the beautiful with us. But the things formerly spoken of would appear, on the other hand, still further to excel the things with us. Whence, if we are to tell a pleasing fable, Simmias, it is worth while to hear what kind the things are on the surface of the earth, beneath the firmament."

Simmias:: "In truth, Socrates, we would gladly hear this fable."

Socrates:: "In the first place then, my friend, this earth is said to be similar in its appearance, should one survey it from above, to balls made of twelve pieces of differently colored leather, variegated, marked out with dyes, of which the colors which the painters use are like samples. But there the whole earth consists of such, and far more brilliant and chaster than those here; for one part of the earth is purple, of wonderful beauty, another golden, a third, so far as it is white, whiter than chalk or snow, besides its being made up in like manner of other colors, and those more numerous and beautiful than we have ever seen. And these its very cavities too, filled as they are with water and air, show a kind of color, refulgent amid the diversity of other colors, so that it presents one continually variegated aspect. But in this earth, being such as I describe, are produced analogous plants, trees, flowers, and fruits; and the mountains and stones have both polish and transparency, and the more beautiful colors; of which these well-known little stones here which are so highly prized are merely fragments, cornelian, jasper, emeralds, and all such like. But there is nothing there which is not of this character, and still more beautiful than these. And the reason of it is, because those stones are pure, and neither corroded nor decayed, like these here, by rottenness nor brine, which descend here together, and produce deformity and disease in the stones, the earth, and other things, in animals and even plants. But the earth itself is adorned with all these things, and with gold, moreover, and silver, and other matters of the kind. For they are naturally conspicuous, being many in number, and large, and on all sides of the earth, so that to behold it is a sight to make spectators blest. But there are many other animals upon it besides men, who inhabit partly the central portion of the earth, partly live bordering on the air as we do on the sea, and partly on the islands near the mainland, which the air surrounds; in a word, that which with us and for our necessities is water and sea, is air with them, while our air is their aether. But their seasons are of such a temperature, that they are exempt from disease, and live for a much longer period than those here, and excel us in sight, hearing, wisdom, and all such like, by as great an interval as the air surpasses water, and the aether air in purity. And they have temples of the gods, and shrines in which the gods in reality abide, and colloquial intercourse, oracular responses, visions of the gods, and such like communications take place between the one and the other. Besides, the sun, the moon, and stars are seen by them such as they really are, and the rest of their felicity is conformable to this."

"And such is the nature of the whole earth, and those things around the earth; but there are in it, throughout its cavities, many places around its entire compass, some deeper and broader than this region wherein we are dwelling, others deeper and having a more narrow aperture than this region of ours, and others of a more shallow depth and broader. But all these are mutually perforated under the earth in various directions, some with more narrow, and others with broader openings; they have conduits also, by which means a vast body of water flows from one cavity into another, as into basins, as also perennial rivers of enormous size under the earth, and waters hot and cold; moreover, fire in great quantities, and large streams of fire, many too of liquid mud, some thinner and some more miry; like the streams of mud which precede the burning torrent of lava in Sicily, and the torrent of lava itself; with which, further, these places severally are filled, to whichever each time the overflow may chance to come. But all these move up and down, as it were from a kind of libration existing in the earth. And this libration is owing to a certain innate property in the earth. Among the chasms in the earth, there is one especially large, which, penetrates quite through the entire earth; this Homer makes mention of, speaking of it as 'Far removed, where there is a profound abyss beneath the earth;' which elsewhere he, as well as many others of the poets, have called Tartarus. Into this chasm, then, all the rivers flow together, and issue forth from it again; and each of them partakes of the nature of that earth, whatever its kind, through which they flow. But this is the reason of all the streams issuing out from thence and flowing in, because this liquid mass has neither bottom nor base. Hence it librates and fluctuates up and down, and the air and wind around it do the same; for they accompany it both when it moves with violence towards the upper and towards the lower parts of the earth; and as in the case of persons respiring, the wind being in constant motion is continually breathed out and drawn in, so there also, the wind partaking of the movements of the liquid mass occasions fearful and tremendous storms by its exits and its entrances. When, therefore, the water rushing with violence descends into that place which is called the lower region, then having passed through the earth it flows into the beds of the rivers there, and fills them up in the manner of those who pump up the water from the hold of a ship; as soon then as it leaves the region there, and turns its course this way, it fills the beds of the rivers here again, and when they have been filled, they flow through the channels and through the earth, and arriving at those places into which severally they make their way, they cause seas, lakes, streams, and fountains. But when they sink into the earth again from thence, some, indeed, having encompassed places of greater size and number, and others fewer places, and of less extent, they are emptied into Tartarus again, some far deeper down than they were drawn up, and others at less depth, but they are all emptied below the point of their discharge. And some, indeed, issue out exactly opposite their point of influx, and others at the same side; there are some too which, having described a complete circle, coiling either once or oftener around the earth, like serpents, when they have descended as low as possible empty themselves into Tartarus again. But it is possible to descend in either direction as far as the centre, and not beyond it; for in either direction an ascent is presented to the rivers on both sides.

“The rest of the rivers, indeed, are numerous, large, and of various descriptions; but amongst these many there are four rivers in particular, of which the largest truly, which flowing outermost encompasses the earth, is called Ocean; but on the opposite side to this, and with a contrary current, flows Acheron; which traverses several other desert regions, and finally, sinking under the earth, empties itself in the Acherusian lake, where the souls of numbers of the dead descend, and having remained there for a destined period, some for a longer and others for a shorter duration, they are sent back again into the generations of animals. But the third river issues forth between these two, and close to its point of issue it falls into a vast region blazing with enormous fires, and makes a lake larger than our sea, boiling up with water and slime; thence it proceeds in a circular course, turbid and muddy, and making the compass of the earth, it reaches, among other places, the extremity of the Acherusian lake, without mixing, however, with its waters; but after a variety of windings beneath the earth, it is discharged into the depths of Tartarus. And this is the river which they call Pyriphlegethon, whose burning currents emit with violence forcibly separated portions (of the river) in whatever part of the earth they may be. But opposite to this the fourth river empties itself first into a region awful and wild, as they say, of the color of cyanus, which (region) they call Stygian, and the lake which the river makes by its discharge, Styx. And being emptied here, and endued by the water with a mischievous efficacy, penetrating the earth, it proceeds by a circular course to meet Pyriphlegethon, and encounters it in the Acherusian lake, at the opposite extremity; neither does the water of this river mingle with any other, but having made a compass of the earth, it empties itself into Tartarus, opposite to Pyriphlegethon; but the name by which the poets call it is Cocytus.

“These things then being so, as soon as the dead arrive at that region whither his daemon carries each, in the first place those who have led an upright and a holy life, and those who have lived otherwise are judged. And those who appear to have led a course of life between the two, proceeding to Acheron, and embarking in those conveyances they have, arrive in them at the (Acherusian) lake, and there abide; and when they are purified and have suffered the penalty of their iniquities, if any of them has committed such, they are absolved; they also obtain the reward of their good deeds, each according to his deserts; but those who appear to be incurable on account of their enormous offences, who have committed either many and flagrant sacrileges, or many murders in contempt of justice and the law, or any other similar crimes, these a suitable destiny precipitates into Tartarus, whence they never at any time come forth. But those who appear to have committed remediable indeed but great offences, having, for instance, used some violence under the influence of anger, towards father or mother, or who have become homicides in consequence of any other similar impulse, and when •they have repented lead a different life, such must, of necessity, be plunged into Tartarus, and after that they have been so and remained there for a year, the wave casts them forth; the homicides, indeed, into Cocytus, but the parricides and matricides into Pyriphlegethon; and when borne along by those rivers, they have arrived at the Acherusian lake, there they entreat and call aloud, some upon those whom they have slain, others upon those whom they have offended, and they implore and beseech of them by name, to allow them to enter upon the lake, and to receive them, and if they obtain their leave, they enter upon it, and rest from their sufferings, but if not, they are borne back into Tartarus, and thence again into the rivers, and they never cease from suffering thus until they have appeased those whom they wronged; for this punishment was ordained them by the judges. But whoever may appear to be eminently distinguished for a holy life, these are they who being delivered from those places in the earth, and discharged as it were from dungeons, ascend into a pure abode above, and dwell upon the surface of the earth. And as many of these same as have been completely purified by philosophy, both live throughout all future time without bodies and arrive at still more beautiful abodes than the former, which it is not easy nor have we at the present sufficient time to describe.”

“But on account of these matters which we have considered, Simmias, we are bound to make every exertion for the acquisition of virtue and wisdom during life; for the prize is glorious, and the hope is great.”

“To insist, however, that these things are just as I have described them, becomes not an intelligent man; that either these, however, or something else of the kind, are the circumstances affecting our souls and their abodes, since the soul appears to be assuredly immortal, this appears to me to be both becoming and worth one’s while, who so thinks, to run the risk of the belief; for the hazard is honorable, and it is one’s duty to apply as charms such impressions to himself, wherefore I am now for so long a time protracting this discourse. On account of these things, then, that man must have good hopes about his soul who, during life has bid adieu to all the other pleasures and ornaments of the body as quite extraneous, convinced that they aggravate the evil, but has concerned himself about knowledge, and having adorned his soul, not with extraneous but with its own proper decoration, temperance, justice, fortitude, freedom, and truth, so awaits with patience his passage to Hades, prepared to depart whenever fate may summon him. You then, Simmias and Cebes, and the rest, shall depart each of you at some future time; but fate now summons me, as a tragic writer would say, and it is almost time for me to adjourn to the bath; for I think it better to drink the poison when I have bathed, and not trouble the women to wash a corpse.”

Phaedo:: When he had expressed himself thus, Crito said;

Crito:: “Be it so, Socrates; but what directions do you leave for them or me on the subject of your children or any other matter, by attending to which we may act most agreeably to you?”

Socrates:: “Such as I am always impressing upon you, Crito, nothing more; that by taking care of yourselves, you shall adopt a course of conduct most agreeable to me and to mine and to yourselves, even though you should make no such promise now; but if you disregard yourselves, and are unwilling to order your life, as in a beaten track, according to what has been established now and at a former time, no matter how many promises you may have made at the present time, you shall effect nothing the more.”

Crito:: “We shall exert ourselves then, to act as you advise; but how shall we bury you?”

Socrates:: “Just as you please, if only you can catch me and I do not escape from you.”

Phaedo:: Upon this, smiling gently and looking round on us, he replied;

Socrates:: “My friends, I cannot persuade Crito that I am the actual Socrates who is now conferring with you and arranging the several subjects of discussion; but he thinks that I am the person whom he shall behold, a short time hence, a corpse, and he asks how he must bury me. But the argument which I urged at such length and for so long a time, to prove that when I shall have drunk the poison I shall abide with you no more, but shall take my departure hence for the happy state of the blessed, this I appear to press on him in vain, while I console by it, at the same time, both you and myself. Enter then into security for me to Crito of an opposite character to that which he gave the judges. For he, indeed, went security for my stay; but be you my sureties that I shall not remain after I die, but shall take my departure, that Crito may bear the matter more easily, and may not, when he sees my body either burned or interred, be troubled on my account as if I suffered something dreadful, nor say at my funeral that he is laying out Socrates, or bearing him forth, or burying him. For, be assured, my excellent Crito, that to use improper terms is not only culpable as far as regards itself, but it also works some mischief to our souls. I must be of good heart then, and direct you to bury my body, (not myself,) and to bury it in such a way as may satisfy you and you think to be most consistent with the laws."

Phaedo:: When he had said this, he arose and went into a certain chamber to bathe, and Crito accompanied him, but he directed us to wait for him. We remained then at one time conversing upon and reviewing the subjects discussed, and again speaking of our misfortune, how severely it had befallen us, fully conscious that being deprived as it were of a parent we should pass like orphans all our future life. But when he had bathed and his children were brought to him—for he had two little sons and one grown up—and his kinswomen had arrived, having conversed with them in presence of Crito, and given them the directions he wished, he desired the women and children to depart and he returned to us himself.

And it was now near sunset; for he had delayed a long time inside. But when he came back from the bath, he sat down, and did not afterwards speak much; and the officer of the Eleven came and stood beside him and said;

Jailer:: “Socrates, I shall not reproach you at least with what I condemn in others, their being indignant with and execrating me, when at the command of the magistrates I direct them to drink the poison. But I have found you upon all other occasions during the time of your imprisonment, the most noble, mildest, and most excellent of men who ever entered here, wherefore, at this time, too, I am well assured that you will not be angry with me but with those who are to blame, for you know well who are so. Now, therefore, since you are aware what I have come to announce, farewell, and try to bear what is inevitable with all possible resignation.”

Phaedo:: Upon this, bursting into tears, he turned away and withdrew.

And Socrates looked towards him and said;

Socrates:: “And you, too, farewell, we shall do as you direct.”

Phaedo:: At the same time (turning to us) he said;

Socrates:: “How kindly polite this man is; during the whole time (of my imprisonment) he used to visit me, and converse with me occasionally, and proved one of the worthiest of men; how heartily, too, does he lament me now. But come, Crito, let us attend his bidding, and let some one bring the poison, if it has been ground; if not, let the man grind it.”

Crito:: “But I think that the sun is still upon the mountains, and has not sunk as yet. Besides, I am aware that others are in the habit of drinking the poison very late, after they have been commanded to drink it, when they have supped and drunk very freely, and some of them after they have enjoyed the society of those they love. Do not then be in haste; for there is yet time.”

Socrates:: “Naturally those persons whom you mention, Crito, act this part; for they imagine that they shall be gainers by so doing, and for my part I shall avoid with equal reason acting thus; for I expect to be no otherwise a gainer by drinking the poison a little later, than to appear ridiculous in my own eyes, if still anxious to live, and sparing that of which no more exists. But go, obey, and do not thwart me.”

Phaedo:: When Crito heard this, he made signs to an attendant standing near; and the attendant went out, and after a delay of some time, he returned with the person who was to administer the poison, who carried it ready ground in a cup; and, when Socrates saw the man, he said;

Socrates:: “Well, now, good friend, what must I do, for you are conversant with these matters?”

Jailer:: “Nothing, but walk about when you have drunk the poison until you feel a weight in your legs, then lie down, and so the poison will work of itself.”

Phaedo:: At the same time he held out the cup to Socrates, and he took it, and with the utmost cheerfulness, Echecrates, without the slightest sign of fear or change in his complexion or his face, but looking steadfastly as he was accustomed on the man, he said;

Socrates:: “What say you of this cup with regard to our making a libation to any one? Is it lawful, or not?”

Jailer:: “We grind just so much, Socrates, as we think sufficient for a draught.”

Socrates:: “I understand; but surely it is both lawful, at least, and expedient to pray to the gods that our journey may be happy hence to them, which I earnestly implore indeed, and may such be the result.”

Phaedo:: And having so said, raising the cup at the same time to his lips, he drained it with the greatest coolness and unconcern.

And for a time, indeed, the greater number of us were just able to refrain from tears, but when we saw him drink and finish the draught, we could do so no longer, but in spite of myself the tears flowed copiously, so that I covered my face and grieved for myself, not at all indeed for him, but at my own misfortune in having lost so dear a friend. Crito stood up to retire rather sooner than I did, as he had not been able to forbear from tears. But Apollodorus even before this never ceased weeping, and then, too, bursting out into lamentation, bewailing and complaining, he pierced the heart of every one present except Socrates himself. But he said;

Socrates:: “What are you doing, my admirable friends? On this account chiefly I dismissed the women in order that they might not commit such foolishness; I have heard, too, that one should die with auspicious language. Be still, then, and be firm.”

Phaedo:: Upon hearing this we were ashamed, and checked our tears. But when he had walked awhile, as soon as he said his legs grew heavy, he lay down on his back, for so the man directed him. At the same time he who administered the poison, taking hold of him, examined after some interval his feet and legs, and then pressing his foot hard asked if he felt it, and he said not. Afterwards he did the same again with his legs; and so going higher up he showed us that he was growing cold and stiff. He then touched him himself, and said that when the chill reached his heart then he should die. Already the region of the lower belly had grown cold, and having uncovered his face, for he was covered with a garment, he said,—the last words, too, which he uttered,—

Socrates:: “Crito, we owe a cock to Æsculapius; pay it, and by no means neglect it.”

Crito:: “It shall be done; but see if you have any other charge to give.”

Phaedo:: When he was asked this, he made no further answer: but after a little time he stirred and the attendant uncovered him, and his eyes were fixed; but Crito observing this closed his mouth and eyes.

Such was the death, Echecrates, of our friend; a man, the very best of those of whom we had experience then, and moreover the most sensible and just.

# **The Phaedo.**

Translated by Thomas Taylor. 1804

PERSONS OF THE DIALOGUE,
Echecrates and Phædo.

Echecrates:: Were you present, Phædo, with Socrates that day when he drank the poison in prison? or did you hear an account of it from any other?

Phaedo:: I myself, Echecrates, was present.

Echecrates:: What then was his discourse previous to his death? and how did he die? for I should be very glad to hear the account: for scarcely does any one of the Phliasian citizens now visit Athens; and it is some time since any stranger has arrived from thence who might afford us some clear information about these particulars. All indeed that we heard was, that he died through drinking the poison; but he who acquainted us with this had nothing further to say about other particulars of his death.

Phaedo:: What! did you not hear the manner in which he was tried?

Echecrates:: Yes: a certain person related this to us; and we wondered, as his sentence was passed so long ago, that he should not die till a considerable time after. What then, Phædo, was the reason of this?

Phaedo:: A certain fortune happened to him, Echecrates: for, the day before his trial, the stern of that ship was crowned which the Athenians send every year to Delos.

Echecrates:: But what is the meaning of this?

Phaedo:: This is the ship, as the Athenians say, in which Theseus formerly carried the twice seven young children to Crete, and preserved both them and himself. The Athenians, therefore, as it is reported, then vowed to

Apollo, that if the children were preserved, they would lead every year a sacred spectacle to Delos; which, from that time, they regularly send every year to the God. As soon, therefore, as the preparations for the sacred spectacle commence, the law orders that the city shall be purified, and that no one shall be put to death by a public decree till the ship has arrived at Delos, and again returned to Athens. But this sometimes takes a long time in accomplishing, when the winds impede their passage; but the festival itself commences when the priest of Apollo has crowned the stern of the ship. Now this, as I told you, took place on the day preceding the trial; and on this account that length of time happened to Socrates in prison between his sentence and his death.

Echecrates:: And what, Phædo, were the circumstances respecting his death? what were his sayings and actions? and who of his familiars were present with him? or would not the magistrates suffer that any should be admitted to him, so that he died deprived of the presence of his friends?

Phaedo:: By no means; but some, and indeed many, were present with him.

Echecrates:: Endeavor to relate all these particulars to us in the clearest manner, unless you have some business which may prevent you.

Phaedo:: But I am at leisure, and will endeavor to gratify your request: for indeed to call to mind Socrates, whether I myself speak or hear others, is to me always the most pleasant of all things.

Echecrates:: Truly, Phædo, others who hear you will be affected in the same manner: but endeavor, as much as you are able, to narrate every circumstance in the most accurate manner.

Phaedo:: And indeed I myself, who was present, was wonderfully affected; for I was not influenced with pity, like one present at the death of a familiar: for this man, O Echecrates, appeared to me to be blessed, when I considered his manner and discourses, and his intrepid and generous death. Hence it appeared to me, that he did not descend to Hades without a divine destiny, but that there also he would be in a happy condition, if this can ever be asserted of any one. On this account I was entirely uninfluenced with pity, though apparently I ought not to have been, on so mournful an occasion; nor yet again was I influenced by pleasure through philosophical converse, as I used to be; for our discourses were of this kind. But, to speak ingenuously, a certain wonderful passion, and an unusual mixture of pleasure and grief, were present with me, produced by considering that he must in a very short time die. And, indeed, all of us who were present were nearly affected in the same manner, at one time laughing, and at another weeping: but this was eminently the case with one of us, Apollodorus; for you know the man, and his manner of behavior.

Echecrates:: How is it possible that I should not?

Phaedo:: He, therefore, was remarkably affected in this manner; and I myself, and others, experienced great trouble and confusion.

Echecrates:: Who then, Phædo, happened to be present?

Phaedo:: Of the natives, Apollodorus, Critobulus, and his father Crito, were present; likewise Hermogenes, Epigenes, Æschines, and Antisthenes. And besides these, Ctesippus the Pœanian, Menexenus, and some other Athenians were present: but Plato I think was sick.

Echecrates:: Were there no strangers?

Phaedo:: Yes: Simmias the Theban, Cebes, and Phædondes; and among the Megarensians, Euclid and Terpsion.

Echecrates:: But what! were not Aristippus and Cleombrotus there?

Phaedo:: By no means: for they were said to be at Ægina.

Echecrates:: Was any other person present?

Phaedo:: I think those I have mentioned were nearly all.

Echecrates:: Will you now then relate what were his discourses?

Phaedo:: I will endeavor to relate the whole to you from the beginning. For we were always accustomed to visit Socrates, myself and others meeting in the morning at the place where he was tried, for it was very near to the prison. Here we waited every day till the prison was opened, discoursing among ourselves, For it was not opened very early in the morning; but, as soon as we could be admitted, we went to Socrates, and generally spent the whole day with him. And then, indeed, we met together sooner than usual; for the day before, when we left the prison, we heard that the ship from Delos was returned. We determined, therefore, among ourselves, to come very early in the morning to the usual place; and we met together accordingly: but when we arrived, the jailer, who used to attend upon us, told us to wait, and not enter till he called us. For, says he, the eleven magistrates are now freeing Socrates from his bonds, and announcing to him that he must die today. But not long after this he returned, and ordered us to enter. When we entered, we found Socrates just freed from his fetters, but Xantippe (you know her) holding one of his children, and sitting by him. As soon, therefore, as Xantippe saw us, she began to lament in a most violent manner, and said such things as are usual with women in affliction; and among the rest;

Xanthippe:: Socrates, this is the last time your friends will speak to you, or you to them.

Phaedo:: But Socrates looking upon Crito;

Socrates:: Crito, let some one take her home.

Phaedo:: Upon which some of Crito's domestics led her away, beating herself, and weeping bitterly. But Socrates, sitting upright on the bed, drew up his leg, and, stroking it with his hand, said at the same time;

Socrates:: What a wonderful thing is this, my friends, which men call *the pleasant and agreeable*! and how admirably is it affected by nature towards that which appears to be its contrary, *the painful*! for they are unwilling to be present with us both together; and yet, if any person pursues and receives the one, he is almost always under a necessity of receiving the other, as if both of them depended from one summit. And it seems to me, that if Æsop had perceived this he would have composed a fable from it, and would have informed us, that Divinity, being willing to reconcile contending natures, but not being able to accomplish this design, conjoined their summits in a nature one and the same; and that hence it comes to pass, that whoever partakes of the one is soon after connected with the other. And this, as it appears, is the case with myself at present; for the pain which was before in my leg, through the bond, is now succeeded by a pleasant sensation.

Cebes:: By Jupiter, Socrates, you have very opportunely caused me to recollect: for certain persons have asked me concerning those poems which you composed, *viz.* the Fables of Æsop which you versified, and your exordium to Apollo, and other pieces of composition; and, among the rest, Evenus lately inquired with what design you did this after coming here, when before you have never attempted any thing of the kind. If, therefore, you have any desire that I may have an answer ready for Evenus, when he again interrogates me on this occasion (and I am certain that he will do so), tell me what I must say to him.

Socrates:: You may truly inform him, Cebes, that I did not compose these verses with any design of rivaling him, or his poems (for I knew that this would be no easy matter); but that I might try to explore the meaning of certain dreams, and that I might make a proper expiation, if this should happen to be the music which they have often ordered me to exercise. For in the past part of my life the same dream has often occurred to me, exhibiting at different times a different appearance, yet always advising me the same thing; for it said, Socrates, make and exercise music. And indeed, in the former part of my life, I considered that this dream persuaded and exhorted me respecting what I should do, in the same manner as those in the races are exhorted; for, by persuading me to exercise music, it signified that I should labor in philosophy, which is the greatest music. But now since my sentence has taken place, and the festival of the God has retarded my death, it appeared to me to be necessary, that, if the music which the dream has so often exhorted me to undertake should happen to be of the popular sort, I should by no means resist its persuasions, but comply with the exhortation: for I considered that it would be more safe for me not to depart from hence before I had made an expiation by composing verses, and obeying the dream. Thus, in the first place, I composed some verses in honor of the God to whom the present festival belongs; but after the God, considering it necessary that he who designs to be a poet should make fables and not discourses, and knowing that I myself was not a mythologist, on these accounts I versified the fables of Æsop, which were at hand, and were known to me; and began with those first, that first presented themselves to my view.

Give this answer, Cebes, to Evenus: at the same time bid him farewell for me; and tell him, if he is wise he will follow me. But I shall depart, as it seems, today; for such are the orders of the Athenians.

Simmias:: What is this, Socrates, which you command me to tell Evenus? for I often meet with him; and from what I know of him, I am certain that he will never willingly comply with your request.

Socrates:: What then, is not Evenus a philosopher?

Simmias:: To me he appears to be so.

Socrates:: Both Evenus, therefore, will be willing to follow me, and every one who is worthy to partake of philosophy; not perhaps indeed by violently depriving himself of life, for this they say is unlawful.

Phaedo:: And at the same time, as he thus spoke, he withdrew his leg from the bed, and placed it on the ground; and afterwards continued to discourse with us, in a sitting posture, the remaining part of the time.

Cebes:: How is this to be understood, Socrates, that it is not lawful to commit suicide, and yet that a philosopher should be willing to follow one who is about to die?

Socrates:: What, Cebes, have not you and Simmias heard your familiar Philolaus discourse concerning things of this kind?

Cebes:: We have not, Socrates, heard any thing clearly on this subject.

Socrates:: But I speak in consequence of having heard; and what I have heard I will not enviously conceal from you. And perhaps it is becoming in the most eminent degree, that he who is about to depart thither should consider and mythologize about this departure: I mean, what kind of a thing we should think it to be. For what else can such a one be more properly employed about, till the setting of the sun?

Cebes:: On what account then, Socrates, do they say that it is unlawful for a man to kill himself? for I myself have some time since heard from Philolaus, when he resided with us, and from some others, that it was not proper to commit such an action; but I never heard any thing clear upon the subject from any one.

Socrates:: Prepare yourself, then, for perhaps you may be satisfied in this particular: and perhaps it may appear to you wonderful, if this alone of every thing else is something simple, and by no means happens to a man like other events, but still remains the same, even with respect to those to whom it is better to die than to live; though, perhaps, it may seem wonderful to you, that it should be better for those men to die, in whom it would be unholy to benefit themselves by suicide, and who ought to expect some other, as a benefactor on this occasion.

Phaedo:: Then Cebes, gently laughing and speaking in his own tongue;

Cebes:: Jupiter knows that.

Socrates:: For this indeed appears to be irrational; and yet, perhaps, it is not so, but has a certain reason on its side. For the discourse which is delivered about these particulars, in the arcana of the mysteries, that we are placed as in a certain prison secured by a guard, and that it is not proper for any one to free himself from this confinement, and make his escape, appears to me to be an assertion of great moment, and not easy to be understood.

But this appears to me, O Cebes, to be well said, that the Gods take care of us, and that we who are men are one of the possessions belonging to the Gods. Or does not this appear to you to be the case?

Cebes:: It does to me.

Socrates:: Would not you, therefore, if any one of your servants should destroy himself, when at the same time you did not signify that you was willing he should die, would you not be angry with him? and if you had any punishment, would you not chastise him?

Cebes:: Entirely so.

Socrates:: Perhaps, therefore, it is not irrational to assert, that a man ought not to kill himself before Divinity lays him under a certain necessity of doing so, such as I am subject to at present.

Cebes:: This, indeed, appears to be reasonable. But that which you said just now, Socrates, that philosophers would very readily be willing to die, appears to be absurd, if what we have asserted is agreeable to reason, that Divinity takes care of us, and that we are one of his possessions; for it is irrational to suppose that the most prudent men should not be grieved, when departing from that servitude in which they are taken care of by the Gods, who are the best of governors. For such a one will by no means think that he shall be better taken care of when he becomes free: but some one who is deprived of intellect may perhaps think that he should fly from his master, and will not consider that he ought not to fly from a good master, but that he should by all means abide in his service. Hence he will depart from him in a most irrational manner: but he who is endowed with intellect will desire to live perpetually with one who is better than himself. And thus, Socrates, it is reasonable that the contrary of what you just now said should take place: for it is proper that the prudent, when about to die, should be sorrowful, but that the foolish should rejoice.

Phaedo:: Socrates, therefore, upon hearing this, seemed to me to be pleased with the reasoning of Cebes; and looking upon us;

Socrates:: Cebes never suffers any thing to pass without investigation, and is by no means willing to admit immediately the truth of an assertion.

Simmias:: But indeed, Cebes, O Socrates, appears to me to say something now to the purpose. For with what design can men, truly wise, fly from masters who are better than themselves, and, without any reluctance, free themselves from their servitude? And Cebes appears to me to direct his discourse to you, because you so easily endure to leave us, and those beneficent rulers the Gods, as you yourself confess.

Socrates:: You speak justly; for I think you mean that I ought to make my defense, as if I was upon my trial.

Simmias:: By all means.

Socrates:: Be it so then: and I shall endeavor that this my apology may appear more reason able to you than it did to my judges. For, with respect to myself, O Simmias and Cebes, unless I thought that I should depart, in the first place, to other Gods who are wise and good, and, in the next place, to men who have migrated from the present life, and are better than any among us, it would be unjust not to be troubled at death: but now believe for certain, that I hope to dwell with good men; though this, indeed, I will not confidently assert: but that I shall go to Gods who are perfectly good rulers, you may consider as an assertion which, if any thing of the kind is so, will be strenuously affirmed by me. So that, on this account, I shall not be afflicted at dying, but shall entertain a good hope that something remains for the dead; and, as it was formerly said, that it will be much better hereafter for the good than the evil.

Simmias:: What then, Socrates, would you have departed with such a conception in your intellect, without communicating it to us? Or will you not render us also partakers of it? For it appears to me, that this will be a common good; and at the same time it will be an apology for you, if you can persuade us to believe what you say.

Socrates:: I will endeavor to do so. But let us first consider what that is which it appears to me Crito some time since was desirous of saying.

Crito:: What else should it be, Socrates, except what he who is to give you the poison has long ago told me, that you ought to speak as little as possible? For he says that those who dispute become too much heated, and that nothing of this kind ought to be introduced with the poison, since those who do not observe this caution are sometimes obliged to drink the poison twice or thrice.

Socrates:: Let him only take care of his proper employment, as one who must administer the poison twice; and even, if occasion requires, thrice.

Crito:: I was almost certain that this, would be your answer; but he enjoined me to do this, as I said, some time since.

Socrates:: Permit him to do so; but I am desirous of rendering to you, as my judges, the reason, as it appears to me, why a man who has truly passed his life in the exercise of philosophy should with great propriety be confident when about to die, and should possess good hopes of obtaining the greatest advantages after death; and in what manner this takes place I will endeavor, Simmias and Cebes, to explain:

Those who are conversant with philosophy in a proper manner, seem to have concealed from others that the whole of their study is nothing else than how to die and be dead. If this then is true, it would certainly be absurd, that those who have made this alone their study through the whole of life, should when it arrives be afflicted at a circumstance upon which they have before bestowed all their attention and labor.

Phaedo:: But here Simmias laughing, said;

Simmias:: By Jupiter, Socrates, you cause me to laugh, though I am very far from desiring to do so at present: for I think that the multitude, if they heard this, would consider it as well said respecting philosophers; and that men of the present day would perfectly agree with you, that philosophers should in reality desire death, and that they are by no means ignorant that men of this description deserve to suffer death.

Socrates:: And indeed, Simmias, they would speak the truth, except in asserting that they are not ignorant of it: for both the manner in which true philosophers desire to die, and how they are worthy of death, is concealed from them. But let us bid farewell to such as these, and discourse among ourselves: and to begin, Do you think that death is any thing?

Simmias:: Entirely so.

Socrates:: Is it any thing else than a liberation of soul from body? and is not this to die, for the body to be liberated from the soul, and to subsist apart by itself? and likewise for the soul to be liberated from the body, and to be essentially separate? Is death any thing else but this?

Simmias:: It is no other.

Socrates:: Consider then, excellent man, whether the same things appear to you as to me; for from hence I think we shall understand better the subjects of our investigation. Does it appear to you that the philosopher is a man who is anxiously concerned about things which are called pleasures, such as meats and drinks?

Simmias:: In the smallest degree, Socrates.

Socrates:: But what, is he sedulously employed in venereal concerns?

Simmias:: By no means

Socrates:: Or does such a man appear to you to esteem other particulars which regard the observance of the body, such as the acquisition of excellent garments and sandals, and other ornaments of the body? whether does he appear to you to esteem or despise such particulars, employing them only so far as an abundant necessity requires?

Simmias:: A true philosopher appears to me to be one who will despise every thing of this kind.

Socrates:: Does it, therefore, appear to you, that the whole employment of such a one will not consist in things which regard the body, but in separating himself from the body as much as possible, and in converting himself to his soul?

Simmias:: It does appear so to me.

Socrates:: Is it not, therefore, first of all evident, in things of this kind, that a philosopher, in a manner far surpassing other men, separates his soul in the highest degree from communion with the body?

Simmias:: It appears so.

Socrates:: And to the many, O Simmias, it appears that he who accounts nothing of this kind pleasant, and who does not partake of them is not worthy to live; but that he nearly approaches to death who is not concerned about the pleasures which subsist through the body.

Simmias:: You entirely speak the truth.

Socrates:: But what with respect to the acquisition of wisdom? Is the body an impediment or not, if any one associates it in the investigation of wisdom? What I mean is this: Have sight and hearing in men any truth? or is the case such as the poets perpetually sing, that

> "We nothing accurate or see or hear?"

Though if these corporeal senses are neither accurate nor clear, by no means can the rest be so: for all the others are in a certain respect more depraved than these. Or does it not appear so to you?

Simmias:: Entirely so.

Socrates:: When then does the soul touch upon the truth? for, when it endeavors to consider any thing in conjunction with the body, it is evidently then deceived by the body.

Simmias:: You speak the truth.

Socrates:: Must not, therefore, something of reality become manifest to the soul, in the energy of reasoning, if this is ever the case?

Simmias:: It must.

Socrates:: But the soul then reasons in the most beautiful manner, when it is disturbed by nothing belonging to the body, neither by hearing, nor sight, nor pain, nor any pleasure, but subsists in the most eminent degree, itself by itself, bidding farewell to the body, and, as much as possible neither communicating nor being in contact with it, extends itself towards real being.

Simmias:: These things are so.

Socrates:: Does not the soul of a philosopher, therefore, in these employments, despise the body in the most eminent degree, and, flying from it, seek to become essentially subsisting by itself?

Simmias:: It appears so.

Socrates:: But what shall we say, Simmias, about such things as the following? Do we say that the *just itself* is something or nothing?

Simmias:: By Jupiter, we say it is something.

Socrates:: And do we not also say, that the beautiful and the good are each of them something?

Simmias:: How is it possible we should not?

Socrates:: But did you ever at any time behold any one of these with your eyes?

Simmias:: By no means.

Socrates:: But did you ever touch upon these with any other corporeal sense? (but I speak concerning all of them; as for instance, about magnitude, health, strength, and, in one word, about the essence of all the rest, and which each truly possesses.) Is then the most true nature of these perceived through the ministry of the body? or rather shall we not say, that whoever among us prepares himself to think dianoëtically in the most eminent and accurate manner about each particular object of his speculation, such a one will accede the nearest possible to the knowledge of each?

Simmias:: Entirely so.

Socrates:: Will not he, therefore, accomplish this in the most pure manner, who in the highest degree betakes himself to each through his dianoëtic power, neither employing sight in conjunction with the dianoëtic energy, nor attracting any other sense, together with his reasoning;

but who, exercising a dianoëtic energy by itself sincere, at the same time endeavors to hunt after every thing which has true being subsisting by itself separate and pure; and who in the most eminent degree is liberated from the eyes and ears, and in short from the whole body, as disturbing the soul, and not suffering it to acquire truth and wisdom by its conjunction? Will not such a man, Simmias, procure for himself real being, if this can ever be asserted of any one?

Simmias:: You speak the truth, Socrates, in a transcendent manner.

Socrates:: Is it not necessary, therefore, from hence, that an opinion of this kind should be present with genuine philosophers in such a manner, that they will speak among themselves as follows: In the consideration of things, this opinion, like a certain path, leads us in conjunction with reason from the vulgar track, that, as long as we are connected with a body, and our soul is contaminated with such an evil, we can never sufficiently obtain the object of our desire; and this object we have asserted to be truth? For the body subjects us to innumerable occupations through necessary aliment, and fills us with love, desire, fear, all various images, and a multitude of trifling concerns; not to mention that, if we are invaded by certain diseases, we are hindered by them in our hunting after real being; so that, as it is said, we can never truly, and in reality, acquire wisdom through the body. For nothing else but the body and its desires cause wars, seditions, and contests, of every kind: for all wars arise through the possession of wealth; and we are compelled to acquire riches through the body, becoming subservient to its cultivation; so that on all these accounts we have no leisure for the exercise of philosophy. But this is the extremity of all evils, that if at any time we are at leisure from its attendance, and betake ourselves to the speculation of any thing, then invading us on all sides in our investigations, it causes agitations and tumults, and so vehemently impels us, that we are not able through its pretence to perceive the truth; but it in reality demonstrated to us, that, if we are designed to know any thing purely, we must be liberated from the body, and behold things with the soul itself. And then; as it appears, we shall obtain the object of our desire, and of which we profess ourselves lovers, viz. wisdom, when we are dead, as our discourse evinces; but by no means while we are alive: for, if we can know nothing purely in conjunction with the body, one of these two consequences must ensue, either that we can never possess knowledge, or that we must obtain it after death; for then the soul will subsist apart by itself, separate from the body, but never before this takes place; and while we live in the body, as it appears, we shall approach in the nearest manner possible to knowledge, if in the most eminent degree we have no association with the body, nor any communication with it (except what the greatest necessity requires), nor are filled with its nature, but purify ourselves from its defiling connection, till Divinity itself dissolve, our bonds. And thus being pure, and liberated from the madness of body, it is proper to believe that we shall then associate with others who are similarly pure, and shall through ourselves know every thing genuine and sincere: and this perhaps is the truth itself; for it is by no means lawful that the pure should be touched by that which is impure. And such, O Simmias, in my opinion, ought to be the discourse and sentiments of all such as are lovers of learning in a proper manner. Or does it not seem so to you?

Simmias:: It does, Socrates, more so than any thing.

Socrates:: If all this then is true, my friend, much hope remains for him who arrives at that place to which I am now departing, that he shall there, if ever any where, sufficiently obtain that for the sake of which we take so much pains in the present life: so that the journey which is now assigned me will be accompanied with good hope; as will likewise be the case with any other man who thinks that he ought to prepare his dianoëtic part in such a manner that it may become as it were pure.

Simmias:: Entirely so.

Socrates:: But does not purification consist in this, as we formerly asserted in our discourse: I mean, in separating the soul from the body in the most eminent degree, and in accustoming it to call together and collect itself essentially on all sides from the body, and to dwell as much as possible, both now and hereafter, alone by itself, becoming by this mean liberated, from the body as from detaining bonds?

Simmias:: Entirely so.

Socrates:: Is not death called a solution and separation of the soul from body?

Simmias:: Perfectly so

Socrates:: But those alone who philosophize rightly, as we have said, always and especially providentially attend to the solution of the soul: and this is the meditation of philosophers, a solution and separation of the soul from the body; or do you not think so?

Simmias:: I do.

Socrates:: Would it not, therefore, as I said at first, be ridiculous for a man who has so prepared himself in the present life as to approach very near to death, to live indeed in the manner we have described, and yet, when death arrives, be afflicted? would not this be ridiculous?

Simmias:: How indeed should it not?

Socrates:: In reality, therefore, O Simmias, those who philosophize rightly will meditate how to die; and to be dead will be to them of all men a thing the least terrible. But from hence consider as follows: for, if they are on all sides enemies to the body, but desire to possess the soul subsisting by itself, would it not be very irrational for them to be terrified and troubled when death approaches, and to be unwilling to depart to that place, where when they have arrived they may hope to enjoy that which they were lovers of in the present life (but they were lovers of wisdom), and to be liberated from the association of that nature to which they were always inimical? Or do you think it possible, that many should be willing, of their own accord, to descend into Hades, allured by the hope of seeing and converting with departed beautiful youths, wives and children whom they have loved; and that the true lover of wisdom, who has exceedingly nourished this hope, that he shall never possess wisdom as he ought any where but in Hades, should be afflicted when dying, and should not depart thither with readiness and delight? For it is necessary, my friend, to think in this manner of one who is a true philosopher; since such a one is very much of opinion, that he shall never any where, but in that place, acquire the possession of wisdom with purity; and if this be the case, would it not be very irrational, as we just now said, for a man of this kind to be terrified at death?

Simmias:: Very much so, by Jupiter.”

Socrates:: This then will be an argument sufficient to convince you, that he whom you behold afflicted, when about to die, is not a philosopher, but a lover of body; and this same person is a lover of riches and honors, either desiring the possession of one of these, or of both.

Simmias:: The case is entirely so as you represent it.

Socrates:: Does not then, O Simmias, that which is called fortitude eminently belong to such as are thus disposed?

Simmias:: Entirely so.

Socrates:: Does not temperance also, which even the multitude thus denominate as a virtue, through which we are not agitated by desires, but regard them with moderation and contempt; does it not, I say, belong to those only who despise the body in the most eminent degree, and live in the exercise of philosophy?

Simmias:: It is necessary."

Socrates:: For, if you are willing to consider the fortitude and temperance of others, they will appear to you to be absurdities.

Simmias:: But how, Socrates?

Socrates:: You know that all others look upon death as the greatest of evils.

Simmias:: In the highest degree so."

Socrates:: Those who are bold, therefore, among these, sustain death when they do sustain it, through the dread of greater evils.

Simmias:: They do so.

Socrates:: All men, therefore, except philosophers, are bold through fearing and dread, though it is absurd that any one should be bold through fear or cowardice.

Simmias:: Entirely so.

Socrates:: But what, are not the moderate among these affected in the same manner? and are they not temperate by a certain intemperance? Though this is in a certain respect impossible, yet a passion similar to this happens to them with respect to this foolish temperance: for, fearing to be deprived of other pleasures which at the same time they desire, they abstain from others, by others being vanquished. And though they call intemperance a subjection to pleasures; yet at the same time it happens to them that, being vanquished by certain pleasures, they rule over others; and this is similar to what I just now said, that after a certain manner they become temperate through intemperance.

Simmias:: It seems so, indeed.

Socrates:: But, O blessed Simmias, this is by no means the right road to virtue, to change pleasures for pleasures, pains for pains, fear for fear, and the greater for the lesser, like pieces of money: but that alone is the proper coin, I mean wisdom, for which all these ought to be changed. And indeed, for the sake of this, and with this every thing must in reality be bought and sold, both fortitude and temperance, justice, and, in one word, true virtue, which subsists with wisdom, whether pleasures and pains, and every thing else of this kind, are present or absent: but if these are separated from wisdom, and changed from one another, such virtue does not merit to be called even a shadowy description, but is in reality servile, and possesses nothing salutary and true. But that which is in reality true virtue is a purification from every thing of this kind; and temperance and justice, fortitude, and, prudence itself, are each of them a certain purification. And those who instituted the mysteries for us appear to have been by no means contemptible persons, but to have really signified formerly, in an obscure manner, *that whoever descended into Hades uninitiated, and without being a partaker of the mysteries, should be plunged into mire*; *but that whoever arrived there, purified and initiated, should dwell with the Gods*. For, as it is said by those who write about the mysteries.

“The thyrsus-bearers numerous are seen,
“But few the Bacchuses have always been.”

These few are, in my opinion, no other than those who philosophize rightly; and that I may be ranked in the number of these, I shall leave nothing unattempted, but exert myself in all possible ways. But whether or not my exertions will be properly directed, and whether I shall accomplish any thing when I arrive thither, I shall clearly know, very shortly, if Divinity pleases, as it appears to me. And this, Simmias and Cebes, is my apology, why upon leaving you, and the rulers of the present life, I ought not to be afflicted and indignant, since I am persuaded that I shall there meet with masters and companions not less good than such as are here. This indeed is incredible to many; but if my apology shall have more influence with you than with the judges of the Athenians, it will have a good effect.

Phaedo:: When Socrates had thus spoken, Cebes, renewing the discourse, said;

Cebes:: Other things, Socrates, appear to me to be well spoken; but what you have asserted about the soul will produce in men much incredulity, who think, when it is liberated from the body, that it is no longer any where, but that, on that very day in which a man dies, it is corrupted and perishes, and this immediately as it is freed from the body; and, besides this, that on its departure it becomes dissipated like wind or smoke, makes its escape, and flies away, and is no longer any where: for if it remained any where essentially collected in itself, and liberated from those evils which you have now enumerated, there would be an abundant and fair hope, Socrates, that what you have asserted is true. But it will perhaps require no small allurement and faith, in order to be persuaded that the soul remains, though the man dies, and that it possesses a certain power and prudence.

Socrates:: You speak the truth, Cebes; but what shall we do? Are you willing that we should discourse about these particulars, whether it is proper that this should be the case with the soul, or not?

Cebes:: Indeed, I shall hear with great pleasure your opinion on this subject.

Socrates:: For I do not think that any one who should hear this discussion, even though he should be a comic poet, could say that I trifled, and discoursed about things not accommodated to my condition. If it is agreeable to you, therefore, and it is requisite to investigate these particulars, let us consider whether the souls of dead men, survive in Hades, or not.

The assertion indeed, which we now call to mind, is an ancient one, I mean that souls departing from hence exist in Hades, and that they again return hither, and are generated from the dead. And if the case is such that living natures are again generated from the dead, can there be any other consequence than that our souls are there? for they could not be again generated if they had no subsistence; and this will be a sufficient argument that these things are so, if it is really evident that the living cannot be generated from any thing else than the dead. But, if this is not the case, it will be necessary to adduce some other reason.

Cebes:: Entirely so.

Socrates:: You should not, therefore, consider this assertion with respect to men alone, if you wish to learn with facility; but we should survey it as connected with all animals and plants, and, in one word, with every thing which is endued with generation. Are not all things, therefore, so generated, that they are produced no otherwise than contraries from contraries, I mean those to which any thing of this kind happens? as the beautiful is contrary to the base, and the just to the unjust; and a thousand other particulars subsist in the same manner. We should consider, therefore, whether it is necessary, respecting every thing which has a contrary, that this contrary should be generated from nothing else than that which is its contrary. As for instance, is it not necessary that, when any thing becomes greater, it should become so from being before smaller?

Cebes:: It is so.

Socrates:: And is not the weaker generated from the stronger, and the swifter from the slower?

Cebes:: Entirely so.

Socrates:: But what if any thing becomes worse, must it not become so from the better? and if more just, must it not be generated from the more unjust?

Cebes:: How should it not?

Socrates:: We have then sufficiently determined this, that every thing is thus generated, viz. contraries from contraries.

Cebes:: Entirely so.

Socrates:: But what, is there any thing among these which has a middle subsistence between both (since all contraries are two), so as to cause two generations from this to that, and from that again to this? for between a greater and a lesser thing there is increase and diminution; and hence we say that the one is increased, but the other diminished.

Cebes:: It is so.

Socrates:: And must not to be separated and mingled, to be cooled and heated, and every thing in the same manner, though sometimes we do not distinguish the several particulars by names, must they not in reality be every where thus circumstanced, be generated from each other, and be subject to a mutual generation of each into one another?

Cebes:: Entirely so.

Socrates:: What then, is there any thing contrary to the being alive, as sleeping is contrary to waking?

Cebes:: Entirely so.

Socrates:: But what is this contrary?

Cebes:: To be dead.

Socrates:: Are not these, therefore, generated from each other, since they are contraries? and since they are two, are there not two generations between them?

Cebes:: How should there not?

Socrates:: I will, therefore, tell you what one of these conjunctions is which I have just now spoken of, and what its generations are; do you tell me what the other is. But I say, that the one of these is *to sleep*, but the other *to awake*, and from sleeping awaking is generated, and from awaking sleeping; and the generations of these are on the one hand to be laid asleep, and on the other to be roused. Have I sufficiently explained this to you or not?

Cebes:: Perfectly so.

Socrates:: Do you, therefore, inform me, in a similar manner, concerning life and death. Do you not say that living is the contrary of to be dead?

Cebes:: I do.

Socrates:: And that they are generated from each other?

Cebes:: Certainly.

Socrates:: What then is generated from that which is alive?

Cebes:: That which is dead.

Socrates:: But what is generated from the dead?

Cebes:: It is necessary to confess that this must be the living.

Socrates:: From the dead, therefore, O Cebes, living things, and men who are alive, are generated.

Cebes:: It appears so.

Socrates:: Our souls therefore subsist in Hades.

Cebes:: So it seems.

Socrates:: Is not, therefore, one of the generations subsisting about these manifest? for to die is, I think, sufficiently clear; is it not?

Cebes:: Entirely so.

Socrates:: What then shall we do? shall we not render back a contrary generation in its turn, but say that nature is defective and lame in this particular? Or is it necessary to assign a certain contrary generation *to the being dead*?

Cebes:: Entirely so.”

Socrates:: But what is this?

Cebes:: *To be restored back again to life.*

Socrates:: But, if there is such a thing as to revive again, will not this reviving be a generation from the dead to the living?

Cebes:: Perfectly so.

Socrates:: This then is agreed upon by us, that the living are generated from the dead no less than the dead from the living: but, this being the case, it is a sufficient argument to prove that the souls of the dead must necessarily exist somewhere, from whence they may again be generated.

Cebes:: It appears to me, Socrates, that this must necessarily follow from what has been admitted.

Socrates:: Take notice then, O Cebes! that we have not unjustly made these concessions, as it appears to me: for if other things, when generated, were not always restored in the place of others, revolving as it were in a circle, but generation subsisted according to a right line, proceeding from one thing alone into its opposite, without recurring again to the other, and making an inflection, you know that all things would at length possess the same form, would be affected with the same passion, and would cease to be generated.

Cebes:: How do you say?

Socrates:: It is by no means difficult to understand what I assert; but just as if there should be such a thing as falling asleep without recurring again to a vigilant state, generated from a sleepy condition, you know that all things would at length exhibit the delusions of Endymion, and would nowhere present themselves to the view, because every thing else would suffer the same as happened to him, viz. would be laid asleep. And if all things were mingled together, without ever being separated, the doctrine of Anaxagoras would soon be verified; for all things would be at once collected in a heap. In the same manner, my dear Simmias, if all such things as participate of life should die, and after they are dead should abide in that lifeless form, and not revive again, would there not be a great necessity that all things should at length die, and that nothing should live? for if living beings are generated from other things, and living beings die, how can it be otherwise but that all things must be extinguished through being dead?

Cebes:: It appears to me, Socrates, that it can not be otherwise; and in my opinion you perfectly speak the truth.

Socrates:: For to me, Cebes, it seems to be so more than any thing, and that we have not assented to this through deception; But that there is such a thing in reality as reviving again; that the living are generated from the dead; that the souls of the dead have a subsistence; and that the condition of the good after this life will be better than at present; but of the evil, worse.

Cebes:: But, according to that doctrine, Socrates, which you are frequently accustomed to employ (if it is true), that learning, with respect to us, is nothing else than reminiscence; according to this, it is necessary that we must have learned the things which we now call to mind in some former period of time. But this is impossible, unless our soul subsisted somewhere before it took up its residence in this human form; so that from hence the soul will appear to be a certain immortal nature.

Simmias:: But, Cebes, recall into my memory what demonstrations there are of these particulars; for I do not very much remember them at present.

Cebes:: The truth of this is evinced by one argument, and that a most beautiful one; that men, when interrogated, if they are but interrogated properly, will speak about every thing just as it is. At the same time, they could never do this unless science and right reason resided in their natures. And, in the second place, if any one leads them to diagrams, or any thing of this kind, he will in these most clearly discover that this is really the case.

Socrates:: But if you are not persuaded from this, Simmias, see if, from considering the subject in this manner, you will perceive as we do. For you do not believe how that which is called learning is reminiscence.

Simmias:: I do not disbelieve it; but I desire to be informed concerning this, which is the subject of our discourse, I mean reminiscence; and indeed, from what Cebes has endeavored to say, I almost now remember, and am persuaded: but nevertheless I would at present hear how you attempt to support this opinion.

Socrates:: We defend it then as follows: we confess without doubt, that if any one calls any thing to mind, it is necessary that at some time or other he should have previously known this.

Simmias:: Entirely so.

Socrates:: Shall we not confess this also, that when science is produced in us, after some particular manner, it is reminiscence? But I mean by a particular manner, thus: If any one, upon seeing or hearing any thing, or apprehending it through the medium of any other sense, should not only know it, but should also think upon something else, of which there is not the same, but a different science, should we not justly say, that he recollects or remembers the particular, of which he receives a mental conception?

Simmias:: How do you mean?

Socrates:: Thus: In a certain respect the science of a man is different from that of a lyre.

Simmias:: How should it not?

Socrates:: Do you not, therefore, know that lovers when they see a lyre, or a vestment, or any thing else which the objects of their affection were accustomed to use, no sooner know the lyre, than they immediately receive in their dianoëtic part the form of the beloved person to whom the lyre belonged? But this is no other than reminiscence: just as any one, upon seeing Simmias, often recollects Cebes; and in a certain respect an infinite number of such particulars continually occur.

Simmias:: An infinite number indeed, by Jupiter.

Socrates:: Is not then something of this kind a certain reminiscence; and then especially so, when any one experiences this affection about things which, through time, and ceasing to consider them he has now forgotten?

Simmias:: Entirely so.

Socrates:: But what, does it happen, that when any one sees a painted horse and a painted lyre, he calls to mind a man? and that when he beholds a picture of Simmias, he recollects Cebes?

Simmias:: Entirely so.

Socrates:: And will it not also happen, that on seeing a picture of Simmias he will recollect Simmias himself?

Simmias:: It certainly will happen so.

Socrates:: Does it not therefore follow, that in all these instances reminiscence partly takes place from things similar, and partly from such as are dissimilar?

Simmias:: It does.

Socrates:: But when any one recollects any thing from similars, must it not also happen to him, that he must know whether this similitude is deficient in any respect, as to likeness, from that particular of which he has the remembrance?

Simmias:: It is necessary.

Socrates:: Consider then if the following particulars are thus circumstanced: Do we say that any thing is in a certain respect equal? I do not say one piece of wood to another, nor one stone to another, nor any thing else of this kind; but do we say that equal itself, which is something different from all these, is something or nothing?

Simmias:: We say it is something different, by Jupiter, Socrates, and that in a wonderful manner.

Socrates:: Have we also a scientific knowledge of that which is equal itself?

Simmias:: Entirely so.

Socrates:: But from whence do we receive the science of it? Is it not from the particulars we have just now spoken of, viz. on seeing wood, stones, or other things of this kind, which are equals, do we not form a conception of that which is different from these? But consider the affair in this manner: Do not equal stones and pieces of wood, which sometimes remain the same, at one time appear equal, and at another not?

Simmias:: Entirely so.

Socrates:: But what, can *equals themselves* ever appear to you unequal? or can equality seem to be inequality?

Simmias:: By no means, Socrates.

Socrates:: These equals, therefore, are not the same with equal itself.

Simmias:: By no means, Socrates, as it appears to me.

Socrates:: But from these equals, which are different from equal itself, you at the same time understand and receive the science of equal itself

Simmias:: You speak most true.

Socrates:: Is it not, therefore, either similar to these or dissimilar?

Simmias:: Entirely so.

Socrates:: But indeed this is of no consequence: for while, in consequence of seeing one thing, you understand another, from the view of this, whether it is dissimilar or similar, it is necessary that this conception of another thing should be reminiscence.

Simmias:: Entirely so.

Socrates:: But what will you determine concerning this? Do we suffer any thing of this kind respecting the equality in pieces of wood, and other such equals as we have just now spoken of? and do they appear to us to be equal in the same manner as equal itself? and is something or nothing wanting, through which they are less equal than equal itself?

Simmias:: There is much wanting.

Socrates:: Must we not, therefore, confess, that when any one, on beholding some particular thing, understands that he wishes this which I now perceive to be such as something else is, but that it is deficient, and falls short of its perfection; must we not confess that he who understands this, necessarily had a previous knowledge of that to which he asserts this to be similar, but in a defective degree?

Simmias:: It is necessary.

Socrates:: What then, do we suffer something of this kind or not about equals and equal itself?

Simmias:: Perfectly so.

Socrates:: It is necessary, therefore, that we must have previously known equal itself before that time, in which, from first seeing equal things, we understood that we desired all these to be such as equal itself but that they had a defective subsistence.

Simmias:: It is so.

Socrates:: But this also we must confess, that we neither understood this, nor are able to understand it, by any other means than either by the sight, or the touch, or some other of the senses.

Simmias:: I speak in the same manner about all these. For they are the same, Socrates, with respect to that which your discourse wishes to evince. But indeed, from the senses, it is necessary to understand that all equals in sensible objects aspire after equal itself and are deficient from its perfection. Or how shall we say?

Socrates:: In this manner: Before, therefore, we begin to see, or hear, and to perceive other things, it necessarily follows, that we must in a certain respect have received the science of equal itself so as to know what it is, or else we could never refer the equals among sensibles to equal itself and be convinced that all these desire to become such as equal itself but fall short of its perfection.

Simmias:: This, Socrates, is necessary, from what has been previously said.

Socrates:: But do we not, as soon as we are born, see and hear, and possess the other senses?

Simmias:: Entirely so.

Socrates:: But we have said it is necessary that prior to these we should have received the science of equal itself.

Simmias:: Certainly.

Socrates:: We must necessarily, therefore, as it appears, have received it before we were born.

Simmias:: It appears so.

Socrates:: If, therefore, receiving this before we were born, we were born possessing it; we both knew prior to our birth, and as soon as we were born, not only the equal, the greater, and the lesser, but every thing of this kind: for our discourse at present is not more concerning the equal than the beautiful, the good, the just, and the holy, and in one word, about every thing which we mark with the signature of that which is, both in our interrogations when we interrogate, and in our answers when we reply: so that it is necessary we should have received the science of all these before we were born.

Simmias:: All this is true.

Socrates:: And if, since we receive these sciences, we did not forget each of them we should always be born knowing, and should always know them through the whole course of our life: for to know is nothing else than this, to retain the science which we have received, and not to lose it. Or do we not call oblivion the loss of science?

Simmias:: Entirely so, Socrates.

Socrates:: But if, receiving science before we were born, we lose it at the time of our birth, and afterwards, through exercising the senses about these particulars, receive back again those sciences which we once before possessed, will not that which we call learning be a recovery of our own proper science? and shall we not speak rightly when we call this a certain reminiscence?

Simmias:: Entirely so.

Socrates:: For this appears to be possible, that when any one perceives any thing, either by seeing or hearing, or employing any other sense, he may at the same time know something different from this, which he had forgotten, and to which this approaches, whether it is dissimilar or similar. So that, as I said, one of these two things must be the consequence: either that we were born knowing these, and possess a knowledge of all of them through the whole of our life; or that we only remember what we are said to learn afterwards; and thus learning will be reminiscence.

Simmias:: The case is perfectly so, Socrates.

Socrates:: Which, therefore, will you choose, Simmias: that we are born knowing, or that we afterwards remember the particulars of which we formerly received the science?

Simmias:: At present, Socrates, I have no choice.

Socrates:: But what will be your choice in the following instance, and what will be your opinion about it? Can a man, who possesses science, render a reason concerning the objects of his knowledge, or not?

Simmias:: There is a great necessity, Socrates, that he should.

Socrates:: And does it also appear to you, that all men can render a reason of the particulars concerning which we have just now spoken?

Simmias:: I wish they could; but I am much more afraid, that tomorrow there will no longer be any one here who can accomplish this in a becoming manner.

Socrates:: You do not therefore think, Simmias, that all men know these particulars?

Simmias:: By no means.

Socrates:: They remember, therefore, the things which they have once learned.

Simmias:: It is necessary.

Socrates:: But when did our souls receive this science? for they did not receive them from those from whom we are born men.

Simmias:: Certainly not.

Socrates:: Before this period, therefore.

Simmias:: Certainly.

Socrates:: Our souls therefore, Simmias, had a subsistence before they were in a human form, separate from bodies, and possessed intellectual prudence.

Simmias:: Unless, Socrates, we received these sciences while we were making our entrance into the present life; for that space of time is yet left for us.

Socrates:: Let it be so, my friend. But in what other time did we lose these? for we were not born possessing them as we have just now acknowledged. Did we lose them at the very time in which we received them? Or can you mention any other time?

Simmias:: By no means, Socrates: but I was ignorant that I spoke nothing to the purpose.

Socrates:: Will then the case remain thus for us, Simmias? For if those things have a subsistence which we perpetually proclaim, viz. a certain something beautiful and good, and every such essence; and if we refer to this all sensible objects, as finding it to have a prior subsistence, and to be ours, and assimilate these to it, as images to their exemplar; it is necessary that, as these have a subsistence, so likewise that our soul should have subsisted before we were born: but if these are not, this discourse will have been undertaken in vain. Is it not so? and is there not an equal necessity, both that these should have a subsistence, and that our souls should have had a being before we were born, and that the one cannot be without the other?

Simmias:: The same necessity, Socrates, appears to me to take place in a most transcendent manner; and the discourse flies to a beautiful circumstance, I mean that our soul subsisted before we were born, in a manner similar to that essence which you now speak of. For I possess nothing which is so clear to me as this, that all such things as the beautiful and the good subsist, in the most eminent degree, together with every thing else which you now mention; and, with respect to myself, it is sufficiently demonstrated.

Socrates:: But how does it appear to Cebes? For it is necessary that Cebes also should be persuaded.

Simmias:: In my opinion he is sufficiently so, although he is the most resolute of all men in not assenting to what is said. Yet I think he is sufficiently persuaded that our soul had a subsistence before we were born. But whether or not the soul remains after death, does not appear to me, Socrates, to be yet demonstrated; but that doubt of the multitude, which Cebes mentioned, still presses hard upon me, whether, when a man dies, the soul is not dissipated, and this is the end of its existence. For what hinders but that it may be born, and may have had a subsistence elsewhere, and this before it came into a human body; and yet, after it departs, and is liberated from this body, may then die and be corrupted?

Cebes:: You speak well, Simmias; for it appears that the half only of what was necessary has been demonstrated, I mean that our soul subsisted before we were born: but it is necessary that you should demonstrate, besides this, that it no less subsists after we are dead, than it did before we were born, in order that the demonstration may be complete.

Socrates:: This, Simmias and Cebes, is even now demonstrated, if you are only willing to connect into one and the same the present discourse and that which we before assented to; I mean that every vital nature is generated from that which is dead. For if the soul had a prior subsistence, and it is necessary when it proceeds into the present life, and is generated man, that it should be generated from nothing else than death, and to be dead; how is it not necessary that it should also subsist after death, since it is requisite that it should be generated again? Its existence therefore, after death, is even now, as I said, demonstrated. But you and Simmias appear to me still more earnestly to discuss this assertion in a very pleasant manner, and to be afraid like boys, left on the soul's departure from the body the winds should tear it in pieces, and widely disperse it, especially if any one should die during a stormy blast, and not when the heavens are serene.

Cebes:: Endeavor, O Socrates, to persuade us of the contrary, as if we were afraid, or rather as if we were not afraid; though, perhaps, there is some boy among us, by whom circumstances of this kind may be dreaded: him, therefore, we should endeavor to persuade not to be terrified at death, as if it was some dreadful specter.

Socrates:: But it is necessary to charm him every day till he becomes well.

Cebes:: But from whence, O Socrates, can a man acquire skill in such enchantment, since you are about to leave us?

Socrates:: Greece, Cebes, is very spacious, in some part of which good men may be found: and there are many barbarous nations, all which must be wandered over, inquiring after an enchanter of this kind, without sparing either riches or labor, as there is nothing for which wealth can be more seasonably bestowed. But it is necessary that you should inquire among yourselves; for perhaps you will not easily find any one who is more able to accomplish this than yourselves.

Cebes:: Let these things be so: but, if you please, let us return from whence we made this digression.

Socrates:: It will be agreeable to me: for how should it not be so?

Cebes:: You speak well.”

Socrates:: Some such thing, therefore, we ought to inquire of ourselves, viz. to what being the passion of becoming dissipated belongs; and respecting what we ought to fear, lest this should take place; and to whom a fear of this kind is proper: and after this, we should consider whether it is soul or not; and, as the result of these speculations, should either be confident or fearful concerning our soul.

Cebes:: You speak true.

Socrates:: Is it not, therefore, a passion natural to that which is collected together, and a composite, that it should be dissolved so far as it is a composite; and that, if there is any thing without composition, to this alone, if to any other, it belongs not to suffer affections of this kind?

Cebes:: This appears to me to be the case.

Socrates:: But does it not follow, that things which always subsist according to the same, and in a similar manner, are in the most eminent degree incomposite; but that such things as subsist differently at different times, and never according to the same, are composites?

Cebes:: To me it appears so.

Socrates:: Let us return, therefore, to the particulars of our former discourse: Whether is essence itself (which both in our inquiries and answers we established as having a being) that which always subsists similarly, and according to the same, or that which subsists differently at different times? And does the equal itself the beautiful itself and every thing which truly is, ever receive any kind of mutation? Or does not every thing which always truly is, and has a uniform subsistence, essentially abide in a similar manner according to the same, and never in any respect receive any mutation?

Cebes:: It is necessary, Socrates, that it should subsist similarly, and according to the same.

Socrates:: But what shall we say concerning many beautiful things, such as men, horses, garments, or other things of this kind, which are either equal, or beautiful; and of all such as are synonymous to these? Do these also subsist according to the same, or rather are they not entirely contrary to those, so that they neither subsist similarly according to the same, either with respect to themselves or to one another, or, in one word, in any manner whatever?

Cebes:: These never subsist in a similar condition.

Socrates:: These, therefore, may be touched, may be seen and perceived by the other senses; but those natures which always subsist according to the same, cannot be apprehended by any other means than the discursive energy of the dianoëtic power. But things of this kind are invisible, and cannot be seen. Are you willing, therefore, that we should establish two species of beings, the one visible, and the other invisible?

Cebes:: Let us establish them.

Socrates:: And that the invisible subsists always according to the same, but the visible never according to the same.

Cebes:: And this also we will establish.

Socrates:: Come then, is there any thing else belonging to us, than on the one hand body, and on the other soul?

Cebes:: Nothing else.

Socrates:: To which species, therefore, shall we say the body is more similar and allied?

Cebes:: It is manifest to every one, that it is allied to the visible species.

Socrates:: But what shall we say of the soul? Is it visible, or invisible?

Cebes:: It is certainly not visible to men, Socrates.

Socrates:: But we speak of things which are visible or not so, with respect to the nature of men. Or do you think we speak of things visible to any other nature?

Cebes:: Of those which regard the nature of men.

Socrates:: What then shall we say respecting the soul, that it is visible, or cannot be seen?

Cebes:: That it cannot be seen.

Socrates:: The soul, therefore, is more similar to the invisible species than the body, but the body is more similar to the visible.

Cebes:: It is perfectly necessary it should be so, Socrates.

Socrates:: And have we not also formerly asserted this, that the soul, when it employs the body in the speculation of any thing, either through sight, or hearing, or some other sense (for to speculate through sense is to speculate through body), then, indeed, it is drawn by the body to things which never subsist according to the same, wanders and is agitated, and becomes giddy like one intoxicated, through passing into contact with things of this kind?

Cebes:: Entirely so.

Socrates:: But when it speculates any thing, itself subsisting by itself, then it departs to that which is pure, eternal, and immortal, and which possesses a sameness of subsistence: and, as being allied to such a nature, it perpetually becomes united with it, when it subsists alone by itself, and as often as it is lawful for it to obtain such a conjunction: and then, too, it rests from its wanderings, and perpetually subsists similarly according to the same, about such natures, as passing into contact with them; and this passion of the soul is denominated prudence.

Cebes:: You speak, Socrates, in every respect beautifully and true.

Socrates:: To which species, therefore, of things, formerly and now spoken of, does the soul appear to you to be more similar and allied?

Cebes:: It appears to me, Socrates, that every one, and even the most indocile, must admit, in consequence of this method of reasoning, that the soul is both totally and universally more similar to that which subsists perpetually the same, than to that which does not so.

Socrates:: But to which is the body most similar?

Cebes:: To the other species.

Socrates:: But consider also as follows: that, since soul and body subsist together, nature commands that the one should be subservient and obey, but that the other should rule and possess dominion. And in consequence of this, which again of these appears to you to be similar to a divine nature, and which to the mortal nature? Or does it not appear to you that the divine nature is essentially adapted to govern and rule, but the mortal to be governed and be subservient?

Cebes:: To me it does so.

Socrates:: To which, therefore, is the soul similar?

Cebes:: It is manifest, Socrates, that the soul is similar to the divine, but the body to the mortal nature.

Socrates:: But consider, Cebes, whether, from all that has been said, these conclusions will result to us, that the soul is most similar to the divine, immortal, intelligible, uniform and indissoluble nature, and which always subsists similarly according to the same; but that the body is most similar to the nature which is human, mortal, void of intellect, multiform, dissoluble, and which never subsists according to the same. Can we, my deaf Cebes, produce any arguments to show that this is not the case?

Cebes:: We cannot.

Socrates:: What then? in consequence of all this, must it not be the property of the body, to be swiftly dissolved; but of the soul, on the contrary, to be entirely indissoluble, or something bordering on such an affection?

Cebes:: How should it not?

Socrates:: Do you conceive, therefore, that when a man dies, the visible part of him, or the body, which is situated in a visible region (and which we call a dead body subject to dissolution, ruin, and dissipation), does not immediately suffer any of these affections, but remains for a considerable space of time; and if any one dies possessing a graceful body, that it very much retains its elegant form? for, when the body is bound and buried according to the manner in which the Egyptians bury their dead, it remains almost entire for an incredible space of time; and though some parts of the body may become rotten, yet the bones and nerves, and every thing of this kind, are preserved as one may say immortal. Is it not so?

Cebes:: Certainly.

Socrates:: Can the soul, therefore, which is invisible, and which departs into another place of this kind, a place noble, pure, and invisible, viz. into Hades, to a beneficent and prudent God (at which place, if Divinity is willing, my soul will shortly arrive); can the soul, I say, since it is naturally of this kind, be immediately dissipated and perish on its being liberated from the body, as is asserted by the many? This is certainly, my dear Cebes and Simmias, far from being the case. But this will much more abundantly take place, if it is liberated in a pure condition, attracting to itself nothing of the body, as not having willingly communicated with it in the present life, but fled from it and collected itself into itself; an employment of this kind having been the subject of its perpetual meditation. But this is nothing else than to philosophize rightly, and to meditate with facility, how to be dead in reality. Or will not this be a meditation of death?

Cebes:: Entirely so.

Socrates:: Will not the soul, therefore, when in this condition, depart to that which is similar to itself, a divine nature, and which is likewise immortal and prudent? and when it arrives thither, will it not become happy, being liberated from wandering and ignorance, terror and insane love, and from all other evils belonging to the human nature; and so, as it is said of the initiated, will in reality pass the rest of its time in the society of the Gods? Shall we speak in this manner, Cebes, or otherwise?

Cebes:: In this manner, by Jupiter.

Socrates:: But I think that if the soul departs polluted and impure from the body, as having always been its associate, attending upon and loving the body, and becoming enchanted by it, through its desires and pleasures, in such a manner as to think that nothing really is, except what is corporeal, which can be touched and seen, eaten and drunk, and employed for the purposes of venereal occupations, and at the same time is accustomed to hate, dread and avoid, that which is dark and invisible to the eye of sense, which is intelligible and apprehended by philosophy; do you think that a soul thus affected can be liberated from the body, so as to subsist sincerely by itself?

Cebes:: By no means.

Socrates:: But I think that it will be contaminated by a corporeal nature, to which its converse and familiarity with the body, through perpetual association and abundant meditation, have rendered it similar and allied.

Cebes:: Entirely so.

Socrates:: But it is proper, my dear Cebes, to think that such a nature is ponderous and heavy, terrestrial and visible; and that a soul of this kind, through being connected with such a nature, is rendered heavy, and drawn down again into the visible region from its dread of that which is invisible and Hades, and, as it is said, wanders about monuments and tombs; about which indeed certain shadowy phantoms of souls appear, being the images produced by such souls as have not been purely liberated from the body, but which participate of the visible nature; and on this account they become visible.

Cebes:: It is very reasonable to suppose so, Socrates.

Socrates:: It is reasonable indeed, Cebes: and likewise that these are not the souls of the worthy, but of the depraved, who are compelled to wander about such places; by these means suffering the punishment of their former conduct, which was evil; and they are compelled thus to wander till, through the desire of a corporeal nature, which attends them they are again bound to a body. They are bound, however, as it is proper they should be, to such manners as they have exercised in the present life.

Cebes:: But what do you say these manners are, Socrates?

Socrates:: As for example, that such as are addicted to gluttony, arrogant injuries, and drinking, and this without any fear of consequences, shall enter into the tribes of asses and brutes of this kind. Or do you not think it proper that they should?

Cebes:: You speak in a manner perfectly becoming.

Socrates:: But shall we not say, that such as held in the highest estimation injustice, tyranny, and rapine shall enter into the tribes of wolves, hawks, and kites? Or where else can we say such souls depart?

Cebes:: Into tribes of this kind, certainly.

Socrates:: It will, therefore, be manifest concerning the rest into what nature each departs, according to the similitudes of manners which they have exercised.

Cebes:: It is manifest; for how should it not be so?

Socrates:: Are not, therefore, those among these the most happy, and such as depart into the best place, who have made popular and political virtue their study, which they call indeed temperance and justice, and which is produced from custom and exercise, without philosophy and intellect?

Cebes:: But how are these the most happy?

Socrates:: Because it is fit that these should again migrate into a political and mild tribe of this kind; such as bees, wasps, or ants, or into the same human tribe again, and from these become moderate men.

Cebes:: It is fit.

Socrates:: But it is not lawful for any to pass into the genus of Gods, except such as, through a love of learning, have philosophized, and departed from hence perfectly pure. And for the sake of this, my dear Simmias and Cebes, those who have philosophized rightly abstain from all desires belonging to the body, and strenuously persevere in this abstinence, without giving themselves up to their dominion; nor is it because they dread the ruin of their families, and poverty, like the multitude of the lovers of wealth; nor yet because they are afraid of ignominy and the infamy of improbity, like those who are lovers of dominion and honors, that they abstain from these desires.

Cebes:: For it would not, Socrates, become them so to do.

Socrates:: It would not, by Jupiter. Hence those, O Cebes! who take care of their soul, and do not live in a state of subserviency to their bodies, bidding farewell to all such characters as we have mentioned above, do not proceed in the same path with these during the journey of life, because such characters are ignorant how they should direct their course; but considering that they ought not to act contrary to philosophy, and to its solution and purification, they give themselves up to its direction, and follow wherever it leads.

Cebes:: In what manner, Socrates?

Socrates:: I will tell you. The lovers of learning well know, that when philosophy receives their soul into her protection (and when she does so, she finds it vehemently bound and agglutinated to the body, and compelled to speculate things through this, as through a place of confinement, instead of beholding herself through herself; and besides this, rolled in every kind of ignorance: philosophy likewise beholds the dire nature of the confinement, that it arises through desire; so that he who is bound in an eminent degree assists in binding himself); the lovers of learning therefore, I say, know that philosophy, receiving their soul in this condition, endeavors gently to exhort it, and dissolve its bonds; and this she attempts to accomplish, by showing that the inspection of things through the eyes is full of deception, and that this is likewise the case with perception through the ears and the other senses. Philosophy too persuades the soul to depart from all these fallacious informations, and to employ them no further than necessity requires; and exhorts her to call together and collect herself into one. And besides this, to believe in no other than herself, with respect to what she understands, herself subsisting by herself, of that which has likewise a real subsistence by itself; and not to consider that as having a true being which she speculates through others, and which has its subsistence in others.

And lastly, that a thing of this kind is sensible and visible; but that what she herself perceives is intelligible and invisible. The soul of a true philosopher, therefore, thinking that he ought not to oppose this solution, abstains as much as possible from pleasures and desires, griefs and fears, considering that when any one is vehemently delighted or terrified, afflicted or desirous, he does not suffer any such mighty evil from these as some one may perhaps conceive, I mean such as disease and a consumption of wealth, through indulging his desires; but that he suffers that which is the greatest, and the extremity of all evils, and this without apprehending that he does so.

Cebes:: But what is this evil, Socrates?

Socrates:: That the soul of every man is compelled at the same time to be either vehemently delighted or afflicted about some particular thing, and to consider that about which it is thus eminently passive, as having a most evident and true subsistence, though this is by no means the case; and that these are most especially visible objects. Is it not so?

Cebes:: Entirely.

Socrates:: In this passion, therefore, is not the soul in the highest degree bound to the body?

Cebes:: In what manner?

Socrates:: Because every pleasure and pain, as if armed with a nail, fasten and rivet the soul to the body, cause it to become corporeal, and fill it with an opinion, that whatever the body asserts is true. For, in consequence of the soul forming the same opinions with the body, and being delighted with the same objects, it appears to me that it is compelled to possess similar manners, and to be similarly nourished, and to become so affected, that it can never pass into Hades in a pure condition; but always departs full of a corporeal nature; and thus swiftly falls again into another body, and, becoming as it were sown, is engendered; and lastly, that from these it becomes destitute of a divine, pure, and uniform association.

Cebes:: You speak most true, Socrates.

Socrates:: For the sake of these things therefore, O Cebes I those who are justly lovers of learning are moderate and brave, and not for the sake of such as the multitude assert. Or do you think it is?

Cebes:: By no means; for it cannot be.

Socrates:: But the soul of a philosopher reasons in this manner; and does not think that philosophy ought to free him from the body, but that when he is freed he may give himself up to pleasures and pains, by which he will again be bound to the body, and will undertake a work which it is impossible to finish, reweaving a certain web of Penelope. But procuring tranquility with respect to these, and following the guidance of the reasoning power, and being always conversant with this, contemplating at the same time that which is true, divine, and not the subject of opinion, and being likewise nourished by such an object of contemplation, he will think that he ought to live in this manner while he lives, and that when he dies he shall depart to a kindred essence, and an essence of this kind, being liberated from the maladies of the human nature. But from a nutriment of this kind the soul has no occasion to fear (while it makes these, O Simmias and Cebes! its study) lest, in its liberation from the body, it should be lacerated, and, being blown about and dissipated by the winds, should vanish, and no longer have anywhere a subsistence.

Phaedo:: When Socrates had thus spoken, a long silence ensued; and Socrates seemed to revolve with himself what had been said; as likewise did the greatest part of us: but Cebes and Simmias discoursed a little with each other. And Socrates at length looking upon them;

Socrates:: What, do our assertions appear to you to have been not sufficiently demonstrated? for many doubts and suspicions yet remain, if any one undertakes to investigate them sufficiently. If, therefore, you are considering something else among yourselves, I have nothing to say; but if you are doubting about those particulars which we have just now made the subject of our discourse, do not be remiss in speaking about and running over what has been said, if it appears to you in any respect that we might have spoken better; and receive me again as your associate, if you think that you can be any ways benefited by my assistance.

Simmias:: Indeed, Socrates, I will tell you the truth: for some time since each of us being agitated with doubts, we impelled and exhorted one another to interrogate you, through our desire of hearing them solved; but we were afraid of causing a debate, lest it should be disagreeable to you in your present circumstances.

Phaedo:: But Socrates, upon hearing this, gently laughed, and said;

Socrates:: This is strange, indeed, Simmias; for I shall with difficulty be able to persuade other men that I do not consider the present fortune as a calamity, since I am not able to persuade even you; but you are afraid lest I should be more morose now than I was prior to the present event. And, as it seems, I appear to you to be more despicable than swans with respect to divination, who, when they perceive that it is necessary for them to die, sing not only as usual, but then more than ever; rejoicing that they are about to depart to that Deity in whose service they are engaged. But men, because they themselves are afraid of death, falsely accuse the swans, and assert that, in consequence of their being afflicted at death, their song is the result of grief. Nor do they consider that no bird sings when it is hungry or cold, or is afflicted with any other malady; neither the nightingale, nor the swallow, nor the lapwing, all which they say sing lamenting through distress. But neither do these birds, as it appears to me, sing through sorrow, nor yet the swans; but in my opinion these last are prophetic, as belonging to Apollo; and in consequence of foreseeing the good which Hades contains, they sing and rejoice at that period more remarkably than at any preceding time. But I consider myself as a fellow-servant of the swans, and sacred to the same Divinity. I possess a divining power from our common master no less than they; nor shall I be more afflicted than the swan in being liberated from the present life. Hence it is proper that you should both speak and inquire about whatever you please, as long as the eleven magistrates will permit.

Simmias:: You speak excellently well; and as you give me permission, I will both tell you what are my doubts, and how far Cebes does not admit what has been said. For, as to myself, Socrates, I am perhaps of the same opinion about these particulars as yourself; that to know them clearly in the present life is either impossible. or a thing very difficult to obtain. But not to argue about what has been said in every possible way, and to desist before by an arduous investigation on all sides weariness is produced, can only take place among indolent and effeminate men. For it is necessary, in things of this kind, either to learn or to discover the manner of their subsistence; or, if both these are impossible, then, by receiving the best of human reasons, and that which is the most difficult of confutation, to venture upon this as on a raft, and sail in it through the ocean of life, unless some one should be able to be carried more safely, and with less danger, by means of a firmer vehicle, or a certain divine reason. I shall not, therefore, now be ashamed to interrogate, in consequence of the confession which you have made; nor shall I blame myself hereafter, that I have not spoken what appears to me at present: for, upon considering what has been said, both with myself and together with Cebes, your doctrine did not seem to be sufficiently confirmed.

Socrates:: And perhaps, my friend, you have the truth on your side; but inform me in what respect it did not seem to be sufficiently confirmed.

Simmias:: In this; because any one may assert the same about harmony, and a lyre, and its chords; that, for instance, harmony is something invisible and incorporeal, all-beautiful and divine, in a well-modulated lyre: but the lyre and its chords are bodies, and of a corporeal nature; are composites and terrestrial, and allied to that which is mortal. When any one, therefore, shall either have broken the lyre, or cut and burst the chords, some person may contend from the same reasoning as yours, that it is necessary the harmony should yet remain, and not be destroyed (for it cannot in any respect be possible that the lyre should subsist when the chords are burst, and the chords themselves are of a mortal nature; but the harmony, which is connate and allied to that which is divine and immortal, will become extinct, and perish prior to the mortal nature itself); because it is necessary that harmony should be somewhere, and that the wood and chords must suffer putrefaction, before this can be subject to any passion. For I think, Socrates, that you yourself have also perceived this, that we consider the soul in the most eminent degree, as something of such a kind as to become the temperament of hot and cold, moist and dry, and such-like affections, for the reception of which our body is extended, and by which it is contained: and that the soul is the harmony of all these, when they are beautifully and moderately tempered with each other. If, therefore, the soul is a certain harmony, it is evident that when our body suffers either intension or remission, through diseases and other maladies, the soul must from necessity immediately perish, though of the most divine nature (in the same manner as other harmonies perish, which either subsist in sounds or in the works of artificers); but the remaining parts of the body of each person must subsist for a long time, till they are either burnt or become rotten. Consider then what we shall say to this discourse, if any one should think, since the soul is the temperament of things subsisting in the body, that it perishes the first, in that which is called death.

Phaedo:: Socrates, therefore, beholding us, and laughing as he was accustomed to do very often.

Socrates:: Simmias speaks justly. If any one of you, therefore, is more prompt than I am, why does he not reply to these objections?, for he seems not to have handled this affair badly. But it appears to me, that before we make our reply we should first hear Cebes, and know what it is which he objects to our discourse; that, in consequence of some time intervening, we may deliberate what we shall say; and that afterwards, upon hearing the objections, we may either assent to them if they appear to assert any thing becoming; or, if they do not, that we may defend the discourse we have already delivered. But tell me. Cebes, what it is which so disturbs you, as to cause your unbelief.

Cebes:: I will tell you: your discourse seems to me to be yet in the same state, and to be liable to the same accusation as we mentioned before. For, that our soul had a subsistence before it came into the present form, is an assertion, I will not deny, of a very elegant kind, and (if it is not too much to say) sufficiently demonstrated: but that it still remains when we are dead, does not appear to me to have been clearly proved; nor do I assent to the objection of Simmias, that the soul is not stronger and more lasting than the body, For it appears to me to be much more excellent than all these. Why then, says reason, do you yet disbelieve? for, since you see that when a man dies that which is, more imbecile still remains, does it not appear to you to be necessary that the more lasting nature should be preserved during this period of time? Consider. therefore, whether I shall say any thing to the purpose in reply. For I, as well as Simmias, as it seems, stand in need of a certain similitude: for to me these things appear to be asserted in the same manner, as if any one should say concerning an aged dead weaver, that the man has not yet perished, but perhaps still survives somewhere; and should exhibit as an argument in proof of this assertion a vestment woven by himself, which he wore, and which is yet safe and entire. And if he should ask some one not crediting his assertion, which is the more lasting, the genus of man or of a garment, whose subsistence consists in its use and in being worn; then should it be replied, that the genus of man is much more lasting, he might think it demonstrated, that the man is by a much stronger reason preserved, since that which is of a shorter duration has not yet perished. But I do not think, Simmias, that this is the case. For consider with yourself what I say: since every person must apprehend, that he who asserts this speaks foolishly. For this weaver, having worn and woven many such vestments, died after them being many, but I think before the last; and yet it cannot be any thing the more inferred on this account, that the man is viler or more imbecile than a vestment. And I think that the soul, with respect to the body, will receive the same similitude; and he who shall assert the same concerning these, will appear to me to speak in a very equitable manner; I mean that the soul is of a lasting nature, but the body more debile and lets durable. But I should say that each soul wears many bodies, especially if it lives many years; for, if the body glides away like a stream, and is dissolved while the man yet lives, but the soul perpetually reweaves that which is worn and consumed, it will be necessary indeed, that when the soul is destroyed it should then be clothed with the last vestment, and should perish prior to this alone. But the soul having perished, then the body will evince the nature of its imbecility, and, becoming rapidly rotten, will be perfectly dissolved: so that, in consequence of this reasoning, it is not yet proper that we should be persuaded to believe with confidence, that our soul subsists somewhere after we are dead. For, if any one should assent to him who asserts even more than you have done, and should grant that not only our soul had an existence before we were born into the present life, but that nothing hinders us from admitting that certain souls after death may still have a subsistence, exist in some future period, and often be born, and again perish (for so naturally strong is the soul, that it will preserve itself through frequent births); but this being granted, it may still follow, that it will not only labor in those many generations, but that, finishing its course, in some one of these deaths, it will entirely perish. But no one should say that this death and dissolution of the body, which also introduces destruction to the soul, can be known: For it is impossible that it can be perceived by any one of us. If this, however, be the case, it will not follow that he who possesses the confidence of good hope concerning death is not foolishly confident, unless he can demonstrate that the soul is perfectly immortal and undecaying: for otherwise it will be necessary, that he who is about to die should always fear for his soul, lest in the death, which is at hand, he should entirely perish through the separation of his body.

Phaedo:: When we heard them therefore, speak in this manner, we were all of us very disagreeably affected, as we afterwards declared to each other; because, as we were in the highest degree persuaded by the former discourse, they again seemed to disturb us and to cast us into unbelief; and this in such a manner, as not only to cause us to deny our assent to the arguments which had been already adduced, but to such as might afterwards be asserted, fearing lest either we should not be proper judges of any thing, or that the things themselves should be unworthy of belief.

Echecrates:: By the Gods, Phædo, I can easily pardon you: for, while I am now hearing you, I cannot refrain from saying to myself, In what arguments can we any longer believe? For the discourse of Socrates, which a little before was exceedingly credible, is now fallen into unbelief. For the assertion, that our soul is a certain harmony, gained my assent both now and always in a wonderful manner; and now it is mentioned, it recalls as it were into my memory a knowledge that I formerly was of the same opinion. And thus I am perfectly indigent again of some other reason, as if from the very beginning, which may persuade me that the soul of a dead man does not die together with the body. Tell me therefore, by Jupiter, how Socrates pursued the discourse; and whether he, as you confess was the case with yourself, seemed troubled at these objections; or, on the contrary, answered them with facility; and whether he defended his doctrine sufficiently, or in a defective manner. Relate all these particulars to us as accurately as you can.

Phaedo:: Indeed, Echecrates, I have often admired Socrates; but never more so than at that time. That he should be able indeed to say something in reply, is perhaps not wonderful; but I especially admired, in the first place, this in him, that he received the discourse of the young men in such a pleasant, benevolent and wonderful manner; and, in the next place, that he so acutely perceived how we were affected by their objections; and lastly, that he so well cured our disturbance, recalled us, as if flying and vanquished, and caused us, in conjunction with himself, to pursue and consider the discourse.

Echecrates:: But how did he do this?

Phaedo:: I will tell you: I happened at that time to sit at his right hand, upon a low seat near his bed; but he himself sat much higher than I did. Stroking me on the head, therefore, and compressing the hair which hung on my neck (for he used sometimes to play with my hairs);

Socrates:: Tomorrow, Phædo, you will perhaps cut off these beautiful locks.

Phaedo:: It seems so, indeed, Socrates.

Socrates:: But you will not, if you will be persuaded by me.

Phaedo:: But why not?

Socrates:: For both you and I ought to cut off our hair today, if our discourse must die, and we are not able to recall it to life again. And I indeed, if I was you, and I found that discourse fled from me, would take an oath after the manner of the Argives, that I would never suffer my hair to grow, till, by contesting in disputation, I had vanquished the objections of Simmias and Cebes.

Phaedo:: But Hercules is reported not to have been sufficient against two.

Socrates:: Call upon me, therefore, as your Iolaus, while the light yet lasts.

Phaedo:: I call then, not as Hercules upon Iolaus, but as Iolaus upon Hercules.

Socrates:: It is of no consequence. But, in the first place, we must be careful that we are not influenced by a certain passion.

Phaedo:: What passion?

Socrates:: That we do not become haters of reason, in the same manner as some become, haters of men. For no greater evil can happen to any one than to be a hater of reasons. But a hatred of reason and a hatred of mankind are both produced in the same manner. For misanthropy is produced in us through very much believing without art in some particular person, and considering him as a man true, sincere, and faithful, whom in the course of a short acquaintance we find to be depraved and unfaithful; and that this is the case again with another. And when any one often suffers this disappointment, and especially from those whom he considered as his most intimate familiars and friends, at length, through finding himself thus frequently hurt, he hates all men, and thinks that there is nothing in any respect sincere in any one. Or have you never perceived that this is the case?

Phaedo:: Entirely so.

Socrates:: But is not this base? and is it not evident that such a one attempts to make use of men, without possessing the art which respects human affairs? For If, in a certain respect, he employed them with art, he would think, as the case really is, that men very good, or very bad, are but few in number; and that the greater part of mankind are those which subsist between these.

Phaedo:: How do you mean?

Socrates:: In the same manner as about things very small and very great. Do you think that any thing is more rare than to find a very large or a very small man, or dog, or any thing else; and again any thing excessively swift or slow, beautiful or base, white or black? Or do you not perceive that the summits of the extremes of all these are rare and few, but that things subsisting between these are copious and many?

Phaedo:: Entirely so.

Socrates:: Do you not, therefore, think that if a contest of improbity should be proposed, those who hold the first rank among the base would be found to be but few?

Phaedo:: It is agreeable to reason to think so.

Socrates:: It is so, indeed; but in this respect reasons are not similar to men (for I shall now follow you as the leader); but in this they are similar, when any one, for instance, without possessing the art belonging to discourse, believes that a certain discourse is true, and shortly after it appears to him to be false, as it is sometimes the one and sometimes the other, and the same thing happens to him about different discourses. And this is particularly the case with those who are familiar with contradictory arguments; for these you know think that they at length become most wise, and alone perceive that there is nothing sound and stable either in things or reasons; but that every thing is whirled upwards and downwards, as if existing in the river Euripus, and does not abide in any one condition for any portion of time whatever.

Phaedo:: You speak perfectly true.

Socrates:: Would it not then, Phædo, be a passion worthy of commiseration, if, when a certain reason is true and firm, and is capable of being understood, yet some one falling from this should be involved in doubt, because he has heard reasons, which, though remaining the same, yet have at one time appeared to be true, and at another false; and should not accuse himself and his own want of skill, but at length through grief should transfer all the blame from himself to the reasons; and thus should pass the remainder of his life, hating and slandering reasons, and deprived of the truth and science of things?

Phaedo:: By Jupiter, such a one would be miserable indeed.

Socrates:: In the first place, therefore, we should be very careful against admitting an opinion, that no reasoning appears to be valid; but we should much rather think that we are not yet in a healthy condition, and that we ought vigorously and cheerfully to study how to be well. And this indeed ought to be the case with you and others, for the sake of the whole remainder of your life, but with me, for the sake of death itself; as there is danger at the present time, lest I should not behave philosophically, but, like those who are perfectly unskilled, contentiously. For such as these, when they controvert any particular, are not at all concerned how that subsists about which they dispute; but are alone anxious, that what they have established may appear to the persons present to be true. And I seem to myself at present to differ alone in this respect from such as these: for I am not solicitous that my discourse may appear true to those who are present (except just as it may happen in passing), but that it may appear to be so in the most eminent degree to me myself. For I thus reason, my dear friend (and see in how fraudulent a manner), that if my assertions are true, it will be a beautiful circumstance to be persuaded of their truth; but that if nothing remains for the dead, I shall at least have the advantage of being less afflicted with my present condition than others. But this ignorance of mine will not continue long (For it would be bad if it should), but shortly after this will be dissolved; and being thus prepared, Simmias and Cebes, I shall now return to the discourse. But, that you may be persuaded by me, pay no attention to the person of Socrates, but be much more solicitous in assenting to the truth, if I should appear to you to assert any thing true; but if this should not be the case, oppose me with all your might, and beware, lest through too much ardor I should deceive both myself and you, and, acting in this respect like bees, should depart from you, leaving my sting behind.

But to begin: In the first place, remind me of what you have said, if it should appear that I have forgotten it. For Simmias, I think, distrusted and was afraid lest the soul, though it is at the same time more divine and beautiful than the body, should perish before it, as subsisting in the form of harmony. But Cebes appears to me to have admitted this, that the soul is more lasting than the body; but yet that it is perfectly uncertain, whether after the soul has worn out many bodies, and this often, it may not at length, leaving body behind, itself also perish; so that this will be death itself, I mean the destruction of the soul, since the body perpetually perishes without ceasing. Are not these the things, Simmias and Cebes, which we ought to consider?

Phaedo:: They both confessed that the particulars were these.

Socrates:: Whether, therefore, do you reject the whole of our former discourse, or do you reject some things and not others?

Phaedo:: They replied, We admit some things, and not others.

Socrates:: What then do you say about that discourse, in which we asserted that learning is reminiscence; and that, this being the case, our soul most necessarily have subsisted somewhere before it was bound in the body?

Cebes:: I indeed was both then wonderfully persuaded by that discourse, and now firmly abide in the same opinion.

Simmias:: And I also am affected in the same manner; and I should very much wonder should I ever conceive otherwise about this particular.

Socrates:: But it is necessary, my Theban guest, that it should appear otherwise to you, if you still continue of the opinion, that harmony is something composite, and that the soul is a certain harmony, composed from things extended through the body. For you will never assent to yourself asserting, that harmony was composed prior to the things from which it ought to be composed; or do you think you can?

Simmias:: By no means, Socrates.

Socrates:: Do you perceive, therefore, that you will not be consistent in your assertions, when you say that the soul had at subsistence before it came into a human form and into body, but that at the same time it was composed from things which then had not a being? For neither is harmony such as that to which you assimilate it; but the lyre, and the chords, and the sounds yet unharmonized, have a prior existence; but harmony is composed the last of all, and is the first dissolved. How, therefore, can this discourse be consonant with that?

Simmias:: In no respect.

Socrates:: But it certainly is proper that a discourse about harmony should be consonant, if this can ever be asserted of any other.

Simmias:: It is proper, indeed.

Socrates:: But this discourse of yours is not consonant. Consider, therefore, which of these assertions you will choose, that learning is reminiscence, or that the soul is harmony.

Simmias:: I prefer the former, Socrates, by much; for the latter gained my assent without a demonstration, through nothing more than a certain probability and specious appearance; from whence also it appears evident to the multitude of mankind. But I well know, that the discourses which frame their demonstrations from assimilative reasons only are nothing more than empty boastings; and unless a man defends himself against them they will very much deceive him, both in geometry and all other speculations. But the discourse about reminiscence and learning was delivered through an hypothesis highly worthy of reception. For in this it was said that our soul had a subsistence somewhere before it came into the present body, as it is an essence possessing the appellation of that which truly is. But, as I persuade myself, I assent to this doctrine in a manner sufficient and proper; and hence it is necessary, as it appears to me, that I should neither assent to myself nor to any other asserting that the soul is harmony.

Socrates:: But what, Simmias? Does it appear to you that it can either belong to this harmony, or to any composition, to subsist differently from the things from which it is composed?

Simmias:: By no means.

Socrates:: And indeed, as it appears to me, it can neither perform nor suffer any thing else, besides what these perform and suffer.

Phaedo:: He agreed it could not.

Socrates:: It does not, therefore, belong to harmony to be the leader of the materials from which it is composed, but to follow them.

Phaedo:: This also he granted.

Socrates:: It is far, therefore, from being the case, that harmony will either be moved or found contrary, or in any other respect be adverse to its parts.

Simmias:: Very far, indeed.

Socrates:: But what, does not every harmony naturally subsist in such a manner as to be harmony, so far as it receives a congruous temperament?

Simmias:: I do not understand you.

Socrates:: But if it were possible that it could be congruously tempered with still greater vehemence, and more in quantity, would it not be more vehemently harmony and more in quantity; but if less vehemently and less in quantity, just the contrary?

Simmias:: Entirely so.

Socrates:: But can it be said of the soul, that, even in the smallest circumstance, one soul is more vehemently and more in quantity, or lest vehemently and less in quantity, soul, than another?

Simmias:: By no means.

Socrates:: Consider then, by Jupiter, is it truly said, that one soul possesses intellect and virtue, and is good; but that another is foolish and vicious, and is bad?

Simmias:: It is truly said.

Socrates:: Among those, therefore, who establish the soul as harmony, what can any one call virtue and vice in the soul? Will he call the one harmony, and the other discord? And that the one, that is to say the good soul, is harmonized; and, as it is harmony, possesses another harmony in itself; but that the other is discord, and does not contain in itself another harmony?

Simmias:: I know not what to reply; but it is manifest, that he who establishes this would make some such reply.

Socrates:: But it has been granted, that one soul is not more or less soul than another; and this is no other than to confess, that one harmony is not more vehemently and more in quantity, nor less vehemently and less in quantity, harmony, than another: is it not so?

Simmias:: Entirely so.

Socrates:: But that which is neither more nor less harmony, is neither more nor less harmonized: is it not so?

Simmias:: It is

Socrates:: But can that which is neither more nor less harmonized participate more or less of harmony? or does it equally participate?

Simmias:: Equally.

Socrates:: The soul, therefore, since it is not more or less soul than another, is not more or less harmonized.

Simmias:: It is not.

Socrates:: But since it is thus affected, it will neither participate more of discord nor of harmony.

Simmias:: By no means.

Socrates:: And again, in consequence of this passion, can one soul participate more of vice or virtue than another, since vice is discord, but virtue harmony?

Simmias:: It cannot.

Socrates:: But rather, Simmias, according to right reason, no soul will participate of vice, since it is harmony: for doubtless the harmony, which is perfectly such, can never participate of discord.

Simmias:: It certainly cannot.

Socrates:: Neither, therefore, can the soul, which is perfectly soul, participate of vice: for how can it, in consequence of what has been said? In consequence of this reasoning, therefore, the souls of all animals will be similarly good; since they are naturally similarly souls, with respect to the essence of soul.

Simmias:: To me it appears so, Socrates.

Socrates:: If the hypothesis therefore was right, would it appear to you to be beautifully said, and that this consequence ensued, that the soul is harmony?

Simmias:: By no means.

Socrates:: But what, among all the things which are inherent in man, would you say that any thing else governed except soul, if he be a prudent man?

Simmias:: I should not.

Socrates:: But whether does the soul govern, by assenting to the passions belonging to the body, or by opposing them? My meaning is this, that when heat and thirst are present, the soul, if it governs, will frequently draw the body to the contrary, i.e. not to drink; and hunger being present, that it shall not eat; and in a thousand other instances we may behold the soul opposing the desires of the body: may we not?

Simmias:: Entirely so.

Socrates:: Have we not above confessed, that if the soul was harmony, it would never found contrary to the intensions, remissions, or vibrations, or any other passion belonging to its component parts, but that it would follow, and never rule over them?

Simmias:: We have granted this; for how could we do otherwise?

Socrates:: But what, does not the soul now appear to act just the contrary to this, ruling over all those particulars, from which it may be said it subsists. nearly opposing all of them through the whole of life, and exercising absolute dominion over them all manner of ways, punishing some of these indeed with greater difficulty, and accompanied with pain; some through gymnastic and medicine, and some by milder methods, and some again by threats, and others by admonishing desire, anger, and fear; addressing that which it opposes, as being itself of a different nature? just as Homer does in the Odyssey, where he says of Ulysses:

> “His breast he struck, and cried, My heart, sustain,
> “This ill! for thou hast borne far greater pain.”

Do you think that Homer devised this in consequence of thinking that the soul is harmony, and of such a kind as to be led by the passions of the body, and not such as is naturally adapted to lead and govern, and which is something much more divine than harmony?

Simmias:: By Jupiter, Socrates, I do not think that he did.

Socrates:: By no means, therefore, most excellent man, shall we do well, in asserting that the soul is a *certain* harmony: for by thus asserting, as it appears, we shall neither agree with Homer, that divine poet, nor be consistent with ourselves.

Simmias:: It is so, indeed.

Socrates:: Let it then be so; and thus, as it appears, we have sufficiently appeased the patrons of the Theban harmony. But how, Cebes, and by what discourse shall we appease the patrons of Cadmus?

Cebes:: You appear to me to be likely to find out a way: for you have delivered this discourse against harmony in a wonderful manner, and beyond what I expected. For, while

Simmias related his doubts, I thought it would be a most admirable thing, should any one be able to reply to his discourse. He therefore appears to me, in a manner perfectly extraordinary, not to have sustained the very first assault of your discourse. I should not, therefore, be surprised if the arguments of Cadmus met with the same fate.

Socrates:: My good friend, do not speak so magnificently, lest a certain envy should subvert our future discourse. These things, indeed, will be taken care of by Divinity. But we, approaching near in an Homeric manner, will try whether you say any thing to the purpose. This then is the sum of what you inquire: you think it proper to demonstrate that our soul is without decay, and immortal; that a philosopher who is about to die with all the confidence of hope, and who thinks that after death he shall be far more happy than in the present life, may not indulge a stupid and foolish confidence. But you say, though it should be shown that the soul is something robust and deiform, and that it subsisted before we were born, yet nothing hinders but that all these arguments may not evince its immortality, but only that the soul is more lasting than the body, that it formerly existed somewhere for an immense period of time, and that it knew and performed a multitude of things. But that, for all this, it will be nothing the more immortal; but that, entering into the body of a man, it will be the principle of destruction to itself, as if connected with a disease: so that it will both lead a miserable life in the body, and at last will perish in that which is called death. But you say it is of no consequence whether it comes into body once or often, with respect to our occasion of fear: For it is very proper that he who neither knows, nor is able to render a reason, why the soul is immortal, should be afraid of death, unless he is deprived of intellect. This, I think, Cebes, is the sum of what you say; and I have repeated it often, that nothing may escape our observation; and that, if you are willing, you may either add or take away from our statement of the objections.

Cebes:: I have nothing at present either to add or take away; but these are the objections which I make.

Phaedo:: Socrates, therefore, after he had been silent for a long time, and considering something by himself, said;

Socrates:: You require, Cebes, a thing of no small importance: For it is perfectly necessary to treat concerning the cause of generation and corruption. If you are willing, therefore, I will relate to you what happened to me in this investigation; and afterwards, if any thing which I shall say shall appear to you useful, with respect to persuading you in the present inquiry, employ it for this purpose.

Cebes:: But I am most assuredly willing.

Socrates:: Hear then my narration: When I was a young man, Cebes, I was in a wonderful manner desirous of that wisdom which they call a history of nature: For it appeared to me to be a very superb affair to know the causes of each particular, on what account each is generated, why it perishes, and why it exists. And I often tossed myself as it were upwards and downwards; considering, in the first place, whether after that which is hot and cold has received a certain rottenness, as some say, then animals are nourished; and whether the blood is that through which we become prudent, or air, or fire; or whether none of these, but the brain, is that which affords the senses of hearing, seeing, and smelling; so that memory and opinion are generated from these, and that from memory and opinion obtaining tranquility, science is accordingly produced? And again considering the corruptions of these, and the properties which take place about the heavens and the earth, I at length appeared to myself so unskillful in the speculation of these, as to receive no advantage from my inquiries. But I will give you a sufficient proof of the truth of this: for I then became so very blind, with respect to things which I knew before with great clearness (as it appeared both to myself and others) through this speculation, as to want instruction both in many particulars, which I thought I had known before, and in this, why a man is increased. For I thought it was evident to every one that this took place through eating and drinking: for when, from the aliment, flesh accedes to flesh, bone to bone, and every where kindred to kindred parts, then the bulk which was small becomes afterwards great; and thus a little man becomes a large one. Such was then my opinion; does it appear to you a becoming one?

Cebes:: To me, indeed, it does.

Socrates:: But still further, consider as follows: for I thought that I seemed to myself sufficiently right in my opinion, when, on seeing a tall man standing by a short one, I judged that he was taller by the head; and in like manner one horse than another: and still more evident than these, ten things appeared to me to be more than eight, because two is added to them and that a bicubital is greater than a cubital magnitude, through its surpassing it by the half.

Cebes:: But now what appears to you respecting these?

Socrates:: By Jupiter, I am so far from thinking that I know the cause of these, that I cannot even persuade myself, when any person adds one to one, that then the one to which the addition was made becomes two; or that the added one, and that to which it is added, become two, through the addition of the one to the other. For I should wonder, since each of these, when separate from one another, was one, and not then two; if, after they have approached nearer to each other, this should be the cause of their becoming two, viz. the association through which they are placed nearer to each other. Nor yet, if any person should divide one, am I able to persuade myself that this division is the cause of its becoming two. For that former cause of two being produced is contrary to this. For then this took place, because they were collected near to each other, and the one was applied to the other; but now, because the one is removed and separated from the other. Nor do I any longer persuade myself, that I know why one is produced; nor, in one word, why any thing else is either generated or corrupted, or is, according to this method of proceeding: but, in order to obtain this knowledge, I venture to mingle another method of my own, by no means admitting this which I have mentioned.

But having once heard a person reading from a certain book, composed, as he said, by Anaxagoras when he came to that part, in which he says that intellect orders and is the cause of all things, I was delighted with this cause, and thought that, in a certain respect, it was an excellent thing for intellect to be the cause of all; and I considered that, if this was the case, disposing intellect would adorn all things, and place every thing in that situation in which it would subsist in the best manner. If any one, therefore, should be willing to discover the cause through which every thing is generated, or corrupted, or is, he ought to discover how it may subsist in the best manner, or suffer, or perform any thing else. In consequence of this, therefore, it is proper that a man should consider nothing else, either about himself or about others, except that which is the most excellent and the best: but it is necessary that he who knows this should also know that which is subordinate, since there is one and the same science of both. But thus reasoning with myself, I rejoiced, thinking that I had found a preceptor in Anaxagoras, who would instruct me in the causes of things agreeably to my own conceptions; and that he would inform me, in the first place, whether the earth is flat or round; and afterwards explain the cause and necessity of its being so, adducing for this purpose that which is better, and showing that, it is better for the earth to exist in this manner. And if he should say it is situated in the middle, that he would, besides this, show that it is better For it to be in the middle; and if he should render all this apparent to me, I was so disposed as not to require any other species of cause. I had likewise prepared myself in a similar manner for an inquiry respecting the sun, and moon, and the other stars, their velocities and revolutions about each other, and all their other properties; so as to be able to know why it is better for each to operate in a certain manner, and to suffer that which it suffers. For I by no means thought, after he had said that all these were orderly disposed by intellect, he would introduce any other cause of their subsistence, except that which shows that it is best for them to exist as they do. Hence I thought that in assigning the cause common to each particular, and to all things, he would explain that which is best for each, and is the common good of all. And indeed I would not have exchanged these hopes for a mighty gain! but having obtained his books with prodigious eagerness, I read them with great celerity, that I might with great celerity know that which is the best, and that which is base.

From this admirable hope however, my friend, I was forced away, when, in the course of my reading, I saw him make no use of intellect, nor employ certain causes, for the purpose of orderly disposing particulars, but assign air, æther, and water, and many other things equally absurd, as the causes of things. And he appeared to me to be affected in a manner similar to him who should assert, that all the actions of Socrates are produced by intellect; and afterwards, endeavoring to relate the causes of each particular action, should say, that, in the first place, I now sit here because my body is composed from bones and nerves, and that the bones are solid, and are separated by intervals from each other; but that the nerves, which are of a nature capable of intension and remission, cover the bones, together with the flesh and skin by which they are contained. The bones, therefore, being suspended from their joints, the nerves, by straining and relaxing them enable me to bend my limbs as at present; and through this cause I here sit in an inflected position—and again, should assign other such-like causes of my conversation with you, viz. voice, and air, and hearing, and a thousand other such particulars, neglecting to adduce the true cause, that since it appeared to the Athenians better to condemn me, on this account, it also appeared to me to be better and more just to sit here, and, thus abiding, sustain the punishment which they have ordained me. For otherwise, by the dog, as it appears to me, these nerves and bones would have been carried long ago either into Megara or Bœotia, through an opinion of that which is best, if I had not thought it more just and becoming to sustain the punishment ordered by my country, whatever it might be, than to withdraw myself and run away. But to call things of this kind causes is extremely absurd. Indeed, if any one should say that without possessing such things as bones and nerves, and other particulars which belong to me, I could not act in the manner I appear to do, he would speak the truth: but to assert that I act as I do at present through these, and that I operate with this intellect, and not from the choice of that which is best, would be an assertion full of extreme negligence and sloth. For this would be the consequence of not being able to collect by division, that the true cause of a thing is very different from that without which a cause would not be a cause. And this indeed appears to me to be the case with the multitude of mankind, who, handling things as it were in darkness, call them by names foreign from the truth, and thus denominate things causes which are not so. Hence, one placing round the earth a certain vortex, produced by the celestial motion, renders by this mean the earth fixt in the centre; but another places air under it, as if it was a basis to a broad trough. But they neither investigate that power through which things are now disposed in the best manner possible, nor do they think that it is endued with any dæmoniacal strength: but they fancy they have found a certain Atlas, more strong and immortal than such a strength, and far more sustaining all things; and they think that the good and the becoming do not in reality connect and sustain any thing. With respect to myself, indeed, I would most willingly become the disciple of any one; so that I might perceive in what manner a cause of this kind subsists. But since I am deprived of this advantage, and have neither been able to discover it myself, nor to learn it from another, are you willing, Cebes, that I should show you the manner in which I made a prosperous voyage to discover the cause of things?

Cebes:: I am willing in a most transcendent degree.

Socrates:: It appeared to me therefore afterwards, when I was wearied with such speculations, that I ought to take care lest I should be affected in the same manner as those are who attentively behold the sun in an eclipse: for some would be deprived of their sight, unless they beheld its image in water, or in a similar medium. And something of this kind I perceived with respect to myself, and was afraid lest my soul should be perfectly blinded through beholding things with the eyes of my body, and through endeavoring to apprehend them by means of the several senses. Hence I considered that I ought to fly to reasons, and in them survey the truth of things. Perhaps, indeed, this similitude of mine may not in a certain respect be proper: for I do not entirely admit that he who contemplates things in reasons, surveys them in images, more than he who contemplates them in external effects. This method, therefore, I have adopted; and always establishing that reason as an hypothesis, which I judge to be the most valid, whatever appears to me to be consonant to this, I fix upon as true, both concerning the cause of things and every thing else; but such as are not consonant I consider as not true. But I wish to explain to you what I say in a clearer manner: for I think that you do not at present understand me.

Cebes:: Not very much, by Jupiter.

Socrates:: However, I now assert nothing new, but what I have always asserted at other times, and in the preceding disputation. For I shall now attempt to demonstrate to you that species of cause which I have been discoursing about, and shall return again to those particulars which are so much celebrated; beginning from these, and laying down as an hypothesis, that there is a certain something beautiful, itself subsisting by itself; and a certain something good and great, and so of all the rest; which if you permit me to do, and allow that such things have a subsistence, I hope that I shall be able from these to demonstrate this cause to you, and discover that the soul is immortal.

Cebes:: But, in consequence of having granted you this already, you cannot be hindered from drawing such a conclusion.

Socrates:: But consider the things consequent to these, and see whether you will then likewise agree with me. For it appears to me, that if there be any thing else beautiful, besides the beautiful itself, it cannot be beautiful on any other account than because it participates of the beautiful itself; and I should speak in the same manner of all things. Do you admit such a cause?

Cebes:: I admit it.

Socrates:: I do not therefore any longer perceive, nor am I able to understand, those other wise causes; but if any one tells me why a certain thing is beautiful, and assigns as a reason, either its possessing a florid color, or figure, or something else of this kind, I bid farewell to other hypotheses (for in all others I find myself disturbed); but this I retain with myself, simply, inartificially, and perhaps foolishly, that nothing else causes it to be beautiful, than either the presence, or communion, or in whatever manner the operations may take place, of the beautiful itself. For I cannot yet affirm how this takes place; but only this, that all beautiful things become such through the beautiful itself. For it appears to me most safe thus to answer both myself and others; and adhering to this, I think that I can never fall, but that I shall be secure in answering, that all beautiful things are beautiful through the beautiful itself. Does it not also appear so to you?

Cebes:: It does.

Socrates:: And that great things, therefore, are great, and things greater, greater through magnitude itself; and things lesser, lesser through smallness itself?

Cebes:: Certainly.

Socrates:: Neither, therefore, would you assent, if it should be said that some one is larger than another by the head, and that he who is lesser is lesser by the very same thing, i.e. the head: but you would testify that you said nothing else than that, with respect to every thing great, one thing is greater than another by nothing else than magnitude, and that through this it is greater, i.e. through magnitude; and that the lesser is lesser through nothing else than smallness, and that through this it is lesser, i.e. through smallness. For you would be afraid, I think, lest, if you should say that any one is greater and lesser by the head, you should contradict yourself: first, in asserting that the greater is greater, and the lesser lesser, by the very same thing; and afterwards that the greater is greater by the head, which is a small thing; and that it is monstrous to suppose, that any thing which is great can become so through something which is small. Would you not be afraid of all this?

Phaedo:: says Cebes, laughing;

Cebes:: Indeed I should.

Socrates:: Would you not also be afraid to say that ten things are more than eight by two, and that through this cause ten transcends eight, and not by multitude and through multitude? And in like manner, that a thing which is two cubits in length is greater than that which is but one cubit, by the half, and not by magnitude? for the dread is indeed the same.

Cebes:: Entirely so.

Socrates:: But what? one being added to one, will the addition be the cause of their becoming two? or if one is divided, and two produced, would you not be afraid to assign division as the cause? Indeed you would cry with a loud voice, that you know no other way by which any thing subsists, than by participating the proper essence of every thing which it participates; and that in these you can assign no other cause of their becoming two, than the participation of the duad; and that it is proper all such things as are about to become two, should participate of this, and of unity, whatever is about to become one. But you would bid farewell to these divisions and additions, and other subtitles of this kind, and would leave them to be employed in answering, by those who are wiser than yourself. And fearing, as it is said, your own shadow, and your own unskillfulness, you would adhere to this safe hypothesis, and answer in the manner I have described. But if any one should adhere to this hypothesis, you would refrain from answering him till you had considered the consequences resulting from thence, and whether they were consonant or dissonant to one another. But when it is necessary for you to assign a reason for your belief in this hypothesis, you will assign it in a similar manner, laying down again another hypothesis, which shall appear to be the best among supernal natures, till you arrive at something sufficient. At the same time you will by no means confound things by mingling them together, after the manner of the contentious, when you discourse concerning the principle and the consequences arising from thence, if you are willing to discover any thing of true beings. For by such as these, perhaps, no attention is paid to this. For These, through their wisdom, are sufficiently able to mingle all things together, and at the same time please themselves. But you, if you rank among the philosophers, will act, I think, in the manner I have described.

Phaedo:: Both Simmias and Cebes said, You speak most truly.

Echecrates:: By Jupiter, Phædo, they assented with great propriety: for he appears to me to have asserted this in a manner wonderfully clear; and this even to one endued with the smallest degree of intellect.

Phaedo:: And so indeed, Echecrates, it appeared in every respect to all who were present.

Echecrates:: And well it might: For it appears so to us, now we hear it, who were not present. But what was the discourse after this?

Phaedo:: If I remember right, after they had granted all this, and had confessed that each of the several species was something, and that others participating of these received the same denomination, he afterwards interrogated them as follows:

Socrates:: If then you allow that these things are so, when you say that Simmias is greater than Socrates, but less than Phædo, do you not then assert that both magnitude and parvitude are inherent in Simmias?

Cebes:: I do.

Socrates:: And yet you must confess, that this circumstance of Simmias surpassing Socrates does not truly subsist in the manner which the words seem to imply. For Simmias is not naturally adapted to surpass Socrates, so far as he is Simmias, but by the magnitude which he possesses: nor, again, does he surpass Socrates so far as Socrates is Socrates, but because Socrates possesses parvitude with respect to his magnitude.

Cebes:: True.

Socrates:: Nor, again, is Simmias surpassed by Phædo, because Phædo is Phædo, but because Phædo possesses magnitude with respect to the parvitude of Simmias.

Cebes:: It is so.

Socrates:: Simmias, therefore, is allotted the appellation of both small and great, being situated in the middle of both; exhibiting his smallness to be surpassed by the greatness of the one, and his greatness to the other's smallness, which it surpasses. And at the same time, gently laughing, I seem to have spoken with all the precision of an historian; but, notwithstanding this, it is as I say.

Phaedo:: He allowed it.

Socrates:: But I have mentioned these things, in order that you may be of the same opinion as myself. For to me it appears, not only that magnitude is never willing to be at the same time both great and small, but that the magnitude which we contain never desires to receive that which is small, nor be surpassed; but that it is willing to do one of these two things either, to fly away, and gradually withdraw itself, when its contrary the small approaches to it, or to perish when it arrives; but that it is unwilling, by sustaining and receiving parvitude, to be different from what it was. In the same manner as I myself receiving and sustaining parvitude, and still remaining that which I am, am nevertheless small. But that being great dares not to be small. And in like manner the small, which resides in us, is not willing at any time to subsist in becoming to be great, or to be great: nor does any thing else among contraries, while it remains that which it was, wish at the same time to subsist in becoming to be, and to be, its contrary; but it either departs or perishes in consequence of this passion.

Cebes:: It appears so to me in every respect.

Phaedo:: But a certain person, who was present, upon hearing this (I do not clearly remember who it was);

Someone:: By the Gods, was not the very contrary of what you now assert admitted by you in the former part of your discourse, viz. that the greater was generated from the less, and the less from the greater; and that generation among contraries plainly took place from contraries? But now you appear to me to say, that this can never be the case.

Phaedo:: Upon this Socrates, after he had extended his head a little further, and had listened to his discourse, said;

Socrates:: You very manfully put me in mind; yet you do not understand the difference between what is now and what was then asserted. For then it was said, that a contrary thing was generated from a contrary; but now, that a contrary can never become contrary to itself, neither that contrary which subsists in us; nor that which subsists in nature. For then, my friend, we spoke concerning things which possess contraries, calling the contraries by the appellation of the things in which they reside; but now we speak of things which receive their denomination from the contraries residing in them. And we should never be willing to assert that these contraries receive a generation from one another.

Phaedo:: And at the same time, beholding Cebes, he said;

Socrates:: Did any thing which has been said by this person disturb you also?

Cebes:: Indeed it did not; and at such a time as this there are not many things which can disturb me.

Socrates:: We ingenuously, therefore, assent to this, that a contrary can never become contrary to itself.

Cebes:: Entirely so.

Socrates:: But still further, consider whether you agree with me in this also. Do you call the hot and the cold any thing?

Cebes:: I do.

Socrates:: Are they the same with snow and fire?

Cebes:: They are not, by Jupiter.

Socrates:: The hot, therefore, is something different from fire, and the cold from snow.

Cebes:: Certainly.

Socrates:: But this also is, I think, apparent to you, that snow, as long as it is such, can never, by receiving heat, remain what it was before, viz. snow, and at the same time become hot; but, on the accession of heat, must either withdraw itself from it, or perish.

Cebes:: Entirely so.

Socrates:: And again, that fire, when cold approaches to it, must either depart or perish; but that it will never dare, by receiving coldness, still to remain what it was, i.e. fire, and yet be at the same time cold.

Cebes:: You speak truly.

Socrates:: But it happens to some of these, that not only the species itself is always thought worthy of the same appellation, but likewise something else, which is not indeed that species, but which perpetually possesses the form of it as long as it exists. But in the following instances my meaning will perhaps be more apparent: for the odd number ought always to possess that name by which we now call it: should it not?

Cebes:: Entirely so.

Socrates:: But is this the case with the odd number alone (for this is what I inquire)? or is there any thing else which is not indeed the same with the odd, but yet which ought always to be called odd, together with its own proper name, because it naturally subsists in such a manner, that it can never desert the form of the odd? But this is no other than what happens to the number three, and many other things. For consider, does not the number three appear to you to be always called by its proper name, and at the same time by the name of the odd, though the odd is not the same as the triad? Yet the triad, and the pentad, and the entire half of number, naturally subsist in such a manner, that though they are not the same as the odd, yet each of them is always odd. And again, two and four, and the whole other order of number, though they are not the same as the even, yet each of them is always even: do you admit this or not?

Cebes:: How should I not?

Socrates:: See then what I wish to evince. But it is as follows: It has appeared, not only that contraries do not receive one another, but that even such things as are not contrary to each other, and yet always possess contraries, do not appear to receive that idea which is contrary to the idea which they contain; but that on its approach they either perish or depart. Shall we not, therefore, say that three things would first perish, and endure any thing whatever, sooner than sustain to be three things, and at the same time to be even?

Cebes:: Entirely so.

Socrates:: And yet the duad is not contrary to the triad.

Cebes:: Certainly not.

Socrates:: Not only, therefore, do contrary species never sustain the approach of each other, but certain other things likewise cannot sustain the accession of contraries.

Cebes:: You speak most true.

Socrates:: Are you willing, therefore, that, if we are able, we should desire what kind of things these are?

Cebes:: Entirely so.

Socrates:: Will they not then, Cebes, be such things as compel whatever they occupy, not only to retain their idea, but likewise not to receive a contrary to it?

Cebes:: How do you mean?

Socrates:: Exactly as we just now said. For you know it is necessary, that whatever things the idea of three occupies should not only be three, but likewise odd.

Cebes:: Entirely so.

Socrates:: To a thing of this kind, therefore, we assert, that an idea contrary to that form, through which it becomes what it is, will never approach.

Cebes:: It cannot.

Socrates:: But it becomes what it is through the odd: does it not?

Cebes:: Certainly.

Socrates:: But is not the contrary to this the idea of the even?

Cebes:: It is

Socrates:: The idea of the even, therefore, will never accede to three things.

Cebes:: Never.

Socrates:: Are not three things, therefore, destitute of the even?

Cebes:: Destitute.

Socrates:: The triad, therefore, is an odd number.

Cebes:: It is

Socrates:: The things which I mentioned then are defined, viz. such things, which, though they are not contrary to some particular nature, yet do not at the same time receive that which is contrary; just as the triad in the present instance, though it is not contrary to the even, yet does not anything more receive it on this account: For it always brings with it that which is contrary to the even; and in like manner the duad to the odd, and fire to cold, and an abundant multitude of other particulars. But see whether you would thus define, not only that a contrary does not receive a contrary, but likewise that the nature which brings with it a contrary to that to which it approaches, will never receive the contrariety of that which it introduces. But recollect again, For it will not be useless to hear it repeated often. Five things will not receive the form of the even; neither will ten things, which are the double of five, receive the form of the odd. This, therefore, though it is itself contrary to something else, yet will not receive the form of the odd; nor will the sesquialter, nor other things of this kind, such as the half and the third part, ever receive the form of the whole, if you pursue and assent to these consequences.

Cebes:: I most vehemently pursue and assent to them.

Socrates:: Again, therefore, speak to me from the beginning; and this not by answering to what I inquire, but, in a different manner, imitating me. For I say this, in consequence of perceiving another mode of answering, arising from what has now been said, no less secure than that which was established at first. For, if you should ask me what that is, which, when inherent in any body, causes the body to be hot, I should not give you that cautious and unskillful answer, that it is heat, but one more elegant deduced from what we have just now said; I mean, that it is fire. Nor, if you should ask me what that is, which when inherent in a certain body, the body is diseased, I should not say that it is disease, but a fever. Nor, if you should ask what that is, which when inherent in a number, the number will be odd, I should not say that it is imparity, but unity, and in a similar manner in other particulars. But see whether you sufficiently understand my meaning.

Cebes:: Perfectly so.

Socrates:: Answer me then, what that is, which when inherent in the body, the body will be alive?

Cebes:: Soul.

Socrates:: Is this then always the case?

Cebes:: How should it not?

Socrates:: Will soul, therefore, always introduce life to that which it occupies?

Cebes:: It will truly.

Socrates:: But is there anything contrary to life, or not?

Cebes:: There is

Socrates:: But what?

Cebes:: Death.

Socrates:: The soul, therefore, will never receive the contrary to that which it introduces, in consequence of what has been already admitted.

Cebes:: And this most vehemently so.

Socrates:: But what? how do we denominate that which does not receive the idea of the even?

Cebes:: Odd.

Socrates:: And how do we call that which does not receive justice, and that which does not receive music?

Cebes:: We call the one unjust, and the other unmusical.

Socrates:: Be it so. But what do we call that which does not receive death?

Cebes:: Immortal.

Socrates:: The soul does not receive death?

Cebes:: It does not.

Socrates:: The soul, therefore, is immortal.

Cebes:: Immortal.

Socrates:: Let it be so. And shall we say that this is now demonstrated? Or how does it appear to you?

Cebes:: It appears to me, Socrates, to be most sufficiently demonstrated.

Socrates:: What then, Cebes, if it were necessary to the odd that it should be free from destruction, would not three things be indestructible?

Cebes:: How should they not?

Socrates:: If, therefore, it was also necessary that a thing void of heat should be indestructible, when any one should introduce heat to snow, would not the snow withdraw itself, base and unliquefied? For it would not perish; nor yet, abiding, would it receive the heat.

Cebes:: You speak the truth.

Socrates:: In like manner, I think if that which is void of cold was indestructible, that when any thing cold approached to fire, the fire would neither be extinguished nor destroyed, but would depart free from damage.

Cebes:: It is necessary.

Socrates:: Hence it is necessary to speak in this manner concerning that which is immortal: for, if that which is immortal is indestructible, it is impossible that the soul, when death approaches to it, should perish. For it follows, from what has been said, that it does not receive death, and of course it will never be dead. Just as we said, that three things will never be even, nor will this ever be the case with that which is odd: nor will fire ever be cold, nor yet the heat which is inherent in fire. But some one may say, What hinders but that the odd may never become the even, through the accession of the even, as we have confessed; and yet, when the odd is destroyed, the even may succeed instead of it? We cannot contend with him who makes this objection, that it is not destroyed: for the odd is not free from destruction; since, if this was granted to us, we might easily oppose the objection, and obtain this concession, that the odd and three things would depart, on the approach of the even; and we might contend in the same manner about fire and heat, and other particulars: might we not?

Cebes:: Entirely so.

Socrates:: And now, therefore, since we have confessed respecting that which is immortal, that it is indestructible, it must follow that the soul is, together with being immortal, likewise indestructible: but if this be not admitted, other arguments will be necessary for our conviction.

Cebes:: But there is no occasion for this. For it is scarcely possible that any thing else should be void of corruption, if that which is immortal and eternal is subject to dissolution.

Socrates:: But I think that Divinity, and the form itself of life, and if any thing else besides this is immortal, must be confessed by all beings to be entirely free from dissolution.

Cebes:: All men, indeed, by Jupiter, must acknowledge this; and much more, as it appears to me, must it be admitted by the Gods.

Socrates:: Since, therefore, that which is immortal is also incorruptible, will not the soul, since it is immortal, be indestructible?

Cebes:: It is perfectly necessary.

Socrates:: When, therefore, death invades a man, the mortal part of him, as it appears, dies; but the immortal part departs safe and uncorrupted, and withdraws itself from death.

Cebes:: It appears so.

Socrates:: The soul, therefore, O Cebes, will, more than any thing, be immortal and indestructible; and our souls will in reality subsist in Hades.

Cebes:: And therefore, Socrates, I have nothing further to object to these arguments, nor any reason why I should disbelieve their reality: but if either Simmias, or any person present, has any thing to say, he will do well not to be silent: for I know not what other opportunity he can have, besides the present, if he wishes either to speak or hear about things of this kind.

Simmias:: But indeed I have nothing which can hinder my belief in what has been said. But yet on account of the magnitude of the things about which we have discoursed, and through my despising human imbecility, I am compelled to retain with myself an unbelief about what has been asserted.

Socrates:: Indeed, Simmias, you not only speak well in the present instance, but it is necessary that even those first hypotheses which we established, and which are believed by us, should at the same time be more clearly considered: and if you sufficiently investigate them you will follow reason, as it appears to me, in as great a degree as is possible to man. And if this becomes manifest, you will no longer make any further inquiry.

Simmias:: You speak true.

Socrates:: But it is just, my friends, to think that if the soul is immortal, it requires our care and attention, not only for the present time, in which we say it lives, but likewise with a view to the whole of time: and it will now appear, that he who neglects it must subject himself to a most dreadful danger. For, if death were the liberation of the whole man, it would be an unexpected gain to the wicked to be liberated at the same time from the body, and from their vices together with their soul: but now, since the soul appears to be immortal, no other flight from evils, and no other safety remains for it, than in becoming the best and most prudent possible. For when the soul arrives at Hades, it will possess nothing but discipline and education, which are said to be of the greatest advantage or detriment to the dead, in the very beginning of their progression thither. For thus it is said: that the dæmon of each person, which was allotted to him while living, endeavors to lead each to a certain place, where it is necessary that all of them being collected together, after they have been judged, should proceed to Hades, together with their leader, who is ordered to conduct them from hence thither. But there receiving the allotments proper to their condition, and abiding for a necessary time, another leader brings them back hither again, in many and long periods of time. The journey, therefore, is not such as Telephus asserts it to be in Æschylus. For he says that a simple path leads to Hades: but it appears to me that the path is neither simple nor one. For there would be no occasion of leaders, nor could any one ever wander from the right road, if there was but one way. But now it appears to have many divisions and dubious turnings: and this I conjecture from our holy and legal rites. The soul, therefore, which is properly adorned with virtue, and which possesses prudence, willingly follows its leader, and is not ignorant of its present condition: but the soul which still adheres to body through desire (as I said before), being for a long space of time terrified about it, and struggling and suffering abundantly about the visible place, is with violence and great difficulty led away by its presiding dæmon. And when it arrives at that place where other souls are assembled, all the rest fly from and avoid this unpurified soul, which has been guilty either of unjust slaughter, or has perpetrated such deeds as are allied to this, and are the works of kindred souls; nor is any one willing to become either its companion or leader. But such a soul wanders about, oppressed with every kind of anxiety and trouble, till certain periods of time are accomplished: and these being completed, it is driven by necessity to an abode accommodated to its nature. But the soul which has passed through life with purity and moderation, obtaining the Gods for its companions and leaders, will reside in a place adapted to its purified condition.

There are indeed many and admirable places belonging to the earth; and the earth itself is neither of such a kind, nor of such a magnitude, as those who are accustomed to speak about it imagine, as I am persuaded from a certain person's account.

Simmias:: How is this, Socrates? For I myself also have heard many things about the earth; and yet perhaps not these particulars which have obtained your belief. I should therefore be glad to hear you relate them.

Socrates:: Indeed, Simmias, the art of Glaucus does not appear to me to be necessary, in order to relate these particulars; but to evince their truth, seems to me to be an undertaking beyond what the art of Glaucus can accomplish. Besides, I myself perhaps am not able to accomplish this; and even though I should know how, the time which is allotted me to live, Simmias, seems by no means sufficient for the length of such a discourse. However, nothing hinders me from informing you what I am persuaded is the truth, respecting the form of the earth, and the places which it contains.

Simmias:: And this information will be sufficient.

Socrates:: I am persuaded, therefore, in the first place, that if the earth is in the middle of the heavens, and is of a spherical figure, it has no occasion of air, nor of any other such-like necessity, to prevent it from falling: but that the perfect similitude of the heavens to themselves, and the equilibrium of the earth, are sufficient causes of its support. For that which is equally inclined, when placed in the middle of a similar nature, cannot tend more or less to one part than another; but, subsisting on all sides similarly affected, it will remain free from all inclination. This is the first thing of which I am persuaded.

Simmias:: And very properly so.

Socrates:: But yet further, that the earth is prodigiously great; that we who dwell in places extending from Phasis to the pillars of Hercules, inhabit only a certain small portion of it, about the Mediterranean sea, like ants or frogs about a marsh; and that there are many others elsewhere, who dwell in many such-like places. For I am persuaded, that there are every where about the earth many hollow places of all-various forms and magnitudes; into which there is a confluence of water, mists, and air: but that the earth itself, which is of a pure nature, is situated in the pure heavens, in which the stars are contained, and which most of those who are accustomed to speak about such particulars denominate æther. But the places which we inhabit are nothing more than the dregs of this pure earth, or cavities into which its dregs continually flow. We are ignorant, therefore, that we dwell in the cavities of this earth, and imagine that we inhabit its upper parts, Just as if some one dwelling in the middle bottom of the sea, should think that he resided on its surface, and, beholding the sun and the other stars through the water, should imagine that the sea is the heavens; but through sloth and imbecility having never ascended to the top of the sea, nor emerged from its deeps into this region, has never perceived how much purer and more beautiful it is than the place which he inhabits, nor has received this information from any other who has beheld this place of our abode. In the very same manner are we affected: for, dwelling in a certain hollow of the earth, we think that we reside on its surface; and we call the air heaven, as if the stars passed through this, as through the heavens themselves. And this likewise, in the same manner as in the above instance, happens to us through our imbecility and sloth, which render us incapable of ascending to the summit of the air. For, otherwise, if any one could arrive at its summit, or, becoming winged, could fly thither, he would be seen emerging from hence; and just as fishes, emerging hither from the sea, perceive what our region contains, in the same manner would he behold the several particulars belonging to the summit of the earth. And besides this, if his nature was sufficient for such an elevated survey, he would know that the heavens which he there beheld were the true heavens, and that he perceived the true light and the true earth. For this earth which we inhabit, the stones which it contains, and the whole region of our abode, are all corrupted and gnawed, just as thing is in the sea are corroded by the salt: for nothing worthy of estimation grows in the sea, nor does it contain any thing perfect; but caverns and sand, and immense quantities of mud and filth, are found in it wherever there is earth. Nor are its contents to be by any means compared with the beauty of the various particulars in our place of abode. But those upper regions of the earth will appear to be yet far more excellent than these which we inhabit. For, if it is proper to tell you a beautiful fable, it is well worth hearing, Simmias, what kind of places those are on the upper earth, situated under the heavens.

It is reported then, my friend, in the first place, that this earth, if any one surveys it from on high, appears like globes covered with twelve skins, various, and distinguished with colors; a pattern of which are the colors found among us; and which our painters use. But there the whole earth is composed from materials of this kind, and such as are much more splendid and pure than our region contains: for they are partly indeed purple, and endued with a wonderful beauty; partly of as golden color; and partly more white than plaster or snow; and are composed from other colors in a similar manner, and those more in number and more beautiful than any we have ever beheld. For the hollow parts of this pure earth, being filled with water and air, exhibit a certain species of color, shining among the variety of other colors in such a manner, that one particular various form, of the earth continually presents itself to the view. Hence, whatever grows in this earth grows analogous to its nature, such as trees, and flowers, and fruits: and again, its mountains and stones possess a similar perfection and transparency, and are rendered beautiful through various colors; of which the stones so much honored by us in this place of our abode are but small parts, such as sardin-stones, jaspers, and emeralds, and all of this kind. But there nothing subsists which is not of such a nature as I have described; and there are other things far more beautiful than even these. But the reason of this is because the stones there are pure, and not consumed and corrupted, like ours, through rottenness and salt, from a conflux of various particulars, which in our places of abode cause filthiness and disease to the stones and earth, animals and plants, which are found among us. But this pure earth is adorned with all these, and with gold and silver, and other things of a similar nature: for all these are naturally apparent, since they are both numerous and large, and are diffused every where throughout the earth; so that to behold it is the spectacle of blessed spectators. This earth too contains many other animals and men, some of whom inhabit its middle parts; others dwell about the air, as we do about the sea; and others reside in islands which the air flows round, and which are situated not far from the continent. And in one word, what water and the sea are to us, with respect to utility, that air is to them: but what air is to us, that æther is to the inhabitants of this pure earth. But the seasons there are endued with such an excellent temperament, that the inhabitants are never molested with disease, and live for a much longer time than those who dwell in our regions; and they surpass us in sight, hearing, and prudence, and every thing of this kind, as much as air excels water in purity—and æther, air. And besides this, they have groves and temples of the Gods, in which the Gods dwell in reality; and likewise oracles and divinations, and sensible perceptions of the Gods, and such-like associations with them. The sun too, and moon, and stars, are seen by them such as they really are; and in every other respect their felicity is of a correspondent nature.

And in this manner indeed the whole earth naturally subsists, and the parts which are situated about it. But it contains about the whole of its ambit many places in its concavities; some of which are more profound and extended than the region which we inhabit: but others are more profound, indeed, but yet have a less chasm than the places of our abode; and there are certain parts which are less profound, but broader than ours. But all these are in many places perforated into one another under the earth, according to narrower and broader avenues, and have passages of communication through which a great quantity of water flows into the different hollows of the earth, as into bowls; and besides this, there are immense bulks of ever-flowing rivers under the earth, and of hot and cold waters;

likewise a great quantity of fire, mighty rivers of fire, and many of moist mire, some of which are purer, and others more muddy; as in Sicily there are rivers of mud, which flow before a stream of fire, which is itself a flaming torrent. And from these the several places are filled, into which each flows at particular times. But all these are moved upwards and downwards, like a hanging vessel, situated in the earth. This hanging vessel too, through a certain nature of this kind, is one of the chasms of the earth; and this the greatest, and totally perforated through the whole earth. And of this Homer thus speaks:

> Far, very far, where under earth is found
> A gulf, of every depth, the most profound.

which he elsewhere and many other poets denominate Tartarus. For into this chasm there is a conflux of all rivers, from which they again flow upwards. But each derives its quality from the earth through which it flows, And the reason why they all flow into, and again out of this chasm, is because this moisture cannot find either a bottom or a basis. Hence it becomes elevated, and fluctuates upwards and downwards: and this too is the case with, the air and spirit which are situated about it. For they follow this moisture, both when they are impelled to more remote places of the earth, and when to the places of our abode. And as in respiration the flowing breath is perpetually expired and inspired, so there the spirit, which is elevated together with the moisture, causes certain vehement and immense winds during its ingress and departure. When the water, therefore, being impelled, flows into that place which we call downwards, then the rivers flow through the earth into different channels, and fill them; just as those who pour into another vessel the water which they have drawn. But when this water, departing from thence, is impelled; hither, it again fills the rivers, on the earth; and these, when filled, flow through channels and through the earth; and when they have severally passed through the avenues, which are open to each, they produce seas, lakes, rivers, and fountains. Flowing back again from hence under the earth, and some of them streaming round longer and more numerous places, but others round such as are shorter and less numerous, they again hurl themselves into Tartarus; and some indeed much more profoundly, but others less so, than they were drawn: but the influxions of all of them are deeper than the places from which they flow upwards. And the effluxions of some are in a direction contrary to their influxions, but in others both take place according to the same part. There are some again which entirely flow round in a circle, folding themselves like snakes, once or often about the earth; and being bent downwards as much as possible, they are again, hurled forth on each side till they arrive at the middle, but never beyond this, For each part of the earth becomes steep to both these streams.

The other rivers, indeed, are many, great, and various: but among this abundance there are certain streams, four in number, of which the greatest, and which circularly flows round the earth the outermost of all, is called the Ocean. But that which flows opposite, and in a contrary direction to this, is Acheron; which, flowing through other solitary places, and under the earth, devolves its waters into the Acherusian marsh, into which many souls of the dead pass; and abiding there for certain destined spaces of time, some of which are more and others less extended, they are again sent into the generations of animals. The third river of these hurls itself forth in the middle, and near its source falls into a mighty place, burning with abundance of fire, and produces a sake greater than our sea, and hot with water and mud. But it proceeds from hence in a circle, turbulent and miry, and, surrounding the earth, arrives both elsewhere and at the extremities of the Acherusian marsh, with the water of which it does not become mingled; but, often revolving itself under the earth, flows into the more downward parts of Tartarus. And this is the river which they still denominate Pyriphlegethon; the streams of which send forth dissevered rivers to various parts of the earth. But the fourth river, which is opposite to this, first falls as it is said into a place dreadful and wild, and wholly tinged with an azure color, which they denominate Styx: and the influxive streams of this river form the Stygian marsh. But falling into this, and receiving vehement powers in its water, it hides itself under the earth, and, rolling round, proceeds contrary to Pyriphlegethon, and meets with it in the Acherusian marsh, in a contrary direction. Nor is the water of this river mingled with any thing, but, revolving in a circle, it hurls itself into Tartarus, in a course opposite to Pyriphlegethon. But its name, according to the poets, is Cocytus.

These being thus naturally constructed, when the dead arrive at that place into which the dæmon leads each, in the first place they are judged, as well those who have lived in a becoming manner, and piously, and justly, as those who have not. And those who appear to have passed a middle kind of life, proceeding to Acheron, and ascending the vehicles prepared for them arrive in these at the Acherusian lake, and dwell there; till being purified, and having suffered punishment for any injuries they may have committed, they are enlarged; and each receives the reward of his beneficence, according to his deserts. But those who appear to be incurable, through the magnitude of their offences, because they have perpetrated either many and great sacrileges, or many unjust slaughters, and such as are contrary to law, or other things of this kind—these, a destiny adapted to their guilt hurls into Tartarus, from which they will never be discharged. But those who are found to have committed curable, but yet mighty crimes, such as those who have been guilty through anger of any violence against their father or mother, and have lived the remainder of their lives penitent for the offence, or who have become homicides in any other similar manner; with respect to these, it is necessary that they should fall into Tartarus: but after they have fallen, and have dwelt there for a year, the waves hurl them out of Tartarus; and the homicides indeed into Cocytus, but the violators of fathers and mothers into Pyriphlegethon. But when, being borne along by these rivers, they arrive at the Acherusian marsh, they here bellow and invoke one part those whom they have slaughtered, and another part those whom they have injured. But, invoking these, they suppliantly entreat that they would suffer them to enter into the lake, and forgive them. And if they persuade them to do this, they depart, and find an end to their maladies: but if they are unable to accomplish this, they are carried back again into Tartarus, and from thence again into the rivers. And they do not cease from suffering this, till they have persuaded those they have injured to forgiveness. For this punishment was ordained them by the judges. But those who shall appear to have lived most excellently, with respect to piety—these are they, who, being liberated and dismissed from these places in the earth, as from the abodes of a prison, shall arrive at the pure habitation on high, and dwell on the ætherial earth. And among these, those who are sufficiently purified by philosophy shall live without bodies, through the whole of the succeeding time, and shall arrive at habitations yet more beautiful than these, which it is neither easy to describe, nor is the present time sufficient for such an undertaking.

But for the sake of these particulars which we have related, we should undertake every thing, Simmias, that we may participate of virtue and prudence in the present life. For the reward is beautiful, and the hope mighty. To affirm, indeed, that these things subsist exactly as I have described them is not the province of a man endued with intellect. But to assert that either these or certain particulars of this kind take place, with respect to our souls and their habitations—since our soul appears to be immortal—this is, I think, both becoming, and deserves to be hazarded by him who believes in its reality. For the danger is beautiful; and it is necessary to allure ourselves with things of this kind, as with enchantments: and, on this account, I produced the fable which you have just now heard me relate. But, for the sake of these, it is proper that the man should be confident about his soul, who in the present life bidding farewell to those pleasures which regard the body and its ornaments, as things foreign from his nature, has earnestly applied himself to disciplines, as things of far greater consequence; and who having adorned his soul not with a foreign but its own proper ornament, viz. with temperance and justice, fortitude, liberty and truth, expects a migration to Hades, as one who is ready to depart whenever he shall be called upon by Fate. You, therefore, Simmias and Cebes, and the rest who are here assembled, will each depart in some period of time posterior to the present; but

Me now calling, Fate demands:

(as some tragic poet would say) and it is almost time that I should betake myself to the bath. For it appears to me better to wash myself before I drink the poison, and not to trouble the women with washing my dead body.

Phaedo:: When, therefore, he had thus spoken;

Crito:: Be it so, Socrates: but what orders do you leave to these who are present, or to myself, or respecting your children, or any thing else in the execution of which we can particularly oblige you?

Socrates:: None such as are new, Crito, but that which I have always said to you; that if you take care of yourselves, you will always perform in whatever you do that which is acceptable to myself, to my family, and to your own selves, though you should not promise me any thing at present. But if you neglect yourselves, and are unwilling to live according to what has been now and formerly said, as vestiges of direction in your course, you will accomplish nothing, though you should now promise many things, and in a very vehement manner.

Crito:: We shall take care, therefore, to act as you desire. But how would you be buried?

Socrates:: Just as you please, if you can but catch me, and I do not elude your pursuit.

Phaedo:: And at the same time gently laughing, and addressing himself to us;

Socrates:: I cannot persuade Crito, my friends, that I am that Socrates who now disputes with you, and methodizes every part of the discourse; but he thinks that I am he whom he will shortly behold dead, and asks how I ought to be buried. But all that long discourse which some time since I addressed to you, in which I asserted that after I had drunk the poison I should no longer remain with you, but should depart to certain felicities of the blessed, this I seem to have declared to him in vain, though it was undertaken to console both you and myself. Promise, therefore, for me to Crito, just the contrary of what he promised to my judges. For he promised that I should not run away; but do you engage that when I die I shall not stay with you, but shall depart and entirely leave you; that Crito may more easily bear this separation, and may not be afflicted when he sees my body either burnt or buried, as if I suffered some dreadful misfortune; and that he may not say at my interment, that Socrates is laid out, or is carried out, or is buried. For be well assured of this, excellent Crito, that when we do not speak in a becoming manner, we are not only culpable with respect to our speech, but likewise affect our souls with a certain evil. But it is proper to be confident, and to say that my body will be buried, and in such a manner as is pleasing to you, and which you think is most agreeable to our laws.

Phaedo:: When he had thus spoken he rose, and went into a certain room, that he might wash himself, and Crito followed him: but he ordered us to wait for him. We waited, therefore, accordingly, discoursing over and reviewing among ourselves what had been said; and sometimes speaking about his death, how great a calamity it would be to us; and sincerely thinking that we, like those who are deprived of their father, should pass the rest of our life in the condition of orphans. But when he had washed himself, his sons were brought to him (for he had two little ones, and one considerably advanced in age), and the women belonging to his family likewise came in to him: but when he had spoken to them before Crito, and had left them such injunctions as he thought proper, he ordered the boys and women to depart; and he himself returned to us. And it was now near the setting of the sun: for he had been absent for a long time in the bathing-room. But when he came in from washing, he sat down; and did not speak much afterwards. For then the servant of the eleven magistrates came in, and standing near him;

Jailer:: I do not perceive that in you, Socrates, which I have taken notice of in others; I mean, that they are angry with me, and curie me, when, being compelled by the magistrates, I announce to them that they must drink the poison. But, on the contrary, I have found you at the present time to be the most generous, mild, and the best of all the men that ever came into this place: and, therefore, I am well convinced that you are not angry with me, but with the authors of your present condition. You know those whom I allude to. Now, therefore (for you know what I came to tell you), farewell, and endeavor to bear this necessity as easily as possible.

Phaedo:: And at the same time bursting into tears, and turning himself away, he departed. But Socrates looking after him;

Socrates:: And thou too, farewell; and we shall take care to act as you advise.

Phaedo:: And at the same time turning to us;

Socrates:: How courteous is the behavior of that man! During the whole time of my abode here, he has visited and often conversed with me, and proved himself to be the best of men; and now how generously he weeps on my account! But let us obey him, Crito, and let some one bring the poison, if it is bruised; but if not, let the man whose business it is bruise it himself.

Crito:: But, Socrates, I think that the sun still hangs over the mountains, and is not yet set. And at the same time I have known others who have drunk the poison very late, after it was announced to them; who have supped and drunk abundantly; and who have enjoyed the objects of their love. Therefore, do not be in such haste; for there is yet time enough.

Socrates:: Such men, Crito, act with great propriety in the manner you have described (for they think to derive some advantage by so doing), and I also with great propriety shall not act in this manner. For I do not think I shall gain any thing by drinking it later, except becoming ridiculous to myself through desiring to live, and being sparing of life when nothing of it any longer remains. Go, then, be persuaded, and comply with my request.

Phaedo:: Then Crito, hearing this, gave the sign to the boy that stood near him. And the boy departing, and having staid for some time, came, bringing with him the person that was to administer the poison, and who brought it properly prepared in a cup. But Socrates, beholding the man

Socrates:: It is well, my friend; but what is proper to do with it? for you are knowing in these affairs.

Jailer:: You have nothing else to do, but when you have drunk it to walk about, till a heaviness takes place in your legs; and afterwards lie down: this is the manner in which you should act.

Phaedo:: And at the same time he extended the cup to Socrates. But Socrates received it from him and indeed, Echecrates, with great cheerfulness; neither trembling, nor suffering any alteration for the worse in his color or countenance: but, as he was accustomed to do, beholding the man with a bull-like aspect;

Socrates:: What say you respecting this potion? Is it lawful to make a libation of it, or not?

Jailer:: We only bruise, Socrates, as much as we think sufficient for the purpose.

Socrates:: I understand you: but it is certainly both lawful and proper to pray to the Gods, that my departure from hence thither may be attended with prosperous fortune; which I entreat them to grant may be the case.

Phaedo:: And at the same time ending his discourse, he drank the poison with exceeding facility and alacrity. And thus far, indeed, the greater part of us were tolerably well able to refrain from weeping: but when we saw him drinking, and that he had drunk it, we could no longer restrain our tears. But from me, indeed, notwithstanding the violence which I employed in checking them they flowed abundantly; so that, covering myself with my mantle, I deplored my misfortune. I did not indeed weep for him, but for my own fortune; considering what an associate I should be deprived of. But Crito, who was not able to restrain his tears, was compelled to rise before me. And Apollodorus, who during the whole time prior to this had not ceased from weeping, then wept aloud with great bitterness; so that he infected all who were present, except Socrates. But Socrates, upon seeing this, exclaimed;

Socrates:: What are you doing, excellent men? For, indeed, I principally sent away the women, lest they should produce a disturbance of this kind. For I have heard that it is proper to die joyfully and with propitious omens. Be quiet, therefore, and summon fortitude to your assistance.

Phaedo:: When we heard this we blushed, and restrained our tears. But he, when he found during his walking that his legs felt heavy, and had told us so, said himself down in a supine position. For the man had ordered him to do so. And at the same time he who gave him the poison, touching him at intervals, considered his feet and legs. And after he had vehemently pressed his foot, he asked him if he felt it. But Socrates answered he did not. And after this he again pressed his thighs: and thus ascending with his hand, he showed us that he was cold and stiff. And Socrates also touched himself, and said, that when the poison reached his heart he should then leave us. But now his lower belly was almost cold; when uncovering himself (for he was covered), he said (which were his last words):

Socrates:: Crito, we owe a cock to Æsculapius. Discharge this debt, therefore, for me, and do not neglect it.

Crito:: It shall be done: but consider whether you have any other commands.

Phaedo:: To this inquiry of Crito he made no reply; but shortly after moved himself, and the man covered him. And Socrates fixed his eyes. Which when Crito perceived, he closed his mouth and eyes. This, Echecrates, was the end of our associate; a man, as it appears to me, the best of those whom we were acquainted with at that time, and, besides this, the most prudent and just.

THE END OF THE PHÆDO.

# Phaedo.

Translated by Hugh Tredennich. 1954

Socrates, Phaedo, Echecrates, Crito, Cebes, Simmias,
Apollodorus, Attendant, Xanthippe, Someone, Jailer

Echecrates:: Were you there with Socrates yourself, Phaedo, when he was executed, or did you hear about it from somebody else?

Phaedo:: No, I was there myself, Echecrates.

Echecrates:: Then what did the master say before he died, and how did he meet his end? I should very much like to know. None of the people in Phlius go to Athens much in these days, and it is a long time since we had any visitor from there who could give us any definite information, except that he was executed by drinking hemlock. Nobody could tell us anything more than that.

Phaedo:: Then haven't you even heard how his trial went?

Echecrates:: Yes, someone told us about that, and we were surprised because there was obviously a long interval between it and the execution. How was that, Phaedo?

Phaedo:: A fortunate coincidence, Echecrates. It so happened that on the day before the trial they had just finished garlanding the stern of the ship which Athens sends to Delos.

Echecrates:: What ship is that?

Phaedo:: The Athenians say that it is the one in which Theseus sailed away to Crete with the seven youths and seven maidens, and saved their lives and his own as well. The story says that the Athenians made a vow to Apollo that if these young people's lives were saved they would send a solemn mission to Delos every year, and ever since then they have kept their vow to the god, right down to the present day. They have a law that as soon as this mission begins the city must be kept pure, and no public executions may take place until the ship has reached Delos and returned again, which sometimes takes a long time, if the winds happen to hold it back. The mission is considered to begin as soon as the priest of Apollo has garlanded the stern of the ship, and this happened, as I say, on the day before the trial. That is why Socrates spent such a long time in prison between his trial and execution.

Echecrates:: But what about the actual circumstances of his death, Phaedo? What was said and done, and which of the master's companions were with him? Or did the authorities refuse them admission, so that he passed away without a friend at his side?

Phaedo:: Oh no, some of them were there—quite a number, in fact.

Echecrates:: I wish you would be kind enough to give us a really detailed account—unless you are pressed for time.

Phaedo:: No, not at all. I will try to describe it for you. Nothing gives me more pleasure than recalling the memory of Socrates, either by talking myself or by listening to someone else.

Echecrates:: Well, Phaedo, you will find that your audience feels just the same about it. Now try to describe every detail as carefully as you can.

Phaedo:: In the first place, my own feelings at the time were quite extraordinary. It never occurred to me to feel sorry for him, as you might have expected me to feel at the deathbed of a very dear friend. The master seemed quite happy, Echecrates, both in his manner and in what he said; he met his death so fearlessly and nobly. I could not help feeling that even on his way to the other world he would be under the providence of God, and that when he arrived there all would be well with him, if it ever has been so with anybody. So I felt no sorrow at all, as you might have expected on such a solemn occasion, and at the same time I felt no pleasure at being occupied in our usual philosophical discussions—that was the form that our conversation took. I felt an absolutely incomprehensible emotion, a sort of curious blend of pleasure and pain combined, as my mind took it in that in a little while my friend was going to die. All of us who were there were affected in much the same way, between laughing and crying; one of us in particular, Apollodorus—you know what he is like, don't you?

Echecrates:: Of course I do.

Phaedo:: Well, he quite lost control of himself, and I and the others were very much upset.

Echecrates:: Who were actually there, Phaedo?

Phaedo:: Why, of the local people there were this man Apollodorus, and Critobulus and his father, and then there were Hermogenes and Epigenes and Aeschines and Antisthenes. Oh yes, and Ctesippus of Paeania, and Menexenus, and some other local people. I believe that Plato was ill.

Echecrates:: Were there any visitors from outside?

Phaedo:: Yes, Simmias of Thebes, with Cebes and Phaedondas, and Euclides and Terpsion from Megara.

Echecrates:: Why, weren't Aristippus and Cleombrotus there?

Phaedo:: No, they were in Aegina, apparently.

Echecrates:: Was there anybody else?

Phaedo:: I think that's about all.

Echecrates:: Well, what form did the discussion take?

Phaedo:: I will try to tell you all about it from the very beginning. We had all made it our regular practice, even in the period before, to visit Socrates every day. We used to meet at daybreak by the courthouse where the trial was held, because it was close to the prison. We always spent some time in conversation while we waited for the door to open, which was never very early, and when it did open, we used to go in to see Socrates, and generally spent the day with him. On this particular day we met earlier than usual, because when we left the prison on the evening before, we heard that the boat had just arrived back from Delos; so we urged one another to meet at the same place as early as possible. When we arrived, the porter, instead of letting us in as usual, told us to wait and not to come in until he gave us the word. The commissioners are taking off Socrates' chains, he said, and warning him that he is to die today.

After a short interval he came back and told us to go in. When we went inside we found Socrates just released from his chains, and Xanthippe—you know her!—sitting by him with the little boy on her knee. As soon as Xanthippe saw us she broke out into the sort of remark you would expect from a woman;

Xanthippe:: Oh, Socrates, this is the last time that you and your friends will be able to talk together!

Phaedo:: Socrates looked at Crito.

Socrates:: Crito, someone had better take her home.

Phaedo:: Some of Crito's servants led her away crying hysterically. Socrates sat up on the bed and drew up his leg and massaged it, saying as he did so;

Socrates:: What a queer thing it is, my friends, this sensation which is popularly called pleasure! It is remarkable how closely it is connected with its conventional opposite, pain. They will never come to a man both at once, but if you pursue one of them and catch it, you are nearly always compelled to have the other as well; they are like two bodies attached to the same head. I am sure that if Aesop had thought of it he would have made up a fable about them, something like this—God wanted to stop their continual quarreling, and when he found that it was impossible, he fastened their heads together; so wherever one of them appears, the other is sure to follow after. That is exactly what seems to be happening to me. I had a pain in my leg from the fetter, and now I feel the pleasure coming that follows it.

Phaedo:: Here Cebes broke in and said;

Cebes:: Oh yes, Socrates, I am glad you reminded me. Evenus asked me a day or two ago, as others have done before, about the lyrics which you have been composing lately by a adapting Aesop’s fables and ‘The Prelude’ to Apollo. He wanted to know what induced you to write them now after you had gone to prison, when you had never done anything of the kind before. If you would like me to be able to answer Evenus when he asks me again—as I am sure he will—tell me what I am to say.

Socrates:: Tell him the truth, that I did not compose them to rival either him or his poetry—which I knew would not be easy. I did it in the attempt to discover the meaning of certain dreams, and to clear my conscience, in case this was the art which I had been told to practice. It is like this, you see. In the course of my life I have often had the same dream, appearing in different forms at different times, but always saying the same thing, ‘Socrates, practice and cultivate the arts.’ In the past I used to think that it was impelling and exhorting me to do what I was actually doing; I mean that the dream, like a spectator encouraging a runner in a race, was urging me on to do what I was doing already, that is, practicing the arts, because philosophy is the greatest of the arts, and I was practicing it. But ever since my trial, while the festival of the god has been delaying my execution, I have felt that perhaps it might be this popular form of art that the dream intended me to practice, in which case I ought to practice it and not disobey. I thought it would be safer not to take my departure before I had cleared my conscience by writing poetry and so obeying the dream. I began with some verses in honor of the god whose festival it was. When I had finished my hymn, I reflected that a poet, if he is to be worthy of the name, ought to work on imaginative themes, not descriptive ones, and I was not good at inventing stories. So I availed myself of some of Aesop's fables which were ready to hand and familiar to me, and I versified the first of them that suggested themselves. You can tell Evenus this, Cebes, and bid him farewell from me, and tell him, if he is wise, to follow me as quickly as he can. I shall be going today, it seems; those are my country's orders.

Simmias:: What a piece of advice for Evenus, Socrates! I have had a good deal to do with him before now, and from what I know of him he will not be at all ready to obey you.

Socrates:: Why? Isn't Evenus a philosopher?

Simmias:: So I believe.

Socrates:: Well then, he will be quite willing, just like anyone else who is properly grounded in philosophy. However, he will hardly do himself violence, because they say that it is not legitimate.

Phaedo:: As he spoke he lowered his feet to the ground, and sat like this for the rest of the discussion.

Cebes now asked him;

Cebes:: Socrates, what do you mean by saying that it is not legitimate to do oneself violence, although a philosopher will be willing to follow a friend who dies?

Socrates:: Why, Cebes, have you and Simmias never heard about these things while you have been with Philolaus?

Cebes:: Nothing definite, Socrates.

Socrates:: Well, even my information is only based on hearsay, but I don’t mind at all telling you what I have heard. I suppose that for one who is soon to leave this world there is no more suitable occupation than inquiring into our views about the future life, and trying to imagine what it is like. What else can one do in the time before sunset?

Cebes:: Tell me then, Socrates, what are the grounds for saying that suicide is not legitimate? I have heard it described as wrong before now, as you suggested, both by Philolaus, when he was staying with us, and by others as well, but I have never yet heard any definite explanation for it.

Socrates:: Well, you must not lose heart. Perhaps you will hear one someday. However, no doubt you will feel it strange that this should be the one question that has an unqualified answer—I mean, if it never happens in the case of life and death, as it does in all other connections, that sometimes and for some people death is better than life. And it probably seems strange to you that it should not be right for those to whom death would be an advantage to benefit themselves, but that they should have to await the services of someone else.

Phaedo:: Cebes laughed gently and, dropping into his own dialect, said;

Cebes:: Aye, that it does.

Socrates:: Yes, put in that way it certainly might seem unreasonable, though perhaps it has some justification. The allegory which the mystics tell us—that we men are put in a sort of guard post, from which one must not release oneself or run away—seems to me to be a high doctrine with difficult implications. All the same, Cebes, I believe that this much is true, that the gods are our keepers, and we men are one of their possessions. Don't you think so?

Cebes:: Yes, I do.

Socrates:: Then take your own case. If one of your possessions were to destroy itself without intimation from you that you wanted it to die, wouldn't you be angry with it and punish it, if you had any means of doing so?

Cebes:: Certainly.

Socrates:: So if you look at it in this way I suppose it is not unreasonable to say that we must not put an end to ourselves until God sends some compulsion like the one which we are facing now.

Cebes:: That seems likely, I admit. But what you were saying just now, that philosophers would be readily willing to die—that seems illogical, Socrates, assuming that we were right in saying a moment ago that God is our keeper and we are his possessions. If this service is directed by the gods, who are the very best of masters, it is inexplicable that the very wisest of men should not be grieved at quitting it, because he surely cannot expect to provide for himself any better when he is free. On the other hand a stupid person might get the idea that it would be to his advantage to escape from his master. He might not reason it out that one should not escape from a good master, but remain with him as long as possible, and so he might run away unreflectingly. A sensible man would wish to remain always with his superior. If you look at it in this way, Socrates, the probable thing is just the opposite of what we said just now. It is natural for the wise to be grieved when they die, and for fools to be happy.

Phaedo:: When Socrates had listened to this he seemed to me to be amused at Cebes' persistence, and looking round at us he said;

Socrates:: You know, Cebes is always investigating arguments, and he is not at all willing to accept every statement at its face value.

Simmias:: Well, but, Socrates, I think that this time there is something in what he says. Why should a really wise man want to desert masters who are better than himself, and to get rid of them so lightly? I think Cebes is aiming his criticism at you, because you are making so light of leaving us, and the gods too, who as you admit are good masters.

Socrates:: What you and Cebes say is perfectly fair. You mean, I suppose, that I must make a formal defense against this charge.

Simmias:: Exactly.

Socrates:: Very well then, let me try to make a more convincing defense to you than I made at my trial. If I did not expect to enter the company, first, of other wise and good gods, and secondly of men now dead who are better than those who are in this world now, it is true that I should be wrong in not grieving at death. As it is, you can be assured that I expect to find myself among good men. I would not insist particularly on this point, but on the other I assure you that I shall insist most strongly—that I shall find there divine masters who are supremely good. That is why I am not so much distressed as I might be, and why I have a firm hope that there is something in store for those who have died, and, as we have been told for many years, something much better for the good than for the wicked.

Simmias:: Well, what is your idea, Socrates? Do you mean to keep this knowledge to yourself now that you are leaving us, or will you communicate it to us too? I think that we ought to have a share in this comfort; besides, it will serve as your defense, if we are satisfied with what you say.

Socrates:: Very well, I will try. But before I begin, Crito here seems to have been wanting to say something for some time. Let us find out what it is.

Crito:: Only this, Socrates, that the man who is to give you the poison has been asking me for a long time to tell you to talk as little as possible. He says that talking makes you heated, and that you ought not to do anything to affect the action of the poison. Otherwise it is sometimes necessary to take a second dose, or even a third.

Socrates:: That is his affair. Let him make his own preparations for administering it twice or three times if necessary.

Crito:: I was pretty sure you would say that, but he's been bothering me for a long time.

Socrates:: Never mind him. Now for you, my jury. I want to explain to you how it seems to me natural that a man who has really devoted his life to philosophy should be cheerful in the face of death, and confident of finding the greatest blessing in the next world when his life is finished. I will try to make clear to you, Simmias and Cebes, how this can be so.

Ordinary people seem not to realize that those who really apply themselves in the right way to philosophy are directly and of their own accord preparing themselves for dying and death. If this is true, and they have actually been looking forward to death all their lives, it would of course be absurd to be troubled when the thing comes for which they have so long been preparing and looking forward.

Phaedo:: Simmias laughed and said;

Simmias:: Upon my word, Socrates, you have made me laugh, though I was not at all in the mood for it. I am sure that if they heard what you said, most people would think—and our fellow countrymen would heartily agree—that it was a very good hit at the philosophers to say that they are half dead already, and that they, the normal people, are quite aware that death would serve the philosophers right.

Socrates:: And they would be quite correct, Simmias—except in thinking that they are 'quite aware.' They are not at all aware in what sense true philosophers are half dead, or in what sense they deserve death, or what sort of death they deserve. But let us dismiss them and talk among ourselves. Do we believe that there is such a thing as death?

Phaedo:: Taking up the role of answering, Simmias said;

Simmias:: Most certainly.

Socrates:: Is it simply the release of the soul from the body? Is death nothing more or less than this, the separate condition of the body by itself when it is released from the soul, and the separate condition by itself of the soul when released from the body? Is death anything else than this?

Simmias:: No, just that.

Socrates:: Well then, my boy, see whether you agree with me. I fancy that this will help us to find out the answer to our problem. Do you think that it is right for a philosopher to concern himself with the so-called pleasures connected with food and drink?

Simmias:: Certainly not, Socrates.

Socrates:: What about sexual pleasures?

Simmias:: No, not at all.

Socrates:: And what about the other attentions that we pay to our bodies? Do you think that a philosopher attaches any importance to them? I mean things like providing himself with smart clothes and shoes and other bodily ornaments; do you think that he values them or despises them—in so far as there is no real necessity for him to go in for that sort of thing?

Simmias:: I think the true philosopher despises them.

Socrates:: Then it is your opinion in general that a man of this kind is not concerned with the body, but keeps his attention directed as much as he can away from it and toward the soul?

Simmias:: Yes, it is.

Socrates:: So it is clear first of all in the case of physical pleasures that the philosopher frees his soul from association with the body, so far as is possible, to a greater extent than other men?

Simmias:: It seems so.

Socrates:: And most people think, do they not, Simmias, that a man who finds no pleasure and takes no part in these things does not deserve to live, and that anyone who thinks nothing of physical pleasures has one foot in the grave?

Simmias:: That is perfectly true.

Socrates:: Now take the acquisition of knowledge. Is the body a hindrance or not, if one takes it into partnership to share an investigation?

What I mean is this. Is there any certainty in human sight and hearing, or is it true, as the poets are always dinning into our ears, that we neither hear nor see anything accurately? Yet if these senses are not clear and accurate, the rest can hardly be so, because they are all inferior to the first two. Don't you agree?

Simmias:: Certainly.

Socrates:: Then when is it that the soul attains to truth? When it tries to investigate anything with the help of the body, it is obviously led astray.

Simmias:: Quite so.

Socrates:: Is it not in the course of reflection, if at all, that the soul gets a clear view of facts?

Simmias:: Yes.

Socrates:: Surely the soul can best reflect when it is free of all distractions such as hearing or sight or pain or pleasure of any kind—that is, when it ignores the body and becomes as far as possible independent, avoiding all physical contacts and associations as much as it can, in its search for reality.

Simmias:: That is so.

Socrates:: Then here too—in despising the body and avoiding it, and endeavoring to become independent—the philosopher's soul is ahead of all the rest.

Simmias:: It seems so.

Socrates:: Here are some more questions, Simmias. Do we recognize such a thing as absolute uprightness?

Simmias:: Indeed we do.

Socrates:: And absolute beauty and goodness too?

Simmias:: Of course.

Socrates:: Have you ever seen any of these things with your eyes?

Simmias:: Certainly not.

Socrates:: Well, have you ever apprehended them with any other bodily sense? By ‘them’ I mean not only absolute tallness or health or strength, but the real nature of any given thing—what it actually is. Is it through the body that we get the truest perception of them? Isn’t it true that in any inquiry you are likely to attain more nearly to knowledge of your object in proportion to the care and accuracy with which you have prepared yourself to understand that object in itself?

Simmias:: Certainly.

Socrates:: Don’t you think that the person who is likely to succeed in this attempt most perfectly is the one who approaches each object, as far as possible, with the unaided intellect, without taking account of any sense of sight in his thinking, or dragging any other sense into his reckoning—the man who pursues the truth by applying his pure and unadulterated thought to the pure and unadulterated object, cutting himself off as much as possible from his eyes and ears and virtually all the rest of his body, as an impediment which by its presence prevents the soul from attaining to truth and clear thinking? Is not this the person, Simmias, who will reach the goal of reality, if anybody can?

Simmias:: What you say is absolutely true, Socrates.

Socrates:: All these considerations, must surely prompt serious philosophers to review the position in some such way as this. It looks as though this were a bypath leading to the right track. So long as we keep to the body and our soul is contaminated with this imperfection, there is no chance of our ever attaining satisfactorily to our object, which we assert to be truth. In the first place, the body provides us with innumerable distractions in the pursuit of our necessary sustenance, and any diseases which attack us hinder our quest for reality. Besides, the body fills us with loves and desires and fears and all sorts of fancies and a great deal of nonsense, with the result that we literally never get an opportunity to think at all about anything. Wars and revolutions and battles are due simply and solely to the body and its desires. All wars are undertaken for the acquisition of wealth, and the reason why we have to acquire wealth is the body, because we are slaves in its service. That is why, on all these accounts, we have so little time for philosophy. Worst of all, if we do obtain any leisure from the body's claims and turn to some line of inquiry, the body intrudes once more into our investigations, interrupting, disturbing, distracting, and preventing us from getting a glimpse of the truth. We are in fact convinced that if we are ever to have pure knowledge of anything, we must get rid of the body and contemplate things by themselves with the soul by itself. It seems, to judge from the argument, that the wisdom which we desire and upon which we profess to have set our hearts will be attainable only when we are dead, and not in our lifetime. If no pure knowledge is possible in the company of the body, then either it is totally impossible to acquire knowledge, or it is only possible after death, because it is only then that the soul will be separate and independent of the body. It seems that so long as we are alive, we shall continue closest to knowledge if we avoid as much as we can all contact and association with the body, except when they are absolutely necessary, and instead of allowing ourselves to become infected with its nature, purify ourselves from it until God himself gives us deliverance. In this way, by keeping ourselves uncontaminated by the follies of the body, we shall probably reach the company of others like ourselves and gain direct knowledge of all that is pure and uncontaminated—that is, presumably, of truth.

For one who is not pure himself to attain to the realm of purity would no doubt be a breach of universal justice.

Something to this effect, Simmias, is what I imagine all real lovers of learning must think themselves and say to one another. Don't you agree with me?

Simmias:: Most emphatically, Socrates.

Socrates:: Very well, then,  if this is true, there is good reason for anyone who reaches the end of this journey which lies before me to hope that there, if anywhere, he will attain the object to which all our efforts have been directed during my past life. So this journey which is now ordained for me carries a happy prospect for any other man also who believes that his mind has been prepared by purification.

Simmias:: It does indeed.

Socrates:: And purification, as we saw some time ago in our discussion, consists in separating the soul as much as possible from the body, and accustoming it to withdraw from all contact with the body and concentrate itself by itself, and to have its dwelling, so far as it can, both now and in the future, alone by itself, freed from the shackles of the body. Does not that follow?

Simmias:: Yes, it does.

Socrates:: Is not what we call death a freeing and separation of soul from body?

Simmias:: Certainly.

Socrates:: And the desire to free the soul is found chiefly, or rather only, in the true philosopher. In fact the philosopher's occupation consists precisely in the freeing and separation of soul from body. Isn't that so?

Simmias:: Apparently.

Socrates:: Well then, as I said at the beginning, if a man has trained himself throughout his life to live in a state as close as possible to death, would it not be ridiculous for him to be distressed when death comes to him?

Simmias:: It would, of course.

Socrates:: Then it is a fact, Simmias, that true philosophers make dying their profession, and that to them of all men death is least alarming. Look at it in this way. If they are thoroughly dissatisfied with the body, and long to have their souls independent of it, when this happens would it not be entirely unreasonable to be frightened and distressed? Would they not naturally be glad to set out for the place where there is a prospect of attaining the object of their lifelong desire—which is wisdom—and of escaping from an unwelcome association? Surely there are many who have chosen of their own free will to follow dead lovers and wives and sons to the next world, in the hope of seeing and meeting there the persons whom they loved. If this is so, will a true lover of wisdom who has firmly grasped this same conviction—that he will never attain to wisdom worthy of the name elsewhere than in the next world—will he be grieved at dying? Will he not be glad to make that journey? We must suppose so, my dear boy, that is, if he is a real philosopher, because then he will be of the firm belief that he will never find wisdom in all its purity in any other place. If this is so, would it not be quite unreasonable, as I said just now, for such a man to be afraid of death?

Simmias:: It would, indeed.

Socrates:: So if you see anyone distressed at the prospect of dying, it will be proof enough that he is a lover not of wisdom but of the body. As a matter of fact, I suppose he is also a lover of wealth and reputation—one or the other, or both.

Simmias:: Yes, you are quite right.

Socrates:: Doesn’t it follow, Simmias, that the virtue which we call courage belongs primarily to the philosophical disposition?

Simmias:: Yes, no doubt it does.

Socrates:: Self-control, too, as it is understood even in the popular sense—not being carried away by the desires, but preserving a decent indifference toward them—is not this appropriate only to those who regard the body with the greatest indifference and spend their lives in philosophy?

Simmias:: Certainly.

Socrates:: If you care to consider courage and self-control as practiced by other people, you will find them illogical.

Simmias:: How so, Socrates?

Socrates:: You know, don’t you, that everyone except the philosopher regards death as a great evil?

Simmias:: Yes, indeed.

Socrates:: Isn’t it true that when a brave man faces death he does so through fear of something worse?

Simmias:: Yes, it is true.

Socrates:: So in everyone except the philosopher courage is due to fear and dread, although it is illogical that fear and cowardice should make a man brave.

Simmias:: Quite so.

Socrates:: What about temperate people? Is it not, in just the same way, a sort of self-indulgence that makes them self-controlled? We may say that this is impossible, but all the same those who practice this simple form of self-control are in much the same case as that which I have just described. They are afraid of losing other pleasures which they desire, so they refrain from one kind because they cannot resist the other. Although they define self-indulgence as the condition of being ruled by pleasure, it is really because they cannot resist some pleasures that they succeed in resisting others, which amounts to what I said just now—that they control themselves, in a sense, by self-indulgence.

Simmias:: Yes, that seems to be true.

Socrates:: I congratulate you on your perception, Simmias. No, I am afraid that, from the moral standpoint, it is not the right method to exchange one degree of pleasure or pain or fear for another, like coins of different values. There is only one currency for which all these tokens of ours should be exchanged, and that is wisdom. In fact, it is wisdom that makes possible courage and self-control and integrity or, in a word, true goodness, and the presence or absence of pleasures and fears and other such feelings makes no difference at all, whereas a system of morality which is based on relative emotional values is a mere illusion, a thoroughly vulgar conception which has nothing sound in it and nothing true. The true moral ideal, whether self-control or integrity or courage, is really a kind of purgation from all these emotions, and wisdom itself is a sort of purification. Perhaps these people who direct the religious initiations are not so far from the mark, and all the time there has been an allegorical meaning beneath their doctrine that he who enters the next world uninitiated and unenlightened shall lie in the mire, but he who arrives there purified and enlightened shall dwell among the gods. You know how the initiation practitioners say, ‘Many bear the emblems, but the devotees are few’? Well, in my opinion these devotees are simply those who have lived the philosophical life in the right way—a company which, all through my life, I have done my best in every way to join, leaving nothing undone which I could do to attain this end. Whether I was right in this ambition, and whether we have achieved anything, we shall know for certain, if God wills, when we reach the other world, and that, I imagine, will be fairly soon.

This is the defense which I offer you, Simmias and Cebes, to show that it is natural for me to leave you and my earthly rulers without any feeling of grief or bitterness, since I believe that I shall find there, no less than here, good rulers and good friends. If I am any more convincing in my defense to you than I was to my Athenian jury, I shall be satisfied.

Phaedo:: When Socrates had finished, Cebes made his reply.

Cebes:: The rest of your statement, Socrates, seems excellent to me, but what you said about the soul leaves the average person with grave misgivings that when it is released from the body it may no longer exist anywhere, but may be dispersed and destroyed on the very day that the man himself dies, as soon as it is freed from the body, that as it emerges it may be dissipated like breath or smoke, and vanish away, so that nothing is left of it anywhere. Of course if it still existed as an independent unity, released from all the evils which you have just described, there would be a strong and glorious hope, Socrates, that what you say is true. But I fancy that it requires no little faith and assurance to believe that the soul exists after death and retains some active force and intelligence.

Socrates:: Quite true, Cebes. But what are we to do about it? Is it your wish that we should go on speculating about the subject, to see whether this view is likely to be true or not?

Cebes:: For my part, I should be very glad to hear what you think about it.

Socrates:: At any rate, I hardly think that anyone who heard us now—even a comic poet—would say that I am wasting time and discoursing on subjects which do not concern me. So if that is how you feel, we had better continue our inquiry. Let us approach it from this point of view. Do the souls of the departed exist in another world or not?

There is an old legend, which we still remember, to the effect that they *do* exist there, after leaving here, and that they return again to this world and come into being from the dead. If this is so—that the living come into being again from the dead—does it not follow that our souls exist in the other world? They could not come into being again if they did not exist, and it will be sufficient proof that my contention is true if it really becomes apparent that the living come from the dead, and from nowhere else. But if this is not so, we shall need some other argument.

Cebes:: Quite so.

Socrates:: If you want to understand the question more readily, consider it with reference not only to human beings but to all animals and plants. Let us see whether in general everything that admits of generation is generated in this way and no other—opposites from opposites, wherever there is an opposite—as for instance beauty is opposite to ugliness and right to wrong, and there are countless other examples. Let us consider whether it is a necessary law that everything which has an opposite is generated from that opposite and from no other source. For example, when a thing becomes bigger, it must, I suppose, have been smaller first before it became bigger?

Cebes:: Yes.

Socrates:: And similarly if it becomes smaller, it must be bigger first, and become smaller afterward?

Cebes:: That is so.

Socrates:: And the weaker comes from the stronger, and the faster from the slower?

Cebes:: Certainly.

Socrates:: One more instance. If a thing becomes worse, is it not from being better? And if more just, from being more unjust?

Cebes:: Of course.

Socrates:: Are we satisfied, then, that everything is generated in this way—opposites from opposites?

Cebes:: Perfectly.

Socrates:: Here is another question. Do not these examples present another feature, that between each pair of opposites there are two processes of generation, one from the first to the second, and another from the second to the first? Between a larger and a smaller object are there not the processes of increase and decrease, and do we not describe them in this way as increasing and decreasing?

Cebes:: Yes.

Socrates:: Is it not the same with separating and combining, cooling and heating, and all the rest of them? Even if we sometimes do not use the actual terms, must it not in fact hold good universally that they come one from the other, and that there is a process of generation from each to the other?

Cebes:: Certainly.

Socrates:: Well then, is there an opposite to living, as sleeping is opposite to waking?

Cebes:: Certainly.

Socrates:: What?

Cebes:: Being dead.

Socrates:: So if they are opposites, they come from one another, and have their two processes of generation between the two of them?

Cebes:: Of course.

Socrates:: Very well, then, I will state one pair of opposites which I mentioned just now—the opposites themselves and the processes between them—and you shall state the other. My opposites are sleeping and waking, and I say that waking comes from sleeping and sleeping from waking, and that the processes between them are going to sleep and waking up. Does that satisfy you, or not?

Cebes:: Perfectly.

Socrates:: Now you tell me in the same way, about life and death. Do you not admit that death is the opposite of life?

Cebes:: I do.

Socrates:: And that they come from one another?

Cebes:: Yes.

Socrates:: Then what comes from the living?

Cebes:: The dead.

Socrates:: And what comes from the dead?

Cebes:: I must admit that it is the living.

Socrates:: So it is from the dead, Cebes, that living things and people come?

Cebes:: Evidently.

Socrates:: Then our souls do exist in the next world.

Cebes:: So it seems.

Socrates:: And one of the two processes in this case is really quite certain—dying is certain enough, isn't it?

Cebes:: Yes, it is.

Socrates:: What shall we do, then? Shall we omit the complementary process, and leave a defect here in the law of nature? Or must we supply an opposite process to that of dying?

Cebes:: Surely we must supply it.

Socrates:: And what is it?

Cebes:: Coming to life again.

Socrates:: Then if there is such a thing as coming to life again, it must be a process from death to life?

Cebes:: Quite so.

Socrates:: So we agree upon this too—that the living have come from the dead no less than the dead from the living. But I think we decided that if this was so, it was a sufficient proof that the souls of the dead must exist in some place from which they are reborn.

Cebes:: It seems to me, Socrates, that this follows necessarily from our agreement.

Socrates:: I think there is another way too, Cebes, in which you can see that we were not wrong in our agreement. If there were not a constant correspondence in the process of generation between the two sets of opposites, going round in a sort of cycle, if generation were a straight path to the opposite extreme without any return to the starting point or any deflection, do you realize that in the end everything would have the same quality and reach the same state, and change would cease altogether?

Cebes:: What do you mean?

Socrates:: Nothing difficult to understand. For example, if 'falling asleep' existed, and 'waking up' did not balance it by making something come out of sleep, you must realize that in the end everything would make Endymion look foolish. He would be nowhere, because the whole world would be in the same state—asleep. And if everything were combined and nothing separated, we should soon have Anaxagoras' 'all things together.' In just the same way, my dear Cebes, if everything that has some share of life were to die, and if after death the dead remained in that form and did not come to life again, would it not be quite inevitable that in the end everything should be dead and nothing alive? If living things came from other living things, and the living things died, what possible means could prevent their number from being exhausted by death?

Cebes:: None that I can see, Socrates. What you say seems to be perfectly true.

Socrates:: Yes, Cebes, if anything is true, I believe that this is, and we were not mistaken in our agreement upon it. Coming to life again is a fact, and it is a fact that the living come from the dead, and a fact that the souls of the dead exist.

Cebes:: Besides, Socrates, there is that theory which you have often described to us—that what we call learning is really just recollection. If that is true, then surely what we recollect now we must have learned at some time before, which is impossible unless our souls existed somewhere before they entered this human shape. So in that way too it seems likely that the soul is immortal.

Simmias:: How did the proofs of that theory go, Cebes? Remind me, because at the moment I can't quite remember.

Cebes:: One very good argument is that when people are asked questions, if the question is put in the right way they can give a perfectly correct answer, which they could not possibly do unless they had some knowledge and a proper grasp of the subject. And then if you confront people with a diagram or anything like that, the way in which they react is an unmistakable proof that the theory is correct.

Socrates:: And if you don't find that convincing, Simmias, see whether this appeals to you. I suppose that you find it hard to understand how what we call learning can be recollection?

Simmias:: Not at all. All that I want is to be helped to do what we are talking about—to recollect. I can practically remember enough to satisfy me already, from Cebes' approach to the subject, but I should be nonetheless glad to hear how you meant to approach it.

Socrates:: I look at it in this way. We are agreed, I suppose, that if a person is to be reminded of anything, he must first know it at some time or other?

Simmias:: Quite so.

Socrates:: Are we also agreed in calling it recollection when knowledge comes in a particular way? I will explain what I mean. Suppose that a person on seeing or hearing or otherwise noticing one thing not only becomes conscious of that thing but also thinks of a something else which is an object of a different sort of knowledge. Are we not justified in saying that he was reminded of the object which he thought of?

Simmias:: What do you mean?

Socrates:: Let me give you an example. A human being and a musical instrument, I suppose you will agree, are different objects of knowledge.

Simmias:: Yes, certainly.

Socrates:: Well, you know what happens to lovers when they see a musical instrument or a piece of clothing or any other private property of the person whom they love. When they recognize the thing, their minds conjure up a picture of its owner. That is recollection. In the same way the sight of Simmias often reminds one of Cebes, and of course there are thousands of other examples.

Simmias:: Yes, of course there are.

Socrates:: So by recollection we mean the sort of experience which I have just described, especially when it happens with reference to things which we had not seen for such a long time that we had forgotten them.

Simmias:: Quite so.

Socrates:: Well, then, is it possible for a person who sees a picture of a horse or a musical instrument to be reminded of a person, or for someone who sees a picture of Simmias to be reminded of Cebes?

Simmias:: Perfectly.

Socrates:: And is it possible for someone who sees a portrait of Simmias to be reminded of Simmias himself?

Simmias:: Yes, it is.

Socrates:: Does it not follow from all this that recollection may be caused either by similar or by dissimilar objects?

Simmias:: Yes, it does.

Socrates:: When you are reminded by similarity, surely you must also be conscious whether the similarity is perfect or only partial.

Simmias:: Yes, you must.

Socrates:: Here is a further step. We admit, I suppose, that there is such a thing as equality—not the equality of stick to stick and stone to stone, and so on, but something beyond all that and distinct from it—absolute equality. Are we to admit this or not?

Simmias:: Yes indeed, most emphatically.

Socrates:: And do we know what it is?

Simmias:: Certainly.

Socrates:: Where did we get our knowledge? Was it not from the particular examples that we mentioned just now? Was it not from seeing equal sticks or stones or other equal objects that we got the notion of equality, although it is something quite distinct from them? Look at it in this way. Is it not true that equal stones and sticks sometimes, without changing in themselves, appear equal to one person and unequal to another?

Simmias:: Certainly.

Socrates:: Well, now, have you ever thought that things which were absolutely equal were unequal, or that equality was inequality?

Simmias:: No, never, Socrates.

Socrates:: Then these equal things are not the same as absolute equality.

Simmias:: Not in the least, as I see it, Socrates.

Socrates:: And yet it is these equal things that have suggested and conveyed to you your knowledge of absolute equality, although they are distinct from it?

Simmias:: Perfectly true.

Socrates:: Whether it is similar to them or dissimilar?

Simmias:: Certainly.

Socrates:: It makes no difference. So long as the sight of one thing suggests another to you, it must be a cause of recollection, whether the two things are alike or not.

Simmias:: Quite so.

Socrates:: Well, now, what do we find in the case of the equal sticks and other things of which we were speaking just now? Do they seem to us to be equal in the sense of absolute equality, or do they fall short of it in so far as they only approximate to equality? Or don't they fall short at all?

Simmias:: They do, a long way.

Socrates:: Suppose that when you see something you say to yourself, This thing which I can see has a tendency to be like something else, but it falls short and cannot be really like it, only a poor imitation. Don’t you agree with me that anyone who receives that impression must in fact have previous knowledge of that thing which he says that the other resembles, but inadequately?

Simmias:: Certainly he must.

Socrates:: Very well, then, is that our position with regard to equal things and absolute equality?

Simmias:: Exactly.

Socrates:: Then we must have had some previous knowledge of equality before the time when we first saw equal things and realized that they were striving after equality, but fell short of it.

Simmias:: That is so.

Socrates:: And at the same time we are agreed also upon this point, that we have not and could not have acquired this notion of equality except by sight or touch or one of the other senses. I am treating them as being all the same.

Simmias:: They are the same, Socrates, for the purpose of our argument.

Socrates:: So it must be through the senses that we obtained the notion that all sensible equals are striving after absolute equality but falling short of it. Is that correct?

Simmias:: Yes, it is.

Socrates:: So before we began to see and hear and use our other senses we must somewhere have acquired the knowledge that there is such a thing as absolute equality. Otherwise we could never have realized, by using it as a standard for comparison, that all equal objects of sense are desirous of being like it, but are only imperfect copies.

Simmias:: That is the logical conclusion, Socrates.

Socrates:: Did we not begin to see and hear and possess our other senses from the moment of birth?

Simmias:: Certainly.

Socrates:: But we admitted that we must have obtained our knowledge of equality before we obtained them.

Simmias:: Yes.

Socrates:: So we must have obtained it before birth.

Simmias:: So it seems.

Socrates:: Then if we obtained it before our birth, and possessed it when we were born, we had knowledge, both before and at the moment of birth, not only of equality and relative magnitudes, but of all absolute standards. Our present argument applies no more to equality than it does to absolute beauty, goodness, uprightness, holiness, and, as I maintain, all those characteristics which we designate in our discussions by the term 'absolute.' So we must have obtained knowledge of all these characteristics before our birth.

Simmias:: That is so.

Socrates:: And unless we invariably forget it after obtaining it we must always be born *knowing* and continue to *know* all through our lives, because 'to know' means simply to retain the knowledge which one has acquired, and not to lose it. Is not what we call 'forgetting' simply the loss of knowledge, Simmias?

Simmias:: Most certainly, Socrates.

Socrates:: And if it is true that we acquired our knowledge before our birth, and lost it at the moment of birth, but afterward, by the exercise of our senses upon sensible objects, recover the knowledge which we had once before, I suppose that what we call learning will be the recovery of our own knowledge, and surely we should be right in calling this recollection.

Simmias:: Quite so.

Socrates:: Yes, because we saw that it is possible for the perception of an object by sight or hearing or any of the other senses to suggest to the percipient, through association, whether there is any similarity or not, another object which he has forgotten. So, as I maintain, there are two alternatives. Either we are all born with knowledge of these standards, and retain it throughout our lives, or else, when we speak of people learning, they are simply recollecting what they knew before. In other words, learning is recollection.

Simmias:: Yes, that must be so, Socrates.

Socrates:: Which do you choose, then, Simmias? That we are born with knowledge, or that we recollect after we are born the things of which we possessed knowledge before we were born?

Simmias:: I don't know which to choose on the spur of the moment, Socrates.

Socrates:: Well, here is another choice for you to make. What do you think about this? Can a person who knows a subject thoroughly explain what he knows?

Simmias:: Most certainly he can.

Socrates:: Do you think that everyone can explain these questions about which we have just been talking?

Simmias:: I should like to think so, but I am very much afraid that by this time tomorrow there will be no one on this earth who can do it properly.

Socrates:: So you don't think, Simmias, that everyone has knowledge about them?

Simmias:: Far from it.

Socrates:: Then they just recollect what they once learned.

Simmias:: That must be the right answer.

Socrates:: When do our souls acquire this knowledge? It cannot be after the beginning of our mortal life.

Simmias:: No, of course not.

Socrates:: Then it must be before.

Simmias:: Yes.

Socrates:: Then our souls had a previous existence, Simmias, before they took on this human shape. They were independent of our bodies, and they were possessed of intelligence.

Simmias:: Unless perhaps it is at the moment of birth that we acquire knowledge of these things, Socrates. There is still that time available.

Socrates:: No doubt, my dear fellow, but just tell me, what other time is a there to lose it in? We have just agreed that we do not possess it when we are born. Do we lose it at the same moment that we acquire it? Or can you suggest any other time?

Simmias:: No, of course not, Socrates. I didn't realize what nonsense I was talking.

Socrates:: Well, how do we stand now, Simmias? If all these absolute realities, such as beauty and goodness, which we are always talking about, really exist, if it is to them, as we rediscover our own former knowledge of them, that we refer, as copies to their patterns, all the objects of our physical perception—if these realities exist, does it not follow that our souls must exist too even before our birth, whereas if they do not exist, our discussion would seem to be a waste of time? Is this the position, that it is logically just as certain that our souls exist before our birth as it is that these realities exist, and that if the one is impossible, so is the other?

Simmias:: It is perfectly obvious to me, Socrates, that the same logical necessity applies to both. It suits me very well that your argument should rely upon the point that our soul's existence before our birth stands or falls with the existence of your grade of reality. I cannot imagine anything more self-evident than the fact that absolute beauty and goodness and all the rest that you mentioned just now exist in the fullest possible sense. In my opinion the proof is quite satisfactory.

Socrates:: What about Cebes? We must convince Cebes too.

Simmias:: To the best of my belief he is satisfied. It is true that he is the most obstinate person in the world at resisting an argument, but I should think that he needs nothing more to convince him that our souls existed before our birth. As for their existing after we are dead as well, even I don't feel that that has been proved, Socrates. Cebes' objection still holds—the common fear that a man's soul may be disintegrated at the very moment of his death, and that this may be the end of its existence. Supposing that it is born and constituted from some source or other, and exists before it enters a human body. After it has entered one, is there any reason why, at the moment of release, it should not come to an end and be destroyed itself?

Cebes:: Quite right, Simmias. It seems that we have got the proof of one half of what we wanted—that the soul existed before birth—but now we need also to prove that it will exist after death no less than before birth, if our proof is to be complete.

Socrates:: As a matter of fact, my dear Simmias and Cebes, it is proved already, if you will combine this last argument with the one about which we agreed before, that every living thing comes from the dead. If the soul exists before birth, and if when it proceeds toward life and is born it must be born from death or the dead state, surely it must also exist after death, if it must be born again. So the point which you mention has been proved already. But in spite of this I believe that you and Simmias would like to spin out the discussion still more. You are afraid, as children are, that when the soul emerges from the body the wind may really puff it away and scatter it, especially when a person does not die on a calm day but with a gale blowing.

Phaedo:: Cebes laughed.

Cebes:: Suppose that we are afraid, Socrates, and try to convince us. Or rather don't suppose that it is we that are afraid. Probably even in us there is a little boy who has these childish terrors. Try to persuade him not to be afraid of death as though it were a bogy.

Socrates:: What you should do, is to say a magic spell over him every day until you have charmed his fears away.

Simmias:: But, Socrates, where shall we find a magician who understands these spells now that you… are leaving us?

Socrates:: Greece is a large country, Cebes, which must have good men in it, and there are many foreign races too. You must ransack all of them in your search for this magician, without sparing money or trouble, because you could not spend your money more opportunely on any other object. And you must search also by your own united efforts, because it is probable that you would not easily find anyone better fitted for the task.

Cebes:: We will see to that. But let us return to the point where we left off, if you have no objection.

Socrates:: Of course not. Why should I?

Cebes:: Thank you.

Socrates:: We ought, I think, to ask ourselves this. What sort of thing is it that would naturally suffer the fate of being dispersed? For what sort of thing should we fear this fate, and for what should we not? When we have answered this, we should next consider to which class the soul belongs, and then we shall know whether to feel confidence or fear about the fate of our souls.

Cebes:: Quite true.

Socrates:: Would you not expect a composite object or a natural compound to be liable to break up where it was put together? And ought not anything which is really incomposite to be the one thing of all others which is not affected in this way?

Cebes:: That seems to be the case.

Socrates:: Is it not extremely probable that what is always constant and invariable is incomposite, and what is inconstant and variable is composite?

Cebes:: That is how it seems to me.

Socrates:: Then let us return to the same examples which we were discussing before. Does that absolute reality which we define in our discussions remain always constant and invariable, or not? Does absolute equality or beauty or any other independent entity which really exists ever admit change of any kind? Or does each one of these uniform and independent entities remain always constant and invariable, never admitting any alteration in any respect or in any sense?

Cebes:: They must be constant and invariable, Socrates.

Socrates:: Well, what about the concrete instances of beauty—such as men, horses, clothes, and so on—or of equality, or any other members of a class corresponding to an absolute entity? Are they constant, or are they, on the contrary, scarcely ever in the same relation in any sense either to themselves or to one another?

Cebes:: With them, Socrates, it is just the opposite; they are never free from variation.

Socrates:: And these concrete objects you can touch and see and perceive by your other senses, but those constant entities you cannot possibly apprehend except by thinking; they are invisible to our sight.

Cebes:: That is perfectly true.

Socrates:: So you think that we should assume two classes of things, one visible and the other invisible?

Cebes:: Yes, we should.

Socrates:: The invisible being invariable, and the visible never being the same?

Cebes:: Yes, we should assume that too.

Socrates:: Well, now, are we not part body, part soul?

Cebes:: Certainly.

Socrates:: Then to which class do we say that the body would have the closer resemblance and relation?

Cebes:: Quite obviously to the visible.

Socrates:: And the soul, is it visible or invisible?

Cebes:: Invisible to men, at any rate, Socrates.

Socrates:: But surely we have been speaking of things visible or invisible to our human nature. Do you think that we had some other nature in view?

Cebes:: No, human nature.

Socrates:: What do we say about the soul, then? Is it visible or invisible?

Cebes:: Not visible.

Socrates:: Invisible, then?

Cebes:: Yes.

Socrates:: So soul is more like the invisible, and body more like the visible?

Cebes:: That follows inevitably, Socrates.

Socrates:: Did we not say some time ago that when the soul uses the instrumentality of the body for any inquiry, whether through sight or hearing or any other sense—because using the body implies using the senses—it is drawn away by the body into the realm of the variable, and loses its way and becomes confused and dizzy, as though it were fuddled, through contact with things of a similar nature?

Cebes:: Certainly.

Socrates:: But when it investigates by itself, it passes into the realm of the pure and everlasting and immortal and changeless, and being of a kindred nature, when it is once independent and free from interference, consorts with it always and strays no longer, but remains, in that realm of the absolute, constant and invariable, through contact with beings of a similar nature. And this condition of the soul we call wisdom.

Cebes:: An excellent description, and perfectly true, Socrates.

Socrates:: Very well, then, in the light of all that we have said, both now and before, to which class do you think that the soul bears the closer resemblance and relation?

Cebes:: I think, Socrates, that even the dullest person would agree, from this line of reasoning, that the soul is in every possible way more like the invariable than the variable.

Socrates:: And the body?

Cebes:: To the other.

Socrates:: Look at it in this way too. When soul and body are both in the same place, nature teaches the one to serve and be subject, the other to rule and govern. In this relation which do you think resembles the divine and which the mortal part? Don’t you think that it is the nature of the divine to rule and direct, and that of the mortal to be subject and serve?

Cebes:: I do.

Socrates:: Then which does the soul resemble?

Cebes:: Obviously, Socrates, soul resembles the divine, and body the mortal.

Socrates:: Now, Cebes, see whether this is our conclusion from all that we have said. The soul is most like that which is divine, immortal, intelligible, uniform, indissoluble, and ever self-consistent and invariable, whereas body is most like that which is human, mortal, multiform, unintelligible, dissoluble, and never self-consistent. Can we adduce any conflicting argument, my dear Cebes, to show that this is not so?

Cebes:: No, we cannot.

Socrates:: Very well, then, in that case is it not natural for body to disintegrate rapidly, but for soul to be quite or very nearly indissoluble?

Cebes:: Certainly.

Socrates:: Of course you know that when a person dies, although it is natural for the visible and physical part of him, which lies here in the visible world and which we call his corpse, to decay and fall to pieces and be dissipated, none of this happens to it immediately. It remains as it was for quite a long time, even if death takes place when the body is well nourished and in the warm season. Indeed, when the body is dried and embalmed, as in Egypt, it remains almost intact for an incredible time, and even if the rest of the body decays, some parts of it—the bones and sinews and anything else like them—are practically everlasting. That is so, is it not?

Cebes:: Yes.

Socrates:: But the soul, the invisible part, which goes away to a place that is, like itself, glorious, pure, and invisible—the true Hades or unseen world—into the presence of the good and wise God, where, if God so wills, my soul must shortly go—will it, if its very nature is such as I have described, be dispersed and destroyed at the moment of its release from the body, as is the popular view? Far from it, my dear Simmias and Cebes. The truth is much more like this. If at its release the soul is pure and carries with it no contamination of the body, because it has never willingly associated with it in life, but has shunned it and kept itself separate as its regular practice—in other words, if it has pursued philosophy in the right way and really practiced how to face death easily—this is what ‘practicing death’ means, isn’t it?

Cebes:: Most decidedly.

Socrates:: Very well, if this is its condition, then it departs to that place which is, like itself, invisible, divine, immortal, and wise, where, on its arrival, happiness awaits it, and release from uncertainty and folly, from fears and uncontrolled desires, and all other human evils, and where, as they say of the initiates in the Mysteries, it really spends the rest of time with God. Shall we adopt this view, Cebes, or some other?

Cebes:: This one, by all means.

Socrates:: But, I suppose, if at the time of its release the soul is tainted and impure, because it has always associated with the body and cared for it and loved it, and has been so beguiled by the body and its passions and pleasures that nothing seems real to it but those physical things which can be touched and seen and eaten and drunk and used for sexual enjoyment, and if it is accustomed to hate and fear and avoid what is invisible and hidden from our eyes, but intelligible and comprehensible by philosophy—if the soul is in this state, do you think that it will escape independent and uncontaminated?

Cebes:: That would be quite impossible.

Socrates:: On the contrary, it will, I imagine, be permeated by the corporeal, which fellowship and intercourse with the body will have ingrained in its very nature through constant association and long practice.

Cebes:: Certainly.

Socrates:: And we must suppose, my dear fellow, that the corporeal is heavy, oppressive, earthly, and visible. So the soul which is tainted by its presence is weighed down and dragged back into the visible world, through fear, as they say, of Hades or the invisible, and hovers about tombs and graveyards. The shadowy apparitions which have actually been seen there are the ghosts of those souls which have not got clear away, but still retain some portion of the visible, which is why they can be seen.

Cebes:: That seems likely enough, Socrates.

Socrates:: Yes, it does, Cebes. Of course these are not the souls of the good, but of the wicked, and they are compelled to wander about these places as a punishment for their bad conduct in the past. They continue wandering until at last, through craving for the corporeal, which unceasingly pursues them, they are imprisoned once more in a body. And as you might expect, they are attached to the same sort of character or nature which they have developed during life.

Cebes:: What sort do you mean, Socrates?

Socrates:: Well, those who have cultivated gluttony or selfishness or drunkenness, instead of taking pains to avoid them, are likely to assume the form of donkeys and other perverse animals. Don't you think so?

Cebes:: Yes, that is very likely.

Socrates:: And those who have deliberately preferred a life of irresponsible lawlessness and violence become wolves and hawks and kites, unless we can suggest any other more likely animals.

Cebes:: No, the ones which you mention are exactly right.

Socrates:: So it is easy to imagine into what sort of animals all the other kinds of soul will go, in accordance with their conduct during life.

Cebes:: Yes, certainly.

Socrates:: I suppose that the happiest people, and those who reach the best destination, are the ones who have cultivated the goodness of an ordinary citizen—what is called self-control and integrity—which is acquired by habit and practice, without the help of philosophy and reason.

Cebes:: How are these the happiest?

Socrates:: Because they will probably pass into some other kind of social and disciplined creature like bees, wasps, and ants, or even back into the human race again, becoming decent citizens.

Cebes:: Very likely.

Socrates:: But no soul which has not practiced philosophy, and is not absolutely pure when it leaves the body, may attain to the divine nature; that is only for the lover of wisdom. This is the reason, my dear Simmias and Cebes, why true philosophers abstain from all bodily desires and withstand them and do not yield to them. It is not because they are afraid of financial loss or poverty, like the average man who thinks of money first, nor because they shrink from dishonor and a bad reputation, like those who are ambitious for distinction and authority.

Cebes:: No, those would be unworthy motives, Socrates.

Socrates:: They would indeed. And so, Cebes, those who care about their souls and do not subordinate them to the body dissociate themselves firmly from these others and refuse to accompany them on their haphazard journey, and, believing that it is wrong to oppose philosophy with her offer of liberation and purification, they turn and follow her wherever she leads.

Cebes:: What do you mean, Socrates?

Socrates:: I will explain. Every seeker after wisdom knows that up to the time when philosophy takes it over his soul is a helpless prisoner, chained hand and foot in the body, compelled to view reality not directly but only through its prison bars, and wallowing in utter ignorance. And philosophy can see that the imprisonment is ingeniously effected by the prisoner's own active desire, which makes him first accessory to his own confinement. Well, philosophy takes over the soul in this condition and by gentle persuasion tries to set it free. She points out that observation by means of the eyes and ears and all the other senses is entirely deceptive, and she urges the soul to refrain from using them unless it is necessary to do so, and encourages it to collect and concentrate itself by itself, trusting nothing but its own independent judgment upon objects considered in themselves, and attributing no truth to anything which it views indirectly as being subject to variation, because such objects are sensible and visible but what the soul itself sees is intelligible and invisible. Now the soul of the true philosopher feels that it must not reject this opportunity for release, and so it abstains as far as possible from pleasures and desires and griefs, because it reflects that the result of giving way to pleasure or fear or desire is not as might be supposed the trivial misfortune of becoming ill or wasting money through self-indulgence, but the last and worst calamity of all, which the sufferer does not recognize.

Cebes:: What is that, Socrates?

Socrates:: When anyone’s soul feels a keen pleasure or pain it cannot help supposing that whatever causes the most violent emotion is the plainest and truest reality, which it is not. It is chiefly visible things that have this effect, isn’t it?

Cebes:: Quite so.

Socrates:: Is it not on this sort of occasion that soul passes most completely into the bondage of body?

Cebes:: How do you make that out?

Socrates:: Because every pleasure or pain has a sort of rivet with which it fastens the soul to the body and pins it down and makes it corporeal, accepting as true whatever the body certifies. The result of agreeing with the body and finding pleasure in the same things is, I imagine, that it cannot help becoming like it in character and training, so that it can never get entirely away to the unseen world, but is always saturated with the body when it sets out, and so soon falls back again into another body, where it takes root and grows. Consequently it is excluded from all fellowship with the pure and uniform and divine.

Cebes:: Yes, that is perfectly true, Socrates.

Socrates:: It is for these reasons, Cebes, that true philosophers exhibit self-control and courage—not for the reasons which are generally supposed. Or do you think that the popular view is right?

Cebes:: No, certainly not.

Socrates:: No, indeed. A philosopher's soul will take the view which I have described. It will not first expect to be set free by philosophy, and then allow pleasure and pain to reduce it once more to bondage, thus taking upon itself an endless task, like Penelope when she undid her own weaving. No, this soul secures immunity from its desires by following reason and abiding always in her company, and by contemplating the true and divine and unconjecturable, and drawing inspiration from it, because such a soul believes that this is the right way to live while life endures, and that after death it reaches a place which is kindred and similar to its own nature, and there is rid forever of human ills. After such a training, my dear Simmias and Cebes, the soul can have no grounds for fearing that on its separation from the body it will be blown away and scattered by the winds, and so disappear into thin air, and cease to exist altogether.

Phaedo:: There was silence for some time after Socrates had said this. He himself, to judge from his appearance, was still occupied with the argument which he had just been stating, and so were most of us, but Simmias and Cebes went on talking in a low voice.

When Socrates noticed them he said;

Socrates:: Why, do you feel that my account is inadequate? Of course it is still open to a number of doubts and objections, if you want to examine it in detail. If it is something else that you two are considering, never mind, but if you feel any difficulty about our discussion, don’t hesitate to put forward your own views, and point out any way in which you think that my account could be improved. And by all means make use of my services too, if you think I can help at all to solve the difficulty.

Simmias:: Very well, Socrates, I will be quite open with you. We have both been feeling difficulties for some time, and each of us has been urging the other to ask questions. We are anxious to have your answers, but we did not like to bother you, for fear of annoying you in your present misfortune.

Phaedo:: When Socrates heard this he laughed gently and said;

Socrates:: I am surprised at you, Simmias. I shall certainly find it difficult to convince the outside world that I do not regard my present lot as a misfortune if I cannot even convince you, and you are afraid that I am more irritable now than I used to be. Evidently you think that I have less insight into the future than a swan; because when these birds feel that the time has come for them to die, they sing more loudly and sweetly than they have sung in all their lives before, for joy that they are going away into the presence of the god whose servants they are. It is quite wrong for human beings to make out that the swans sing their last song as an expression of grief at their approaching end. People who say this are misled by their own fear of death, and fail to reflect that no bird sings when it is hungry or cold or distressed in any other way—not even the nightingale or swallow or hoopoe, whose song is supposed to be a lament. In my opinion neither they nor the swans sing because they are sad. I believe that the swans, belonging as they do to Apollo, have prophetic powers and sing because they know the good things that await them in the unseen world, and they are happier on that day than they have ever been before. Now I consider that I am in the same service as the swans, and dedicated to the same god, and that I am no worse endowed with prophetic powers by my master than they are, and no more disconsolate at leaving this life. So far as that fear of yours is concerned, you may say and ask whatever you like, so long as the Athenian officers of justice permit.

Simmias:: Thank you. I will tell you my difficulty first and then Cebes shall tell you where he finds your theory unacceptable. I think, just as you do, Socrates, that although it is very difficult if not impossible in this life to achieve certainty about these questions, at the same time it is utterly feeble not to use every effort in testing the available theories, or to leave off before we have considered them in every way, and come to the end of our resources. It is our duty to do one of two things, either to ascertain the facts, whether by seeking instruction or by personal discovery, or, if this is impossible, to select the best and most dependable theory which human intelligence can supply, and use it as a raft to ride the seas of life—that is, assuming that we cannot make our journey with greater confidence and security by the surer means of a divine revelation. And so now, after what you have said, I shall not let any diffidence prevent me from asking my question, and so make me blame myself afterward for not having spoken my mind now. The fact is, Socrates, that on thinking it over, and discussing it with Cebes here, I feel that your theory has serious flaws in it.

Socrates:: Your feeling is very likely right, my dear boy, but tell me where you think the flaws are.

Simmias:: What I mean is this. You might say the same thing about tuning the strings of a musical instrument, that the attunement is something invisible and incorporeal and splendid and divine, and located in the tuned instrument, while the instrument itself and its strings are material and corporeal and composite and earthly and closely related to what is mortal. Now suppose that the instrument is broken, or its strings cut or snapped. According to your theory the attunement must still exist—it cannot have been destroyed, because it would be inconceivable that when the strings are broken the instrument and the strings themselves, which have a mortal nature, should still exist, and the attunement, which shares the nature and characteristics of the divine and immortal, should exist no longer, having predeceased its mortal counterpart. You would say that the attunement must still exist somewhere just as it was, and that the wood and strings will rot away before anything happens to it. I say this, Socrates, because, as I think you yourself are aware, we Pythagoreans have a theory of the soul which is roughly like this.

The body is held together at a certain tension between the extremes of hot and cold, and dry and wet, and so on, and our soul is a temperament or adjustment of these same extremes, when they are combined in just the right proportion. Well, if the soul is really an adjustment, obviously as soon as the tension of our body is lowered or increased beyond the proper point, the soul must be destroyed, divine though it is—just like any other adjustment, either in music or in any product of the arts and crafts, although in each case the physical remains last considerably longer until they are burned up or rot away. Find us an answer to this argument, if someone insists that the soul, being a temperament of physical constituents, is the first thing to be destroyed by what we call death.

Phaedo:: Socrates opened his eyes very wide—a favorite trick of his—and smiled.

Socrates:: Really, Simmias' criticism is quite justified, so if any of you are readier-witted than I am, you had better answer him. It seems to me that he is not handling the argument at all badly. However, before we have the answer, I think we should hear what criticisms Cebes has to make in his turn, so that we may have time to decide what we shall say. When we have heard him, we must either agree with them if they seem to be at all on the right note, or if not, we must then proceed to champion our theory.

Come on, Cebes, tell us what has been troubling you.

Cebes:: Very well. It seems to me that the argument is just where it was. I mean that it is open to the same criticism that we made before. The proof that our soul existed before it took on this present shape is perfectly satisfying—I might even say convincing. I am not changing my position about that. But as for its still existing somewhere after we are dead, I think that the proof fails in this way. Mind you, I don't agree with Simmias' objection that soul is not stronger and more durable than body; it seems to me to be far superior in every way like that. Then why, your theory might inquire, are you still skeptical, when you can see that after a man dies even the weaker part of him continues to exist? Don't you think the more durable part of him must logically survive as long?

Well, here is my answer. I want you to consider whether there is anything in what I say—because like Simmias I must have recourse to an illustration. Suppose that an elderly tailor has just died. Your theory would be just like saying that the man is not dead, but still exists somewhere safe and sound, and offering as proof the fact that the coat which he had made for himself and was wearing has not perished but is still intact. If anyone was skeptical, I suppose you would ask him which is likely to last longer, a man or a coat which is being regularly used and worn, and when he replied that the former was far more likely, you would imagine that you had proved conclusively that the man is safe and sound, since the less-enduring object has not perished. But surely this is not so, Simmias—because I want your opinion too. Anyone would dismiss such a view as absurd. The tailor makes and wears out any number of coats, but although he outlives all the others, presumably he perishes before the last one, and this does not mean that a man is inferior to a coat, or has a weaker hold upon life. I believe that this analogy might apply to the relation of soul to body, and I think that it would be reasonable to say of them in the same way that soul is a long-lived thing, whereas body is relatively feeble and short-lived. But while we may admit that each soul wears out a number of bodies, especially if it lives a great many years—because although the body is continually changing and disintegrating all through life, the soul never stops replacing what is worn away—still we must suppose that when the soul dies it is still in possession of its latest covering, and perishes before it in this case only, although when the soul has perished the body at last reveals its natural frailty and quickly rots away. If you accept this view there is no justification yet for any confidence that after death our souls still exist somewhere.

Suppose that one conceded to the exponent of immortality even more than you claim, granting not only that our souls existed before our birth, but also that some of them may continue to exist or come into existence after death, and be born and die again several times—soul having such natural vitality that it persists through successive incarnations—unless in granting this he made the further concession that the soul suffers no ill effects in its various rebirths, and so does not, at one of its ‘deaths,’ perish altogether. If he had to admit that nobody knows which of these ‘deaths’ or separations from the body may prove fatal to the soul, because such insight is impossible for any of us—on these terms, Socrates, no one but a fool is entitled to face death with confidence, unless he can prove that the soul is absolutely immortal and indestructible. Otherwise everyone must always feel apprehension at the approach of death, for fear that in this particular separation from the body his soul may be finally and utterly destroyed.

Phaedo:: Well, when we had heard them state their objections, we all felt very much depressed, as we told one another later. We had been quite convinced by the earlier part of the discussion, and now we felt that they had upset our convictions and destroyed our confidence not only in what had been said already, but also in anything that was to follow later. Perhaps we were incompetent to judge, or the facts themselves might prove to be unreliable.

Echecrates:: You certainly have my full sympathy, Phaedo. After hearing your account I find myself faced with the same misgiving. How can we believe in anything after this? Socrates’ argument was absolutely convincing, and now it is completely discredited. That theory that our soul is a sort of attunement has always had an extraordinary attraction for me, and when I heard it stated it reminded me that I myself had formed the same opinion. What I really need now is another proof, right from the beginning, to convince me that when a man dies his soul does not die with him. Tell me, how did Socrates pick up the trail again? And did he show any sign of being upset, like the rest of you, or did he quietly come to the rescue of the argument? And did he rescue it effectively or not? Tell us every detail as accurately as you can.

Phaedo:: I can assure you, Echecrates, that Socrates often astonished me, but I never admired him more than on this particular occasion. That he should have been ready with an answer was, I suppose, nothing unusual, but what impressed me was, first, the pleasant, kindly, appreciative way in which he received the two boys' objections, then his quick recognition of how the turn of the discussion had affected us, and lastly the skill with which he healed our wounds, rallied our scattered forces, and encouraged us to join him in pursuing the inquiry.

Echecrates:: How did he do that?

Phaedo:: I will tell you. I happened to be sitting to the right of his bed, on a footstool, and he was much higher than I was. So he laid his hand on my head and gathered up the curls on my neck—he never missed a chance of teasing me about my curls—and said;

Socrates:: Tomorrow, I suppose, Phaedo, you will cut off this beautiful hair.

Phaedo:: I expect so, Socrates.

Socrates:: Not if you take my advice.

Phaedo:: Why not?

Socrates:: Because I shall cut off mine today, and you ought to do the same, that is, if we let our argument die and fail to bring it to life again. What is more, if I were you, and let the truth escape me, I should make a vow like the

Argives' never to let my hair grow again until I had defeated the argument of Simmias and Cebes in a return battle.

Phaedo:: But, I objected, not even Heracles can take on two at once.

Socrates:: You had better call upon me to be your Iolaus, while the daylight lasts.

Phaedo:: Very well, but I am Iolaus appealing to Heracles, not Heracles to Iolaus.

Socrates:: The effect will be just the same. But first there is one danger that we must guard against.

Phaedo:: What sort of danger?

Socrates:: Of becoming misologic, in the sense that people become misanthropic. No greater misfortune could happen to anyone than that of developing a dislike for argument. Misology and misanthropy arise in just the same way. Misanthropy is induced by believing in somebody quite uncritically. You assume that a person is absolutely truthful and sincere and reliable, and a little later you find that he is shoddy and unreliable. Then the same thing happens again. After repeated disappointments at the hands of the very people who might be supposed to be your nearest and most intimate friends, constant irritation ends by making you dislike everybody and suppose that there is no sincerity to be found anywhere. Have you never noticed this happening?

Phaedo:: Indeed, I have.

Socrates:: Don't you feel that it is reprehensible? Isn't it obvious that such a person is trying to form human relationships without any critical understanding of human nature? Otherwise he would surely recognize the truth—that there are not many very good or very bad people, but the great majority are something between the two.

Phaedo:: How do you make that out?

Socrates:: On the analogy of very large or small objects. Can you think of anything more unusual than coming across a very large or small man, or dog, or any other creature? Or one which is very swift or slow, ugly or beautiful, white or black? Have you never realized that extreme instances are few and rare, while intermediate ones are many and plentiful?

Phaedo:: Certainly.

Socrates:: So you think that if there were a competition in wickedness, very few would distinguish themselves even there?

Phaedo:: Probably.

Socrates:: Yes, it is probable. However, you have led me into a digression. The resemblance between arguments and human beings lies not in what I said just now, but in what I said before, that when one believes that an argument is true without reference to the art of logic, and then a little later decides rightly or wrongly that it is false, and the same thing happens again and again—you know how it is, especially with those who spend their time in arguing both sides—they end by believing that they are wiser than anyone else, because they alone have discovered that there is nothing stable or dependable either in facts or in arguments, and that everything fluctuates just like the water in a tidal channel, and never stays at any point for any time.

Phaedo:: That is perfectly true.

Socrates:: Well, then, Phaedo, supposing that there is an argument which is true and valid and capable of being discovered, if anyone nevertheless, through his experience of these arguments which seem to the same people to be sometimes true and sometimes false, attached no responsibility to himself and his lack of technical ability, but was finally content, in exasperation, to shift the blame from himself to the arguments, and spend the rest of his life loathing and decrying them, and so missed the chance of knowing the truth about reality—would it not be a deplorable thing?

Phaedo:: It would indeed.

Socrates:: Very well, that is the first thing that we must guard against. We must not let it enter our minds that there may be no validity in argument. On the contrary we should recognize that we ourselves are still intellectual invalids, but that we must brace ourselves and do our best to become healthy—you and the others partly with a view to the rest of your lives, but I directly in view of my death, because at the moment I am in danger of regarding it not philosophically but self-assertively. You know how, in an argument, people who have no real education care nothing for the facts of the case, and are only anxious to get their point of view accepted by the audience? Well, I feel that at this present moment I am as bad as they are, only with this difference, that my anxiety will be not to convince my audience, except incidentally, but to produce the strongest possible conviction in myself. This is how I weigh the position, my dear fellow—see how selfish I am! If my theory is really true, it is right to believe it, while, even if death is extinction, at any rate during this time before my death I shall be less likely to distress my companions by giving way to self-pity, and this folly of mine will not live on with me—which would be a calamity—but will shortly come to an end.

That, my dear Simmias and Cebes, is the spirit in which I am prepared to approach the discussion. As for you, if you will take my advice, you will think very little of Socrates, and much more of the truth. If you think that anything I say is true, you must agree with me; if not, oppose it with every argument that you have. You must not allow me, in my enthusiasm, to deceive both myself and you, and leave my sting behind when I fly away.

Well, we must go ahead. First remind me of what you said, if you find my memory inaccurate. Simmias, I believe, is troubled with doubts. He is afraid that, even if the soul is more divine and a higher thing than the body, it may nevertheless be destroyed first, as being a kind of attunement. Cebes on the other hand appeared to agree with me that soul is more enduring than body, but to maintain that no one can be sure that, after repeatedly wearing out a great many bodies, it does not at last perish itself, leaving the last body behind; and he thinks that death may be precisely this, the destruction of the soul, because the body never stops perishing all the time. Am I right, Simmias and Cebes, in thinking that these are the objections which we have to investigate?

Phaedo:: They agreed that this was so.

Socrates:: Well, then, do you reject all our previous arguments, or only some of them?

Phaedo:: Only some of them.

Socrates:: What is your opinion of the reasoning by which we asserted that learning is recollection, and that, if this is so, our souls must have existed somewhere else before they were confined in the body?

Cebes:: Speaking for myself, I found it remarkably convincing at the time, and I stick to it still as I do to no other theory.

Simmias:: Yes, indeed, it is just the same with me. I should be very much surprised if I ever changed my opinion about that.

Socrates:: But you will have to change it, my Theban friend, if the conception stands that an attunement is a composite thing, and that the soul is an attunement composed of our physical elements at a given tension. I imagine that you would not accept even from yourself the assertion that a composite attunement existed before the elements of which it was to be composed. Or would you?

Simmias:: Not for a moment, Socrates.

Socrates:: Don't you see that that is just what it amounts to when you say that the soul exists before it enters the human form or body, and also that it is composed of elements which do not yet exist? Surely an attunement is not at all like the object of your comparison. The instrument and the strings and their untuned notes come first. The attunement is the last of all to be constituted and the first to be destroyed. How will this account harmonize with the other?

Simmias:: Not at all.

Socrates:: And yet, if any account ought to be harmonious, it should be an account of attunement.

Simmias:: Yes, it should.

Socrates:: Well, this one does not harmonize with your view. Make up your mind which theory you prefer—that learning is recollection, or that soul is an attunement.

Simmias:: The former, without any hesitation, Socrates. The other appealed to me, without any proof to support it, as being based on plausible analogy, which is why most people find it attractive. But I realize that theories which rest their proof upon plausibility are impostors, and unless you are on your guard, they deceive you properly, both in geometry and everywhere else. On the other hand, the theory of recollection and learning derives from a hypothesis which is worthy of acceptance. The theory that our soul exists even before it enters the body surely stands or falls with the soul's possession of the ultimate standard of reality—a view which I have, to the best of my belief, fully and rightly accepted. It seems therefore that I must not accept, either from myself or from anyone else, the assertion that soul is an attunement.

Socrates:: There is this way of looking at it too, Simmias. Do you think that an attunement, or any other composite thing, should be in a condition different from that of its component elements?

Simmias:: No, I do not.

Socrates:: And it should not act, or be acted upon, I presume, differently from them?

Phaedo:: He agreed.

Socrates:: So an attunement should not control its elements, but should follow their lead?

Phaedo:: He assented.

Socrates:: There is no question of its conflicting with them, either in movement or in sound or in any other way.

Simmias:: None at all.

Socrates:: Very well, then, is it not the nature of every attunement to be an attunement in so far as it is tuned?

Simmias:: I don't understand.

Socrates:: Surely, if it is tuned more, that is, in a greater degree—supposing this to be possible—it must be more of an attunement, and if it is tuned less, that is, in a lesser degree, it must be less of an attunement.

Simmias:: Quite so.

Socrates:: And is this the case with the soul—that one soul is, even minutely, more or less of a soul than another?

Simmias:: Not in the least.

Socrates:: Now please give me your closest attention. Do we say that one kind of soul possesses intelligence and goodness, and is good, and that another possesses stupidity and wickedness, and is evil? And is this true?

Simmias:: Yes, it is true.

Socrates:: Then how will a person who holds that the soul is an attunement account for the presence in it of goodness and badness? Will he describe them as yet another attunement or lack of it? Will he say that the good soul is in tune, and not only is an attunement itself, but contains another, whereas the bad soul is out of tune and does not contain another attunement?

Simmias:: I really could not say, but obviously anyone who held that view would have to say something of the sort.

Socrates:: But we have already agreed, that no soul can be more or less of a soul than another, and this is the same as agreeing that no attunement can be more of an attunement and in a greater degree, or less of an attunement and in a lesser degree, than another. Is that not so?

Simmias:: Certainly.

Socrates:: And that what is neither more nor less of an attunement is neither more nor less in tune. Is that so?

Simmias:: Yes.

Socrates:: Does that which is neither more nor less in tune contain a greater or smaller proportion of attunement, or an equal one?

Simmias:: An equal one.

Socrates:: Then since no soul is any more or less than just a soul, it is neither more nor less in tune.

Simmias:: That is so.

Socrates:: Under this condition it cannot contain a greater proportion of discord or attunement.

Simmias:: Certainly not.

Socrates:: And again under this condition can one soul contain a greater proportion of badness or goodness than another, assuming that badness is discord and goodness attunement?

Simmias:: No, it cannot.

Socrates:: Or rather, I suppose, Simmias, by strict reasoning no soul will contain any share of badness, if it is an attunement, because surely since attunement is absolutely attunement and nothing else, it can never contain any share of discord.

Simmias:: No, indeed.

Socrates:: Nor can the soul, since it is absolutely soul, contain a share of badness.

Simmias:: Not in the light of what we have said.

Socrates:: So on this theory every soul of every living creature will be equally good—assuming that it is the nature of all souls to be equally souls and nothing else.

Simmias:: I think that follows, Socrates.

Socrates:: Do you also think that this view is right? Would the argument ever have come to this if our hypothesis, that the soul is an attunement, had been correct?

Simmias:: Not the least chance of it.

Socrates:: Well, do you hold that it is any other part of a man than the soul that governs him, especially if it is a wise one?

Simmias:: No, I do not.

Socrates:: Does it yield to the feelings of the body, or oppose them? I mean, for instance, that when a person is feverish and thirsty it impels him the other way, not to drink, and when he is hungry, not to eat, and there are thousands of other ways in which we see the soul opposing the physical instincts. Is that not so?

Simmias:: Certainly.

Socrates:: Did we not also agree a little while ago that if it is an attunement it can never sound a note that conflicts with the tension or relaxation or vibration or any other condition of its constituents, but must always follow them and never direct them?

Simmias:: Yes, we did, of course.

Socrates:: Well, surely we can see now that the soul works in just the opposite way. It directs all the elements of which it is said to consist, opposing them in almost everything all through life, and exercising every form of control—sometimes by severe and unpleasant methods like those of physical training and medicine, and sometimes by milder ones, sometimes scolding, sometimes encouraging—and conversing with the desires and passions and fears as though it were quite separate and distinct from them. It is just like Homer's description in the *Odyssey* where he says that Odysseus;

> Then beat his breast, and thus reproved his heart,
> Endure, my heart; still worse hast thou endured.

Do you suppose that when he wrote that he thought that the soul was an attunement, liable to be swayed by physical feelings? Surely he regarded it as capable of swaying and controlling them, as something much too divine to rank as an attunement.

Simmias:: That is certainly how it seems to me, Socrates.

Socrates:: Good. In that case there is no justification for our saying that soul is a kind of attunement. We should neither agree with Homer nor be consistent ourselves.

Simmias:: That is so.

Socrates:: Well now, we seem to have placated the Theban lady Harmonia with moderate success. But what about Cadmus, Cebes? How shall *we* placate him, and what argument shall we use?

Cebes:: I think that you will find a way. This argument which you brought forward against the attunement theory far surpassed all my expectations. When Simmias was explaining his difficulties I wondered very much whether anyone would be able to do anything with his argument; so I was quite astonished that it could not stand up against your very first attack. I should not be surprised if Cadmus' argument met the same fate.

Socrates:: My dear fellow, don't boast, or some misfortune will upset the forthcoming argument. However, we will leave that to God; it is our task to come to close quarters in the Homeric manner and test the validity of your contention.

What you require, in a nutshell, is this. You consider that unless the confidence of a philosopher who at the point of dying believes that after death he will be better off for having lived and ended his life in philosophy than in any other way of living is to be a blind and foolish confidence, the soul must be proved to be indestructible and immortal. To show that it has great vitality and a godlike nature, and even that it existed before we were born—all this, you say, may very well indicate not that the soul is immortal, but merely that it is long-lived, and pre-existed somewhere for a prodigious period of time, enjoying a great measure of knowledge and activity. But all this did not make it any the more immortal. Indeed its very entrance into the human body was, like a disease, the beginning of its destruction; it lives this life in increasing weariness, and finally perishes in what we call death. You also say that, to our individual fears, it makes no difference whether it enters the body once or often. Anyone who does not know and cannot prove that the soul is immortal must be afraid, unless he is a fool.

That, I believe, is the substance of your objection, Cebes. I am deliberately reviewing it more than once, in order that nothing may escape us, and that you may add to it or subtract from it anything that you wish.

Cebes:: But at the present moment there is no need for me to add or subtract anything; that is precisely my point of view.

Phaedo:: After spending some time in reflection Socrates said;

Socrates:: What you require is no light undertaking, Cebes. It involves a full treatment of the causes of generation and destruction. If you like, I will describe my own experiences in this connection, and then, if you find anything helpful in my account, you can use it to reassure yourself about your own objections.

Cebes:: Yes, indeed, I should like that very much.

Socrates:: Then listen, and I will tell you. When I was young, Cebes, I had an extraordinary passion for that branch of learning which is called natural science. I thought it would be marvelous to know the causes for which each thing comes and ceases and continues to be. I was constantly veering to and fro, puzzling primarily over this sort of question. Is it when heat and cold produce fermentation, as some have said, that living creatures are bred? Is it with the blood that we think, or with the air or the fire that is in us? Or is it none of these, but the brain that supplies our senses of hearing and sight and smell, and from these that memory and opinion arise, and from memory and opinion, when established, that knowledge comes? Then again I would consider how these faculties are lost, and study celestial and terrestrial phenomena, until at last I came to the conclusion that I was uniquely unfitted for this form of inquiry. I will give you a sufficient indication of what I mean. I had understood some things plainly before, in my own and other people's estimation, but now I was so befogged by these speculations that I unlearned even what I had thought I knew, especially about the cause of growth in human beings. Previously I had thought that it was quite obviously due to eating and drinking—that when, from the food which we consume, flesh is added to flesh and bone to bone, and when in the same way the other parts of the body are augmented by their appropriate particles, the bulk which was small is now large, and in this way the small man becomes a big one. That is what I used to believe—reasonably, don't you think?

Cebes:: Yes, I do.

Socrates:: Consider a little further. I had been content to think, when I saw a tall man standing beside a short one, that he was taller by a head, and similarly in the case of horses. And it seemed to me even more obvious that ten is more than eight because it contains two more, and that two feet is bigger than one because it exceeds it by half its own length.

Cebes:: And what do you believe about them now?

Socrates:: Why, upon my word, that I am very far from supposing that I know the explanation of any of these things. I cannot even convince myself that when you add one to one either the first or the second one becomes two, or they both become two by the addition of the one to the other. I find it hard to believe that, although when they were separate each of them was one and they were not two, now that they have come together the cause of their becoming two is simply the union caused by their juxtaposition. Nor can I believe now, when you divide one, that this time the cause of its becoming two is the division, because this cause of its becoming two is the opposite of the former one; then it was because they were brought close together and added one to the other, but now it is because they are taken apart and separated one from the other. Nor can I now persuade myself that I understand how it is that things become one, nor, in short, why anything else comes or ceases or continues to be, according to this method of inquiry. So I reject it altogether, and muddle out a haphazard method of my own.

However, I once heard someone reading from a book, by Anaxagoras, and asserting that it is mind that produces order and is the cause of everything. This explanation pleased me. Somehow it seemed right that mind should be the cause of everything, and I reflected that if this is so, mind in producing order sets everything in order and arranges each individual thing in the way that is best for it. Therefore if anyone wished to discover the reason why any given thing came or ceased or continued to be, he must find out how it was best for that thing to be, or to act or be acted upon in any other way. On a this view there was only one thing for a man to consider, with regard both to himself and to anything else, namely the best and highest good, although this would necessarily imply knowing what is less good, since both were covered by the same knowledge.

These reflections made me suppose, to my delight, that in Anaxagoras I had found an authority on causation who was after my own heart. I assumed that he would begin by informing us whether the earth is flat or round, and would then proceed to explain in detail the reason and logical necessity for this by stating how and why it was better that it should be so. I thought that if he asserted that the earth was in the center, he would explain in detail that it was better for it to be there; and if he made this clear, I was prepared to give up hankering after any other kind of cause. I was prepared also in the same way to receive instruction about the sun and moon and the other heavenly bodies, about their relative velocities and their orbits and all the other phenomena connected with them—in what way it is better for each one of them to act or be acted upon as it is. It never entered my head that a man who asserted that the ordering of things is due to mind would offer any other explanation for them than that it is best for them to be as they are. I thought that by assigning a cause to each phenomenon separately and to the universe as a whole he would make perfectly clear what is best for each and what is the universal good. I would not have parted with my hopes for a great sum of money. I lost no time in procuring the books, and began to read them as quickly as I possibly could, so that I might know as soon as possible about the best and the less good.

It was a wonderful hope, my friend, but it was quickly dashed. As I read on I discovered that the fellow made no use of mind and assigned to it no causality for the order of the world, but adduced causes like air and æther and water and many other absurdities. It seemed to me that he was just about as inconsistent as if someone were to say, The cause of everything that Socrates does is mind—and then, in trying to account for my several actions, said first that the reason why I am lying here now is that my body is composed of bones and sinews, and that the bones are rigid and separated at the joints, but the sinews are capable of contraction and relaxation, and form an envelope for the bones with the help of the flesh and skin, the latter holding all together, and since the bones move freely in their joints the sinews by relaxing and contracting enable me somehow to bend my limbs, and that is the cause of my sitting here in a bent position. Or again, if he tried to account in the same way for my conversing with you, adducing causes such as sound and air and hearing and a thousand others, and never troubled to mention the real reasons, which are that since Athens has thought it better to condemn me, therefore I for my part have thought it better to sit here, and more right to stay and submit to whatever penalty she orders. Because, by dog, I fancy that these sinews and bones would have been in the neighborhood of Megara or Boeotia long ago—impelled by a conviction of what is best!—if I did not think that it was more right and honorable to submit to whatever penalty my country orders rather than take to my heels and run away. But to call things like that causes is too absurd. If it were said that without such bones and sinews and all the rest of them I should not be able to do what I think is right, it would be true. But to say that it is because of them that I do what I am doing$_s$ and not through choice of what is best—although my actions are controlled by mind—would be a very lax and inaccurate form of expression. Fancy being unable to distinguish between the cause of a thing and the condition without which it could not be a cause! It is this latter, as it seems to me, that most people, groping in the dark, call a cause—attaching to it a name to which it has no right. That is why one person surrounds the earth with a vortex, and so keeps it in place by means of the heavens, and another props it up on a pedestal of air, as though it were a wide platter. As for a power which keeps things disposed at any given moment in the best possible way, they neither look for it nor believe that it has any supernatural force. They imagine that they will someday find a more mighty and immortal and all-sustaining Atlas, and they do not think that anything is really bound and held together by goodness or moral obligation. For my part, I should be delighted to learn about the workings of such a cause from anyone, but since I have been denied knowledge of it, and have been unable either to discover it myself or to learn about it from another, I have worked out my own makeshift approach to the problem of causation. Would you like me to give you a demonstration of it, Cebes?

Cebes:: I should like it very much indeed.

Socrates:: Well, after this, when I was worn out with my physical investigations, it occurred to me that I must guard against the same sort of risk which people run when they watch and study an eclipse of the sun; they really do sometimes injure their eyes, unless they study its reflection in water or some other medium. I conceived of something like this happening to myself, and I was afraid that by observing objects with my eyes and trying to comprehend them with each of my other senses I might blind my soul altogether. So I decided that I must have recourse to theories, and use them in trying to discover the truth about things. Perhaps my illustration is not quite apt, because I do not at all admit that an inquiry by means of theory employs 'images' any more than one which confines itself to facts. But however that may be, I started off in this way, and in every case I first lay down the theory which I judge to be soundest, and then whatever seems to agree with it—with regard either to causes or to anything else—I assume to be true, and whatever does not I assume not to be true. But I should like to express my meaning more clearly, because at present I don't think that you understand.

Cebes:: No, indeed I don't, not a bit.

Socrates:: Well, what I mean is this, and there is nothing new about it. I have always said it; in fact I have never stopped saying it, especially in the earlier part of this discussion. As I am going to try to explain to you the theory of causation which I have worked out myself, I propose to make a fresh start from those principles of mine which you know so well—that is, I am assuming the existence of absolute beauty and goodness and magnitude and all the rest of them. If you grant my assumption and admit that they exist, I hope with their help to explain causation to you, and to find a proof that soul is immortal.

Cebes:: Certainly I grant it. You need lose no time in drawing your conclusion.

Socrates:: Then consider the next step, and see whether you share my opinion. It seems to me that whatever else is beautiful apart from absolute beauty is beautiful because it partakes of that absolute beauty, and for no other reason. Do you accept this kind of causality?

Cebes:: Yes, I do.

Socrates:: Well, now, that is as far as my mind goes; I cannot understand these other ingenious theories of causation. If someone tells me that the reason why a given object is beautiful is that it has a gorgeous color or shape or any other such attribute, I disregard all these other explanations—I find them all confusing—and I cling simply and straightforwardly and no doubt foolishly to the explanation that the one thing that makes that object beautiful is the presence in it or association with it, in whatever way the relation comes about, of absolute beauty. I do not go so far as to insist upon the precise details —only upon the fact that it is by beauty that beautiful things are beautiful. This, I feel, is the safest answer for me or for anyone else to give, and I believe that while I hold fast to this I cannot fall; it is safe for me or for anyone else to answer that it is by beauty that beautiful things are beautiful. Don’t you agree?

Cebes:: Yes, I do.

Socrates:: Then is it also by largeness that large things are large and larger things larger, and by smallness that smaller things are smaller?

Cebes:: Yes.

Socrates:: So you too, like myself, would refuse to accept the statement that one man is taller than another ‘by a head,’ and that the shorter man is shorter by the same. You would protest that the only view which you yourself can hold is that whatever is taller than something else is so simply by tallness—that is, because of tallness—and that what is shorter is so simply by shortness, that is, because of shortness. You would be afraid, I suppose, that if you said that one man is taller than another by a head, you would be faced by a logical objection—first that the taller should be taller and the shorter shorter by the same thing, and secondly that the taller person should be taller by a head, which is a short thing, and that it is unnatural that a man should be made tall by something short. Isn’t that so?

Phaedo:: Cebes laughed and said;

Cebes:: Yes, it is.

Socrates:: Then you would be afraid to say that ten is more than eight ‘by two,’ or that two is the cause of its excess over eight, instead of saying that it is more than eight by, or because of, being a larger number, and you would be afraid to say that a length of two feet is greater than one foot by a half, instead of saying that it is greater by its larger size—because there is the same danger here too?

Cebes:: Quite so.

Socrates:: Suppose next that we add one to one. You would surely avoid saying that the cause of our getting two is the addition, or in the case of a divided unit, the division. You would loudly proclaim that you know of no other way in which any given object can come into being except by participation in the reality peculiar to its appropriate universal, and that in the cases which I have mentioned you recognize no other cause for the coming into being of two than participation in duality, and that whatever is to become two must participate in this, and whatever is to become one must participate in unity. You would dismiss these divisions and additions and other such niceties, leaving them for persons wiser than yourself to use in their explanations, while you, being nervous of your own shadow, as the saying is, and of your inexperience, would hold fast to the security of your hypothesis and make your answers accordingly. If anyone should fasten upon the hypothesis itself, you would disregard him and refuse to answer until you could consider whether its consequences were mutually consistent or not. And when you had to substantiate the hypothesis itself, you would proceed in the same way, assuming whatever more ultimate hypothesis commended itself most to you, until you reached one which was satisfactory. You would not mix the two things together by discussing both the principle and its consequences, like one of these destructive critics—that is, if you wanted to discover any part of the truth. They presumably have no concern or care whatever for such an object, because their cleverness enables them to muddle everything up without disturbing their own self-complacence, but you, I imagine, if you are a philosopher, will follow the course which I describe.

Simmias:: You are perfectly right.

Cebes:: You are perfectly right.

Echecrates:: I can assure you, Phaedo, I am not surprised. It seems to me that Socrates made his meaning extraordinarily clear to even a limited intelligence.

Phaedo:: That was certainly the feeling of all of us who were present, Echecrates.

Echecrates:: No doubt, because it is just the same with us who were not present and are hearing it now for the first time. But how did the discussion go on?

Phaedo:: I think that when Socrates had got this accepted, and it was agreed that the various forms exist, and that the reason why other things are called after the forms is that they participate in the forms, he next went on to ask;

Socrates:: If you hold this view, I suppose that when you say that Simmias is taller than Socrates but shorter than Phaedo, you mean that at that moment there are in Simmias both tallness and shortness?

Simmias:: Yes, I do.

Socrates:: But do you agree that the statement ‘Simmias is bigger than Socrates’ is not true in the form in which it is expressed? Surely the real reason why Simmias is bigger is not because he is Simmias but because of the height which he incidentally possesses, and conversely the reason why he is bigger than Socrates is not because Socrates is Socrates, but because Socrates has the attribute of shortness in comparison with Simmias’ height.

Simmias:: True.

Socrates:: And again Simmias’ being smaller than Phaedo is due not to the fact that Phaedo is Phaedo, but to the fact that Phaedo has the attribute of tallness in comparison with Simmias’ shortness.

Simmias:: Quite so.

Socrates:: So that is how Simmias comes to be described as both short and tall, because he is intermediate between the two of them, and allows his shortness to be surpassed by the tallness of the one while he asserts his superior tallness over the shortness of the other.

Phaedo:: He added with a smile;

Socrates:: I seem to be developing an artificial style, but the facts are surely as I say.

Phaedo:: Simmias agreed.

Socrates:: I am saying all this because I want you to share my point of view. It seems to me not only that the form of tallness itself absolutely declines to be short as well as tall, but also that the tallness which is in us never admits smallness and declines to be surpassed. It does one of two things. Either it gives way and withdraws as its opposite shortness approaches, or it has already ceased to exist by the time that the other arrives. It cannot stand its ground and receive the quality of shortness in the same way as I myself have done. If it did, it would become different from what it was before, whereas I have not lost my identity by acquiring the quality of shortness—I am the same man, only short—but my tallness could not endure to be short instead of tall. In the same way the shortness that is in us declines ever to become or be tall, nor will any other quality, while still remaining what it was, at the same time become or be the opposite quality; in such a situation it either withdraws or ceases to exist.

Cebes:: I agree with you entirely.

Phaedo:: At this point one of the company—I can’t remember distinctly who it was—said;

Someone:: Look here! Didn’t we agree, earlier in the discussion, on the exact opposite of what you are saying now—that the bigger comes from the smaller and the smaller from the bigger, and that it is precisely from their opposites that opposites come? Now the view seems to be that this is impossible.

Phaedo:: Socrates had listened with his head turned toward the speaker.

Socrates:: It was brave of you to refresh my memory, but you don’t realize the difference between what we are saying now and what we said then. Then we were saying that opposite *things* come from opposite *things;* now we are saying that the opposite *itself* can never become opposite to itself—neither the opposite which is in us nor that which is in the real world. Then, my friend, we were speaking about objects which possess opposite qualities, and calling them by the names of the latter, but now we are speaking about the qualities themselves, from whose presence in them the objects which are called after them derive their names. We maintain that the opposites themselves would absolutely refuse to tolerate coming into being from one another.

Phaedo:: As he spoke he looked at Cebes.

Socrates:: I suppose that nothing in what he said worried you too, Cebes?

Cebes:: No, not this time, though I don’t deny that a good many other things do.

Socrates:: So we are agreed upon this as a general principle, that an opposite can never be opposite to itself.

Cebes:: Absolutely.

Socrates:: Then consider this point too, and see whether you agree about it too. Do you admit that there are such things as heat and cold?

Cebes:: Yes, I do.

Socrates:: Do you think they are the same as snow and fire?

Cebes:: Certainly not.

Socrates:: Heat is quite distinct from fire, and cold from snow?

Cebes:: Yes.

Socrates:: But I suppose you agree, in the light of what we said before, that snow, being what it is, can never admit heat and still remain snow, just as it was before, only with the addition of heat. It must either withdraw at the approach of heat, or cease to exist.

Cebes:: Quite so.

Socrates:: Again, fire must either retire or cease to exist at the approach of cold. It will never have the courage to admit cold and still remain fire, just as it was, only with the addition of cold.

Cebes:: That is true.

Socrates:: So we find, in certain cases like these, that the name of the form is eternally applicable not only to the form itself, but also to something else, which is not the form but invariably possesses its distinguishing characteristic. But perhaps another example will make my meaning clearer. Oddness must always be entitled to this name by which I am now calling it, isn't that so?

Cebes:: Certainly.

Socrates:: This is the question. Is it unique in this respect, or is there something else, not identical with oddness, to which we are bound always to apply not only its own name but that of odd as well, because by its very nature it never loses its oddness? What I mean is illustrated by the case of the number three; there are plenty of other examples, but take the case of three. Don't you think that it must always be described not only by its own name but by that of odd, although odd and three are not the same thing? It is the very nature of three and five and all the alternate integers that every one of them is invariably odd, although it is not identical with oddness. Similarly two and four and all the rest of the other series are not identical with even, but each one of them always is even. Do you admit this, or not?

Cebes:: Of course I do.

Socrates:: Well, then, pay careful attention to the point which I want to make, which is this. It seems clear that the opposites themselves do not admit one another, but it also looks as though any things which, though not themselves opposites, always have opposites in them, similarly do not admit the opposite form to that which is in them, but on its approach either cease to exist or retire before it. Surely we must assert that three will sooner cease to exist or suffer any other fate than submit to become even while it is still three?

Cebes:: Certainly.

Socrates:: And yet two and three are not opposites.

Cebes:: No, they are not.

Socrates:: So it is not only the opposite forms that cannot face one another's approach; there are other things too which cannot face the approach of opposites.

Cebes:: That is quite true.

Socrates:: Shall we try, if we can, to define what sort of things these are?

Cebes:: By all means.

Socrates:: Well, then, Cebes, would this describe them—that they are things which are compelled by some form which takes possession of them to assume not only its own form but invariably also that of some other form which is an opposite?

Cebes:: What do you mean?

Socrates:: Just what we were saying a minute ago. You realize, I suppose, that when the form of three takes possession of any group of objects, it compels them to be odd as well as three.

Cebes:: Certainly.

Socrates:: Then I maintain that into such a group the opposite form to the one which has this effect can never enter.

Cebes:: No, it cannot.

Socrates:: And it was the form of odd that had this effect?

Cebes:: Yes.

Socrates:: And the opposite of this is the form of even?

Cebes:: Yes.

Socrates:: So the form of even will never enter into three.

Cebes:: No, never.

Socrates:: In other words, three is incompatible with evenness.

Cebes:: Quite.

Socrates:: So the number three is uneven.

Cebes:: Yes.

Socrates:: I proposed just now to define what sort of things they are which, although they are not themselves directly opposed to a given opposite, nevertheless do not admit it, as in the present example, three, although not the opposite of even, nevertheless does not admit it, because three is always accompanied by the opposite of even—and similarly with two and odd, or fire and cold, and hosts of others. Well, see whether you accept this definition. Not only does an opposite not admit its opposite, but if anything is accompanied by a form which has an opposite, and meets that opposite, then the thing which is accompanied never admits the opposite of the form by which it is accompanied. Let me refresh your memory; there is no harm in hearing a thing several times. Five will not admit the form of even, nor will ten, which is double five, admit the form of odd. Double has an opposite of its own, but at the same time it will not admit the form of odd. Nor will one and a half, or other fractions such as one half or three quarters and so on, admit the form of whole. I assume that you follow me and agree.

Cebes:: I follow and agree perfectly.

Socrates:: Then run over the same ground with me from the beginning, and don't answer in the exact terms of the question, but follow my example. I say this because besides the 'safe answer' that I described at first, as the result of this discussion I now see another means of safety.

Suppose, for instance, that you ask me what must be present in body to make it hot. I shall not return the safe but ingenuous answer that it is heat, but a more sophisticated one, based on the results of our discussion—namely that it is fire. And if you ask what must be present in a body to make it diseased, I shall say not disease but fever. Similarly if you ask what must be present in a number to make it odd, I shall say not oddness but unity, and so on. See whether you have a sufficient grasp now of what I want from you.

Cebes:: Quite sufficient.

Socrates:: Then tell me, what must be present in a body to make it alive?

Cebes:: Soul.

Socrates:: Is this always so?

Cebes:: Of course.

Socrates:: So whenever soul takes possession of a body, it always brings life with it?

Cebes:: Yes, it does.

Socrates:: Is there an opposite to life, or not?

Cebes:: Yes, there is.

Socrates:: What?

Cebes:: Death.

Socrates:: Does it follow, then, from our earlier agreement, that soul will never admit the opposite of that which accompanies it?

Cebes:: Most definitely.

Socrates:: Well, now, what name did we apply just now to that which does not admit the form of even?

Cebes:: Uneven.

Socrates:: And what do we call that which does not admit justice, or culture?

Cebes:: Uncultured, and the other unjust.

Socrates:: Very good. And what do we call that which does not admit death?

Cebes:: Immortal.

Socrates:: And soul does not admit death?

Cebes:: No.

Socrates:: So soul is immortal.

Cebes:: Yes, it is immortal.

Socrates:: Well, can we say that that has been proved? What do you think?

Cebes:: Most completely, Socrates.

Socrates:: Here is another question for you, Cebes. If the uneven were necessarily imperishable, would not three be imperishable?

Cebes:: Of course.

Socrates:: Then again, if what is not hot were necessarily imperishable, when you applied heat to snow, would not the snow withdraw still intact and unmelted? It could not cease to exist, nor on the other hand could it remain where it was and admit the heat.

Cebes:: That is true.

Socrates:: In the same way I assume that if what is not cold were imperishable, when anything cold approached fire, it could never go out or cease to exist; it would depart and be gone unharmed.

Cebes:: That must be so.

Socrates:: Are we not bound to say the same of the immortal? If what is immortal is also imperishable, it is impossible that at the approach of death soul should cease to be. It follows from what we have already said that it cannot admit death, or be dead—just as we said that three cannot be even, nor can odd; nor can fire be cold, nor can the heat which is in the fire. But, it may be objected, granting, as has been agreed, that odd does not become even at the approach of even, why should it not cease to exist, and something even take its place? In reply to this we could not insist that the odd does not cease to exist—because what is not even is not imperishable—but if this were conceded, we could easily insist that, at the approach of even, odd and three retire and depart. And we could be equally insistent about fire and heat and all the rest of them, could we not?

Cebes:: Certainly.

Socrates:: So now in the case of the immortal, if it is conceded that this is also imperishable, soul will be imperishable as well as immortal. Otherwise we shall need another argument.

Cebes:: There is no need on that account. If what is immortal and eternal cannot avoid destruction, it is hard to see how anything else can.

Socrates:: And I imagine that it would be admitted by everyone, that God at any rate, and the form of life, and anything else that is immortal, can never cease to exist.

Cebes:: Yes indeed, by all men certainly, and even more, I suppose, by the gods.

Socrates:: Then since what is immortal is also indestructible, if soul is really immortal, surely it must be imperishable too.

Cebes:: Quite inevitably.

Socrates:: So it appears that when death comes to a man, the mortal part of him dies, but the immortal part retires at the approach of death and escapes unharmed and indestructible.

Cebes:: Evidently.

Socrates:: Then it is as certain as anything can be, Cebes, that soul is immortal and imperishable, and that our souls will really exist in the next world.

Cebes:: Well, Socrates, for my part I have no criticisms, and no doubt about the truth of your argument. But if Simmias here or anyone else has any criticism to make, he had better not keep it to himself, because if anyone wants to say or hear any more about this subject, I don’t see to what other occasion he is to defer it.

Simmias:: As a matter of fact, I have no doubts myself either now, in view of what you have just been saying. All the same, the subject is so vast, and I have such a poor opinion of our weak human nature, that I can’t help still feeling some misgivings.

Socrates:: Quite right, Simmias, and what is more, even if you find our original assumptions convincing, they still need more accurate consideration. If you and your friends examine them closely enough, I believe that you will arrive at the truth of the matter, in so far as it is possible for the human mind to attain it, and if you are sure that you have done this, you will not need to inquire further.

Simmias:: That is true.

Socrates:: But there is a further point, gentlemen, which deserves your attention. If the soul is immortal, it demands our care not only for that part of time which we call life, but for all time. And indeed it would seem now that it will be extremely dangerous to neglect it. If death were a release from everything, it would be a boon for the wicked, because by dying they would be released not only from the body but also from their own wickedness together with the soul, but as it is, since the soul is clearly immortal, it can have no escape or security from evil except by becoming as good and wise as it possibly can. For it takes nothing with it to the next world except its education and training, and these, we are told, are of supreme importance in helping or harming the newly dead at the very beginning of his journey there.

This is how the story goes. When any man dies, his own guardian spirit, which was given charge over him in his life, tries to bring him to a certain place where all must assemble, and from which, after submitting their several cases to judgment, they must set out for the next world, under the guidance of one who has the office of escorting souls from this world to the other. When they have there undergone the necessary experiences and remained as long as is required, another guide brings them back again after many vast periods of time.

Of course this journey is not as Aeschylus makes Telephus describe it. He says that the path to Hades is straightforward, but it seems clear to me that it is neither straightforward nor single. If it were, there would be no need for a guide, because surely nobody could lose his way anywhere if there were only one road. In fact, it seems likely that it contains many forkings and crossroads, to judge from the ceremonies and observances of this world.

Well, the wise and disciplined soul follows its guide and is not ignorant of its surroundings, but the soul which is deeply attached to the body, as I said before, hovers round it and the visible world for a long time, and it is only after much resistance and suffering that it is at last forcibly led away by its appointed guardian spirit. And when it reaches the same place as the rest, the soul which is impure through having done some impure deed, either by setting its hand to lawless bloodshed or by committing other kindred crimes which are the work of kindred souls, this soul is shunned and avoided by all. None will company with it or guide it, and it wanders alone in utter desolation until certain times have passed, whereupon it is borne away of necessity to its proper habitation. But every soul that has lived throughout its life in purity and soberness enjoys divine company and guidance, and each inhabits the place which is proper to it. There are many wonderful regions in the earth, and the earth itself is neither in nature nor in size such as geographers suppose it to be—so someone has assured me.

Simmias:: How can you say that, Socrates? I myself have heard a great many theories about the earth, but not this belief of yours. I should very much like to hear it.

Socrates:: Why, really, Simmias, I don’t think that it calls for the skill of a Glaucus to explain what my belief is, but to prove that it is true seems to me to be too difficult even for a Glaucus. In the first place I should probably be unable to do it, and in the second, even if I knew how, it seems to me, Simmias, that my life is too short for a long explanation. However, there is no reason why I should not tell you what I believe about the appearance of the earth and regions in it.

Simmias:: Well, even that will do.

Socrates:: This is what I believe, then. In the first place, if the earth is spherical and in the middle of the heavens, it needs neither air nor any other such force to keep it from falling; the uniformity of the heavens and the equilibrium of the earth itself are sufficient to support it. Any body in equilibrium, if it is set in the middle of a uniform medium, will have no tendency to sink or rise in any direction more than another, and having equal impulses will remain suspended. This is the first article of my belief.

Simmias:: And quite right too.

Socrates:: Next, I believe that it is vast in size, and that we who dwell between the river Phasis and the Pillars of Hercules inhabit only a minute portion of it—we live round the sea like ants or frogs round a pond—and there are many other peoples inhabiting similar regions. There are many hollow places all round the earth, places of every shape and size, into which the water and mist and air have collected. But the earth itself is as pure as the starry heaven in which it lies, and which is called aether by most of our authorities. The water, mist, and air are the dregs of this aether, and they are continually draining into the hollow places in the earth. We do not realize that we are living in its hollows, but assume that we are living on the earth's surface. Imagine someone living in the depths of the sea. He might think that he was living on the surface, and seeing the sun and the other heavenly bodies through the water; he might think that the sea was the sky. He might be so sluggish and feeble that he had never reached the top of the sea, never emerged and raised his head from the sea into this world of ours, and seen for himself—or even heard from someone who had seen it—how much purer and more beautiful it really is than the one in which his people lives. Now we are in just the same position. Although we live in a hollow of the earth, we assume that we are living on the surface, and we call the air heaven, as though it were the heaven through which the stars move. And this point too is the same, that we are too feeble and sluggish to make our way out to the upper limit of the air. If someone could reach to the summit, or put on wings and fly aloft, when he put up his head he would see the world above, just as fishes see our world when they put up their heads out of the sea. And if his nature were able to bear the sight, he would recognize that that is the true heaven and the true light and the true earth. For this earth and its stones and all the regions in which we live are marred and corroded, just as in the sea everything is corroded by the brine, and there is no vegetation worth mentioning, and scarcely any degree of perfect formation, but only caverns and sand and measureless mud, and tracts of slime wherever there is earth as well, and nothing is in the least worthy to be judged beautiful by our standards. But the things above excel those of our world to a degree far greater still. If this is the right moment for an imaginative description, Simmias, it will be worth your while to hear what it is really like upon the earth which lies beneath the heavens.

Simmias:: Yes, indeed, Socrates, it would be a great pleasure to us, at any rate, to hear this description.

Socrates:: Well, my dear boy, the real earth, viewed from above, is supposed to look like one of these balls made of twelve pieces of skin, variegated and marked out in different colors, of which the colors which we know are only limited samples, like the paints which artists use, but there the whole earth is made up of such colors, and others far brighter and purer still. One section is a marvelously beautiful purple, and another is golden. All that is white of it is whiter than chalk or snow, and the rest is similarly made up of the other colors, still more and lovelier than those which we have seen. Even these very hollows in the earth, full of water and air, assume a kind of color as they gleam amid the different hues around them, so that there appears to be one continuous surface of varied colors. The trees and flowers and fruits which grow upon this earth are proportionately beautiful. The mountains too and the stones have a proportionate smoothness and transparency, and their colors are lovelier. The pebbles which are so highly prized in our world—the jaspers and rubies and emeralds and the rest—are fragments of these stones, but there everything is as beautiful as they are, or better still. This is because the stones there are in their natural state, not damaged by decay and corroded by salt water as ours are by the sediment which has collected here, and which causes disfigurement and disease to stones and earth, and animals and plants as well. The earth itself is adorned not only with all these stones but also with gold and silver and the other metals, for many rich veins of them occur in plain view in all parts of the earth, so that to see them is a sight for the eyes of the blessed.

There are many kinds of animals upon it, and also human beings, some of whom live inland, others round the air, as we live round the sea, and others in islands surrounded by air but close to the mainland. In a word, as water and the sea are to us for our purposes, so is air to them, and as air is to us, so the æther is to them. Their climate is so temperate that they are free from disease and live much longer than people do here, and in sight and hearing and understanding and all other faculties they are as far superior to us as air is to water or æther to air in clarity.

They also have sanctuaries and temples which are truly inhabited by gods, and oracles and prophecies and visions and all other kinds of communion with the gods occur there face to face. They see the sun and moon and stars as they really are, and the rest of their happiness is after the same manner.

Such is the nature of the earth as a whole and of the things that are upon it. In the earth itself, all over its surface, there are many hollow regions, some deeper and more widely spread than that in which we live, others deeper than our region but with a smaller expanse, some both shallower than ours and broader. All these are joined together underground by many connecting channels, some narrower, some wider, through which, from one basin to another, there flows a great volume of water—monstrous unceasing subterranean rivers of waters both hot and cold—and of fire too, great rivers of fire, and many of liquid mud, some clearer, some more turbid, like the rivers in Sicily that flow mud before the lava comes, and the lava stream itself. By these the several regions are filled in turn as the flood reaches them.

All this movement to and fro is caused by an oscillation inside the earth, and this oscillation is brought about by natural means, as follows.

One of the cavities in the earth is not only larger than the rest, but pierces right through from one side to the other. It is of this that Homer speaks when he says. ‘Far, far away, where lies earth’s deepest chasm,’ while elsewhere both he and many other poets refer to it as Tartarus. Into this gulf all the rivers flow together, and from it they flow forth again, and each acquires the nature of that part of the earth through which it flows. The cause of the flowing in and out of all these streams is that the mass of liquid has no bottom or foundation; so it oscillates and surges to and fro, and the air or breath that belongs to it does the same, for it accompanies the liquid both as it rushes to the further side of the earth and as it returns to this. And just as when we breathe we exhale and inhale the breath in a continuous stream, so in this case too the breath, oscillating with the liquid, causes terrible and monstrous winds as it passes in and out. So when the water retires to the so-called lower region the streams in the earth flow into those parts and irrigate them fully, and when in turn it ebbs from there and rushes back this way, it fills our streams again, and when they are filled they flow through their channels and through the earth; and arriving in those regions to which their ways have been severally prepared, they make seas and lakes and rivers and springs. Then sinking again beneath the ground, some by way of more and a further regions, others by fewer and nearer, they empty themselves once more into Tartarus, some much lower, some only a little lower than the point at which they were emitted, but they all flow in at a level deeper than their rise. Some flow in on the opposite side to that on which they came out, and others on the same side, while some make a complete circle and, winding like a snake one or even more times round the earth, descend as far as possible before they again discharge their waters. It is possible to descend in either direction as far as the center, but no further, for either direction from the center is uphill, whichever way the streams are flowing.

Among these many various mighty streams there are four in particular. The greatest of these, and the one which describes the outermost circle, is that which is called Oceanus. Directly opposite to this and with a contrary course is Acheron, which not only flows through other desolate regions but passes underground and arrives at the Acherusian Lake, where the souls of the dead for the most part come, and after staying there for certain fixed periods, longer or shorter, are sent forth again to the births of living creatures. Halfway between these two a third river has its rise, and near its source issues into a great place burning with sheets of fire, where it forms a boiling lake of muddy water greater than our sea. From there it follows a circular course, flowing turbid and muddy, and as it winds round inside the earth it comes at last to the margin of the Acherusian Lake, but does not mingle with the waters, and after many windings underground, it plunges into Tartarus at a lower point. This is the river called Pyriphlegethon, whose fiery stream belches forth jets of lava here and there in all parts of the world. Directly opposite to this in its turn the fourth river breaks out, first, they say, into a wild and dreadful place, all leaden gray, which is called the Stygian region, and the lake which the river forms on its entry is called Styx. After falling into this, and acquiring mysterious powers in its waters, the river passes underground and follows a spiral course contrary to that of Pyriphlegethon, which it meets from the opposite direction in the Acherusian Lake. This river too mingles its stream with no other waters, but circling round falls into Tartarus opposite Pyriphlegethon, and its name, the poets say, is Cocytus.

Such is the conformation of the earth and its rivers. And when the newly dead reach the place to which each is conducted by his guardian spirit, first they submit to judgment, both those who have lived well and holily, and those who have not. Those who are judged to have lived a neutral life set out for Acheron, and embarking in those vessels which await them, are conveyed in them to the lake, and there they dwell, and undergoing purification are both absolved by punishment from any sins that they have committed, and rewarded for their good deeds, according to each man's deserts. Those who on account of the greatness of their sins are judged to be incurable, as having committed many gross acts of sacrilege or many wicked and lawless murders or any other such crimes—these are hurled by their appropriate destiny into Tartarus, from whence they emerge no more. Others are judged to have been guilty of sins which, though great, are curable—if, for example, they have offered violence to father or mother in a fit of passion, but spent the rest of their lives in penitence, or if they have committed manslaughter after the same fashion. These too must be cast into Tartarus, but when this has been done and they have remained there for a year, the surge casts them out—the manslayers down Cocytus and the offenders against their parents down Pyriphlegethon. And when, as they are swept along, they come past the Acherusian Lake, there they cry aloud and call upon those whom they have killed or misused, and calling, beg and entreat for leave to pass from the stream into the lake, and be received by them. If they prevail, they come out and there is an end of their distress, but if not, they are swept away once more into Tartarus and from there back into the rivers, and find no release from their sufferings until they prevail upon those whom they have wronged, for this is the punishment which their judge has appointed for them.

But those who are judged to have lived a life of surpassing holiness—these are they who are released and set free from confinement in these regions of the earth, and passing upward to their pure abode, make their dwelling upon the earth's surface. And of these such as have purified themselves sufficiently by philosophy live thereafter altogether without bodies, and reach habitations even more beautiful, which it is not easy to portray—nor is there time to do so now. But the reasons which we have already described provide ground enough, as you can see, Simmias, for leaving nothing undone to attain during life some measure of goodness and wisdom, for the prize is glorious and the hope great.

Of course, no reasonable man ought to insist that the facts are exactly as I have described them. But that either this or something very like it is a true account of our souls and their future habitations—since we have clear evidence that the soul is immortal—this, I think, is both a reasonable contention and a belief worth risking, for the risk is a noble one. We should use such accounts to inspire ourselves with confidence, and that is why I have already drawn out my tale so long.

There is one way, then, in which a man can be free from all anxiety about the fate of his soul—if in life he has abandoned bodily pleasures and adornments, as foreign to his purpose and likely to do more harm than good, and has devoted himself to the pleasures of acquiring knowledge, and so by decking his soul not with a borrowed beauty but with its own—with self-control, and goodness, and courage, and liberality, and truth—has fitted himself to await his journey to the next world. You, Simmias and Cebes and the rest, will each make this journey someday in the future, but for me the fated hour, as a tragic character might say, calls even now. In other words, it is about time that I took my bath. I prefer to have a bath before drinking the poison, rather than give the women the trouble of washing me when I am dead.

Phaedo:: When he had finished speaking, Crito said;

Crito:: Very well, Socrates. But have you no directions for the others or myself about your children or anything else? What can we do to please you best?

Socrates:: Nothing new, Crito, just what I am always telling you. If you look after yourselves, whatever you do will please me and mine and you too. even if you don't agree with me now. On the other hand, if you neglect yourselves and fail to follow the line of life as I have laid it down both now and in the past, however fervently you agree with me now, it will do no good at all.

Crito:: We shall try our best to do as you say. But how shall we bury you?

Socrates:: Any way you like, that is, if you can catch me and I don't slip through your fingers.

Phaedo:: He laughed gently as he spoke, and turning to us went on;

Socrates:: I can't persuade Crito that I am this Socrates here who is talking to you now and marshaling all the arguments. He thinks that I am the one whom he will see presently lying dead, and he asks how he is to bury me! As for my long and elaborate explanation that when I have drunk the poison I shall remain with you no longer, but depart to a state of heavenly happiness, this attempt to console both you and myself seems to be wasted on him. You must give an assurance to Crito for me—the opposite of the one which he gave to the court which tried me. He undertook that I should stay, but you must assure him that when I am dead I shall not stay, but depart and be gone. That will help Crito to bear it more easily, and keep him from being distressed on my account when he sees my body being burned or buried, as if something dreadful were happening to me, or from saying at the funeral that it is Socrates whom he is laying out or carrying to the grave or burying. Believe me, my dear friend Crito, misstatements are not merely jarring in their immediate context; they also have a bad effect upon the soul. No, you must keep up your spirits and say that it is only my body that you are burying, and you can bury it as you please, in whatever way you think is most proper.

Phaedo:: With these words he got up and went into another room to bathe, and Crito went after him, but told us to wait. So we waited, discussing and reviewing what had been said, or else dwelling upon the greatness of the calamity which had befallen us, for we felt just as though we were losing a father and should be orphans for the rest of our lives. Meanwhile, when Socrates had taken his bath, his children were brought to see him—he had two little sons and one big boy—and the women of his household, you know, arrived. He talked to them in Crito's presence and gave them directions about carrying out his wishes. Then he told the women and children to go away, and came back himself to join us.

It was now nearly sunset, because he had spent a long time inside. He came and sat down, fresh from the bath, and he had only been talking for a few minutes when the prison officer came in, and walked up to him.

Jailer:: Socrates, at any rate I shall not have to find fault with you, as I do with others, for getting angry with me and cursing when I tell them to drink the poison—carrying out government orders. I have come to know during this time that you are the noblest and the gentlest and the bravest of all the men that have ever come here, and now especially I am sure that you are not angry with me, but with them, because you know who are responsible. So now—you know what I have come to say—good-by, and try to bear what must be as easily as you can.

Phaedo:: As he spoke he burst into tears, and turning round, went away. Socrates looked up at him and said;

Socrates:: Good-by to you, too. We will do as you say.

Phaedo:: Then addressing us he went on;

Socrates:: What a charming person! All the time I have been here he has visited me, and sometimes had discussions with me, and shown me the greatest kindness—and how generous of him now to shed tears for me at parting! But come, Crito, let us do as he says. Someone had better bring in the poison, if it is ready-prepared; if not, tell the man to prepare it.

Crito:: But surely, Socrates, the sun is still upon the mountains; it has not gone down yet. Besides, I know that in other cases people have dinner and enjoy their wine, and sometimes the company of those whom they love, long after they receive the warning, and only drink the poison quite late at night. No need to hurry. There is still plenty of time.

Socrates:: It is natural that these people whom you speak of should act in that way, Crito, because they think that they gain by it. And it is also natural that I should not, because I believe that I should gain nothing by drinking the poison a little later—I should only make myself ridiculous in my own eyes if I clung to life and hugged it when it has no more to offer. Come, do as I say and don't make difficulties.

Phaedo:: At this Crito made a sign to his servant, who was standing near by. The servant went out and after spending a considerable time returned with the man who was to administer the poison. He was carrying it ready-prepared in a cup.

When Socrates saw him he said;

Socrates:: Well, my good fellow, you understand these things. What ought I to do?

Jailer:: Just drink it, and then walk about until you feel a weight in your legs, and then lie down. Then it will act of its own accord.

Phaedo:: As he spoke he handed the cup to Socrates, who received it quite cheerfully, Echecrates, without a tremor, without any change of color or expression, and said, looking up under his brows with his usual steady gaze;

Socrates:: What do you say about pouring a libation from this drink? Is it permitted, or not?

Jailer:: We only prepare what we regard as the normal dose, Socrates.

Socrates:: I see. But I suppose I am allowed, or rather bound, to pray the gods that my removal from this world to the other may be prosperous. This is my prayer, then, and I hope that it may be granted.

Phaedo:: With these words, quite calmly and with no sign of distaste, he drained the cup in one breath.

Up till this time most of us had been fairly successful in keeping back our tears, but when we saw that he was drinking, that he had actually drunk it, we could do so no longer. In spite of myself the tears came pouring out, so that I covered my face and wept brokenheartedly—not for him, but for my own calamity in losing such a friend. Crito had given up even before me, and had gone out when he could not restrain his tears. But Apollodorus, who had never stopped crying even before, now broke out into such a storm of passionate weeping that he made everyone in the room break down, except Socrates himself, who said;

Socrates:: Really, my friends, what a way to behave! Why, that was my main reason for sending away the women, to prevent this sort of disturbance, because I am told that one should make one's end in a tranquil frame of mind. Calm yourselves and try to be brave.

Phaedo:: This made us feel ashamed, and we controlled our tears. Socrates walked about, and presently, saying that his legs were heavy, lay down on his back—that was what the man recommended. The man—he was the same one who had administered the poison—kept his hand upon Socrates, and after a little while examined his feet and legs, then pinched his foot hard and asked if he felt it. Socrates said no. Then he did the same to his legs, and moving gradually upward in this way let us see that he was getting cold and numb. Presently he felt him again and said that when it reached the heart, Socrates would be gone.

The coldness was spreading about as far as his waist when Socrates uncovered his face, for he had covered it up, and said—they were his last words—

Socrates:: Crito, we ought to offer a cock to Asclepius. See to it, and don't forget.

Crito:: No, it shall be done. Are you sure that there is nothing else?

Phaedo:: Socrates made no reply to this question, but after a little while he stirred, and when the man uncovered him, his eyes were fixed. When Crito saw this, he closed the mouth and eyes.

Such, Echecrates, was the end of our comrade, who was, we may fairly say, of all those whom we knew in our time, the bravest and also the wisest and most upright man.

# Phaedo.

Translated by Woodhead, W. D. 1953

Reported by Phaedo:

Socrates Cebes Simmias Crito Phaedo
Xanthippe Prison Attendants

Echecrates:: Were you with Socrates yourself, Phaedo, on the day when he drank the poison in prison, or did you hear the story from another?

Phaedo:: I myself was there, Echecrates.

Echecrates:: Then what was it that he said before dying, and how did he meet his end? I should so like you to tell me. For nobody from Phlius goes very much to Athens now, and no stranger from Athens has come here for a long time, who could have given us any certain news about these events, except that he drank the poison and died. There was no other news we could learn.

Phaedo:: Did you not even hear then how the trial went?

Echecrates:: Oh yes, someone told us about that and we were surprised that though it took place so much earlier he was not put to death until long after. Why was this, Phaedo?

Phaedo:: It was an accident, Echecrates: the stern of the ship which the Athenians send to Delos had been crowned just the day before the trial.

Echecrates:: And what ship is this?

Phaedo:: This, the Athenians say, is the ship in which Theseus once went with the seven boys and seven maidens to Crete, and he saved them and was himself saved. At the time, we are told, the Athenians vowed to Apollo that, if they were saved, they would every year conduct a pilgrimage to Delos: and ever since then they have always continued to send it every year to the god. Now when the pilgrimage begins it is their law that the city shall be pure of bloodshed and that none shall be put to death by the state until the ship has sailed to Delos and returned: and this sometimes takes a long while, when the ship is detained by contrary winds. The pilgrimage begins when the priest of Apollo crowns the ship's stern, and this happened, as I said, just the day before the trial. That is why Socrates spent that long time in the prison between his trial and death.

Echecrates:: And what about his death itself, Phaedo? What was said and done, and which of his friends were present? Or would the magistrates allow none to be present, so that he died all alone?

Phaedo:: By no means: there were some present, in fact quite a number.

Echecrates:: Do be so kind as to tell me all as exactly as you can, if you are not busy for the moment.

Phaedo:: Indeed I am not busy, and I will attempt to relate it: for to me there is no greater pleasure than to recall Socrates, whether I speak of him myself or listen to another.

Echecrates:: You will find your hearers, too, equally delighted, Phaedo: so try to narrate it all as accurately as you can.

Phaedo:: Well, I myself experienced the strangest of feelings in his company. I was not moved by the pity which is usual when one is present at the death of a dear friend: for I considered him happy, Echecrates, both in his demeanor and in his discourse; so fearlessly and nobly did he die: and so I concluded that even in departing to the other world he was under the care of providence and that he, if anybody, would find all well when he arrived there. For this reason I felt no such pity as might have been expected at a scene of sorrow, nor again the pleasure I usually feel when occupied with philosophical discussions—for our conversation was of philosophy—but it was simply a strange feeling that came over me, an unusual blending of pleasure and pain, when I reflected that he was very soon to die. And all of us who were present were in much the same plight, now laughing, now in tears, especially one of our company, Apollodorus—you must know the man and his ways.

Echecrates:: Of course.

Phaedo:: He was completely a victim to this mood, and I and the others too were strangely agitated.

Echecrates:: Just who were there, Phaedo?

Phaedo:: Of our native Athenians this Apollodorus, and Critobulus and his father, and Hermogenes, Epigenes, Aeschines, and Antisthenes. Then Ctesippus of Paeania was there, and Menexenus, and some other Athenians. But Plato, I believe, was ill.

Echecrates:: And were any strangers there?

Phaedo:: Yes, Simmias of Thebes, and Cebes, and Phaedondas: and Eucleides and Terpsion of Megara.

Echecrates:: Were Aristippus and Cleombrotus present?

Phaedo:: No, they were said to be in Aegina.

Echecrates:: Was anyone else there?

Phaedo:: No, I think these were about all.

Echecrates:: Well, tell me about the discussion.

Phaedo:: I will try to tell you everything from the beginning. I had always been accustomed on the previous days to visit Socrates along with the others and we would meet together at daybreak in the court where the trial was held, for it is close to the prison, And so we would wait on each occasion until the prison was opened, talking together: for it was not opened early: and when it was opened, we would go in to Socrates and generally spend all day with him. But on this occasion we gathered earlier; for the evening before, when we left the prison, we had learnt that the ship had arrived from Delos. And so we passed the word along to each other to meet at the usual place as early as possible. On our arrival, the porter who used to answer the door came out and told us to wait and not to enter till he himself called us: ‘for’, said he, ‘the Eleven are now releasing Socrates from his fetters and giving orders for his death to-day.’ However, after a short interval he returned and bade us enter. So we went in and found Socrates just freed from his fetters and Xanthippe—you know her—sitting beside him with the child in her arms. When she saw us, she cried aloud and uttered the kind of words that women commonly use:

Xanthippe:: ‘Socrates, this is the very last time that your friends will talk to you and you to them.’

Phaedo:: And Socrates looked at Crito and said:

Socrates:: ‘Crito, let someone take her home.’

Phaedo:: Some of Crito’s people then led her away weeping aloud and beating her breast. And Socrates sat up on his bed and bent his leg and rubbed it with his hand, saying as he rubbed it:

Socrates:: ‘How strange, my friends, that feeling seems to be which men call pleasure! How wondrously related to pain, which appears to be its opposite! They refuse to come to a man together; but if he pursues and catches the one, he is practically always compelled to accept the other also, as if, though two, they were fastened to a single head. I believe that if Aesop had noticed them he would have composed a fable relating that God wished to reconcile their quarrel and, finding that he could not, joined their heads together: and for this reason whenever the one appears, the other follows later. And this seems to be the case with me. I first suffered pain in my leg because of the fetters: but now pleasure, it seems, has come to succeed it.'

Cebes:: 'By heaven, I am glad you reminded me, Socrates. Several people have already questioned me about those poems you composed, setting the tales of Aesop to music and the prelude to Apollo: and Evenus asked me the other day what you had in mind in composing these after you came to prison, though you had never written poetry before. If you are interested, then, in having an answer ready for Evenus when he asks again—and you may be sure he will—tell me what to say.'

Socrates:: "'Tell him the truth, Cebes, that I had no desire in composing them to set up as a rival to him and his poems, for I knew that would not be easy: but I was trying to discover the meaning of some dreams and to salve my conscience in case it was this kind of music that they were bidding me compose. My experience was something like this: the same dream has often visited me in my past life, appearing in different forms on different occasions, but always saying the same thing: "Socrates, compose and practice music And previously I imagined it was urging and encouraging me to do just what I was already doing and that, like those who cheer on runners that are already running, so too the dream, in bidding me compose music, was urging me to do what I was already about, since philosophy is the finest music and in this I was engaged. But after the trial took place and the god's festival delayed my death, it seemed to me that, in case it was music in the ordinary sense that the dream enjoined upon me to compose, I should not disregard it, but should so compose:

for it was safer, I thought, to salve my conscience by composing in obedience to the dream before my departure. And so I wrote first in honor of the god whose festival it was: and after addressing the god, I reflected that a poet, if he was to be a true poet, ought to write fables, not tales of fact: and not being an inventor of fables myself, I chose for this reason such fables of Aesop as I had ready to hand and knew by heart, and put into verse the first that presented themselves. So tell Even us this, Cebes, and bid him farewell: and tell him to follow me with all speed, if he is wise. It seems I am departing to-day: for such is the bidding of the Athenians.'

Simmias:: 'What strange advice, Socrates, to give to Evenus! I have often met him, and from what I know of him it is pretty certain that he will not follow your counsel if he can help it.'

Socrates:: 'Why, is not Evenus a philosopher?'

Simmias:: 'Yes, I think so.'

Socrates:: 'Then Evenus will be ready to die, and anyone else who has a genuine interest in philosophy. But he will not perhaps do violence to himself: for they say that that is not permitted.'

Phaedo:: And as he said this he put his feet down from the bed to the ground and sat thus throughout the rest of the conversation.

Cebes:: 'What do you mean, Socrates, by saying that it is not permitted to do violence to ourselves, and yet that the philosopher would be ready to follow the dying man?'

Socrates:: 'Why, Cebes, surely you and Simmias, who are associates of Philolaus, have heard about these things?'

Cebes:: 'Nothing definite, Socrates.'

Socrates:: 'Well, I myself only speak about them from hearsay: but I have no objection to telling you what I have heard. For perhaps it is especially appropriate for one on the point of departure to the other world to reflect and tell tales about the sojourn there and what kind of life we think it is likely to be. What better, after all, could we do between now and sunset?'

Cebes:: 'Why then do they say that it is not permitted us to take our own lives, Socrates? As you asked just now, I have often heard from Philolaus, when he lived among us, and from others too, that we ought not to do this. But I have never heard anything definite from anyone about these matters.'

Socrates:: 'Well, you must be of good courage, for perhaps you will hear. But it may possibly seem strange to you if this of all things holds good without exception—if it never proves true, as in other matters, that it is better for man, that is to say, for certain men under certain conditions, to die than to live: and perhaps it will seem strange if those for whom it is better to die may not with piety do themselves this service, but must wait for some other to be their benefactor.'

Phaedo:: Cebes said with a gentle laugh, speaking in his own dialect;

Cebes:: 'That's true enow.'

Socrates:: 'It might indeed seem illogical. when put in this way: however, perhaps it can be justified. The account which is given in the Mysteries, that we men live in a kind of guard-house and that we should not discharge ourselves or run away, seems to me profound and not easy to comprehend: but this at least, Cebes, I consider a true statement, that it is the gods who care for us and that we men are the chattels of the gods. Do you not agree?'

Cebes:: 'I do.'

Socrates:: ‘Then. would you not be angry if one of your chattels were to kill itself without any indication on your part that you wished it to die, and if punishment were possible would you not punish it?’

Cebes:: ‘Certainly.’

Socrates:: ‘Perhaps then in this way it is not beyond reason that a man ought not to kill himself unless god send upon him some necessity, such as mine in my present position.’

Cebes:: ‘Well, that seems reasonable enough. But your recent remark that philosophers would readily welcome death seems strange, Socrates, if we were right in saying just now that god cares for us and we are his chattels. It cannot be explained why the wisest of men are not angry at leaving a service in which the best of all possible masters, the gods, rule over them: for surely the wise man does not imagine that he will look after himself still better if freed from their care. A foolish man might perhaps think that he should run away from his master and might not reason that he should not flee from the good but should remain as long as he can where he is: and so he might senselessly run away: but the man of sense would surely desire to be always with one who is his better. And yet, Socrates, when we put it in this way, the opposite of what we said just now seems likely: wise men ought to be vexed at dying, and fools should rejoice.’

Phaedo:: When Socrates heard this, he seemed delighted at the persistence of Cebes, and looking at us he said:

Socrates:: ‘Cebes, you see, is always on the scent of some argument or other, and is not by any means ready to accept at once what anyone says.’

Simmias:: ‘Yes, but this time, Socrates, I too think there is something in what Cebes says. For what could really wise men want in running away from masters better than themselves and lightly leaving their service? And it seems to me that the arguments of Cebes point at you, because you are so little distressed at leaving us and leaving the gods whom you admit to be the best of masters.’

Socrates:: ‘You are right in what you say, I think you mean that I must answer these charges, as though in a court of law.’

Simmias:: ‘Certainly.’

Socrates:: ‘Well then, let me try to defend my cause more convincingly than I did before my judges. If I did not think, Simmias and Cebes, that I shall be departing in the first place to other gods who are wise and good, and secondly to the company of dead men who are better than those in this world, I should indeed be guilty in not being vexed at dying: but as it is, you may be assured that I hope to join good men—though this I would not positively insist upon—but I do assure you that, if there is anything in the world I would insist upon, it is that I am going to live with gods who are very good masters. And that is why I am not vexed as I might be, but am cheerfully confident that there is some existence for the dead and, as they tell us from olden times, a far better life for the good than for the evil.’

Simmias:: ‘Why then, Socrates, do you intend to keep these beliefs to yourself when you depart, or will you give us a share of them? For the good you mention seems to be one in which we should partake; and at the same time you will be making your defense, if you can convince us by what you say.’

Socrates:: ‘Well, I will try, but first let us discover what it is that Crito has apparently been wanting for some time to say.’

Crito:: ‘Why, Socrates, merely that the man who is to administer the poison keeps asking me to inform you that you must talk as little as possible: for he says that people become overheated by conversation—a condition which must not be allowed to interfere with the poison. Those who behave so are at times compelled to drink it two or three times.’

Socrates:: ‘Never mind him: just let him attend to his part and be ready to administer it twice or even three times, if need be.’

Crito:: ‘I knew it pretty well, but he has been troubling me for some time.’

Socrates:: ‘Let him be. But now I wish to render my account to you, my judges, explaining how it seems to me that a man who has truly spent his life in philosophy may naturally be void of fear when about to die, and may hope to win the greatest of blessings, after death, in the other world. I will now endeavor to explain to you, Simmias and Cebes, how this may be so.

‘It seems as if other men are unaware that all who genuinely pursue philosophy of their own accord practice nothing else but dying and death. If this is true, then, it would surely be absurd to desire nothing but this throughout life, but, when death has come, to be vexed at what they so eagerly pursued and practiced.’

Simmias:: ‘Socrates, you have indeed made me laugh though I was scarcely in a laughing mood. For I think that most men, if they heard this, would consider you have spoken the real truth about philosophers, and my own fellow-countrymen too would be in thorough agreement, that philosophers in fact are ripe for death; and they would insist they are well aware that death is just what these philosophers deserve.’

Socrates:: ‘They would be quite right in their belief, Simmias, except in saying they are well aware. For they are not aware in what way true philosophers are ripe for death, in what way they deserve death, nor what kind of death they deserve. Let us discuss this matter among ourselves and pay no heed to them. We believe there is such a thing as death?’

Simmias:: ‘Certainly.’

Socrates:: ‘And that it is the separation of soul from body? And that death consists in this, the body existing alone and by itself, severed from the soul, and the soul existing alone and by itself separate from the body? Surely death is nothing else but this.’

Simmias:: ‘No, just this.’

Socrates:: ‘And now consider, my good friend; perhaps you share my opinion: for it is from the following questions, I believe, that we shall gain a clearer knowledge of what we are investigating. Do you think that a philosopher is much concerned with such so-called pleasures as eating and drinking?’

Simmias:: ‘By no means, Socrates.’

Socrates:: ‘And what about the pleasures of love?’

Simmias:: ‘Certainly not.’

Socrates:: ‘And what about other cares of the body? Do you think he values them highly? For instance, the possession of fine clothes and shoes, and general bodily adornment—do you think he esteems or despises them, except in so far as they are absolutely necessary?’

Simmias:: ‘The genuine philosopher, I think, disdains them.’

Socrates:: ‘Do you not believe that such a man’s concern is directed entirely to the soul, having nothing to do with the body, so far as he can escape its claims?’

Simmias:: ‘I do.’

Socrates:: ‘Is it not clear then first of all in such matters as these that the philosopher separates the soul from communion with the body, to an extent beyond other men?’

Simmias:: ‘It is evident.’

Socrates:: ‘And most men, Simmias, I suppose, consider that life is not worth living for a man who finds no pleasure in these things and takes no part in them, and they hold that the man who thinks nothing of bodily pleasures is all but dead.’

Simmias:: ‘What you say is very true.’

Socrates:: ‘And what about the actual acquisition of wisdom? Is the body an obstacle or not, if one takes it along as a partner in the search? What I mean to say is: do sight and hearing contain any real truth for men? Do not even the poets continually repeat that we neither hear nor see anything accurately? And yet if these bodily senses are not accurate or dependable, still less likely are the others, all of which are surely inferior to these two. Do you not agree?’

Simmias:: ‘Certainly.’

Socrates:: ‘Then, when does the soul grasp truth? For when she attempts any investigation in company with the body, she is obviously deceived by it.’

Simmias:: ‘That is true.’

Socrates:: ‘Is it not by exact reasoning, if at all, that any truth becomes evident to her?’

Simmias:: ‘Yes.’

Socrates:: ‘And surely she reasons best, when none of these things, neither hearing nor vision, pain nor pleasure, intrudes to vex her, but when most she is alone and apart, paying no heed to the body and as far as possible secure from contact and communion with it in her effort to attain the truth.’

Simmias:: ‘That is true.’

Socrates:: ‘Here too, then, the philosopher’s soul most disdains the body and flees from it, and seeks to be apart and alone.’

Simmias:: ‘Clearly.’

Socrates:: ‘And what about the next point, Simmias? Do we assert that there exists a Right, which is just right and nothing else, or not?’

Simmias:: ‘We certainly do.’

Socrates:: ‘And a Beautiful and a Good?

Simmias:: ‘Of course.’

Socrates:: ‘And have you ever seen any of these with your eyes?’

Simmias:: ‘Certainly not.’

Socrates:: ‘Have you ever grasped them by any other bodily senses? I am speaking about all such things as Size, or Health, or Strength, and in a word about the essential being of all of them, just what each one exactly is. Is it by the body that their truest nature is contemplated, or is it not nearer the truth to say that, whosoever of us has most carefully and completely disciplined himself to comprehend by his intellect anything by itself alone which he investigates, will come nearest to knowing it in each case?’

Simmias:: ‘Certainly.’

Socrates:: ‘Would not this be achieved most purely by one who approached each thing as far as possible with thought alone, without taking account of sight in his thinking or dragging in any other sense to accompany his reasoning? By employing thought unalloyed and" thought alone he would attempt to track down each object in its pure reality, alone and by itself, freeing himself so far as he can from eyes and ears and in general from the whole body, since by its partnership it disturbs the soul and prevents her from acquiring wisdom and truth. Is not this the man, if there be any, Simmias, who will attain knowledge of reality?'

Simmias:: 'There is wondrous truth, in what you say, Socrates.'

Socrates:: 'Then, should not all these conclusions bring home to genuine philosophers an opinion which they will express to each other in the following terms: "It seems as if a kind of short cut is bringing us on our path: for as long as we possess a body and our soul is contaminated by an evil of such a nature, we shall never completely attain the object of our desire—which we say is truth. For the body is constantly distracting us through its need of sustenance: moreover, if any sicknesses befall us, they hinder us in our quest for truth. And it fills us full of loves and passions, fears and fancies of every kind, and abundant folly, so that, as the saying goes, in actual fact it gives us not even a moment to think. The body and its appetites, and these alone, cause warfare and feuds and battles: for it is to acquire wealth that all wars arise, and wealth we are compelled to acquire for the sake of the body, in whose service we are slaves: and the result is that for all these reasons we have little leisure for philosophy. But the worst factor of all is that, if we gain a little leisure from it and turn to any inquiry, it constantly intrudes in the midst of our researches, causing such trouble and interruption and dismay that it will not allow us to see the truth. We have discovered in fact that if we are to achieve pure knowledge, we must be released from the body and by the soul itself alone we must behold things themselves alone: and then, it seems, we shall attain the goal of our desire, that wisdom of which we claim to be lovers—when we are dead, as the argument signifies, not while we live. For if it is impossible to win pure knowledge when in the body, then of two things one must be true: either knowledge can never be acquired, or only after death: for then the soul will exist by herself apart from the body, but not till then. And during life we shall apparently come closest to knowledge if as far as possible we keep no company with the body or communion with it beyond what is absolutely necessary, and suffer not its nature to infect us but remain pure from it until God himself releases us. And departing thus pure from the foolishness of the body, in all likelihood we shall dwell with the pure and shall learn of ourselves all that is undefiled—and that, I think, is the true: for I believe it is not permitted to the impure to attain to the pure." Such, I think, Simmias, must be the words and the opinions which all genuine lovers of knowledge will communicate to each other. Do you not think so?'

Simmias:: 'Most assuredly, Socrates.'

Socrates:: 'Then if this is true, my friend, I have every hope that when I reach my journey's end, I shall there, if anywhere, fully attain the goal of all our earnest endeavor in our past life: and therefore the journey now appointed for me I greet with good hopes, and so may any other man who thinks that his mind is now prepared as by purification.'

Simmias:: 'Certainly.'

Socrates:: 'And is not this purification just what we described some time ago in our discussion—to separate the soul, as far as possible, from the body, and to form in her the habit of isolating and gathering herself away from the body on every side, living, so far as she may, both in the present and hereafter, by herself alone, as she becomes free from the fetters of the body?'

Simmias:: 'Certainly.'

Socrates:: 'Is not death the name given to this release and separation of soul from body?'

Simmias:: 'Assuredly.'

Socrates:: 'And as we say, it is only the genuine philosophers who are always most eager for this severance, and the separation of soul from body is the actual pursuit of philosophers, is it not?'

Simmias:: 'Evidently.'

Socrates:: 'Then as I said at the beginning, it would be ridiculous if a man, who trained himself in life to live as nearly as possible in a state of death, should be vexed at death's coming.'

Simmias:: 'Ridiculous, of course.'

Socrates:: 'Then in actual fact, Simmias, true philosophers rehearse dying, and to them least of all men is death a terror. Look at the matter in this way. They are everywhere at variance with the body and yearn to possess the soul by itself alone: would it not then be utterly unreasonable if, when this came about, they were vexed and afraid, and if they did not gladly go where they may hope on their arrival to obtain what throughout life they longed for—and that is wisdom—and to be released from the company of that with which they were at odds? Many men, when their human favorites or wives or children have died, have been willing and ready to go to the other world in quest of them, drawn by the hope of seeing there and conversing with those for whom they longed: and shall a man then who is genuinely in love with wisdom and has firmly conceived this same hope, that in the other world and nowhere else can he in any measure worth speaking of attain her—shall such a man be reluctant to die and not gladly take his departure? Surely he must be glad if, my friend, he is truly a philosopher: for he will be strong in his belief that there and nowhere else can he achieve wisdom in her purity. And if this is so, then, as I said just now, it would surely be utterly unreasonable if such a man were afraid of death.'

Simmias:: 'Utterly indeed.'

Socrates:: 'Then, when you see a man troubled at the approach of death, is this not conclusive evidence that he was not after all a lover of wisdom, but a lover of the body? And this same man is, I believe, a lover of money and of power, either the one or both.'

Simmias:: 'The truth is indeed as you say.'

Socrates:: 'And now, Simmias, does not the quality called courage also especially belong to philosophers?'

Simmias:: 'Assuredly.'

Socrates:: 'And self-discipline, even in the popular sense of the word, that is to say, not to be excited by passions but to despise them and live an orderly life—does not that belong only to those who most disdain the body and live as philosophers?'

Simmias:: 'It certainly must.'

Socrates:: 'For if you care, to consider the courage and self-discipline of other men, you will find them quite absurd.'

Simmias:: 'How is that, Socrates?'

Socrates:: 'You know, that all other men think death one of the great evils.'

Simmias:: 'Yes indeed.'

Socrates:: 'And do not the brave among them face death, when they do face it, through fear of greater evils?'

Simmias:: 'That is so.'

Socrates:: 'Then all except philosophers are brave through fear and apprehension: and yet it is unreasonable at least that a man should be brave through fear and cowardice.'

Simmias:: 'Certainly.'

Socrates:: 'And what about the disciplined among them? Are they not precisely in the same case, self-disciplined through a kind of self-indulgence? We may say that this is impossible, but none the less their condition of naive self-restraint comes to much the same as this. They desire certain pleasures and are afraid of being deprived of them: consequently they abstain from other pleasures because they are controlled by these. Men call it self-indulgence to be mastered by pleasures, but for all that these men control certain pleasures only because they are controlled by others. And this is much like what I was saying just now, that they have achieved self-discipline by a kind of self-indulgence.'

Simmias:: 'So it seems.'

Socrates:: 'Dear Simmias, I am afraid that, if we look to goodness as our standard, this is not the right form of exchange, to barter pleasure for pleasure, pain for pain, and fear for fear, trading the greater for the less, as though they were coins, but the only true currency for which all things should be exchanged is wisdom, and it is only when accompanied by wisdom that courage and self-control and justice and, in short, goodness itself are really what they claim to be, whether pleasures or fears or all other such things be added or not. Once these things are separated from wisdom and exchanged, the one for the other, the resultant goodness is, I fear, a mere stage illusion, slavish in reality and devoid of any soundness or truth; but the real goodness is a kind of purification from all these things, and self-control and justice and bravery and wisdom itself are a kind of purificatory rite. Apparently those who established the mysteries were no mean persons and really spoke in riddles when they said long ago that the man who reaches the other world uninitiated and unconsecrated will lie in the mire, but he who has been purified and initiated will on his arrival there dwell with the gods. For, as those concerned in the Mysteries say, "Many bear the emblems, but the adepts are few": and these last, in my opinion, are none but the true philosophers. And of their company I have throughout my life done all in my power to become a member, and in every way I have striven to join them: but whether I strove in the right way or met with any success, I shall learn for sure, I think, quite soon when I go to the other world, if it be God's will. This then, Simmias and Cebes, is the defense I offer to prove that I am justified in not being vexed or troubled at leaving you and my masters in this world: for I believe that, there no less than here, I shall find good masters and friends: if then I am more convincing in my defense before you than before my Athenian judges, all will be well.'

Phaedo:: When Socrates had thus spoken, Cebes rejoined:

Cebes:: 'Socrates, everything else you said I think is right: but in what you said about the soul you will find many who disbelieve you and fear that, once the soul has left the body, she nowhere exists, but perishes and suffers destruction on the very day of a man's death, at the moment when she leaves the body, and issuing from it and dispersing like breath or smoke she flies away and is gone for ever. If she did somewhere exist, gathered to herself alone and freed from the evils you just now recounted, we should have fair and abundant hopes, Socrates, that what you say is true: but it calls perhaps for considerable powers of persuasion and proof to convince us that the dead man's soul still exists and possesses some force and intelligence.'

Socrates:: 'Quite true, Cebes, but what are we to do? Do you suggest that we should employ our fancy in discussing the probability of such things?'

Cebes:: 'I myself at any rate, should be delighted to hear your opinion about them.'

Socrates:: 'I do not think, that anyone who heard me now, even if he were a comic poet, would maintain that I am babbling and talking about what does not concern me. If you like then, we may investigate the matter.

'And let us consider it in this way—whether it is true that the souls of the dead live on in the other world or not. Now there is an ancient story, which we recall, that they live in that world on arriving from this, and that they return hither and are born again from the dead: and if this is so, and the living come to birth again from the dead, then surely our souls must dwell there: for they could not be born again if they did not exist. And it would be sufficient proof that they do exist, if it could really be shown that the living are born only from the dead: but if this is not so, then we should need some other argument.'

Cebes:: 'Certainly.'

Socrates:: 'Well, if you want to discover the truth more easily, do not consider the problem as it concerns man only, but in relation to all animal and plant life and, in brief, all things that are born. Let us see in all these instances whether all that have opposites are generated only from those opposites; as for instance, the noble is the opposite of the base, the just of the unjust, and so with countless other examples. Let us then consider whether it is necessary that, where anything has an opposite, it can be generated from nothing else except that opposite. For example, if anything becomes larger, that larger size proceeds from what was smaller before?'

Cebes:: 'Yes.'

Socrates:: 'And if it becomes small, that smaller size proceeds from what was larger before?'

Cebes:: 'That is so.'

Socrates:: 'And the wreaker proceeds from the stronger, and the faster from the slower?'

Cebes:: 'Certainly.'

Socrates:: 'Again, if a thing becomes worse, it proceeds from the better, and more just from the more unjust?'

Cebes:: 'Of course.'

Socrates:: 'Then we are sufficiently assured of this principle that all things are so produced, opposites proceeding from opposites.'

Cebes:: 'Certainly.'

Socrates:: 'Once again: is it true that there exist in all pairs of opposites two processes between each pair, from one to the other and in reverse from the other to the one? For instance, between larger and smaller is there not growth and decrease, so that we speak of one as increasing and the other diminishing?'

Cebes:: 'Yes.'

Socrates:: 'And so too with separation and combination, cooling and heating, and all such things, even if we do not always use the precise terms, yet in fact at least this must everywhere hold good, that they are generated from each other and there is a process from the one to the other.'

Cebes:: ‘Most certainly.’

Socrates:: ‘Then, has life an opposite, just as sleeping is the opposite of being awake?’

Cebes:: ‘Certainly.’

Socrates:: ‘And what is it?’

Cebes:: ‘Death.’

Socrates:: ‘Then if these two are opposites, do they not proceed from each other; and since they are two, are there not two processes between them?’

Cebes:: ‘Of course.’

Socrates:: ‘Now I will tell you, of one of the two pairs I mentioned just now, both the pair and the processes: and do you tell me of the other. One term I call sleep, the other, being awake; and from sleep proceeds waking, and from waking sleep: and the processes are falling asleep and waking up. Are you satisfied, or not?’

Cebes:: ‘Perfectly.’

Socrates:: ‘Then do you in your turn tell me similarly about life and death. Do you not hold that death and life are opposites?’

Cebes:: ‘I do.’

Socrates:: ‘Generated from one another?’

Cebes:: ‘Yes.’

Socrates:: ‘Then what is it that proceeds from the living?’

Cebes:: ‘The dead.’

Socrates:: ‘And what, from the dead?’

Cebes:: ‘I must admit—the living.’

Socrates:: ‘Then it is from the dead, Cebes, that living things and persons are generated?’

Cebes:: ‘Evidently.’

Socrates:: ‘Our souls therefore live on in the other world?’

Cebes:: ‘So it seems.’

Socrates:: ‘Now one of the two processes connected with these is manifest, for death is manifest, is it not?’

Cebes:: ‘Assuredly.’

Socrates:: ‘What are we to do then? Shall we refuse duly to assign the opposite process, and leave nature lame of one foot? Or must we acknowledge some opposite process to dying?’

Cebes:: ‘Most certainly we must, I think.’

Socrates:: ‘And what is this?’

Cebes:: ‘Coming to life again.’

Socrates:: ‘Then, if coming to life again be true, this return to life would be a process leading from the dead to the living?’

Cebes:: ‘Certainly.’

Socrates:: ‘In this way then also we agree that the living proceed from the dead no less than the dead from the living: and this being so, we considered, I believe, that we had sufficient proof that the souls of the dead must somewhere exist, whence they come to life again.’

Cebes:: ‘I think, Socrates, that this must necessarily be true as the result of our admissions.’

Socrates:: ‘Consider in this way too, Cebes, that we were not wrong, in my opinion, in making these admissions. If each process had not a corresponding opposite process, moving with a kind of circular motion, and if the process were in a straight line from one state to the opposite only, without any reversal or return to the first, you realize, do you not, that finally all things would have the same form, suffer the same experiences, and cease to come into being.’

Cebes:: ‘How do you mean?’

Socrates:: ‘It is not difficult to understand my meaning. For instance, if falling asleep existed, but waking up again, which proceeds from sleep, did not exist as a corresponding opposite, you know that finally everything would make Endymion seem a mere trifle, and he would be nowhere in the reckoning because everything else would be in the same condition of slumber as himself. And if all things combined and there were no separation, the saying of Anaxagoras would quickly come to pass, and “all would be chaos”. So too, my dear Cebes, if all things that partake of life were to die and, once dead, were to remain in that form and not come to life again, is it not absolutely necessary that finally all things should be dead and none be living? For if living things were generated from some other source and living things died, what is to prevent all things from being finally spent in death?’

Cebes:: ‘Nothing in my opinion, Socrates, but what you say seems absolutely true.’

Socrates:: ‘It is indeed so, Cebes, beyond all question, and we did not deceive ourselves in making these admissions, but it is actual truth that we return to life and that the living proceed from the dead and that the souls of the dead exist.’

Cebes:: ‘Yes, and besides, if that doctrine of yours, which you so often affirm, is true, Socrates, that our learning is nothing else but reminiscence, according to that doctrine also we must in some time past have learnt that of which we are now reminded. But this is impossible unless our souls existed before they were born in this human form: here too, it seems, is an indication that the soul is immortal.’

Simmias:: ‘But, Cebes, what are the proofs of this? Recall them to me, for I do not very well remember them at the moment.’

Cebes:: ‘There is one very good argument, when people are questioned, if the questions are well put, they tell us of themselves the truth about things. But if they had no knowledge dwelling within them and could give no right account, they would not be able to do this: and then again, if you show men diagrams or other such things, you have conclusive proof that the facts are so.’

Socrates:: ‘And if this is not enough to persuade you, Simmias, consider whether you share my view when you look at it like this: for you do not, it seems, believe that what we call learning can be recollection.’

Simmias:: ‘It is not that I do not believe, but what I want is just the very thing we are discussing—to be reminded: and from what Cebes undertook to say, I am nearly reminded and convinced already. But none the less I should like to hear now how you intended to explain it.’

Socrates:: ‘In this way. We surely agree that if a Man is to be reminded of anything, he must have had previous knowledge of it.’

Simmias:: ‘Certainly.’

Socrates:: ‘Then do we agree also that when knowledge occurs in the following way, it is reminiscence? The way that I mean is this: if a man sees or hears something or perceives it by some other sense, and not only knows that thing but also thinks of something else which is not the object of the same, but of another form of knowledge, do we not rightly say that he has “recollected” that second object of which he thought?’

Simmias:: ‘What do you mean?’

Socrates:: ‘Take this example. Knowledge of a man is different from that of a lyre.’

Simmias:: ‘Of course.’

Socrates:: ‘Now you know that when a lover sees a lyre or a garment or anything else his favorite is wont to use, this is his sensation: he knows the lyre and in his mind perceives the bodily form of the boy who owned it. And this is reminiscence. For instance, anyone seeing Simmias is often reminded of Cebes, and there are other examples innumerable.’

Simmias:: ‘Innumerable indeed.’

Socrates:: ‘Now is not this a kind of reminiscence, and particularly so when the experience is concerned with things already forgotten through lapse of time or lack of attention?’

Simmias:: ‘Certainly.’

Socrates:: ‘Again. Is it possible to be reminded of a man on seeing a picture of a horse or a lyre, and to be reminded of Cebes on seeing a portrait of Simmias?’

Simmias:: ‘Certainly.’

Socrates:: ‘And, on seeing a portrait of Simmias, to be reminded of Simmias?’

Simmias:: ‘Undoubtedly.’

Socrates:: ‘Do we not then conclude from all this that reminiscence may come both from like and from unlike objects?’

Simmias:: ‘We do.’

Socrates:: ‘But whenever we are reminded of something by what resembles it, must not this lead to a further experience—the reflection whether the resembling object in point of resemblance falls short or not of the object recalled by it?’

Simmias:: ‘It assuredly must.’

Socrates:: ‘Consider then, if this be the truth. We speak, do we not, about the existence of equality, I do not mean between wood and wood, stone and stone, or any such instance, but beyond all these something else, equality itself. Do we say it exists or not?’

Simmias:: ‘Indeed we do and most emphatically too.’

Socrates:: ‘And do we know this absolute reality?’

Simmias:: ‘Certainly.’

Socrates:: ‘Whence did we gain our knowledge of it? Is it not from seeing the things we mentioned just now, equal pieces of wood or stone or other such things? Did we not from seeing them form our conception of equality itself, which is different from them? Or do you not think it is different? Look at it in this way. Do not equal stones or sticks, though they are the same, sometimes appear equal to one person, but not to another?’

Simmias:: ‘Certainly.’

Socrates:: ‘But do things which are absolutely equal appear at times unequal to you, or equality itself inequality?’

Simmias:: ‘Never, Socrates.’

Socrates:: ‘Then, those equal objects mentioned above are not the same as the equal itself?’

Simmias:: ‘No, by no means, I think, Socrates.’

Socrates:: ‘Yet it was from these equal objects, which are different from the equal itself, that you conceived and grasped your knowledge of that equal.’

Simmias:: ‘That is undoubtedly true.’

Socrates:: ‘Whether it resembles these particular objects or not?’

Simmias:: ‘Certainly.’

Socrates:: ‘That makes no difference. As long as, when you see one thing, the sight of it makes you think of another, whether it be like or unlike, the process must be reminiscence.’

Simmias:: ‘Certainly.’

Socrates:: ‘And now, with regard to the equal pieces of wood and other equal objects mentioned just now, is this what we feel about them? Do they appear equal to us in the way in which equality itself is equal, or do they in any degree fall short of being just like equality itself, or not?’

Simmias:: ‘They fall far short.’

Socrates:: ‘We agree then, do we not, that whenever anyone sees something and thinks to himself, “what I am now looking at wants to be like some other thing, but it falls short and cannot be just like it and is inferior”, then the man who thus thinks must have previous knowledge of that which, he says, the first object, though inferior, resembles?’

Simmias:: ‘He must.’

Socrates:: ‘Well then, have we ourselves too experienced the same feeling with regard to equal things and equality itself, or have we not?’

Simmias:: ‘Assuredly we have.’

Socrates:: ‘Then we must have had previous knowledge of equality before that time when we first saw equal objects and reflected that all of them wanted to be like equality itself but fell short thereof.’

Simmias:: ‘That is so.’

Socrates:: ‘But we agree also that we did not and could not conceive this idea except through sight or touch or some other bodily sense—I make no distinction between them.’

Simmias:: ‘Yes, for they are the same, Socrates, for the purpose of our demonstration.’

Socrates:: ‘But it is from the senses that we must conceive the idea that all the equal objects perceived by them aim at the real equality but fall short of it. Or what other account can we give?’

Simmias:: ‘No other.’

Socrates:: ‘Then before we began to see and hear and employ our other senses we must somehow have acquired a knowledge of the real equality, if we were to refer to it all the equals perceived by the senses and judge that all of them are eager to be just like the real equal, but are inferior to it?’

Simmias:: ‘That follows necessarily from what we have already said, Socrates.’

Socrates:: ‘Now we possessed sight and hearing and the other senses immediately we were born?’

Simmias:: ‘Certainly.’

Socrates:: ‘But we must, we say, have gained knowledge of equality itself before we had these senses?’

Simmias:: ‘Yes.’

Socrates:: ‘Then we must have obtained it before we were born, it seems.’

Simmias:: ‘So it seems.’

Socrates:: ‘Now if we obtained it before our birth and were born with it, we knew before birth and immediately upon birth not only the equal, the greater, and the less, but all such things: for we are not discussing the equal alone, but the beautiful, the good, the right, the holy, and, as I say, everything upon which, in the questions we ask and the answers we give, we set the seal of “being just what it is.” So we must necessarily have obtained the knowledge of all these things before birth.’

Simmias:: ‘That is so.’

Socrates:: ‘But if after acquiring knowledge we do not forget it each time we are born, then we must be born with knowledge each time and possess it throughout our lives: for to know is to have acquired knowledge of something and to retain it without losing it: is it not the loss of knowledge, Simmias, that we mean by forgetfulness?’

Simmias:: ‘Yes, certainly, Socrates.’

Socrates:: ‘But, I suppose, if after acquiring it before birth we lost it at birth, and later by using the senses upon things we recover the knowledge we had before, then would not what we call learning be the recovery of knowledge which is our own? And should we not be right in calling this process reminiscence?’

Simmias:: ‘Certainly.’

Socrates:: ‘Yes, for we discovered that, on perceiving some object, whether by sight or hearing or any other sense, we might from this perception conceive an idea of something else related to the perception, whether like or unlike it, which we had forgotten. And so, as I say, we have two alternatives to choose from: either we are born with a knowledge of these things and all know them throughout our lives, or after birth those whom we speak of as learning are merely recollecting, and learning must be reminiscence.’

Simmias:: ‘That is very true, Socrates.’

Socrates:: ‘Which do you choose then, Simmias? That we are born with knowledge, or that we are reminded later of what we knew before?’

Simmias:: ‘I cannot choose at the moment, Socrates.’

Socrates:: ‘Well, can you make a choice here, and what is your opinion in this matter? If a man has knowledge, could he give an account of what he knows, or not?’

Simmias:: ‘Certainly he can, Socrates.’

Socrates:: ‘And do you think that all people are able to give an account of those things we were discussing just now?’

Simmias:: ‘I wish they could, but I very much fear that by this time tomorrow there will no longer be anyone who can do so adequately.’

Socrates:: ‘Then you do not think, Simmias, that all know these things.’

Simmias:: ‘By no means.’

Socrates:: ‘They are reminded then of what they once learned?’

Simmias:: ‘It must be so.’

Socrates:: ‘And when did our souls gain the knowledge? Certainly it was not after we were born as men.’

Simmias:: ‘Certainly not.’

Socrates:: ‘Then it was earlier?’

Simmias:: ‘Yes.’

Socrates:: ‘Our souls then, Simmias, existed before they took on human form, apart from the body, and possessed intelligence?’

Simmias:: ‘Yes, Socrates, unless we acquire this knowledge at the moment of birth: for that time still remains.’

Socrates:: ‘Well then, my friend, at what other time, pray, do we lose it? For surely, as we agreed just now, we are not born with it. Do we lose it at the very moment when we acquire it? Or is there any other time you can name?’

Simmias:: ‘By no means, Socrates: I did not realize that I was talking nonsense.’

Socrates:: ‘Then the truth is this, Simmias, is it not? If those things exist that we so constantly talk about, the beautiful, the good, and every such essence, and if we refer all our sensations to these, which we discover to have existed before and still to be ours, and compare the objects of sensation with these realities, then just as surely as these realities exist, so surely must our souls have existed before we were born: but if these realities do not exist, our discussion must be all in vain. Is this the case, and is it equally necessary that these realities exist and that our souls existed before birth, and that if the one does not exist, then neither does the other?’

Simmias:: ‘It is absolutely plain to me, Socrates, that the necessity in each case is the same; and most opportunely our argument is seeking refuge in the conclusion that our souls existed before birth just as surely as the reality now under discussion exists. For there is nothing so evident to me as that all these things, the beautiful, the good, and everything of which you just now spoke, have a most real existence. And I think this has been most satisfactorily proved.’

Socrates:: ‘And what does Cebes think? For he too must be persuaded.’

Simmias:: ‘He is satisfied, I think, yet he is the most stubborn of men in his refusal to accept an argument. But, I think, he needs no further proof to persuade him that our souls existed before birth. Whether they will still exist, however, after death does not seem even to me, Socrates, to have been proved, but the objection voiced by Cebes just now still stands, the fear of the many that a man’s soul is dispersed at death and that death is the end of her. The soul may be born and brought together from some other source and may exist elsewhere before arriving in a human body: but what is to prevent it from meeting its end and being destroyed, after entering and departing from that body?’

Cebes:: ‘You are right, Simmias. It seems as if about half of what we wanted has been proved, namely that our souls existed before we were born: but we need further proof that when we are dead they will exist no less than before birth, if the demonstration is to be complete.’

Socrates:: ‘That has already been proved, Simmias and Cebes, if you will combine this argument with that which we agreed upon before, namely that all that is living proceeds from the dead. For if the soul exists before birth, and when she enters life and comes into being she must proceed from no other source than death and the state of the dead, surely it is necessary that she exists even after death, since she must come once more to birth. And so the point you raised has already been proved. Still it seems to me that you and Simmias would be glad to push the discussion still further, and that like children you are afraid that as she goes forth from the body the wind will really and truly blow her away and dissipate her, especially if one happens to die, not in calm weather, but in a high gale.’

Cebes:: ‘You must try to convince us, Socrates, as if we were afraid; or rather not ourselves afraid, but perhaps there is within us a child who suffers such fears. Try to persuade him, then, not to fear death as though it were a bogeyman.’

Socrates:: ‘Well, you must sing spells over him every day, until you dispel his fear.’

Cebes:: ‘And where shall we find another good enchanter, Socrates, now that you are leaving us?’

Socrates:: ‘Hellas is a wide country, and in it surely dwell good men; and there are many foreign races too. And in your search for such an enchanter you must ransack them one and all, sparing neither toil nor money, for there is nothing on which you could more fittingly spend money. And you must search too by yourselves in one another’s company: for perhaps you could not easily find any more competent than yourselves.’

Cebes:: ‘Well, you may rely upon that, but let us return to the point at which we digressed, if you are agreeable.’

Socrates:: ‘I am quite agreeable: that goes without saying.’

Cebes:: ‘Good.’

Socrates:: ‘Then we must ask ourselves some such question as the following: to what kind of thing does it belong to experience dissipation, and for what kind of thing should we fear this experience, and what escapes it? And next we should inquire to which of the two classes the soul belongs, and in the light of the conclusions reached feel confidence or fear about the soul.’

Cebes:: ‘Quite true.’

Socrates:: ‘Now is it not the property of the compound and the naturally composite to be dissolved in the same way in which it was combined: whereas if a thing is not compounded, this alone if anything must fittingly escape dissolution?’

Cebes:: ‘That is what I think.’

Socrates:: ‘Then those things which always remain uniform and invariable are most likely to be uncompounded: but things that are constantly changing and never the same are compounded?’

Cebes:: ‘I think so.’

Socrates:: ‘Let us go back to what we were discussing previously. What of reality itself, whose being we gave account of in questioning and answering? Is it always uniform and immutable, or does it suffer change? Equality itself, beauty itself, what each thing is by itself, reality—do these admit of any change whatever? Or does each thing which is just itself and no more, being uniform when considered by itself alone, remain constantly the same, admitting nowhere of any change whatever?’

Cebes:: ‘It must remain uniform, Socrates, and immutable.’

Socrates:: ‘But what of the many beautiful things, men, for instance, or horses, or garments, or any other such things, and the many equal things, or all things which share the names of these single realities? Are these constantly the same, or, quite the contrary, practically never uniform or stable in their relations either with themselves or each other?’

Cebes:: ‘The latter is true, they are never uniform.’

Socrates:: ‘Now these things you could touch and see and perceive with the other senses, but the things that are constantly the same you can grasp only by the process of thinking, and they are invisible, are they not, and never to be seen?’

Cebes:: ‘You are absolutely right.’

Socrates:: ‘Let us then assume, shall we, two types of objects, the seen and the unseen.’

Cebes:: ‘Let us so assume.’

Socrates:: ‘And the unseen is ever uniformly constant, but the seen is constantly changing?’

Cebes:: ‘Let us assume that too.’

Socrates:: ‘Well then, are we not made up of body and soul?’

Cebes:: ‘Of nothing else.’

Socrates:: ‘And to which type do we say the body is more like and more akin?’

Cebes:: ‘That is evident to everybody, the visible.’

Socrates:: ‘And what of the soul? Is it visible or invisible?’

Cebes:: ‘Invisible at any rate to man, Socrates.’

Socrates:: ‘But in speaking of visible and invisible we are referring, are we not, to human senses, not to others?’

Cebes:: ‘To human senses.’

Socrates:: ‘Then what have we to say about the soul? Can it be seen or not?’

Cebes:: ‘It cannot.’

Socrates:: ‘It is invisible then?’

Cebes:: ‘Yes.’

Socrates:: ‘Then the soul more resembles the invisible than the body, and the body the visible?’

Cebes:: ‘Necessarily so, Socrates.’

Socrates:: ‘And did we not say earlier that when the soul uses the aid of the body for any investigation, through the instrument of sight or hearing or any other sense—for investigation through the body means through the senses—she is torn away by the body into the region of constant fluctuation, and she herself wanders about in confusion, reeling like a drunken man, because of her contact with things in similar confusion?’

Cebes:: ‘Certainly.’

Socrates:: ‘But when she pursues her inquiries by herself, she goes to the region of the pure, the eternal and immortal and ever-unchanging, and being akin thereto she ever dwells in it, when she is by herself and it is possible for her to do so: and she has ceased from her wanderings and remains ever constant and changeless with the unchanging, because of her contact with things similarly immutable: and this condition of hers is called wisdom, is it not?’

Cebes:: ‘All that you say, Socrates, is absolutely right and true.’

Socrates:: ‘To which of the two types then, judging from our previous and our present arguments, do you think the soul is more alike or akin?’

Cebes:: ‘Everybody, I think, Socrates, even the veriest dunce, would after this line of inquiry agree that the soul beyond all shadow of doubt is more like the constant and invariable than the ever-changing.’

Socrates:: ‘And what of the body?’

Cebes:: ‘That is more like the other.’

Socrates:: ‘Consider the question in this way too: when soul and body are together, nature enjoins that the one shall serve and be governed, the other be master and govern. From this point of view also which do you think resembles the divine, and which the mortal? Do you not think that the divine is naturally fitted to rule and govern, the mortal to be subject and governed?’

Cebes:: ‘I do.’

Socrates:: ‘Which of the two then does the soul resemble?’

Cebes:: ‘It is obvious, Socrates, that the soul resembles the divine, the body the mortal.’

Socrates:: ‘Now, Cebes, consider whether the conclusion of all our discussion is not this—that the soul most closely resembles the divine and immortal, intelligible and uniform and indissoluble and ever-unchangeable, while the body most resembles the human and mortal, the unintellectual and dissoluble and ceaselessly changing. Have we anything else to say, Cebes, to show that this is not true?’

Cebes:: ‘We have not.’

Socrates:: ‘Then, this being so, is it not the body’s part to be speedily dissolved, and the soul’s to be completely indissoluble, or something close to it?’

Cebes:: ‘Of course.’

Socrates:: ‘Now you notice that when a man dies, the visible part of him, the body, which is situated in the visible world and called his corpse, liable though it is to dissolution and decomposition and dissipation, does not experience any of these things immediately, but remains as it is for fairly long, for quite a long time, in fact, if a man dies with his body in good condition and at a favorable season: for when the body is shrunken and embalmed after the Egyptian manner, it remains all but entire for an incredible time, and some portions of it, bones and sinews and all such parts, even if the body decays, are practically indestructible. Is it not so?’

Cebes:: ‘Yes.’

Socrates:: ‘But the soul, the unseen, which departs to a place resembling itself, pure and noble and invisible, to Hades in the true sense of the word, to dwell with a God good and wise—whither, if God so will, my soul must shortly depart—can it ever be that with such a nature and origin she is straightway dissipated and destroyed when once she leaves the body, as most men tell us? Far from it, dear Cebes and Simmias, but the truth is much rather like this: if she takes her departure when pure, dragging along with her no taint of the body, because during life, so far as she was able, she held no communion with it but shunned it and withdrew into herself, since this was her constant practice—and this means that she genuinely loved wisdom and truly rehearsed death without repining: is not this the practice of death?'

Cebes:: 'Certainly.'

Socrates:: 'In this state then surely she departs to what resembles her, the unseen, the divine and deathless and wise: and when she has there arrived, happiness is her lot, for she is released from wandering and folly, fears and wild passions, and other human ills: and as is said of the initiated she in very truth lives through time to come with the gods. Is this what we are to say, Cebes, or not?'

Cebes:: 'This certainly.'

Socrates:: 'But if she departs from the body polluted and unclean, because she dwelt ever with it and served and loved it, and was bewitched by it and its pleasures and passions, so that she came to think nothing true but what is of the body, what one can touch and see, and eat and drink, and use to satisfy the lusts of the flesh, and if she becomes accustomed to hate and fear and tremble at what is dark and invisible to the eye, but intelligible and grasped by philosophy—do you think a soul in this condition will take her departure pure and unspotted?'

Cebes:: 'Never indeed.'

Socrates:: 'But I think she is interpenetrated by the corporeal, which association and intercourse with the body have ingrained in her, because of her constant communion with the body and her assiduous care of it.'

Cebes:: 'Certainly.'

Socrates:: 'And this bodily element, my friend, must be considered burdensome and heavy, and earthy, and visible: and such a soul is borne down by it and dragged back into the visible world through fear of the invisible, the world of Hades; and, so they say, she haunts monuments and graves, about which shadowy forms of souls have been seen—the images of those souls that have not been released in their purity but still partake of the visible: and this is why they are seen.’

Cebes:: ‘That seems likely, Socrates.’

Socrates:: ‘Likely indeed, Cebes: and likely also that these are not the souls of the good but of the evil, which are compelled to wander about in such places in punishment for their former evil way of life. And so they roam until, through their longing for the bodily element which is their constant companion, they are once more imprisoned in a body. And as we might expect, they are imprisoned in natures suited to their practices during their lifetime.’

Cebes:: ‘What natures do you mean, Socrates?’

Socrates:: ‘For example, those who have practiced gluttony and wantonness and drunkenness and have made no effort to avoid them are likely to enter into the forms of asses and similar creatures. Do you not think so?’

Cebes:: ‘What you say is most probable.’

Socrates:: ‘And those who have preferred injustice and tyranny and robbery enter the forms of wolves and hawks and kites. Where else can we say that such souls go?’

Cebes:: ‘Into such forms, to be sure.’

Socrates:: ‘And is not the direction that the others take in each case, obvious from the similarity of their pursuits?’

Cebes:: ‘Obvious, of course.’

Socrates:: ‘And of these others are not those the happiest, and do they not depart to the best places, who have practiced the popular virtues of the citizen, virtues which men call self-discipline and justice and which arise from habit and practice without philosophy or reason?’

Cebes:: ‘In what way are they the happiest?’

Socrates:: ‘Because it is to be expected that they will return again into some civilized and gentle creatures like themselves, bees perhaps or wasps or ants, or back again to human-kind, and that from them will arise men of worth.’

Cebes:: ‘That is likely.’

Socrates:: ‘But no one who has not loved wisdom and departed wholly pure may join the company of the gods, none but the lover of knowledge. And it is for this reason, my friends Simmias and Cebes, that true philosophers abstain from all the desires of the flesh and hold out without yielding to them, not for fear of wasting their substance and of poverty, like the many in their love of money: nor again is it through dread of dishonor or the disgrace of evil-doing, like lovers of power or honor, that they abstain from them.’

Cebes:: ‘No, that would ill befit them, Socrates.’

Socrates:: ‘Ill indeed. Therefore all those who take any thought for their own souls and do not merely live for the body and mould it into shape, bid farewell to such men as these and do not walk the path they tread, because they do not know where they are going: but thinking that they should not oppose philosophy and the release and purification it offers, they take that path and follow where she guides.’

Cebes:: ‘How, Socrates?’

Socrates:: ‘I will tell you. Lovers of knowledge know that philosophy takes the soul in charge when she is literally bound fast and glued to the body and compelled to view reality as though through the bars of a prison, wallowing in the depth of ignorance, instead of being unfettered and by herself. And she sees how cunningly this prison-house is contrived—that it is contrived by desire in such a way that the prisoner may most fully contribute to his own imprisonment. As I say then, lovers of knowledge know that philosophy takes the soul in this condition and gently comforts her and endeavors to release her, pointing out that the eyesight and hearing and perceptions of the other senses are full of deception, and persuading her to forsake these save in so far as she is compelled to use them, and to gather and concentrate into herself alone, trusting nothing but herself and her pure conception of pure reality: but the shifting and variable objects that she views through other aids, these she must consider void of truth: for such things are sensible and visible, but what she perceives is intelligible and invisible. The soul of the true philosopher then thinks that she should not oppose this liberation, and that is why, so far as she is able, she abstains from pleasures and desires and pains: for she reckons that whenever anyone experiences pleasure or fear or desire to excess, he suffers from no such trivial evil as one would imagine, such as sickness or some expense through satisfying his desires, but he suffers, without taking any account thereof, the very greatest and worst of evils.'

Cebes:: 'What is that, Socrates?'

Socrates:: 'The soul of a man cannot experience excessive pleasure or pain at anything without being forced at the same time to consider that the objects which arouse these feelings most strongly are the clearest and truest of all objects, though it is not so. And such objects are for the most part visible. Is it not so?'

Cebes:: 'Certainly.'

Socrates:: ‘And is it not in this condition that the soul is most completely imprisoned by the body?’

Cebes:: ‘How so?’

Socrates:: ‘Because each pleasure or pain nails her as with a nail to the body and pins her thereto, and makes her resemble the body, so that she believes all that the body says to be true. For by sharing the opinions of the body and its pleasures she is compelled, I suppose, to share in its habits and its nurture and becomes incapable of departing in purity to the other world, but must ever go forth contaminated by the body: and so she quickly falls back into another body and grows in it as though sown there; and as a result she has no part in the communion with the divine and pure and the unchanging.’

Cebes:: ‘You are quite right, Socrates.’

Socrates:: ‘It is for these reasons then, Cebes, and not for those held by the many, that real lovers of knowledge are disciplined and brave: or do you hold otherwise?’

Cebes:: ‘No indeed, not I.’

Socrates:: ‘Assuredly not. This is how the soul of a philosopher will reason: she will not think that, while philosophy should set her free, she should, when once released, of her own will surrender herself to pleasure and pain to bind her fast once more to the body and engage in the interminable task of a Penelope working ever in reverse upon her web. She gains instead peace from these desires and follows reason and ever dwells with it, contemplating what is true and divine and not the mere object of opinion, and seeking thence her nurture: and thus she thinks she should live, as long as she lives, and after death she believes she will depart to what is akin to her and like herself and have done with human evils. After such nurture as this, Simmias and Cebes, there is no danger of her fearing that she may be torn to pieces in parting from the body and blown away by the winds and fly apart into complete nothingness.’

Phaedo:: When Socrates had finished, there was silence for a long time, and Socrates himself, to judge by his appearance, was absorbed in pondering the foregoing discussion, and so were most of us: but Cebes and Simmias went on talking together in a low voice. And when Socrates noticed it, he asked:

Socrates:: ‘What is it? Do you think we have not discussed the matter sufficiently? It certainly does still admit of many doubts and objections, if we are to examine it thoroughly. Well, if you are considering something else, I have nothing to say: but if you are puzzled about these matters, do not hesitate to speak yourselves and to explain it, if you think that we could have discussed it better, and to invite me to join you, if you believe you can solve your problems better with my help.’

Simmias:: ‘Well, Socrates, I will tell you the truth. Each of us has for some time been puzzled and has been pushing the other forward and bidding him ask questions, because, though we are anxious to hear, we hesitated to bother you for fear that in your present misfortune it might be unwelcome to you’.

Phaedo:: Socrates when he heard this laughed gently and said:

Socrates:: ‘Bless my soul, Simmias: I should indeed find it difficult to persuade others that I do not regard my present state as a misfortune, if I cannot convince you, but you are afraid that I am more ill-humored than I was in the past. And apparently you must think me inferior in the gift of prophecy to the swans, which, though they sing all through their lives, yet sing most constantly and most sweetly when they perceive that they have to die, rejoicing that they are on the point of departure to the presence of the god whose servants they are. But men through their own fear of death belie the swans, insisting that they sing their final song for sorrow, in lamentation over their death. They do not reflect that no bird sings when hungry or cold or suffering any other pain, no, not even the nightingale and swallow and hoopoe which, they say, sing dirges for grief. But I do not believe these birds sing in sorrow, or the swans either: but because they are Apollo's birds, they are inspired with prophecy, and owing to their foreknowledge of the blessings of the other world, on that day they sing and rejoice more than they have ever done before. And I myself too consider that I am a fellow-slave with the swans, consecrated to the same god's service, and that I no less than they possess the gift of prophecy from my master, and that I depart from life no less cheerfully than they. But, so far as this hesitation of yours is concerned, you may speak and may ask any questions you like, as long as the Eleven officers of Athens allow.'

Simmias:: 'Good. I will tell you my difficulty, and Cebes in his turn will tell you where he does not accept your statements. To me, Socrates, as perhaps to you also, it seems either impossible or very difficult to know the truth about these matters in this life: but he would be a poor-spirited creature indeed who would not examine in every possible way what is said about them, refusing to give up till his search on every side leaves him completely exhausted. For we must in these questions do one of two things—either learn from another or discover the truth for ourselves, or, if these methods are impossible, take at least the best and most irrefutable of human theories, and embarking on this as upon a raft sail through life with all its attendant dangers, unless we can make our voyage with greater safety and security upon some more trustworthy vessel, some revelation of god. And so too now I shall feel no shame in questioning you, after what you say, and I shall not have to reproach myself hereafter for not saying now what I think. The fact is that when I examine what has been said, either alone or with Cebes, it does not seem altogether adequate.'

Socrates:: 'Perhaps, my friend, your impression is right: but tell me in what way our discussion is not adequate.'

Simmias:: 'In this way, I think. One might use the same argument about the tuning of a lyre and its strings, namely that the attuning is something unseen and incorporeal and very beautiful and divine in the tuned lyre, but that the lyre itself and its strings are corporeal and material and composite and earthy and akin to the mortal. Now if the lyre should be broken or the strings cut or snapped, suppose that someone should maintain by the same argument as yours that the tuning must still exist and cannot have perished—for it would be quite impossible that the lyre should still exist and the strings too which are mortal of nature, though broken, and yet the attuning, which is of like nature and akin to the divine and the immortal, should have perished, and perished too before the mortal element. But, he would say, the attunement must still exist somewhere and the frame and the strings must rot to pieces before anything happens to that. Indeed, Socrates, I think that you yourself must have reflected that we consider the soul to be some such thing as this: that our body is attuned to pitch and held together by the hot and the cold, the moist and the dry, and the like, and that our soul is a blending and attuning of these elements, when they are rightly and properly blended together. If then the soul is just a tuning, it is evident that, when the body is relaxed beyond measure or over-strung by sickness or any other evil, the soul, though most divine, must immediately perish, just as do other attunements both in musical notes and in all the works of artists, while the remains of each body last for a considerable time, until it be burned or molder away. Consider then what we are to say in answer to this argument, if one should claim that the soul, being a blending of the elements of the body, must be the first to perish in what we call death.’

Phaedo:: Socrates, with his characteristic broad stare, smiled and said:

Socrates:: ‘What Simmias says is quite fair. If any one of you then is better prepared to answer than I am, why should he not do so? For Simmias seems to be handling the argument like a master. But I think that before answering we should listen to the further charges which Cebes has to bring against our statement, in order that when we have had sufficient time we may consider what reply to make: and when we have heard them both, we may either agree with them if they seem to be in tune, or if not, then and then only defend our position. But come, Cebes, tell us what your trouble is.’

Cebes:: ‘I will do so’. It seems to me that the argument has not advanced but is liable to the same objections as we made before. I would not retract the statement that our souls existed even before entering this human form: it has been very neatly and, if it be not presumptuous to say so, very conclusively proved. But that the soul still somewhere exists when we are dead—here I think the proof is inadequate. I do not agree with Simmias’ objection that the soul is no stronger and no more enduring than the body: for in all these respects I think she is far superior. “Why then”, the argument might say, “are you still incredulous, when you see that the weaker part still continues to exist when a man is dead? Do you not think it necessary that the more enduring part must still be preserved during this time?" In answer to this, consider whether there is anything in what I say. And I too, Simmias, need to make use of a figure. I think your argument is very much as if a man should say about a weaver who has died old that the man is not dead but exists somewhere safe and sound, and should produce in evidence the fact that the cloak which he wore, woven by his own hands, is still sound and has not been destroyed. And if anyone should refuse to believe him, he might ask which is the more long-lasting, a human being or a cloak in continual use and wear: and when he received the answer that a man lasted much longer, he would consider it proved beyond question that the man was safe because the more short-lived had not perished. But actually this is not the case, Simmias: for you too must consider what I am saying. Everybody would realize that this is a silly argument. For this weaver, after having woven many such cloaks, outlived them despite their number; but the last, I suppose, outlived him: yet a man is not on that account more insignificant or weaker than a cloak. And the same image might, I think, be applied to the relation of soul to body, and we should think it a reasonable argument if a man said just the same about them, namely, that the soul lasts long, and the body is weaker and more short-lived: but he might add that though each soul wears out many bodies, especially if a man lives for many years (for even if his body is in a state of dissolution and is perishing while he is still alive, yet the soul always weaves anew what is worn out), nevertheless it is inevitable that, when the soul perishes, she must be wearing her last woven garment and this alone will outlive her: and when she has perished, then the body reveals its natural weakness and quickly molders away and is gone. And so we may not yet put our trust in this argument and feel assured that, when we are dead, our souls still somewhere exist. For, he might say, one might even concede to him who uses the previous argument still more than you (Cebes) mention, granting not only that our souls existed in the time before our birth but also that there is nothing to prevent the souls of some, even after death, from existing and continuing to exist and being born again and dying again many times—for the soul is naturally so strong that she can endure through many a rebirth: but granting all this, he might not go the length of allowing that she suffers no deterioration in her many births and that she does not finally on the occasion of one of her deaths perish utterly; though none of us, he would say, can recognize this particular death and dissolution of the body which brings destruction to the soul, since none of us can possibly perceive it. To sum up then, if this is the truth, any man who is confident in the face of death must be possessed of a foolish confidence, unless he can demonstrate that the soul is completely immortal and imperishable: and failing this, a man on the point of death must always be afraid that his soul may utterly perish in this impending separation from the body.'

Phaedo:: Now all of us who heard them speak were unpleasantly affected, as we afterwards confessed to one another: for we had been firmly convinced by the previous argument, and now again they seemed to upset us and cause us to distrust not only the previous discussion but also what was yet to come, for fear that we were incompetent critics or that these were matters beyond proof.

Echecrates:: By heaven, Phaedo, I can quite understand your feelings: for after hearing you just now, I myself am impelled to ask myself: 'then what argument shall we ever believe hereafter? How thoroughly convincing was the argument presented by Socrates, and now it has fallen under suspicion. For the doctrine that the soul is an attuning has now and always taken a wonderful hold upon me, and your mention of it reminded me, as it were, that I had previously held the belief myself. And now I must start afresh and I need more than ever some argument which will convince me that the soul of a dead man does not die with him. So tell me, in heaven's name, how Socrates pursued the discussion. Did he show signs, as you say you did, of being troubled, or did he calmly come to the aid of the argument? And did he defend it satisfactorily or the reverse? Tell me everything in as much detail as you can.

Phaedo:: Well, Echecrates, I have often wondered at Socrates, but I never admired him more than then. Perhaps there is nothing strange in his having had an answer to give: but what specially impressed me was, first of all, the pleasure and kindliness and approval with which he greeted the words of the young men, and then the alertness with which he perceived the effect of their objections upon us, and finally the skill with which he healed us and rallied us in our defeat and flight and encouraged us to follow his lead and review the argument along with him.

Echecrates:: How?

Phaedo:: I will tell you. I was sitting to his right on a stool beside the bed, and he was seated much higher than I. He stroked my head and gathered the hair on my neck—it was his habit on occasions to tease me about my hair—and said:

Socrates:: 'Tomorrow perhaps, Phaedo, you will cut those handsome locks of yours.'

Phaedo:: 'I expect so.'

Socrates:: 'Not if you will listen to me.'

Phaedo:: 'What then?'

Socrates:: ‘Today, I will cut mine and you yours, if our argument dies and we cannot restore it to life. And I, if I were you and the argument gave me the slip, would take an oath like the Argives, not to let my hair grow long until I have renewed the battle and defeated the arguments of Simmias and Cebes.’

Phaedo:: ‘But, they say that Hercules himself was no match for two.’

Socrates:: ‘Then summon me as your Iolaus, while there is still daylight.’

Phaedo:: ‘Well then, I summon you, not as Hercules did Iolaus, but as Iolaus summoned Hercules.’

Socrates:: ‘That will make no difference. But first of all let us beware of one weakness.’

Phaedo:: ‘What weakness?’

Socrates:: ‘Let us not prove ourselves misologists, as certain folk become misanthropists: for there is no greater evil a man can suffer than this. And misology and misanthropy both spring from the same cause. Misanthropy insinuates itself into us when we have placed in a man excessive confidence based on insufficient experience, thinking that he is completely truthful and sound and trustworthy, and then a little later have discovered that he is evil and untrustworthy; and then the same thing happens again. And when a man has often had this experience especially at the hands of those whom he would account his best and closest friends, he ends by constantly quarrelling and hating all men and thinking there is absolutely nothing sound in any man. Have you never seen this take place?’

Phaedo:: ‘Certainly.’

Socrates:: ‘And is it not a shameful thing and does it not prove that such a man attempts to associate with his fellows without any experience of human nature? For if when he met them he possessed this experience, he would have thought, as the facts demonstrate, that there are very few superlatively good or bad people, but that most are something between the two.’

Phaedo:: ‘What do you mean?

Socrates:: ‘Just as in the case of things very small or very large, do you think there is anything more rare than to find a very large or very small man or dog or any other creature, or one that is very fast or slow, very ugly or beautiful, very white or black? Have you not observed that in all such things the extremes are few in number and rare, while the means that lie between them are numerous and abundant?’

Phaedo:: ‘Certainly.’

Socrates:: ‘And do you not think that if a competition in wickedness were undertaken, here too the supreme sinners would be found to be very few?’

Phaedo:: ‘Most likely.’

Socrates:: ‘Yes, likely indeed. But it is not in this respect that arguments resemble men: I was merely following your lead in this digression: but the resemblance holds true when a man who is gifted with no experience in discussion believes an argument to be true, and then shortly afterwards thinks it false, which sometimes is and sometimes is not the case, and when this happens again and again. You know that those above all who have spent their time in disputation finally come to believe that they are the wisest of men and that they alone have discovered there is nothing sound or stable either in things or in arguments, but that everything is literally, like the Euripus, in constant ebb and flow and never for any length of time remains at rest.’

Phaedo:: ‘What you say is very true.’

Socrates:: ‘Then, Phaedo, if there is some true and stable doctrine which the mind is capable of grasping, it would indeed be a pitiful business if a man through contact with some of those arguments which seem now true, now false, should refuse to find fault with himself and his own lack of skill, but should finally in his annoyance gladly thrust the blame from his own shoulders upon the arguments and now continue for the rest of his life hating and abusing arguments, and thus rob himself of the truth and knowledge of realities.’

Phaedo:: ‘Pitiful indeed.’

Socrates:: ‘First of all, then, let us beware of admitting into our souls the thought that probably no arguments are sound: we should much rather admit that we ourselves are not yet sound. But we must play the man and zealously strive after soundness, you and the others for the sake of all your future life, and I because of my impending death: for I am afraid that at the present moment I am not facing it like a philosopher but am merely bent upon victory, like those who are utterly devoid of culture. For they, whenever engaged in any dispute, care nothing for the truth of the matter under discussion, but are eager only to enforce their own point of view upon their hearers. And at present I fancy there is only one point in which I shall prove different from them: I shall not be anxious to convince my hearers that what I say is true, except incidentally, but shall be most anxious to convince myself. For I reason, my dear friend—you can see how unscrupulously—that if what I say is true, it is well to be persuaded: but if there is nothing for the dead, at any rate during the actual period before my death I shall be less likely to be tiresome to my friends with my lamentations, and this folly of mine will not long endure—that would be unfortunate—but will soon come to an end. It is in such a state of preparation then, Simmias and Cebes, that I have come to argue: but as for you, if you will heed my advice, you will care but little about Socrates, but much more about the truth: and if you think there is any truth in what I say, agree with it, but if not, fight me with every possible argument: and beware that I do not in my zeal deceive both myself and you, and then fly away leaving my sting in you like a bee.

‘But I must go on. And first of all, remind me of what you both said, in case I appear to have forgotten. Simmias, I believe, is skeptical and afraid that the soul, though nobler and more divine than the body, may perish before it, being of the nature of an attunement. Cebes is ready to agree, I think, that the soul endures longer than the body, but insists that we cannot know for certain whether, after wearing out many bodies at different times, she may not herself perish on leaving the last of them, and whether death is not just this, the destruction of the soul, since the body is continually perishing. Are these the questions, Simmias and Cebes, which we must investigate?”

Phaedo:: Both agreed that they were.

Socrates:: ‘Do you reject all our previous arguments, or only some of them?’

Phaedo:: ‘Some of them, not others’, they replied.

Socrates:: ‘What have you to say then, about our theory that knowledge is reminiscence, and that, this being so, our soul must necessarily have existed somewhere else, before being prisoned in the body?’

Cebes:: ‘I was wonderfully taken by it at the time and there is no theory I cling to more firmly now.’

Simmias:: ‘I too, am of the same opinion, and I should be much surprised if I should ever change it on this subject.’

Socrates:: ‘But, my Theban friend, you must revise your opinion if you still hold to the belief that an attunement is something composite and that the soul is an attunement composed of elements of the body in proper tension: for you surely will never accept from yourself the statement that a composite attunement was in existence before the elements of which it was to be composed, will you?’

Simmias:: ‘By no means, Socrates.’

Socrates:: ‘But you see, do you not, that this is what your statement amounts to, when you say that the soul existed before entering the form and body of man, and at the same time that she is a combination of elements that do not yet exist? For an attunement does not resemble the thing to which you compare it, but the lyre and its strings and notes first come into existence as yet untuned, and the tuning is effected last of all and is first to disappear. How can this belief then be in tune with the other?’

Simmias:: ‘In no way.’

Socrates:: ‘And yet, if any argument at all ought to be properly in tune, it is an argument about attuning.’

Simmias:: ‘Yes, it should be.’

Socrates:: ‘Well, this argument is out of tune. But consider for yourself which of the two statements you choose—that knowledge is reminiscence or that the soul is an attunement.’

Simmias:: ‘The former I greatly prefer, Socrates. The latter I accepted without proof because it seemed probable and plausible—the reason why it appeals to most of those who accept it. But I know that arguments which base their proofs on analogies are impostors, and if one does not use caution, they thoroughly deceive us, in geometry and all other fields. The argument about reminiscence and knowledge, however, was based on a hypothesis worthy of acceptance. For it was stated that the existence of the soul before it entered the body is as sure as that it possesses the reality which is entitled to be called absolute and unqualified reality. This hypothesis I am convinced I have rightly accepted and on satisfactory proof. I must then, it seems, refuse to accept from myself or any other the statement that the soul is an attunement.'

Socrates:: 'And what if you look at it in this way, Simmias? Do you think it proper for an attunement or any other composite thing to differ in nature from the elements which compose it?'

Simmias:: 'By no means.'

Socrates:: 'And it cannot, I suppose, do or suffer anything except what they do or suffer?'

Phaedo:: He agreed.

Socrates:: 'An attunement therefore should not properly lead the elements which compose it, but must follow them?'

Phaedo:: He concurred.

Socrates:: 'It is utterly impossible then that it should vibrate or produce sounds or do anything in opposition to its own parts.'

Simmias:: 'Utterly.'

Socrates:: 'Again, is it not the nature of an attunement to be an attunement just as it is attuned?'

Simmias:: 'I do not understand.'

Socrates:: 'If it is tuned more truly or more completely (supposing such a thing possible), would it be more truly and completely an attunement, or if less truly and completely, less truly and completely an attunement?'

Simmias:: 'Certainly.'

Socrates:: ‘Is it the case with the soul, that one soul can be in the slightest degree more truly and completely, or less truly and completely, a soul than another?’

Simmias:: ‘By no means.’

Socrates:: ‘And now pray tell me, one soul may be said to possess intelligence and worth and to be good, and another to possess folly and wickedness and to be evil: is this not a true saying?’

Simmias:: ‘Yes, quite true.’

Socrates:: ‘Then how will they define these qualities that exist in the soul, this virtue and vice—these people who assume that the soul is a tuning? As another attuning or discordance? And will they say that the good soul is in tune and being a tuning herself, has in her another attuning, and that the other (the evil), being herself out of tune, has no other attunement in herself?’

Simmias:: ‘I cannot say, but it is plain that the man who made this assumption would say something like that.’

Socrates:: ‘But we have already agreed that no one soul is more or less a soul than another: and that is the same as admitting that no attuning is more truly and completely or less truly and completely an attunement than another, is it not?’

Simmias:: ‘Certainly.’

Socrates:: ‘And the attunement which is neither more nor less an attunement is not more nor less tuned: is that so?’

Simmias:: ‘It is.’

Socrates:: ‘And has that which is neither more or less tuned a greater, less, or equal amount of tuning?’

Simmias:: ‘An equal.’

Socrates:: 'Then the soul being neither more nor less a soul than another, is not more nor less tuned either.'

Simmias:: 'That is so.'

Socrates:: 'And this being its condition, it could not have a greater amount of discordance or attunement?'

Simmias:: 'It could not.'

Socrates:: 'And in this case could one soul have a greater amount of vice or virtue than another—if vice be a lack of tuning, and virtue attunement?'

Simmias:: 'It could not.'

Socrates:: 'Or rather, Simmias, to speak correctly, no soul will partake of evil, if it is a tuning: for an attuning, being entirely an attuning, cannot have any part in discordance.'

Simmias:: 'No indeed.'

Socrates:: 'Nor can a soul then which is entirely a soul have any part in evil.'

Simmias:: 'How could it, in view of what has already been said?'

Socrates:: 'According to this argument then all souls of all living creatures will be equally good, since it is the nature of all souls to be equally souls.'

Simmias:: 'Yes, I agree, Socrates.'

Socrates:: 'Do you think that we are right, and that this could have happened to our argument, if the assumption that the soul is an attunement were correct?'

Simmias:: 'By no means.'

Socrates:: 'Again, of all the parts of man would you say that any other is ruler than the soul, and especially the wise soul?'

Simmias:: 'I would not.'

Socrates:: ‘And does she comply with or oppose the passions of the body? I mean, when it is hot and thirsty, she drags it back and prevents it from drinking, and from eating when hungry, and in countless other ways we see the soul opposing the claims of the body. Is it not so?’

Simmias:: ‘Certainly.’

Socrates:: ‘Now did we not previously agree that if she were an attunement she would never produce any sounds contrary to the tensions and relaxations and vibrations and other affections of the elements that compose her, but would follow, never lead them?’

Simmias:: ‘We agreed, of course.’

Socrates:: ‘Well, now we find her doing just the opposite, leading all those elements of which she is said to be made up and opposing them in almost everything throughout her life, exercising her tyranny in every way, sometimes disciplining more harshly and painfully, by gymnastic and medicine, sometimes more gently, and now threatening, now admonishing, speaking to our desires, our passions and fears as though addressing something not herself, just as Homer describes in the Odyssey, where he says of Odysseus:

> He smote his breast, and thus rebuked his heart:
> “Courage, my heart: thou hast borne worse than this.”

Do you think he wrote this in the belief that the soul was an attunement and of a kind to be led by the passions of the body instead of herself leading and governing them, being herself far too divine a thing to be compared to a tuning?’

Simmias:: ‘Indeed, Socrates, I agree with you.’

Socrates:: ‘Then, my good friend, it is under no circumstances right to call the soul an attunement: for we should, it seems, be in disagreement both with the divine poet Homer and with ourselves.’

Simmias:: ‘That is so.’

Socrates:: ‘Well, our Theban goddess Harmonia has, I think, proved quite gracious to us: and now what about Cadmus, Cebes? How shall we propitiate him, and by what argument?’

Cebes:: ‘I think you will discover how the case against attunement you put forward at any rate in a manner that wonderfully exceeded my expectations. When Simmias was speaking in his perplexity, I much wondered whether anyone would be able to deal with his argument. It seems very strange that it could not withstand even the shock of your first assault. I should not be surprised then if the statement of Cadmus suffered the same fate.’

Socrates:: ‘Good friend, do not speak boastfully, for fear some evil eye may defeat and rout my next argument. But that we will leave in God’s hands: let us come to close quarters like Homer’s heroes and discover whether there is anything in what you say. Now the sum and substance of your contention is this: you are asking for a proof that our souls are indestructible and immortal: for otherwise the philosopher on the point of death will be guilty of a foolish and senseless confidence if he is fearless and convinced that after death he will fare far better in the other world than if he had lived another kind of life. And as for our proof that the soul is strong and godlike and existed before we were born men, there is nothing, you say, to prevent all this from proving, not that the soul is immortal, but that it is long-lived and existed somewhere before for a period beyond all reckoning, and knew and did many things: but she was not any the more immortal for all that, and her coming into a human body was actually, like a disease, the first step in her dissolution: and she passes this life in distress and finally perishes in what we call death. And you say it makes no difference whether she enters a body once or many times, so far as our individual fears are concerned: for the man who does not know and cannot demonstrate that the soul is immortal ought to be afraid, unless he is a fool. That, Cebes, is, I think, about what you say. I repeat it again and again on purpose, that no point may escape us and that, if you wish, you may add or withdraw anything.'

Cebes:: 'There is nothing that I want to add or retract for the moment. You have expressed my meaning.'

Phaedo:: Socrates paused for a considerable time in silent reflection: then he said:

Socrates:: 'It is no trivial task, this quest of yours: for we must thoroughly investigate the cause of coming-to-be and ceasing-to-be. Well, I will relate my own experiences in these matters, if you wish, and then if you find anything I say useful, you may employ it to convince you in the problem under debate.'

Cebes:: 'Indeed, I do so wish.'

Socrates:: 'Then listen, and I will tell you. When I was young, Cebes, I was wonderfully eager to acquire that wisdom which they call natural science: for it seemed to me a wondrous wisdom to know the causes of each thing, why it comes into being and passes away, and why it exists. And many a time I was tossed to and fro in doubt, as I asked first of all such questions as these: is it, as certain people say, when the hot and the cold produce putrefaction, that living creatures find their nourishment? And is it with blood that we think, or with air, or fire? Or is it none of these things, but the brain which produces the senses of hearing and sight and smell, and from these arise memory and opinion, and from memory and opinion in an undisturbed state comes knowledge? And again, when considering what destroys these things, and the phenomena of earth and heaven, I finally concluded that nothing could be more ungifted than I for such inquiries. Of this I will give you ample proof: this new inquiry so completely blinded me to what I had previously seemed both to myself and to others to know well, that I forgot even what I formerly imagined I knew about many subjects and in particular the cause of man's growth. I had previously believed it was obvious to all that this was due to eating and drinking: that new flesh was added to flesh by food, and bone to bone, and so too in the same way the elements proper to each thing were added to the other parts, and thus the smaller bulk later became greater and the boy became the man. That is what I used to believe. Do you not think that it sounds reasonable?'

Cebes:: 'I do.'

Socrates:: 'Now consider this further point. I thought I had good grounds for my opinion, when a tall man standing beside a short one seemed to be taller just by a head, and so too with one horse beside another: and still more clearly than this did it seem true to me that ten was more than eight by the addition of two, and two cubits longer than one because they exceed the other by one half.'

Cebes:: 'And what do you think about this now?'

Socrates:: 'I am indeed, little likely to think I know the cause of any of these things, when I refuse to accept my own account that, when one is added to one, either the original one becomes two, or the added one, or the original one and the added one together, by reason of their addition, one to the other, have become two. When each was separated from the other, each of them was one, and they were not then two: it seems strange to me then that, when they have united together, this union should be the cause of their becoming two—the fusion which arises from their juxtaposition. Nor again, if one be divided in two, can I yet convince myself that it is this division which causes it to become two: for this is the opposite of the cause which formerly produced two. Then, it was the coming together and addition of one to the other: now, it is the withdrawing and separation of one from the other. Indeed I am not any longer convinced that I know even how the unit comes into being at all, nor, in a word, how any thing comes to be or passes away or exists, by this method of inquiry; but I follow a new, confused method of my own, and the other I refuse to admit.

'But one day I heard somebody reading from a book, by Anaxagoras as he said, the statement that Mind is the disposer and cause of all things: and I was delighted with this cause, and it seemed to me in a certain way right that Mind should cause all things, and I reflected that, if this were so, then Mind in ordering all things must order and arrange them in the best possible way. If then one wished to discover the cause why anything comes into being or passes away or exists, he will have to discover how it is best for that thing to exist or to act or be acted upon in any way: and the conclusion from this argument was that a man ought to take account only of what is best and most fitting both for himself and for everything else. And the same man must also know the worse: for the same knowledge deals with good and evil. As I reasoned thus, I was happy to think that in Anaxagoras I had found a teacher after my own heart to explain the causes of things, and that he would tell me first of all whether the earth is flat or round, and after informing me, he would proceed to put forward the cause and the necessity, telling me what was best and that it is best for the earth to be what it is:

and if he said that it was in the centre, he would proceed to explain that it was better for it to be in the centre: and if he could make this plain to me, I was prepared never to want any other kind of cause. And I was ready to make similar inquiries about the sun and the moon and the other heavenly bodies, with regard to their relative velocity, and the solstices and other conditions—just how it was better for each body to act and experience what it does. For I would never have believed that, when he claimed they were ordered by Mind, he would suggest any further cause than that it was best for them to be as they are. In assigning, then, a cause to all things both individually and collectively, he would, I thought, proceed to explain what was best for all things individually and collectively: and I would not have sold my hopes for a large sum, but I seized the books with the utmost eagerness and read them as quickly as I could, that I might as quickly as possible learn what was best and what was worst.

'My magnificent hopes were shattered, my friend, when, as my reading progressed, I found a man making no use whatever of Mind and ascribing to it no causal action in the ordering of things, but assigning such causes as air and ether and water and many other strange things. It seemed to me exactly as if a man were to say that everything Socrates did was done by Mind, and then, in attempting to offer reasons for each of my actions, should state, first of all, that I am now sitting here because my body is compacted of bones and sinews, and that the bones are hard and have joints to separate them, and that the sinews naturally contract and relax and, along with the flesh and the skin which holds them together, envelop the bones: and, as the bones swing loose in their sockets, the strain and relaxation of the sinews make it possible for me now to bend my limbs; and this is the cause of my sitting here with legs bent. And again he might give you other such reasons for my talking to you, assigning such causes as sounds and air and hearing and countless other such things, neglecting to mention the true reasons, that since the Athenians thought good to condemn me, I too thought good to sit here and considered it more in accord with justice to hold my ground and submit to whatever punishment they order. For, by the dog, these sinews and bones of mine would, I imagine, long since have been in Megara or Boeotia, borne thither by my conception of what is best, had I not thought it more right and honorable to undergo whatever penalty the city inflicted rather than escape and be a runaway. But to call such things causes is too absurd. If anyone should say that I could not have done what seemed right to me without such things as bones and sinews and the like, that would be quite correct: but to say that these things, and not my choice of what is best, are the causes of my action, and that too though I act with intelligence, would be a very loose and idle way of talking. Just imagine being unable to distinguish between the real cause and the invariable concomitant of the cause! The majority of people, I suppose, groping about as though in the dark, call this the cause, applying to it a name that is not its own. And so one man surrounds the earth with a vortical motion and represents it as kept in its place by the heavens: another pictures the earth as a flat kneading-trough with the air as its foundation and support: but the force which keeps things placed as it is best for them to be placed—that force they neither seek to know nor do they think it has any divine power, but they believe they will discover an Atlas stronger and more immortal than our own and more capable of holding the world together, and the good that binds in the truest sense of the word they imagine has no holding or binding force. Now here is a cause, the nature of which I should be glad to study as the pupil of any man: but since I was deprived of this and could neither discover it myself nor learn it from another, I adopted another method of travel for investigating it: would you like me, Cebes, to explain how I pursued it?'

Cebes:: 'I should very much indeed.'

Socrates:: 'After this, then, having given up investigating things, I felt that I must beware of suffering what happens to those who observe and gaze at the sun during eclipse. For some of them ruin their eyesight, unless they observe its reflection in water or some other medium. That was what I thought of, and I was afraid that my soul might be completely blinded if I gazed at objects with my eyes and attempted to grasp them by each of my senses. I decided then that I must have recourse to propositions and in them study the truth about things. Now perhaps my simile is in a way not quite faithful: for I do not entirely agree that a man who studies realities in propositions is examining them in reflection rather than he who examines them in things. However, this is the way in which I made, my start: assuming as true in each case the proposition which I judged to be the best assured, I set down as true whatever seems to agree with it, both in the matter of causes and in everything else; and whatever disagrees I reject as untrue. I should like to explain my meaning more clearly, for I think you do not yet understand.'

Cebes:: 'No indeed, I do not altogether.'

Socrates:: 'Well, this is what I mean: it is nothing new, but what I have persisted in saying both in to-day's conversation and at other times. I am going to try to show the kind of causation with which I have busied myself, and I will go back to that hackneyed theme and make my starting-point the assumption that there exists an absolute beauty and goodness and greatness and so on. If you allow this and grant that they exist, I hope as a result to reveal to you what the cause is and to discover the immortality of the soul.’

Cebes:: ‘Well, I concede you this, and you need lose no time in proceeding.’

Socrates:: ‘Consider what follows upon this, you may perhaps share my point of view. It seems to me that, if there is any other beautiful thing except beauty itself, it is beautiful for no other reason than that it partakes of that beauty: and so too with everything else. Do you accept that kind of cause?’

Cebes:: ‘I accept.’

Socrates:: ‘Well, I no longer know nor can I understand these other clever causes of theirs: but if anyone tells me why something is beautiful—because it has a fresh and radiant color or a certain shape or anything else like this, I pay no heed to these other reasons, all of which only confuse me, but I hold to my doctrine simply and artlessly and perhaps foolishly, that nothing else makes an object beautiful except the presence of beauty itself or communion with it, or whatever or however you like to call it (I will not go the length of insisting upon exact terms), but I insist that it is by beauty that all beautiful objects become beautiful. This seems to me the safest answer I can give to myself or another, and if I cling to this I believe I shall never fall, but that it is safe to answer myself and anyone else that beauty makes beautiful all things beautiful. Do you not agree?’

Cebes:: ‘I do.’

Socrates:: ‘And it is greatness that makes great things great or greater things greater, and smallness that makes smaller things smaller?’

Cebes:: 'Yes.'

Socrates:: 'You too then would not admit the statement if someone said that one man is taller or shorter than another by a head, but would protest that all you will say is that every thing greater than another is greater by nothing but greatness, and greatness is the reason why it is greater, and the less is less by nothing but smallness, and smallness is the reason why it is smaller: for you would, I imagine, be afraid that, if you say a man is taller or shorter by a head, you may meet with the retort, first that the great is greater and the small smaller by the same thing, and secondly that the tall is taller by a head, which is something short, and that this is a portentous thing that any man should be great by reason of the small. Would you not be afraid of this?'

Phaedo:: With a laugh Cebes said;

Cebes:: 'I should indeed.'

Socrates:: 'Then, you would be afraid to say that ten is more than eight by two and that this is the reason for the excess: you would say it was more by number, and that number was the cause: and that two cubits are more than one by length, not by a half. For you would feel the same fear.'

Cebes:: 'Certainly.'

Socrates:: 'Again, would you not be wary of asserting that, when one is added to one, the addition, or when it is divided, the division is the cause of two? You would protest vigorously that you know of no other way in which any object can come into being except by partaking of the particular reality of each form in which it participates: and in the examples mentioned you can give no other reason for becoming two except participation in duality, and all things that are to be two must partake of this, and what is to be one must partake of unity: and you would bid a long farewell to divisions and additions and all such refinements, leaving the answer to wiser men than you: but you, aware of your lack of experience, and shying, as they say, at your own shadow, would cling firmly to the sure support of your hypothesis and would give the answer we mentioned. And if anyone should lay hands on your hypothesis itself, you would let him be and would make no answer until you could consider whether the consequences of it were consistent with each other or not: and when you had to render an account of the hypothesis itself, you would render it in the same way, by assuming another hypothesis which seemed to you to be best among the more comprehensive ones, until you reached one which was really adequate: but at the same time you would not confound the two things together, as disputants do, when discussing your starting-point and its consequences, if you wished to discover any truths. For these disputants, I suppose, devote never a word nor a thought to such matters, being clever enough to be self-satisfied even when they have thrown everything into chaos: but you, if you are a philosopher, will, I believe, do as I say.’

Phaedo:: ‘That is absolutely true’, said Simmias and Cebes together.

Echecrates:: They were quite right too, Phaedo: for I think his argument is admirably clear even to the dullest of wits.

Phaedo:: Certainly, Echecrates: all who were present thought so too.

Echecrates:: And so do we who were not there but now are listening. But what was said next?

Phaedo:: I believe, when they had made these admissions and had agreed that each of the universal forms exists and that particular objects are called after them because they partake of them, his next question was:

Socrates:: 'Then if you accept all this, do you not, in saying that Simmias is taller than Socrates but shorter than Phaedo, assert that both elements, tallness and shortness, exist in Simmias?'

Cebes:: 'I do.'

Socrates:: 'However, you agree that when you speak of Simmias as taller than Socrates, the truth is not what the words imply: and that it is not because he is Simmias that he is taller, but in virtue of the tallness which is his: nor again is he taller than Socrates because Socrates is Socrates, but in virtue of the shortness of Socrates relatively to the tallness of Simmias.'

Cebes:: 'That is true.'

Socrates:: 'Nor is Simmias shorter than Phaedo because Phaedo is Phaedo, but because of the tallness of Phaedo relatively to the shortness of Simmias.'

Cebes:: 'That is so.'

Socrates:: 'Thus it is then that Simmias is called short or tall, because he is intermediate, submitting his shortness to be exceeded by the tallness of the one, and offering his tallness to exceed the shortness of the other.'

Phaedo:: And with a smile, he continued:

Socrates:: 'It looks as if I am beginning to talk like a statute book: but at any rate the facts are much as I state.'

Phaedo:: He agreed.

Socrates:: 'My reason for thus speaking is that I want you to share my opinion. For I believe, not only that greatness itself will never become at the same time both great and small, but that the greatness in us never admits the small nor suffers itself to be exceeded, but of two things one must happen: either it withdraws in flight when approached by its opposite, the small, or else at this approach it perishes: but it refuses to stand its ground, accept smallness, and be other than it was. Thus when I have stood my ground and accepted smallness, I remain Socrates still and am the same small person: but as the greatness in us, being great, has never submitted to become small, so too the smallness in us will never become or be great, nor will any thing, while it still is what it was, become or be its opposite, but it either withdraws or perishes in this experience.’

Cebes:: ‘That is exactly my opinion.’

Phaedo:: Then one of the company who heard him—I do not quite remember who it was—said:

Someone:: ‘But in heaven’s name, did we not in our earlier discussion agree upon the exact opposite of what we are now saying, stating that the greater is generated by the less, and the less by the greater? and that the generation of opposites simply proceeds from opposites? But now we seem to be saying that this could never take place.’

Phaedo:: Socrates turned his head and listened, and then said:

Socrates:: ‘A gallant reminder but you do not notice the difference between what was said then and now. Then we stated that opposite objects are engendered by their opposites: but now we are saying that the opposite itself could never become opposite to itself, whether it be in us or in the world of reality. We were then talking, my friend, about things in which the opposites are found, naming them by the names of those opposites, but now we are speaking about those opposites themselves which are inherent in objects and give them their names: but the opposites themselves would never, we insist, submit to becoming one another.'

Phaedo:: And with this he looked at Cebes and said:

Socrates:: 'Did anything our friend has said, Cebes, trouble you at all?'

Cebes:: 'No, not this time and yet I do not say that there are not many problems that trouble me.'

Socrates:: 'We are simply agreed then that an opposite can never be opposite to itself.'

Cebes:: 'Entirely agreed.'

Socrates:: 'And now once more, consider whether you will agree with me in this? There are things, are there not, which you call hot and cold?'

Cebes:: 'Yes.'

Socrates:: 'Are they the same as snow and fire?'

Cebes:: 'Indeed not.'

Socrates:: 'But heat is different from fire, and cold from snow?'

Cebes:: 'Yes.'

Socrates:: 'But this, I think, you do believe, that snow when it admits heat, as we have already said, will no longer be what it was, snow as well as hot, but at the approach of heat will either withdraw before it or perish.'

Cebes:: 'Certainly.'

Socrates:: 'And fire too at the approach of cold will either withdraw or perish, but when it has admitted the cold it will never venture to remain what it was, fire as well as cold.'

Cebes:: 'Quite true.'

Socrates:: 'The truth then about some of these things is this not only is the form itself entitled to its own name for ever, but another thing is also, which is not the form but always, whenever it exists, possesses the character of that form. But perhaps my meaning will become plainer in the following example. The odd must always possess the name by which we call it, must it not?'

Cebes:: 'Certainly.'

Socrates:: 'Is it the only thing that does—that is my question—or is there something else which is not identical with the odd but which, in addition to its own name, must always be called odd, because such is its nature that it never fails to be odd? The kind of instance I mean is the number three and many others. Consider the case of three. Do you not think that it must always be called both by its own name and by the name of odd, though the odd is not identical with three? Yet such is the nature of the number three and five and the half of the whole series of numbers that, though not identical with the odd, each of them is odd: and again two and four and all the other series of numbers, though not identical with the even, are each of them always even. Do you agree or not?'

Cebes:: 'Of course.'

Socrates:: 'Then observe what I want to make plain. It is this. Not only do your actual opposite forms evidently exclude each other, but all things also which, though not opposites themselves, always contain opposites, seem never to admit that form which is opposite to the form contained in them, but at its approach they perish or withdraw. Shall we not affirm that three will perish or endure any fate rather than submit, while remaining three, to become even?'

Cebes:: 'Certainly.'

Socrates:: 'And yet, two is not the opposite of three.'

Cebes:: 'It is not.'

Socrates:: 'Then not only do forms refuse to admit the invasion of their opposites, but there are certain other things that do not admit the invasion of opposites.'

Cebes:: 'Quite true.'

Socrates:: 'Shall we then, if we can, determine what kind of things these are?'

Cebes:: 'Certainly.'

Socrates:: 'Would they not, Cebes, be things which, whenever they occupy anything, compel it to assume not only their own form but in each case also that of some opposite [to the attempting invader]?'

Cebes:: 'What do you mean?'

Socrates:: 'Just what we were saying a moment ago. You know, of course, that all things in which the form of three is inherent must be not only three but odd as well.'

Cebes:: 'Certainly.'

Socrates:: 'To such a thing, we insist, the form contrary to that which produces this result can never come.'

Cebes:: 'It cannot.'

Socrates:: 'And the form that produced it was the odd?'

Cebes:: 'Yes.'

Socrates:: 'And the form of the even is the opposite of this?'

Cebes:: 'Yes.'

Socrates:: 'Then the form of the even can never come to the number three?'

Cebes:: 'Never.'

Socrates:: 'So that three has no part in the even?'

Cebes:: 'No part.'

Socrates:: 'Then the number three is uneven?'

Cebes:: 'Yes.'

Socrates:: ‘I said we were to define what things, though not opposites of something, do not admit the opposite in question: for instance, three, which is not the opposite of the even, yet refuses to admit the even but always brings its opposite to confront it, and similarly with two and the odd, fire and cold and many other examples—but consider whether this definition satisfies you: not only does an opposite refuse admission to its opposite, but whatever brings an opposite to that which it invades will never itself admit the opposite of that which it brings. Just recollect once more: for it will do no harm to repeat. Five will not admit the form of the even, nor ten, its double, the form of the odd. It is true enough that the double is opposite to something else (the single), but none the less it will not admit the form of the odd either. Nor will such fractions as three over two or a half or a third and all the like admit the form of the whole, if you follow me and agree with me.’

Cebes:: ‘I do follow and heartily agree.’

Socrates:: ‘Let us go back once more to the beginning and do you answer me, not in the terms of my question, but in imitation of my example. For over and above the safe answer I first gave I see another safe reply based on what we were just saying. If you should ask me what exists in a body to make it hot, I will not give you that safe old foolish answer, heat, but a more clever answer suggested by our discussion, namely fire: and if you should ask me what exists in a body to make it ill, I shall not say sickness, but fever: and again, should you ask what must be in number to make it odd, I shall not answer oddness, but the number one, and so forth. Do you clearly understand my meaning now?’

Cebes:: ‘Quite clearly.’

Socrates:: 'Then answer me. What must there be in a body to make it alive?'

Cebes:: 'A soul.'

Socrates:: 'Is this always so?'

Cebes:: 'Of course.'

Socrates:: 'Whatever the soul occupies, then, she always brings life thereto?'

Cebes:: 'Yes, certainly.'

Socrates:: 'And is there an opposite to life or not?'

Cebes:: 'There is.'

Socrates:: 'What?'

Cebes:: 'Death.'

Socrates:: 'Now in accordance with what we have already agreed, the soul will never admit the opposite of what she brings with her?'

Cebes:: 'Most assuredly not.'

Socrates:: 'Well, what name did we give just now to what refused to admit the form of the even?'

Cebes:: 'The uneven.'

Socrates:: 'And what do we call that which refuses to admit justice and music?'

Cebes:: 'The unjust and the unmusical.'

Socrates:: 'Then what do we call that which does not admit death?'

Cebes:: 'The undying or immortal.'

Socrates:: 'Now the soul does not admit death?'

Cebes:: 'No.'

Socrates:: 'Then the soul is immortal?'

Cebes:: 'Immortal.'

Socrates:: ‘Well: can we say that this has been proved? Or what do you think?’

Cebes:: ‘Quite conclusively, Socrates.’

Socrates:: ‘Now, Cebes, if the odd were of necessity indestructible, would not the number three be also?’

Cebes:: ‘Of course.’

Socrates:: ‘And if that which is without heat were necessarily indestructible, then snow would withdraw safe and unmelted whenever heat approached it. For it could not perish nor could it hold its ground and admit heat.’

Cebes:: ‘That is true.’

Socrates:: ‘So too, I suppose, if that which cannot be made cold were indestructible, then when cold approached fire, that fire could neither be quenched nor could it perish, but it would withdraw and depart in safety.’

Cebes:: ‘Necessarily so.’

Socrates:: ‘Must we not speak in the same way about the immortal? If the immortal is also indestructible, it is impossible for the soul to be destroyed when death attacks her. For our previous argument proves that she will not admit death or be dead, just as we said the number three will never be even, no more will the odd, and fire will never be cold, nor will the heat in fire. “But”, one might add, “though the odd, as we agree, will never be even, when attacked by the even, yet what is to prevent the odd from perishing and the even taking its place?” In reply to such an argument we could not contend that it does not perish: for the uneven is not imperishable: if indeed that were admitted, we might easily contend that at the coming of the even the odd and the number three would withdraw and depart: and we might contend in the same way regarding fire and heat and the rest, might we not?’

Cebes:: ‘Of course.’

Socrates:: ‘So too now, with regard to the immortal, if we agree that it is indestructible also, then the soul would be indestructible as well as immortal: if not, some further argument will be needed.’

Cebes:: ‘But there is no such need, so far as that is concerned: it is hardly likely that anything else would escape destruction, if the immortal, which is eternal, will admit it.’

Socrates:: ‘Yes, and all men, I think, would agree that God, and the form of life itself, and all else that is immortal, can never perish.’

Cebes:: ‘All men indeed and still more, I think, all the gods.’

Socrates:: ‘Then, since the immortal is also indestructible, the soul, if immortal, will be indestructible.’

Cebes:: ‘Necessarily.’

Socrates:: ‘When death, then, attacks a man, the mortal in him, it appears, will perish, but the immortal withdraws and departs safe and undestroyed, retiring before death.’

Cebes:: ‘Evidently.’

Socrates:: ‘Then, Cebes, beyond question, the soul is immortal and indestructible, and our souls will really live on in the other world.’

Cebes:: ‘There is no further objection, Socrates, that I can bring forward, nor can I doubt your statements. But if Simmias or anyone else has anything further to say, he had better not suppress it: for I know of no other opportunity beyond the present, to which he can postpone the discussion, if he wishes either to say or to hear anything about such matters.’

Simmias:: ‘Well, Socrates, I too can find no further reasons to doubt, after what has been said: but owing to the immensity of the subject under debate and my distrust of human frailty, I cannot help still feeling some misgivings within me about our statements.'

Socrates:: 'More than that, Simmias, what you say is right, but we must still examine more carefully our first assumptions, even though they seem sure to you: and if you analyze them satisfactorily, you will, in my opinion, be able to follow the discussion, so far as it is in man's power to do so: and if you make certain that you have done this, you will have no further to seek.'

Simmias:: 'That is true.'

Socrates:: 'But, my friends, it is right for us to reflect that, if the soul is immortal, she needs our care not only for the period during which we enjoy what we call life, but also for all time: and now indeed the danger would seem to be terrible, if we are minded to neglect her. For if death were a deliverance from everything, it would be a godsend to the wicked, when they die, to be delivered at once from the body and from their own wickedness, along with their souls: but as it is, since the soul is plainly immortal, there could be no escape for her from evil nor any salvation except in acquiring the greatest goodness and wisdom. For on her journey to the other world the soul takes nothing with her except her education and culture, and these things, they say, render the dead man the very greatest benefit or harm, right at the beginning of that journey. We are told that after death man's guardian spirit allotted to him in life takes it in hand to lead him to a mysterious place where those who are gathered together must first submit their different claims to judgment and then proceed to the other world under the guidance of him whose task it is to convey thither those from the world above: and after receiving there the treatment that is their due and remaining for the allotted period, they are brought back hither after many long cycles of time by another guide. And this journey does not resemble that described in the Telephus of Aeschylus: for he says that one simple path leads to the other world, but apparently it is neither single nor simple. In that case there would have been no need for guides, since nobody could stray anywhere from the path, if there were but one. But in fact it seems to have many forks and crossroads—at least so I judge from the evidence of sacrifices and ritual in this world.'

'Now the orderly and wise soul follows, quite familiar with her surroundings: but the soul that yearns for the body flutters, as I said before, for a long time about that body and the visible region, and only after violent resistance and much suffering is dragged away panting and reluctant by the appointed spirit. And when she has arrived to join the others, if the soul has been impure and done impure deeds, engaging in brutal murders or other such crimes that are akin to these and perpetrated by kindred souls, all shun her and turn aside to avoid her, and none will be her companion in travel or her guide, but she wanders alone in sore straits until a certain time has passed, at the end whereof she is borne away by necessity to her fitting habitation. But the souls which have passed their life in purity and goodness, with gods to accompany and guide them, dwell each in her proper dwelling-place. Now there are many wonderful regions in the earth: and the earth itself is not of the size or character imagined by those who are wont to speak about it, as a certain person has convinced me.'

Simmias:: 'What is this that you are saying, Socrates? I too have heard many theories about the earth, but not those which you believe. I should very much like to hear them.'

Socrates:: ‘Well, Simmias, it does not require the skill of Glaucus, I think, to describe them to you: but to prove them true would, I believe, be beyond even the skill of Glaucus, Probably I am incapable of doing so: and, even if I knew how, I imagine, Simmias, that my future is not long enough for so lengthy a discussion. There is nothing, however, to prevent me from telling you what I believe to be the form of the earth, and of the regions in it.’

Simmias:: ‘Well, even that will suffice.’

Socrates:: ‘I am convinced then, first of all that, if the earth is spherical and is in the middle of the heavens, it has no need of air or of any other force to prevent it from falling, but that the equiformity of the heavens on every side and the equilibrium of the earth itself are sufficient to keep it in place, for a body in equilibrium set in the middle of something equiform will not be able to incline either more or less in any direction, but being alike on every side it will remain undeviating. This, then, is the first article of my belief.’

Simmias:: ‘And rightly too.’

Socrates:: ‘And further, I am convinced that the earth is very large, and that we who dwell between the Pillars of Hercules and the River Phasis live in a tiny portion of it, around the sea, just like ants or frogs about a swamp, and that many others dwell in many similar regions elsewhere. For everywhere about the earth there are numerous hollows which vary in shape and size, and into these water and mist and air have flowed together: but the earth on its true surface lies pure in a pure heaven, wherein dwell the stars—a heaven which is called ether by most of those who are accustomed to speak on such matters: and water, mist, and air are the sediment of this, and constantly flow into the earth’s hollows.

‘Now we ourselves are unaware that we dwell in these hollows and fancy we are living on the surface above: just as if anyone dwelling half way to the bottom of the sea thought he was living on its surface, and on seeing the sun and the other heavenly bodies through the water imagined that the sea was the sky, and through slothfulness or weakness had never reached the surface of the sea, had never risen from it and looked from the sea to this world of ours, and had never seen, or heard from another who had seen, how much more pure and beautiful is this world than that in which he lived. The same thing is true of us: for though we dwell in one of the hollows of the earth, we think we are living on its surface, and we call the air heaven, thinking that this is the heaven through which the constellations move; whereas our case is just the same—through weakness and slothfulness we are unable to penetrate to the upper surface of the air. If a man could reach that surface, or take wings and fly thither, then just as the fishes in the sea break surface and see what is here, so he too would look up and see what is there, and if his nature were able to sustain the sight, he would learn that yonder was the true heaven, the true light, and the real earth. For this earth in which we dwell and its stones and the whole region here are corrupted and corroded, just as the brine ruins objects in the sea and nothing of any value grows there nor practically speaking is anything brought to fullness there, but there are crevices and sand and fathomless mud and slime, wherever there is any earth to be found, and nothing fit to be compared in any way to the beauties of our world. But that upper world again would seem still more to excel this world of ours. If it is the opportune moment, Simmias, to tell a story, it may be worth your while to hear of the nature of that earth that lies beneath the heavens.’

Simmias:: ‘Indeed, Socrates’, we should be delighted to hear your story.’

Socrates:: ‘Well, my friend, in the first place it is said that the true earth when seen from above resembles a ball made of twelve pieces of leather, a varied patchwork of different colors, of which the colors employed by painters here appear to be samples. But there the whole earth is made up of such colors and of others far more brilliant and pure than these: for one portion is a sea-purple of marvelous beauty, and another of golden hue, and another, where it is white, is whiter than chalk or snow: and it is made up of other colors too in like manner and still more numerous and beautiful than those we have seen. For these very hollows in the earth, which are full of air and water, present a kind of color as they gleam amid the variety of the others, so that the form of the earth appears as a single unbroken but variegated surface. Such is its appearance, and all the things that grow on it, trees, flowers, and fruits, are in like proportion beautiful: and the mountains and stones likewise are correspondingly more beautiful in their smoothness and translucency and in their colors: and the precious stones so highly esteemed here are but broken lights of those—the sards and jaspers and emeralds and all such gems: but there one and all are like these and even more beautiful. And the reason for this is that there the stones are flawless and not corroded or spoilt like ours by corruption and brine brought by the elements which flow together here and produce ugliness and distemper in stones and earth, and in animals and plants as well. The true earth herself is adorned with all these things and also with gold and silver and all other such metals, all of which through their number and size and ubiquity are plainly exposed to view, so that to look upon her is a vision beatific. And upon that earth are many living creatures, including men, some of whom live inland, some on the borders of the air, as we dwell beside the sea, some in islands near the mainland with air flowing round them: and in a word, what water and sea are to serve our needs, air is to them, and what air is to us, ether is to them. And their seasons are so temperately blended that they are immune to diseases and live far longer than we, and in sight and hearing and intelligence and all such endowments they are as far removed from us as air is purer than water and ether than air. And they have also groves and temples of the gods, in which the gods actually dwell, and sacred voices and oracles and direct vision of the gods and intercourse of this kind face to face: and they can see the sun and the moon and the stars as they really are, and their happiness in all things is in keeping with this.

‘Such then is the nature of the earth as a whole and all that is about it: and there are many regions scattered about the whole earth in its hollows, some deeper and broader of surface than that wherein we dwell, some deeper but with a narrower opening than ours, and some at once shallower in depth and wider. And all these are interconnected by numerous subterranean channels, some narrow and some broad, and they have passages through which water flows in abundance from one to the other as though into basins: and there are ever-flowing rivers of stupendous size with water both hot and cold beneath the earth, and abundant fire and great rivers of flame, and also many of liquid mud, some clear, some turbid, like the streams of mud in Sicily that flow before the lava and the lava itself: and therewith each of these regions is filled as the stream around them happens at any time to reach it.

All these things are moved up and down by a kind of see-saw movement which exists in the earth; and this movement is due to the following natural cause. One of these hollows in the earth is larger than the others and is pierced right through the earth, and it is this of which Homer spoke when he said: Far off, where is the deepest abyss beneath the earth: and he himself elsewhere and many other poets have named it Tartarus. Into this gulf flow all rivers together and they issue forth from it again: and they assume in each case the character of the soil through which they flow. Now the reason why all streams flow in and out is that this watery mass has no bottom or foundation. And hence it oscillates and surges up and down, and the air and wind around it act in the same way: for they follow it both when it presses toward the further side of the earth and when it returns to this side, and just as in respiration the breath flows in constant inhalation and exhalation, so too here the wind, in constant oscillation with the water, produces as it comes and leaves savage and violent gales. Now when the water withdraws in the direction which we call downward, the streams flow into those regions which are on the remoter side of the earth and fill them as though pumped thereinto: but when they leave these and head in our direction, they once more fill the streams here, and the streams thus filled flow through the channels and through the earth and reach the different places to which a channel has been opened for each of them, and they create seas and lakes and rivers and springs. And from here they once more plunge beneath the earth, and after making, some of them longer and more numerous circuits, others shorter and fewer, they once more fall into Tartarus, some far below where they were pumped into the channels, others but a little below: but all flow in at a level lower than their point of exit, and some enter opposite the place of issue, others on the same side: there are some too which make a complete circuit, with one or more spiral courses about the earth like serpents, and then pour down as low as they can and once more fall into Tartarus. They can in either direction descend as far as the middle, but no farther: for on either side of the middle (of Tartarus) there is an up-hill slope for both sets of streams.

‘Now there are numerous other large streams of various kinds, but among these many there are four, the largest and outermost of which flows round in a circle and is called Oceanus: and directly opposite to this and flowing in the contrary direction is Acheron, a river which flows through desert regions and passing beneath the earth too issues in the Acherusian lake. Hither come the souls of most of the dead, and after abiding for a destined period, which is in some cases long, in others short, they are once more sent forth to be born into living creatures. The third among these rivers issues from Tartarus between those two and near its place of exit falls into a vast region burning with fierce flame: and it creates a lake larger than our Mediterranean Sea, boiling with water and mud: and it travels thence in a circle with turbid and muddy waters, and coiling around within the earth it visits many other places before coming to the borders of the Acherusian lake, with whose waters it does not mingle: and after many a winding course beneath the earth it flows into a lower level in Tartarus. This is the stream which is named Pyriphlegethon, and its lava floods fling aloft their torn fragments at different points on earth. And over against this the fourth river issues first of all, they say, into a wild and savage region which is all of a steely blue color: and this is called the Stygian region and the lake created by waters of the river is named Styx. And the river after falling into the lake and in its waters conceiving dread powers sinks beneath the earth and flows in a winding course opposite to that of Pyriphlegethon, which it encounters in the Acherusian lake from the opposite side. This river's water too mingles with none: but after travelling in a circle it pours into Tartarus over against Pyriphlegethon: and its name, the poets say, is Cocytus.

'Such is the picture: and when the dead arrive at the place whither each is guided by his attendant spirit, first of all those who have and who have not lived good and pious lives submit their claims for judgment. And those who are found to have lived neither the one nor the other make their way to Acheron, and after embarking on the vessels ready for them, proceed on these to the lake: and there they dwell and are purified of their misdeeds by punishment, if they have been guilty of wrong, and are then absolved: and for their good deeds they are rewarded each according to his deserts. But those who because of the magnitude of their crimes are judged incurable—men guilty of many heinous acts of sacrilege and of many abominable and unnatural murders and other like deeds—are flung by their appropriate destiny into Tartarus, whence they never come forth. Those who are judged to have committed sins which, though great, are not past healing—who have, for example, in a fit of passion laid violent hands on a father or mother and then lived repentant the rest of their days, or who have been guilty of homicide under similar circumstances—these too are doomed to be flung into Tartarus: and when they have been thrown in and have remained there a year, the wave expels them, the homicides down Cocytus, those who have done violence to their fathers or mothers down Pyriphlegethon. And when they are swept along and reach the Acherusian lake, they cry aloud and invoke, some those they have slain, others those to whom they have done violence, entreating and imploring them to receive them and to suffer them to come out into the lake: and if they persuade them, they come forth and cease from their sufferings: but if not, they are swept back once more into Tartarus and thence into the rivers again, and have no respite from their ills until they win over those whom they have wronged: for this is the sentence imposed on them by their judges. But whosoever are judged to have lived lives of exceptional piety, these are those who are set free and delivered from those regions within the earth as though from a prison, and who journey upward to that pure abode and dwell upon the true earth. And of their number those who have been thoroughly cleansed by philosophy live thereafter entirely free from bodies, and travel to homes still more beautiful than these, such as cannot easily be pictured, nor does time suffice for it now. But for the sake of all that we have described, Simmias, we should make every effort during our lives to partake of goodness and wisdom: for fair is the guerdon and great the hope.

'Now it would ill become a man of sense to insist that things are exactly as I have described them: but that this or something like it is true about our souls and their dwellings, since the soul is plainly immortal—this, in my opinion, it is right to say, and it is worth while to risk the belief that this is so—for it is a noble venture—and such are the magic words that one should murmur over himself: and that is why I have so prolonged my story. But for these reasons a man ought to be hopeful about his own soul, who during his life has paid no attention to the pleasures and adornments of the body, considering they were alien to him and did more harm than good, but has eagerly pursued the pleasures of learning, adorning his soul with no alien charms but with her own natural ornaments of self-discipline and righteousness and courage, freedom and truth, and so awaits his journey to the other world. Now you, Simmias and Cebes and the rest, will depart each of you some time hereafter: but for me, as the tragic poet would say, the hour of fate has struck, and it is about time for me to go to my bath: for I think it is better for me to bathe myself before drinking the poison, instead of giving the women the trouble of bathing my dead body.'

Phaedo:: When he had spoken thus, Crito said:

Crito:: 'Well, Socrates: have you any injunctions for your friends or for me about your children or anything else, as to what service of ours would be most welcome to you?'

Socrates:: 'Just what I always say, Crito, nothing new. If you take care of yourselves, then whatever you do will be most welcome to me and mine and to yourselves also, even if you do not admit it now: but if you neglect yourselves and will not in your lives follow the tracks of our discussions past and present, then, however many and earnest the promises you make now, you will profit nothing.'

Crito:: 'We will make our best endeavors to do this, but how shall we bury you?'

Socrates:: 'Any way you like, if you can catch me, and I do not give you the slip.'

Phaedo:: And with a gentle laugh he looked at us and said:

Socrates:: 'I cannot persuade Crito, my friends, that I am Socrates, I, the man who is now conversing and ordering each detail of the discussion: but he thinks I am the corpse which he will see shortly, and actually asks how he is to bury me. But though I have already stated at considerable length that when I have drunk the poison I shall no longer be with you but shall depart to enjoy the mysterious happiness of the blessed, it seems to me that I speak to him in vain in my attempt to comfort you and myself. You, then, must be my sureties to Crito, with the opposite pledge to that which he gave my judges. For he offered security that I would remain: but you must be sureties that, when I am dead, I shall not remain, but shall take my departure: then Crito will take it less to heart and when he sees my body being burned or buried he will not be grieved at the terrible things I am suffering, or say at the burial that it is Socrates he is laying out or carrying to the tomb or burying. For you may be assured, dear Crito, that to say what is wrong is not only faulty in itself but engenders mischief in the soul. But you must be of good cheer, and say that it is my body you are burying: and you may bury it in whatever way you please or think most fitting.'

Phaedo:: After saying this, he arose and went to another room to bathe, and Crito went with him but told us to stay. And so we stayed talking to one another about the discussion and reviewing it, and then again speaking of the magnitude of the misfortune that had befallen us, for we felt literally as if we had been deprived of a father and must henceforth live as orphans. And when he was bathed and his children had been brought to him—he had two small sons and one who was now older—and the women of his family had come, he spoke to them in Crito's presence and gave such instructions as he wished, and then dismissed the women and children, and returned to us.

It was now drawing near to sunset; for he had spent a long time within. And he came and sat down after his bath, and not much had been said after that, when the servant of the Eleven entered and stepped up to him and said:

Jailer:: 'I shall not complain of you, Socrates, as I do of others, who are angry and curse me when, at the bidding of the authorities, I order them to drink the poison. For throughout your stay here I have found you the gentlest and noblest and best of all men who have ever come here, and now too I am well aware that you are not vexed with me but with others who, you know, are to blame. And now, you know on what errand I am come: farewell, and try to bear as lightly as possible your inevitable fate.'

Phaedo:: And then bursting into tears he turned and went away.

Socrates looked up at him and said:

Socrates:: 'Fare you well too: we will do your bidding.'

Phaedo:: And then he turned to us and said:

Socrates:: 'How charming the man is! Throughout my stay here he has come to see me and talked to me at all times and been the kindest of men: and how generously he mourns for me! But come, Crito, let us obey him: let someone fetch the poison, if it is prepared: if not, let the man prepare it.'

Crito:: 'I think that the sun is still upon the hilltops, Socrates, and has not yet sunk to rest. And I know that others take the draught quite late after the word has been given, and they have eaten and drunk quite freely and some of them have enjoyed the company of their loved ones. Do not hurry: there is yet time to spare.'

Socrates:: 'Those whom you mention, Crito, are justified in such actions: for they think they gain by them: but I am justified in refusing to follow them: for I think that I should profit nothing by postponing the draught but should merely appear ridiculous in my own eyes by clinging so greedily to life and sparing the cup when it is already empty. But come let me persuade you, and do not refuse.'

Phaedo:: Crito on hearing this nodded to his slave who was standing by: and the slave left the room and after a considerable interval returned with the man who was to administer the poison, which he carried already prepared in a cup. And Socrates on seeing the man said:

Socrates:: ‘Well, my good fellow, you are an expert in these matters: what have I to do?’

Jailer:: ‘Merely to drink it and walk about until your legs become heavy, and then lie down, and the poison will do the rest’

Phaedo:: And with this he handed the cup to Socrates.

And Socrates took it, and quite cheerfully, Echecrates, without a trace of fear or any change of color or expression, but with that customary mischievous upturned glance of his, looked at the man and said:

Socrates:: ‘What do you say to my pouring a libation from this cup? May I or not?’

Jailer:: ‘We only prepare, Socrates, what we consider the right amount.’

Socrates:: ‘I understand, but I may and must pray to the gods that my journey from this world to the other may be happy. Such then is my prayer, and so be it.’

Phaedo:: And with these words he held his breath and drained the cup cheerfully and without the least repugnance. Now up to that moment most of us had been pretty well able to restrain our tears, but when we saw him drinking and the cup empty, we could do so no longer, but in spite of myself the tears came in floods, so that I covered my face and wept, for myself, not for him, but for my own fate in being deprived of such a friend. And Crito even before me had been unable to control his tears and had moved away: and Apollodorus who had never ceased weeping even before that now burst into loud laments and with his tears and grief broke down one and all of us except Socrates himself.

Socrates:: ‘What are you doing, my strange friends? My chief reason for dismissing the women was that they might not introduce such a discordant note: for I have heard that a man should die in silence. Be quiet then, and have courage.’

Phaedo:: At these words we were ashamed and restrained our tears. And Socrates walked around, and when he said that his legs were heavy, he lay on his back—for so the attendant bade him. And the attendant who gave him the poison touched him and at intervals examined his feet and legs, and then pinched his foot hard and asked him if he felt it: and Socrates said no: and after this his legs and so upward, and showed us that he was becoming cold and numb. And the man himself touched him and said that, when it reached the heart, he would be gone. And now the region about the groin was already growing cold, when Socrates uncovered his face, which had been covered, and said—they were his last words—

Socrates:: ’Crito, we owe a cock to Asclepius: pay the debt and do not neglect it.’

Crito:: ‘It shall be done. Is there anything else?’

Phaedo:: Socrates made no answer to this question, but after a little there was a slight movement, and the attendant uncovered him and his eyes were fixed. And when Crito saw it, he closed his mouth and his eyes.

Such, Echecrates, was the death of our friend, a man whom of all the men of his time that we know we would call the best and the wisest and the most righteous.

# Second Alcibiades.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Socrates, Alcibiades.

---

Socrates:: Are you going, Alcibiades, to pray to the god?

Alcibiades:: Just so, Socrates.

Socrates:: You appear to have a serious look, and to be directing your eyes to the ground, as if thinking upon something.

Alcibiades:: Of what should a person be thinking, Socrates?

Socrates:: Of things, Alcibiades, of the greatest moment, as it seems to myself at least. For come, by Zeus, do you not think, when we happen to pray, either in private or in public, that the gods themselves sometimes grant some of those prayers, and some not, and to some persons they nod assent, but to some not?

Alcibiades:: Very much so.

Socrates:: Does it not seem then to you that there is need of much forethought, in order that a person may not unconsciously pray for great evils for himself, while thinking he is praying for good; and that the gods may not happen to be in such a disposition, as to grant whatever he happens to be praying for? just as they say Œdipus did, in praying that his sons might divide their patrimony by the sword; and when he might have prayed for his then present evils to be averted, he uttered a curse that others might be superadded; and thereupon both these were brought to pass, and after these others too, many and terrible, of which what need is there to speak singly?

Alcibiades:: But, Socrates, you have spoken of a man who was mad; for who, think you, of sound mind would venture to make such a prayer?

Socrates:: Does it seem to you, that to be mad is at all the contrary to being in one's senses?

Alcibiades:: Perfectly so.

Socrates:: Do not men seem to you to be senseless and sensible?

Alcibiades:: Yes, to be so.

Socrates:: Come then, let us consider who these are. For that there are men senseless and sensible you have admitted, and others who are mad.

Alcibiades:: It has been admitted.

Socrates:: Moreover, there are some men in a sound state of health?

Alcibiades:: There are.

Socrates:: And are there not others in a bad state of health?

Alcibiades:: Certainly.

Socrates:: These are not the same with those?

Alcibiades:: They are not.

Socrates:: Are there not others, who are in neither of those states?

Alcibiades:: Certainly not.

Socrates:: For every man must of necessity be either in a diseased state or not.

Alcibiades:: It seems so to myself at least.

Socrates:: What then with respect to intellect and non-intellect, have you the same opinion?

Alcibiades:: How say you?

Socrates:: Does it seem to you to be necessary for a man to be sensible or senseless? Or is there some third and middle state, which causes a man to be neither sensible nor senseless?

Alcibiades:: There certainly is not.

Socrates:: It is necessary then for him to be in the one or in the other of those states.

Alcibiades:: So it seems to me at least.

Socrates:: Do you not remember that you admitted this, that insanity is contrary to being in one's senses?

Alcibiades:: I do.

Socrates:: And that there is no middle or third state, which causes a man to be neither sensible nor senseless?

Alcibiades:: I admitted this too.

Socrates:: But how can two different things be contrary to one thing?

Alcibiades:: By no means.

Socrates:: To be senseless then, and to be mad, seem to be nearly the same thing.

Alcibiades:: They seem so.

Socrates:: If then we should pronounce that all fools were madmen, we should pronounce rightly, Alcibiades. For example, if some of your equals in age, happen to be senseless, as indeed they are, and some of your elders likewise, come, by Jove, do you not think that in this city there are few sensible men, but the majority senseless, whom you call madmen?

Alcibiades:: Yes, I do.

Socrates:: Think you then, that, living under the same state with so many madmen, we should be delighted, or that we should not be buffeted, and pelted, and have long since suffered punishment for such acts as madmen are wont to commit? But consider, thou blessed man, whether this be the case.

Alcibiades:: What then could it be, Socrates? For it appears nearly to be not what I just now fancied.

Socrates:: Neither does it appear so to myself. But let us look at the matter in some such way as this.

Alcibiades:: In what way do you mean?

Socrates:: I will tell you. We understand that some men are in bad health; do we not?

Alcibiades:: Certainly.

Socrates:: Does it seem to you necessary for every man in bad health to have the gout, or a fever, or ophthalmia? Or does it not seem to you that a man, without suffering at all in this way, may be ill in some other disorder? For diseases, we suppose, are of many various kinds, and not these alone.

Alcibiades:: I suppose there are.

Socrates:: Does not every ophthalmia seem to be a disease?

Alcibiades:: Yes.

Socrates:: But is every disease ophthalmia?

Alcibiades:: Certainly not, it seems to me. Yet still I am at a loss about your meaning.

Socrates:: If, however, you will give me your attention, by considering the matter, both of us together will peradventure discover it.

Alcibiades:: I am giving you, Socrates, all attention, to the best of my power.

Socrates:: Was it not agreed upon by us, that every ophthalmia was a disease; but every disease was not an ophthalmia?

Alcibiades:: It was agreed so.

Socrates:: And it seems to me to have been correctly agreed. For all persons in a fever have a disease; but not all, however, who have a disease, are in a fever; neither have they all I think the gout, nor ophthalmia. Every thing indeed of this kind is a disease; and they, whom we call physicians, say that diseases produce different effects. For all diseases are not alike, nor do they all act similarly, but each according to its own peculiar power; and yet they are all diseases, just as we understand there are in the case of workmen; do we not?

Alcibiades:: Certainly.

Socrates:: Such as shoemakers, carpenters, statuaries, and very many others, whom why need one mention in detail? All these have divided amongst them portions of handicraftship, and yet all are handicraftsmen. They are not, however, carpenters, nor shoemakers, nor statuaries, taken altogether.

Alcibiades:: Certainly not.

Socrates:: Just so have men divided folly amongst them. And those, who have the largest share, we call madmen; but those, who have a less, silly, and thunder-struck. But if we choose to speak of such in good-omened language, some call them high-spirited, but others simpletons; and others again, harmless and inexperienced, and speechless. You will also find, upon inquiry, many other names. But they all mean non-intellect; although they differ, just as one art has been shown by us to differ from another; and one disease from another. Or how does it seem to you?

Alcibiades:: To me in this way.

Socrates:: To the point then from whence we digressed let us return back again. For it was proposed, I think, in the beginning of our conversation to consider who are the senseless, and sensible. For it was agreed that some such existed. Was it not?

Alcibiades:: Yes, it was so agreed.

Socrates:: Whether then do you understand by the sensible, those who know how to do and say what they ought?

Alcibiades:: I do.

Socrates:: And whom do you understand by the senseless? Are they not such as know neither of those things?

Alcibiades:: Those very persons.

Socrates:: Will not those persons then, who know neither of those things, unconsciously say and do what they ought?

Alcibiades:: It appears so.

Socrates:: Now of these very persons, Alcibiades, Œdipus, I said, was one. And you will find many of those living even now, who, though not influenced by anger, as he was, pray for things hurtful to themselves; not fancying them to be so, but good rather. He indeed, as he did not pray for good, so neither did he fancy he was doing so. But some others there are, who have suffered the very contrary to this. For I think that you, if the god to whom you happen to be going should appear to you, and, before you had uttered a prayer, first ask you—"Will it suffice for you to become a despotic king of Athens;" and, if you thought this a trifle, and no great thing, should add "and over all the Greeks;" and, if he should see that you fancied you would still have too little, unless he were to appoint you king of the whole of Europe; and should undertake not this alone, (but) that on this very day, according to your wish, all should perceive that Alcibiades, the son of Clinias, is their autocrat—I think you would walk away exceedingly delighted, as if you had met with the greatest good.

Alcibiades:: I fancy, Socrates, that any one else whatever would do so likewise, if such things were to happen to him.

Socrates:: You would not, however, be willing that the country of, and absolute dominion over, all the Greeks and Barbarians should be yours in exchange for your life.

Alcibiades:: I suppose not; for why should I? when I was about to make no use of them.

Socrates:: What then, if you were about to make a bad and detrimental use of them, you would not be willing even in such a case?

Alcibiades:: Certainly not.

Socrates:: You see then that it is not safe to accept at random gifts when offered; nor for a person to pray that things may take place, if he is about to be injured through them, or be totally released from life. Many, too, we could mention, who after having longed for absolute power, and laboured to obtain it, as if about to enjoy some mighty good, have, on account of their tyranny, been plotted against and lost their lives. I think, too, that some events, which happened as it were but yesterday, have come to your ears, how that a favourite of Archelaus, tyrant of Macedonia, murdered his admirer, through his being as fond of absolute power, as the tyrant was of him, and with the view of becoming the tyrant himself, and a happy man; but that, possessing the power for three or four days, he was in turn plotted against by some of his friends and destroyed. You see, too, of our own fellow-citizens—for this we have not heard from others, but know by being present ourselves—that such as have longed for, and obtained, the command of an army, some are even now exiles from the city, and others have ended their lives; and such, as seemed to have fared the best, have passed through many trying dangers and terrors during the campaign itself; and when they have returned to their own country, have suffered from informers a siege not at all inferior to that, which they have endured from foreign foes; so that some of them prayed they had never been at the head of an army, rather than to have borne a command. Now, if the dangers and toils had tended to their benefit, it would have had some reason; but now it is quite the reverse. And with respect to children, you will find in the very same manner, how that some persons, after having prayed for them to be born, have, when they are born, come into the greatest calamities and sorrows. For some, whose children have been thoroughly wicked, have passed the whole of their lives in sorrow; and some, whose children were well-behaved, have met with the misfortune to be deprived of them, and have come into calamities in no respect less than the others, and, like them, have wished rather that their children had been never born. And yet, although these, and many other instances of the like kind, are so very evident to persons, it is rare to find a man who would refuse what is offered, or who, if he is about to obtain it by prayer, would cease to pray for it. Nor would the majority refrain from absolute power, if offered them, or the command of an army, or many other things, which, when present, do more harm than good; but they would, on the contrary, pray for their possession, should such things happen not to be present to any one. And yet, after waiting a little time, they sometimes recant, and pray the reverse of what they prayed before. I have therefore my doubts, that men do in reality accuse the gods unjustly, in saying that their evils come from them; for either by their own crimes or follies, we should say;

They griefs endure beyond their fated share.

And that poet, Alcibiades, was near to being a sensible person, who, when connected with some friends void of understanding, and observing them to do and pray for things which it were better for them not to have, but which appeared to them to be good, thought proper to use in common a prayer, which he expresses somehow to this effect—

Oh, Zeus, our king, whate’er is good vouchsafe
To us, if prayers we offer or do not;
But evil, when we pray thee to avert,
Do thou ordain.

To me indeed the poet appears to speak correctly and safely. But if you have aught in your mind against this sentiment, do not hold your tongue.

Alcibiades:: It is a difficult matter, Socrates, to speak against any thing which is said correctly. But I am thinking on that point, of how many evils to man is ignorance the cause; since, as it seems, through it we are unconsciously doing to ourselves the greatest mischiefs, and, what is the worst, even praying for them; a fact which no one would fancy; but every one would conceive this rather, that he is competent to pray for things the best for himself, and not the worst; for this would in reality be like a curse, and not a prayer.

Socrates:: But perhaps, O best of men, some one who happens to be wiser than you or I, would say, that we do not speak correctly in blaming thus at random ignorance, unless we add that of some things and to some persons and under certain circumstances, ignorance is a good, as it is to them an evil.

Alcibiades:: How say you? Is there any thing whatever, of which it is better for any person whatever, under any circumstances whatever, to be ignorant than to know?

Socrates:: So it seems to me at least; and does it not to you?

Alcibiades:: No, by Zeus.

Socrates:: I will not bring a verdict against you on the point of your being willing to do to your own mother, what they say Orestes and Alcmæon did, or whoever else may have happened to act in the same manner as they did.

Alcibiades:: Speak, by Zeus, words of good omen, Socrates.

Socrates:: There is no need, Alcibiades, of your bidding that person to speak words of good omen, who says that you would not be willing to do such a deed, but much rather him, who says the contrary. But since the deed appears to you to be so dreadful, that it ought not to be mentioned so easily, do you think that Orestes, if he had been a sensible person, and known what it was best for him to do, would have dared to commit any such act?

Alcibiades:: By no means.

Socrates:: Nor would, I think, any other man.

Alcibiades:: Certainly not.

Socrates:: The ignorance therefore of what is best is an evil; and to be ignorant of the best.

Alcibiades:: So it appears, at least to me.

Socrates:: And to him, and to all other men.

Alcibiades:: So I say.

Socrates:: Let us consider further this too. If it occurred to you on this very instant to think it were a better thing for you to take a dagger, and, going to the house of Pericles, your guardian and your friend, to ask—Is he within—with the intention of killing only him, and no other person, and that the servants should say—He is within.—I do not assert that you have an inclination to do any of these things; but if, as I think, it shall seem good to you, what surely nothing prevents, that to him, who is ignorant of what is the best, an opinion has at some time occurred, so that what is even the worst, has been thought at some time to be the best. Or does it not seem to you it would be?

Alcibiades:: Certainly so.

Socrates:: If then, upon going within, you should see himself there, but not knowing him, should think he was some other person, would you still venture to kill him?

Alcibiades:: No, by Zeus; I do not think I should.

Socrates:: For you would not kill any person, who happened to meet you, but only that very person, whom you wished to kill. Is it not so?

Alcibiades:: Yes.

Socrates:: And if you made frequent attempts, but were always ignorant of his being Pericles, whenever you were about to do the deed, you never would make an attack upon him.

Alcibiades:: Certainly not.

Socrates:: What then, do you think that Orestes would ever have made an attack upon his mother, if in like manner he had not known her?

Alcibiades:: I think he would not.

Socrates:: For he too had it not in his mind to kill any woman, who might meet him, nor the mother of any person whatever, but his own mother.

Alcibiades:: Such is the fact.

Socrates:: To persons then so situated, and having such fancies, it is better not to know such things.

Alcibiades:: It appears so.

Socrates:: Do you then perceive, that of some things, and to some persons, and under some circumstances, ignorance is a good, and not, as it seemed to you just now, an evil?

Alcibiades:: It is probable.

Socrates:: Further still, if you are willing to consider what is after this, it would perhaps appear to you to be absurd—

Alcibiades:: What especially, Socrates?

Socrates:: That the possession of all other sciences, so to speak, is, unless a person possesses the science of what is best, very near to being seldom a benefit, but generally hurtful to the person possessing it. And consider in this way. Does it not seem to you necessary that, when we are about to do or say any thing, we ought to know, or previously fancy we know, or know in reality, what we are about to say or do rather readily?

Alcibiades:: To me at least it seems so.

Socrates:: Do not then our public speakers, either knowing how to counsel, or fancying they know, give us their counsel on the instant on every occasion, some about war and peace, others, about the building of walls, or furnishing harbours; and, in one word, whatever one state does to another state, or itself by itself, all takes place from the advice of the orators.

Alcibiades:: You speak the truth.

Socrates:: See then what is after this.

Alcibiades:: If I am able.

Socrates:: You surely call persons sensible and senseless.

Alcibiades:: I do.

Socrates:: Do you not call the many senseless, but the few sensible?

Alcibiades:: Just so.

Socrates:: And you call both so, with an eye to something.

Alcibiades:: Yes.

Socrates:: Would you call that man sensible, who knows how to give advice, but without knowing whether a thing is better, and in what it is better?

Alcibiades:: Certainly not.

Socrates:: Nor him, I think, who knows war abstractedly, but without knowing when it is better, or for how long a time it is better. Is it not so?

Alcibiades:: It is.

Socrates:: Nor if a person knows how to murder another, or to take away his property, or to cause him to be an exile from his country, without knowing when it is better, or to whom it is better to do so.

Alcibiades:: Certainly not.

Socrates:: The man, therefore, who possesses any knowledge of such a kind, unless the knowledge also of what is best follows at his side—now this is surely the same as the knowledge of what is beneficial—Is it not so?

Alcibiades:: Certainly it is.

Socrates:: Shall we say that he is a sensible and a competent counsellor both for the state and himself; but that the man who does not do so, is the contrary of these? Or how seems it to you?

Alcibiades:: To me in this way.

Socrates:: What then, should a person who knows how to ride, or shoot with a bow, or wrestle, or box, or engage in any other kind of combat, or in any thing else which we know by art, by what name will you call him, who knows what takes place the better according to each art? Will you not call him, who knows according to the equestrian art, an equestrian?

Alcibiades:: Yes.

Socrates:: And him who knows according to the boxing art, a boxer? but him, according to the hautboy-playing art, a hautboy-player; and in the rest of cases surely analogously to these? Or how otherwise?

Alcibiades:: Not otherwise than in this way.

Socrates:: Does it then seem to you necessary that the person knowing any of these, is a sensible man? Or shall we say that he wants much of being so?

Alcibiades:: Much indeed, by Zeus.

Socrates:: What kind of a commonwealth do you think there would be, composed of good bow-men and hautboy players, and still more of athletes and other artists, and of those mixed with such as we have just now mentioned, who know how to war in the abstract, and to murder in the abstract; and, moreover, of orators puffed up with the statesman’s swell, but all devoid of the knowledge of what is best, and of that, which knows when it is better to make use of each one of those things, and against whom?

Alcibiades:: A bad one, Socrates, I think.

Socrates:: And you would say, I think, when you saw each one of these men full of ambition, and giving the greatest share he has in the commonwealth to that point;

> Where he may happen to be best himself.

I mean that which becomes best according to his own art, but of that which is the best for the state, and himself for himself having missed for the most part, as having I think trusted without intellect to opinion. Since then such is the case, should we not speak correctly in saying that such a commonwealth was full of great disorder and of lawlessness?

Alcibiades:: Right indeed, by Zeus.

Socrates:: Did it not seem to us to be necessary that we ought previously to fancy we know, or to know in reality, what we are about to say or do readily?

Alcibiades:: It seems so.

Socrates:: Should then a person do what he knows, or thinks he knows, and there follow that we have ourselves beneficially and profitably both to the state and himself to himself, is not—

Alcibiades:: How not?

Socrates:: But if he does I think the contrary of these, there will be a benefit neither to the public nor himself.

Alcibiades:: Certainly not.

Socrates:: What then does it seem to you now? In the like manner, or somehow otherwise?

Alcibiades:: Not otherwise than this.

Socrates:: Did you not say that you called the many senseless, but the few sensible?

Alcibiades:: I did.

Socrates:: And do we not say again that the many have missed of what is the best, by having generally, I think, trusted to opinion without intellect?

Alcibiades:: We say it.

Socrates:: It is for the interest then of the many neither to know any thing, nor to fancy they know, if they shall be more ready to do what they know, or fancy they know, and by doing so are about to be still more injured than benefited.

Alcibiades:: You say what is most true.

Socrates:: Do you see then that when I said, that the possession of the other sciences is, unless a person possesses the science of what is best, very near to being seldom beneficial, and generally hurtful to the person possessing it, did I not appear to be speaking in reality correctly?

Alcibiades:: If not then, yet now it seems so, Socrates.

Socrates:: It is requisite then for a state, and a soul that is about to live correctly, to cling to this science; just as a person in sickness does to a physician, or a person about to sail in safety does to a steersman, by so much as the soul may not previously have a favourable wind, either respecting the possession of property or the strength of body, or any thing else of such a kind, by so much the greater errors is it necessary, it seems, to arise from them; and he who possesses what is called much learning and much art, but is destitute of this very science, and is carried along by each of the others, will he not in reality justly encounter a violent storm, inasmuch as he is, I think, continuing at sea without a steersman, a time not long life of gods; so that it seems to me that here too suits the sentiment of the poet, which he expresses, while he is bringing a charge against some one that

Trades many knew he; but knew badly all.

Alcibiades:: But how, Socrates, does the verse of this poet suit here? For to me it seems to say nothing to the purpose.

Socrates:: Nay, it is very much to the purpose. But this poet writes enigmatically, and so do nearly all the others. For the whole of poetry is naturally enigmatical; and it is not for a person who is to be met with any where, to understand it; and in addition to its being such naturally, when it seizes upon a man of a grudging disposition and unwilling to make himself known, but desirous to conceal, as much as possible, his wisdom, it seems to be difficult beyond measure to understand what each of those poets mean. For you cannot, surely, think that Homer, a poet most divine and clever, was ignorant how impossible it is for a person to know a thing badly; for he it is, who says that Margites knew many things, but knew all badly; but he speaks enigmatically, I suppose, by introducing the word “badly” instead of the word “bad,” and “he knew” instead of “to know.” There is then a sentence composed, unshackled by the metre, and it expresses what he meant, that “He knew many trades; but that to know all was to him an evil.” It is evident then, that if to know many things was to him an evil, he himself was some worthless fellow; at least if we must give any credit to the reasonings previously produced.

Alcibiades:: And so it seems, Socrates, to me; for I should hardly give credit to other reasonings, if not to these.

Socrates:: And correctly does it seem so.

Alcibiades:: Again it seems to me.

Socrates:: But come, by Zeus, for you surely see, how great and of what kind is the difficulty and doubt, in which you too appear to me to have a share; as you never rest at all in changing your place up and down; but what may have seemed especially to you, this to have gone secretly away again, and so seems no longer in a similar manner. Should the god then, to whom you happen to be going, appear to you even now, and ask you, before you had prayed for any thing whatever, whether it would be sufficient for you, if any of those things, mentioned at the beginning, were to take place; or should he leave it to yourself to make a request, how, think you, could you avail yourself of the opportunity? either by accepting any of the things offered, or by praying yourself for something to happen?

Alcibiades:: Now, by the gods, Socrates, I should not know what to say in such a case. But it seems to me to be a violent thing, and in good truth one of caution, in order that a person may not unconsciously pray for things evil, while fancying them to be good; and then after waiting, as you said, a little time, recant, and pray the reverse to what he did at first.

Socrates:: Did not then the poet, whom I mentioned at the beginning of the argument, know somewhat more than we do, when he begged of Zeus to avert terrible things from us when praying?

Alcibiades:: So it seems to me.

Socrates:: The Lacedæmonians, therefore, Alcibiades, having admired this very poet, or having so considered themselves the matter, put up on every occasion in private and in public a similar prayer, by requesting the gods to grant them ever things honourable in addition to what are good; and no one has ever heard them pray for any thing more. Accordingly, up to the passing time, they have been fortunate less than none. And even if it has happened to them to be not fortunate in every thing, it was not on account of this prayer of theirs; but it is for the gods, I presume, to grant what a person happens to pray for, and the reverse. And I am desirous of telling you something else, which I once heard from certain elderly persons, how that, when differences arose between the Athenians and the Lacedæmonians, it so happened to our city, that whenever there was a battle, by land or sea, it was unsuccessful, and never able to gain a victory. Thereupon the Athenians, brooking ill their doings, and at a loss for some contrivance to find an escape from their present evils, held a council; and it seemed to them that it would be best to send to Ammon, and inquire of him, and in addition, this too likewise, on what account do the gods always give the victory to the Lacedæmonians, rather than to us; who, of all the Greeks, bring them sacrifices the most numerous and the most beautiful; and have decorated their temples with offerings such as none else have done; and are wont to make to the gods processions the most costly and the most solemn, each year; and to expend money, such as all the rest of the Greeks never did together; whereas the Lacedæmonians have never paid the least regard to any of these things; but conduct themselves in so slighting a manner towards the gods, as to sacrifice on each occasion animals, maimed even; and in all other matters fall far short of us not a little in honouring the gods, although possessing property not less than our state. When the messenger had thus spoken, and had inquired of the oracle what they ought to do to find a deliverance from their present evils, the prophet made no other answer;—for it is evident the god did not permit him—but calling the messengers, said,—To the Athenians thus saith Ammon. He saith, that he prefers the good-omened address of the Lacedæmonians before all the sacrifices of the rest of the Greeks.—These words he said, and nothing more. Now it seems to me, that by a good-omened address the god means only that prayer of theirs; for it is in reality much superior to the prayers of others. For the rest of the Greeks are wont, some of them, after placing by the altar oxen with gilded horns, and others presenting the gods with offerings to be hung up in temples, to pray for whatever they happen to desire, whether it be good or evil. The gods therefore, on hearing their impious addresses, accept not their costly processions and sacrifices; so that there is need of much caution and consideration as to what is to be spoken and not. And you will find in Homer likewise other expressions similar to these. For he says, that the Trojans, on taken up their night quarters;

The perfect hecatombs to th’ Immortals gave.

and that the winds carried the savour of the fat to heaven;

Sweet-smelling; but the blessed gods refused
To taste it; for by them was hated much
The holy Ilion, and Priam too,
And of the careful Priam subjects all:

so that it was of no use for them to sacrifice, or to expend presents in vain, when they where thus hated by the gods. For the divine nature, I conceive, is not such, as to be seduced by presents, like a knavish judge. But we are giving a silly reason, if we think to get the better of the Lacedæmonians in this way. For it would be a dreadful thing indeed, if the gods looked to gifts and sacrifices, and not the soul, should a person happen to be holy and just. Nay, they look much more, I think, to this, than to expensive processions and sacrifices; for which there is nothing to prevent those from having the power to pay each year, either individuals or states, who have sinned greatly against the gods, and greatly too against men. But they, as not receiving bribes, disdain all such things as these, as says the god, and the prophet of the gods. It seems, then, that justice and prudence are near to being honoured above all things by the gods, and by men too, that have any sense. Now the sensible and the just are none other than such as know what it is meet to do and say both towards gods and men. But I should be glad to hear from you, what are your thoughts upon this subject.

Alcibiades:: To myself, Socrates, the matter seems to be in no other way, than it does to you and the god. For it would not be reasonable for me to vote contrary to the god.

Socrates:: Do you not remember, then, saying that you were much at a loss, lest you should unconsciously be praying for evil things, fancying them to be good?

Alcibiades:: I do.

Socrates:: You see then, that it is not safe for you to go to the god with the view of praying, in order that, should it so happen, he may not hear you speaking impiously, and receive no part of your sacrifice, and you perchance meet with something different. It seems to me, therefore, that it is best to keep quiet. For through your high spirit—for that is the fairest of names for folly—I think you would not be willing to make use of the Lacedæmonian prayer. It is necessary, therefore, for a man to wait, until he has learnt how he ought to conduct himself towards gods and men.

Alcibiades:: But when, Socrates, will that time be? and who is he that will instruct me? for I should be very glad, I think, to see who the man is.

Socrates:: It is he, of whose care you are the object. But it seems to me, as Homer says of Minerva, that she removed the mist from before the eyes of Diomede;

> That he might clearly see both gods and men;

so must he in the first place remove from your soul the mist, that now happens to be present there, and then apply those things, through which you will be about to know both good and evil. For now you seem to be unable to do so.

Alcibiades:: Let him then remove the mist, or any thing else that he pleases; as I am prepared not to fly from any thing ordered by him, whoever he may be, if I am about to become a better man.

Socrates:: And yet he has a very wonderful eagerness in your behalf.

Alcibiades:: Till that time then it seems to me to be best to put off my sacrifice.

Socrates:: And rightly it seems so to you. For it is safer than to run so great a risk.

Alcibiades:: But how, Socrates? However, since you seem to me to have given good advice, I will put this garland round your brows; and to the gods we will then present crowns, and all the other customary offerings, when I behold that day arrive; and it will in no long time arrive, if they are willing.

Socrates:: Well, I accept both this, and I would see myself readily accepting any thing else given by you. And as Creon, when he sees Tiresias wearing garlands, and hears that he had obtained them as the first-fruits of spoils taken from the enemy, is made by Euripides to say;

> This crown, as a happy omen, have I worn;
> For well you know how tempest-tost we lie—

so do I place on myself this opinion on your part as an omen of good. For I seem to myself to be in no less a storm than Creon; and I would gladly be a victor over your admirers.

# Alcibiades II.

Translated by B. Jowett, 3rd ed.

Persons Of The Dialogue.

Socrates and Alcibiades.

Socrates:: Are you going, Alcibiades, to offer prayer to Zeus?

Alcibiades:: Yes, Socrates, I am.

Socrates:: You seem to be troubled and to cast your eyes on the ground, as though you were thinking about something.

Alcibiades:: Of what do you suppose that I am thinking?

Socrates:: Of the greatest of all things, as I believe. Tell me, do you not suppose that the Gods sometimes partly grant and partly reject the requests which we make in public and private, and favour some persons and not others?

Alcibiades:: Certainly.

Socrates:: Do you not imagine, then, that a man ought to be very careful, lest perchance without knowing it he implore great evils for himself, deeming that he is asking for good, especially if the Gods are in the mood to grant whatever he may request? There is the story of Oedipus, for instance, who prayed that his children might divide their inheritance between them by the sword: he did not, as he might have done, beg that his present evils might be averted, but called down new ones. And was not his prayer accomplished, and did not many and terrible evils thence arise, upon which I need not dilate?

Alcibiades:: Yes, Socrates, but you are speaking of a madman: surely you do not think that any one in his senses would venture to make such a prayer?

Socrates:: Madness, then, you consider to be the opposite of discretion?

Alcibiades:: Of course.

Socrates:: And some men seem to you to be discreet, and others the contrary?

Alcibiades:: They do.

Socrates:: Well, then, let us discuss who these are. We acknowledge that some are discreet, some foolish, and that some are mad?

Alcibiades:: Yes.

Socrates:: And again, there are some who are in health?

Alcibiades:: There are.

Socrates:: While others are ailing?

Alcibiades:: Yes.

Socrates:: And they are not the same?

Alcibiades:: Certainly not.

Socrates:: Nor are there any who are in neither state?

Alcibiades:: No.

Socrates:: A man must either be sick or be well?

Alcibiades:: That is my opinion.

Socrates:: Very good: and do you think the same about discretion and want of discretion?

Alcibiades:: How do you mean?

Socrates:: Do you believe that a man must be either in or out of his senses; or is there some third or intermediate condition, in which he is neither one nor the other?

Alcibiades:: Decidedly not.

Socrates:: He must be either sane or insane?

Alcibiades:: So I suppose.

Socrates:: Did you not acknowledge that madness was the opposite of discretion?

Alcibiades:: Yes.

Socrates:: And that there is no third or middle term between discretion and indiscretion?

Alcibiades:: True.

Socrates:: And there cannot be two opposites to one thing?

Alcibiades:: There cannot.

Socrates:: Then madness and want of sense are the same?

Alcibiades:: That appears to be the case.

Socrates:: We shall be in the right, therefore, Alcibiades, if we say that all who are senseless are mad. For example, if among persons of your own age or older than yourself there are some who are senseless,—as there certainly are,—they are mad. For tell me, by heaven, do you not think that in the city the wise are few, while the foolish, whom you call mad, are many?

Alcibiades:: I do.

Socrates:: But how could we live in safety with so many crazy people? Should we not long since have paid the penalty at their hands, and have been struck and beaten and endured every other form of ill-usage which madmen are wont to inflict? Consider, my dear friend: may it not be quite otherwise?

Alcibiades:: Why, Socrates, how is that possible? I must have been mistaken.

Socrates:: So it seems to me. But perhaps we may consider the matter thus:—

Alcibiades:: How?

Socrates:: I will tell you. We think that some are sick; do we not?

Alcibiades:: Yes.

Socrates:: And must every sick person either have the gout, or be in a fever, or suffer from ophthalmia? Or do you believe that a man may labour under some other disease, even although he has none of these complaints? Surely, they are not the only maladies which exist?

Alcibiades:: Certainly not.

Socrates:: And is every kind of ophthalmia a disease?

Alcibiades:: Yes.

Socrates:: And every disease ophthalmia?

Alcibiades:: Surely not. But I scarcely understand what I mean myself.

Socrates:: Perhaps, if you give me your best attention, 'two of us' looking together, we may find what we seek.

Alcibiades:: I am attending, Socrates, to the best of my power.

Socrates:: We are agreed, then, that every form of ophthalmia is a disease, but not every disease ophthalmia?

Alcibiades:: We are.

Socrates:: And so far we seem to be right. For every one who suffers from a fever is sick; but the sick, I conceive, do not all have fever or gout or ophthalmia, although each of these is a disease, which, according to those whom we call physicians, may require a different treatment. They are not all alike, nor do they produce the same result, but each has its own effect, and yet they are all diseases. May we not take an illustration from the artisans?

Alcibiades:: Certainly.

Socrates:: There are cobblers and carpenters and sculptors and others of all sorts and kinds, whom we need not stop to enumerate. All have their distinct employments and all are workmen, although they are not all of them cobblers or carpenters or sculptors.

Alcibiades:: No, indeed.

Socrates:: And in like manner men differ in regard to want of sense. Those who are most out of their wits we call 'madmen' while we term those who are less far gone 'stupid' or 'idiotic' or, if we prefer gentler language, describe them as 'romantic' or 'simple-minded' or, again, as 'innocent' or 'inexperienced' or 'foolish.' You may even find other names, if you seek for them; but by all of them lack of sense is intended. They only differ as one art appeared to us to differ from another or one disease from another. Or what is your opinion?

Alcibiades:: I agree with you.

Socrates:: Then let us return to the point at which we digressed. We said at first that we should have to consider who were the wise and who the foolish. For we acknowledged that there are these two classes? Did we not?

Alcibiades:: To be sure.

Socrates:: And you regard those as sensible who know what ought to be done or said?

Alcibiades:: Yes.

Socrates:: The senseless are those who do not know this?

Alcibiades:: True.

Socrates:: The latter will say or do what they ought not without their own knowledge?

Alcibiades:: Exactly.

Socrates:: Oedipus, as I was saying, Alcibiades, was a person of this sort. And even now-a-days you will find many who [have offered inauspicious prayers], although, unlike him, they were not in anger nor thought that they were asking evil. He neither sought, nor supposed that he sought for good, but others have had quite the contrary notion. I believe that if the God whom you are about to consult should appear to you, and, in anticipation of your request, enquired whether you would be contented to become tyrant of Athens, and if this seemed in your eyes a small and mean thing, should add to it the dominion of all Hellas; and seeing that even then you would not be satisfied unless you were ruler of the whole of Europe, should promise, not only that, but, if you so desired, should proclaim to all mankind in one and the same day that Alcibiades, son of Cleinias, was tyrant:—in such a case, I imagine, you would depart full of joy, as one who had obtained the greatest of goods.

Alcibiades:: And not only I, Socrates, but any one else who should meet with such luck.

Socrates:: Yet you would not accept the dominion and lordship of all the Hellenes and all the barbarians in exchange for your life?

Alcibiades:: Certainly not: for then what use could I make of them?

Socrates:: And would you accept them if you were likely to use them to a bad and mischievous end?

Alcibiades:: I would not.

Socrates:: You see that it is not safe for a man either rashly to accept whatever is offered him, or himself to request a thing, if he is likely to suffer thereby or immediately to lose his life. And yet we could tell of many who, having long desired and diligently laboured to obtain a tyranny, thinking that thus they would procure an advantage, have nevertheless fallen victims to designing enemies. You must have heard of what happened only the other day, how Archelaus of Macedonia was slain by his beloved, whose love for the tyranny was not less than that of Archelaus for him. The tyrannicide expected by his crime to become tyrant and afterwards to have a happy life; but when he had held the tyranny three or four days, he was in his turn conspired against and slain. Or look at certain of our own citizens,—and of their actions we have been not hearers, but eyewitnesses,—who have desired to obtain military command: of those who have gained their object, some are even to this day exiles from the city, while others have lost their lives. And even they who seem to have fared best, have not only gone through many perils and terrors during their office, but after their return home they have been beset by informers worse than they once were by their foes, insomuch that several of them have wished that they had remained in a private station rather than have had the glories of command. If, indeed, such perils and terrors were of profit to the commonwealth, there would be reason in undergoing them; but the very contrary is the case. Again, you will find persons who have prayed for offspring, and when their prayers were heard, have fallen into the greatest pains and sufferings. For some have begotten children who were utterly bad, and have therefore passed all their days in misery, while the parents of good children have undergone the misfortune of losing them, and have been so little happier than the others that they would have preferred never to have had children rather than to have had them and lost them. And yet, although these and the like examples are manifest and known of all, it is rare to find any one who has refused what has been offered him, or, if he were likely to gain aught by prayer, has refrained from making his petition. The mass of mankind would not decline to accept a tyranny, or the command of an army, or any of the numerous things which cause more harm than good: but rather, if they had them not, would have prayed to obtain them. And often in a short space of time they change their tone, and wish their old prayers unsaid. Wherefore also I suspect that men are entirely wrong when they blame the gods as the authors of the ills which befall them: 'their own presumption' or folly (whichever is the right word)—

> 'Has brought these unmeasured woes upon them.'

He must have been a wise poet, Alcibiades, who, seeing as I believe, his friends foolishly praying for and doing things which would not really profit them, offered up a common prayer in behalf of them all:—

> 'King Zeus, grant us good whether prayed for or unsought by us;
> But that which we ask amiss, do thou avert.'

In my opinion, I say, the poet spoke both well and prudently; but if you have anything to say in answer to him, speak out.

Alcibiades:: It is difficult, Socrates, to oppose what has been well said. And I perceive how many are the ills of which ignorance is the cause, since, as would appear, through ignorance we not only do, but what is worse, pray for the greatest evils. No man would imagine that he would do so; he would rather suppose that he was quite capable of praying for what was best: to call down evil seems more like a curse than a prayer.

Socrates:: But perhaps, my good friend, some one who is wiser than either you or I will say that we have no right to blame ignorance thus rashly, unless we can add what ignorance we mean and of what, and also to whom and how it is respectively a good or an evil?

Alcibiades:: How do you mean? Can ignorance possibly be better than knowledge for any person in any conceivable case?

Socrates:: So I believe:—you do not think so?

Alcibiades:: Certainly not.

Socrates:: And yet surely I may not suppose that you would ever wish to act towards your mother as they say that Orestes and Alcmaeon and others have done towards their parent.

Alcibiades:: Good words, Socrates, prithee.

Socrates:: You ought not to bid him use auspicious words, who says that you would not be willing to commit so horrible a deed, but rather him who affirms the contrary, if the act appear to you unfit even to be mentioned. Or do you think of that Orestes, had he been in his senses and knew what was best for him to do, would ever have dared to venture on such a crime?

Alcibiades:: Certainly not.

Socrates:: Nor would any one else, I fancy?

Alcibiades:: No.

Socrates:: That ignorance is bad then, it would appear, which is of the best and does not know what is best?

Alcibiades:: So I think, at least.

Socrates:: And both to the person who is ignorant and everybody else?

Alcibiades:: Yes.

Socrates:: Let us take another case. Suppose that you were suddenly to get into your head that it would be a good thing to kill Pericles, your kinsman and guardian, and were to seize a sword and, going to the doors of his house, were to enquire if he were at home, meaning to slay only him and no one else the servants reply, ‘Yes’: Mind, I do not mean that you would really do such a thing; but there is nothing, you think, to prevent a man who is ignorant of the best, having occasionally the whim that what is worst is best?

Alcibiades:: No.

Socrates::—If, then, you went indoors, and seeing him, did not know him, but thought that he was some one else, would you venture to slay him?

Alcibiades:: Most decidedly not [it seems to me].

Socrates:: For you designed to kill, not the first who offered, but Pericles himself?

Alcibiades:: Certainly.

Socrates:: And if you made many attempts, and each time failed to recognize Pericles, you would never attack him?

Alcibiades:: Never.

Socrates:: Well, but if Orestes in like manner had not known his mother, do you think that he would ever have laid hands upon her?

Alcibiades:: No.

Socrates:: He did not intend to slay the first woman he came across, nor any one else's mother, but only his own?

Alcibiades:: True.

Socrates:: Ignorance, then, is better for those who are in such a frame of mind, and have such ideas?

Alcibiades:: Obviously.

Socrates:: You acknowledge that for some persons in certain cases the ignorance of some things is a good and not an evil, as you formerly supposed?

Alcibiades:: I do.

Socrates:: And there is still another case which will also perhaps appear strange to you, if you will consider it?

Alcibiades:: What is that, Socrates?

Socrates:: It may be, in short, that the possession of all the sciences, if unaccompanied by the knowledge of the best, will more often than not injure the possessor. Consider the matter thus:—Must we not, when we intend either to do or say anything, suppose that we know or ought to know that which we propose so confidently to do or say?

Alcibiades:: Yes, in my opinion.

Socrates:: We may take the orators for an example, who from time to time advise us about war and peace, or the building of walls and the construction of harbours, whether they understand the business in hand, or only think that they do. Whatever the city, in a word, does to another city, or in the management of her own affairs, all happens by the counsel of the orators.

Alcibiades:: True.

Socrates:: But now see what follows, if I can [make it clear to you]. You would distinguish the wise from the foolish?

Alcibiades:: Yes.

Socrates:: The many are foolish, the few wise?

Alcibiades:: Certainly.

Socrates:: And you use both the terms, 'wise' and 'foolish' in reference to something?

Alcibiades:: I do.

Socrates:: Would you call a person wise who can give advice, but does not know whether or when it is better to carry out the advice?

Alcibiades:: Decidedly not.

Socrates:: Nor again, I suppose, a person who knows the art of war, but does not know whether it is better to go to war or for how long?

Alcibiades:: No.

Socrates:: Nor, once more, a person who knows how to kill another or to take away his property or to drive him from his native land, but not when it is better to do so or for whom it is better?

Alcibiades:: Certainly not.

Socrates:: But he who understands anything of the kind and has at the same time the knowledge of the best course of action:—and the best and the useful are surely the same?—

Alcibiades:: Yes.

Socrates::—Such an one, I say, we should call wise and a useful adviser both of himself and of the city. What do you think?

Alcibiades:: I agree.

Socrates:: And if any one knows how to ride or to shoot with the bow or to box or to wrestle, or to engage in any other sort of contest or to do anything whatever which is in the nature of an art,—what do you call him who knows what is best according to that art? Do you not speak of one who knows what is best in riding as a good rider?

Alcibiades:: Yes.

Socrates:: And in a similar way you speak of a good boxer or a good flute-player or a good performer in any other art?

Alcibiades:: True.

Socrates:: But is it necessary that the man who is clever in any of these arts should be wise also in general? Or is there a difference between the clever artist and the wise man?

Alcibiades:: All the difference in the world.

Socrates:: And what sort of a state do you think that would be which was composed of good archers and flute-players and athletes and masters in other arts, and besides them of those others about whom we spoke, who knew how to go to war and how to kill, as well as of orators puffed up with political pride, but in which not one of them all had this knowledge of the best, and there was no one who could tell when it was better to apply any of these arts or in regard to whom?

Alcibiades:: I should call such a state bad, Socrates.

Socrates:: You certainly would when you saw each of them rivalling the other and esteeming that of the greatest importance in the state;

> 'Wherein he himself most excelled.'

—I mean that which was best in any art, while he was entirely ignorant of what was best for himself and for the state, because, as I think, he trusts to opinion which is devoid of intelligence. In such a case should we not be right if we said that the state would be full of anarchy and lawlessness?

Alcibiades:: Decidedly.

Socrates:: But ought we not then, think you, either to fancy that we know or really to know, what we confidently propose to do or say?

Alcibiades:: Yes.

Socrates:: And if a person does that which he knows or supposes that he knows, and the result is beneficial, he will act advantageously both for himself and for the state?

Alcibiades:: True.

Socrates:: And if he do the contrary, both he and the state will suffer?

Alcibiades:: Yes.

Socrates:: Well, and are you of the same mind, as before?

Alcibiades:: I am.

Socrates:: But were you not saying that you would call the many unwise and the few wise?

Alcibiades:: I was.

Socrates:: And have we not come back to our old assertion that the many fail to obtain the best because they trust to opinion which is devoid of intelligence?

Alcibiades:: That is the case.

Socrates:: It is good, then, for the many, if they particularly desire to do that which they know or suppose that they know, neither to know nor to suppose that they know, in cases where if they carry out their ideas in action they will be losers rather than gainers?

Alcibiades:: What you say is very true.

Socrates:: Do you not see that I was really speaking the truth when I affirmed that the possession of any other kind of knowledge was more likely to injure than to benefit the possessor, unless he had also the knowledge of the best?

Alcibiades:: I do now, if I did not before, Socrates.

Socrates:: The state or the soul, therefore, which wishes to have a right existence must hold firmly to this knowledge, just as the sick man clings to the physician, or the passenger depends for safety on the pilot. And if the soul does not set sail until she have obtained this she will be all the safer in the voyage through life. But when she rushes in pursuit of wealth or bodily strength or anything else, not having the knowledge of the best, so much the more is she likely to meet with misfortune. And he who has the love of learning, and is skilful in many arts, and does not possess the knowledge of the best, but is under some other guidance, will make, as he deserves, a sorry voyage:—he will, I believe, hurry through the brief space of human life, pilotless in mid-ocean, and the words will apply to him in which the poet blamed his enemy:—

‘……Full many a thing he knew;
But knew them all badly.’

Alcibiades:: How in the world, Socrates, do the words of the poet apply to him? They seem to me to have no bearing on the point whatever.

Socrates:: Quite the contrary, my sweet friend: only the poet is talking in riddles after the fashion of his tribe. For all poetry has by nature an enigmatical character, and it is by no means everybody who can interpret it. And if, moreover, the spirit of poetry happen to seize on a man who is of a begrudging temper and does not care to manifest his wisdom but keeps it to himself as far as he can, it does indeed require an almost superhuman wisdom to discover what the poet would be at. You surely do not suppose that Homer, the wisest and most divine of poets, was unaware of the impossibility of knowing a thing badly: for it was no less a person than he who said of Margites that ‘he knew many things, but knew them all badly’ The solution of the riddle is this, I imagine:—By ‘badly’ Homer meant ‘bad’ and ‘knew’ stands for ‘to know.’ Put the words together;—the metre will suffer, but the poet’s meaning is clear;—‘Margites knew all these things, but it was bad for him to know them.’ And, obviously, if it was bad for him to know so many things, he must have been a good-for-nothing, unless the argument has played us false.

Alcibiades:: But I do not think that it has, Socrates: at least, if the argument is fallacious, it would be difficult for me to find another which I could trust.

Socrates:: And you are right in thinking so.

Alcibiades:: Well, that is my opinion.

Socrates:: But tell me, by Heaven:—you must see now the nature and greatness of the difficulty in which you, like others, have your part. For you change about in all directions; and never come to rest anywhere: what you once most strongly inclined to suppose, you put aside again and quite alter your mind. If the God to whose shrine you are going should appear at this moment, and ask before you made your prayer, 'Whether you would desire to have one of the things which we mentioned at first, or whether he should leave you to make your own request:'—what in either case, think you, would be the best way to take advantage of the opportunity?

Alcibiades:: Indeed, Socrates, I could not answer you without consideration. It seems to me to be a wild thing to make such a request; a man must be very careful lest he pray for evil under the idea that he is asking for good, when shortly after he may have to recall his prayer, and, as you were saying, demand the opposite of what he at first requested.

Socrates:: And was not the poet whose words I originally quoted wiser than we are, when he bade us [pray God] to defend us from evil even though we asked for it?

Alcibiades:: I believe that you are right.

Socrates:: The Lacedaemonians, too, whether from admiration of the poet or because they have discovered the idea for themselves, are wont to offer the prayer alike in public and private, that the Gods will give unto them the beautiful as well as the good:—no one is likely to hear them make any further petition. And yet up to the present time they have not been less fortunate than other men; or if they have sometimes met with misfortune, the fault has not been due to their prayer. For surely, as I conceive, the Gods have power either to grant our requests, or to send us the contrary of what we ask.

And now I will relate to you a story which I have heard from certain of our elders. It chanced that when the Athenians and Lacedaemonians were at war, our city lost every battle by land and sea and never gained a victory. The Athenians being annoyed and perplexed how to find a remedy for their troubles, decided to send and enquire at the shrine of Ammon. Their envoys were also to ask, 'Why the Gods always granted the victory to the Lacedaemonians?' 'We' (they were to say,) 'offer them more and finer sacrifices than any other Hellenic state, and adorn their temples with gifts, as nobody else does; moreover, we make the most solemn and costly processions to them every year, and spend more money in their service than all the rest of the Hellenes put together. But the Lacedaemonians take no thought of such matters, and pay so little respect to the Gods that they have a habit of sacrificing blemished animals to them, and in various ways are less zealous than we are, although their wealth is quite equal to ours' When they had thus spoken, and had made their request to know what remedy they could find against the evils which troubled them, the prophet made no direct answer,—clearly because he was not allowed by the God to do so;—but he summoned them to him and said: 'Thus saith Ammon to the Athenians: "The silent worship of the Lacedaemonians pleaseth me better than all the offerings of the other Hellenes."' Such were the words of the God, and nothing more. He seems to have meant by 'silent worship' the prayer of the Lacedaemonians, which is indeed widely different from the usual requests of the Hellenes. For they either bring to the altar bulls with gilded horns or make offerings to the Gods, and beg at random for what they need, good or bad. When, therefore, the Gods hear them using words of ill omen they reject these costly processions and sacrifices of theirs. And we ought, I think, to be very careful and consider well what we should say and what leave unsaid. Homer, too, will furnish us with similar stories. For he tells us how the Trojans in making their encampment;

> ‘Offered up whole hecatombs to the immortals,’

and how the ‘sweet savour’ was borne ‘to the heavens by the winds’;

> ‘But the blessed Gods were averse and received it not.
> For exceedingly did they hate the holy Ilium,
> Both Priam and the people of the spear-skilled king.’

So that it was in vain for them to sacrifice and offer gifts, seeing that they were hateful to the Gods, who are not, like vile usurers, to be gained over by bribes. And it is foolish for us to boast that we are superior to the Lacedaemonians by reason of our much worship. The idea is inconceivable that the Gods have regard, not to the justice and purity of our souls, but to costly processions and sacrifices, which men may celebrate year after year, although they have committed innumerable crimes against the Gods or against their fellowmen or the state. For the Gods, as Ammon and his prophet declare, are no receivers of gifts, and they scorn such unworthy service. Wherefore also it would seem that wisdom and justice are especially honoured both by the Gods and by men of sense; and they are the wisest and most just who know how to speak and act towards Gods and men. But I should like to hear what your opinion is about these matters.

Alcibiades:: I agree, Socrates, with you and with the God, whom, indeed, it would be unbecoming for me to oppose.

Socrates:: Do you not remember saying that you were in great perplexity, lest perchance you should ask for evil, supposing that you were asking for good?

Alcibiades:: I do.

Socrates:: You see, then, that there is a risk in your approaching the God in prayer, lest haply he should refuse your sacrifice when he hears the blasphemy which you utter, and make you partake of other evils as well. The wisest plan, therefore, seems to me that you should keep silence; for your 'high-mindedness'—to use the mildest term which men apply to folly—will most likely prevent you from using the prayer of the Lacedaemonians. You had better wait until we find out how we should behave towards the Gods and towards men.

Alcibiades:: And how long must I wait, Socrates, and who will be my teacher? I should be very glad to see the man.

Socrates:: It is he who takes an especial interest in you. But first of all, I think, the darkness must be taken away in which your soul is now enveloped, just as Athene in Homer removes the mist from the eyes of Diomede that

> 'He may distinguish between God and mortal man.'

Afterwards the means may be given to you whereby you may distinguish between good and evil. At present, I fear, this is beyond your power.

Alcibiades:: Only let my instructor take away the impediment, whether it pleases him to call it mist or anything else! I care not who he is; but I am resolved to disobey none of his commands, if I am likely to be the better for them.

Socrates:: And surely he has a wondrous care for you.

Alcibiades:: It seems to be altogether advisable to put off the sacrifice until he is found.

Socrates:: You are right: that will be safer than running such a tremendous risk.

Alcibiades:: But how shall we manage, Socrates?—At any rate I will set this crown of mine upon your head, as you have given me such excellent advice, and to the Gods we will offer crowns and perform the other customary rites when I see that day approaching: nor will it be long hence, if they so will.

Socrates:: I accept your gift, and shall be ready and willing to receive whatever else you may proffer. Euripides makes Creon say in the play, when he beholds Teiresias with his crown and hears that he has gained it by his skill as the first-fruits of the spoil:—

> ‘An auspicious omen I deem thy victor’s wreath:
> For well thou knowest that wave and storm oppress us.’

And so I count your gift to be a token of good-fortune; for I am in no less stress than Creon, and would fain carry off the victory over your lovers.

# Second Alcibiades

Translated by Anthony Kenny.

PERSONS OF THE DIALOGUE.

Socrates, Alcibiades.

---

Socrates:: Alcibiades, are you on your way to say your prayers?

Alcibiades:: Yes, indeed, Socrates.

Socrates:: You have a depressed and downcast look; you seem preoccupied.

Alcibiades:: And what might preoccupy me, Socrates?

Socrates:: The most serious of all questions, in my view. Tell me, in God's name, what you think. In public and private prayer we make requests to the gods: don't they sometimes grant some of them and not all of them, and don't they say yes to some people and no to others?

Alcibiades:: Indeed they do.

Socrates:: So don't you agree that there is a great need for caution, for fear you might, all unawares, be praying for great evils when you think you are asking for great goods? Suppose the gods were in a mood to give whatever was asked; it might be just like the case of Oedipus who blurted out the prayer that his sons might take arms to settle their inheritance. He could have prayed for relief from the ills which beset him without begging for others in addition! But in fact, what he asked for came to pass, with many terrible consequences which there is no need to enumerate.

Alcibiades:: But you're talking about a madman, Socrates: do you think any person of sound mind would have dared to make such a prayer?

Socrates:: Do you take madness to be the opposite of wisdom?

Alcibiades:: Yes, indeed.

Socrates:: Do you think there are some people who are wise and some who are stupid?

Alcibiades:: So it seems.

Socrates:: Well, then, let's see which are which. We have agreed that there are some people who are stupid, some who are wise, and others who are mad.

Alcibiades:: Agreed.

Socrates:: Are there some people who are healthy?

Alcibiades:: Yes.

Socrates:: And others who are sick?

Alcibiades:: Indeed.

Socrates:: Not the same people?

Alcibiades:: Of course not.

Socrates:: Are there any other people who are neither one thing nor the other?

Alcibiades:: No.

Socrates:: Because a person has to be either sick or not sick?

Alcibiades:: That's what I think.

Socrates:: Well now, do you have the same view about wisdom and stupidity?

Alcibiades:: How do you mean?

Socrates:: Do you think it is only possible either to be wise or stupid, or is there also a third state in between in which a person is neither wise nor stupid?

Alcibiades:: No, there isn't.

Socrates:: So you have to be one or the other?

Alcibiades:: So I believe.

Socrates:: Now do you remember that you agreed that madness is the opposite of wisdom?

Alcibiades:: Yes, I did.

Socrates:: And that there is no third state in which a person is neither wise nor stupid?

Alcibiades:: Yes.

Socrates:: And can one thing have two distinct opposites?

Alcibiades:: No.

Socrates:: So it looks as if stupidity and madness are one and the same thing.

Alcibiades:: It does.

Socrates:: So would it be correct to say that all stupid people are mad—not just any of your contemporaries who are stupid, as some of them certainly are, but even older people? Tell me, in God's name, don't you think that in our city the wise are in a minority, and most people are stupid, or, as you would say, mad?

Alcibiades:: I do.

Socrates:: But do you think we could live comfortably in a city of so many madmen? Would we not have met our fate long ago, and been punched and beaten and subjected to every madman's trick? Things aren't quite like that, are they?

Alcibiades:: No, not at all; it looks as if I've not got the matter quite right.

Socrates:: I don't think so either. Try looking at it another way.

Alcibiades:: What way do you mean?

Socrates:: I'll tell you. We take it that some people are sick, don't we?

Alcibiades:: Yes, indeed.

Socrates:: Do you think that anyone who is sick must necessarily have gout, or fever, or eye ache? Or can a person be sick in some other way without having any of these? Surely there are many other diseases besides these?

Alcibiades:: Surely.

Socrates:: Eye ache is always a sickness, don't you think?

Alcibiades:: Yes.

Socrates:: But is sickness always eye ache?

Alcibiades:: No; but I'm not sure what to say.

Socrates:: But if you pay attention to me, we may find out; for two heads are better than one.

Alcibiades:: I am paying attention, Socrates, as well as I can.

Socrates:: Well, we have agreed that while eye ache is always a sickness, not every sickness is eye ache, have we not?

Alcibiades:: Yes, we have.

Socrates:: And rightly. Anyone with a fever is sick, but not everyone who is sick has a fever—nor gout, I take it, nor eye ache. Each of these is a disease, but they present quite different symptoms, to use the doctors' term. They are not all alike, and they do not have like effects; each of them works according to its own nature, but they are all none the less diseases. Similarly, we classify some people as workmen, don't we?

Alcibiades:: Of course.

Socrates:: There are shoemakers, and carpenters, and sculptors, and very many others whom we needn't enumerate. They all have their own share of work, and they are all workmen; but they are not all carpenters or shoemakers or sculptors even though they are all workmen.

Alcibiades:: No.

Socrates:: Well now, in the same way people have shared out stupidity among themselves; those who have the largest share we call madmen, those with a smaller share we call fools or asses. People who prefer euphemisms call them big-hearted or simple, or perhaps innocent, naive, or dumb: you will come across many other names if you look for them. But all these things are stupidity, and differ from each other in the way one kind of work and one kind of disease differs from another. Isn't that right?

Alcibiades:: Absolutely.

Socrates:: Let's go back, then. At the beginning of our discussion we set out to discover which people were wise and which were stupid, because we had agreed that some were one and some were the other.

Alcibiades:: We had indeed.

Socrates:: Is it your view that the wise are those who know what should be done and said?

Alcibiades:: Yes.

Socrates:: And who are the stupid? Those who know neither of these things?

Alcibiades:: Just so.

Socrates:: And those who know neither of these things will say and do what they ought not, without knowing that this is what they are saying and doing?

Alcibiades:: So it seems.

Socrates:: And just such a person was Oedipus. And in our own time you will find many such people—not in a rage as he was—who pray for things that are bad for them in the belief that they are good for them. He did not think so, or pray so; but there are others who are in a very different case. Suppose that the god to whom you are about to pray were to appear to you and ask you, before you began praying, whether you would be happy to be sole ruler of the city of Athens—or, if that seemed mean and tiny, were to offer you all the Greeks as well—or, if he saw that you regarded that too as insignificant unless the whole of Europe were included, were to promise you all of that plus simultaneous acknowledgment by the whole human race of the rule of Alcibiades son of Clinias. If that happened, I imagine, you would go home very happy and think you had come into possession of the greatest of goods.

Alcibiades:: So would anyone else, I imagine, Socrates, if he were given the same promise.

Socrates:: But you would not give your own life in exchange for the territory and sole rule of all the Greeks and all the barbarians?

Alcibiades:: I should think not, since they would be no use to me.

Socrates:: But suppose you were going to use them, but were going to make a bad and harmful use of them? Would you want them then?

Alcibiades:: No.

Socrates:: So you see, it is not safe to accept without thinking what one is given, nor to pray for something which is going to injure one or take away one's life altogether. We could name many people who set their hearts on obtaining sole ruler ship, and strove to achieve this goal as a great good, and then had their lives taken by plotters against their rule. I think you are not unaware of the events of the last few days: Archelaus of Macedon was in love with a man whose love for Archelaus' kingship was greater than Archelaus' love for him, and who killed his lover in order to make himself a king and a happy man. He had only ruled for three or four days when he in his turn fell victim to a plot and was killed himself.

Among our own citizens too—as we know not just by hearsay, but as eye-witnesses—we see some who have longed to command armies, and having got what they wanted are now exiled from the city or have lost their lives altogether. And even those who seem to have done best have lived amidst dangers and fears; not only during their campaigns, but when they have returned home where they have been besieged by informers as tightly as they were by the enemy, so that some of them wished to heaven that they had stayed privates rather than generals. Of course, it would make some sense if these dangers and burdens brought any benefit; but in fact it's quite the contrary.

You will find the same in the matter of children: some people pray to have them, and when they have them they bring them utter disaster and grief. Some people's children are so thoroughly bad that they make their whole life a misery; other people have good children and lose them in some calamity and end up no less miserable than the others, wishing they had never had children at all.

However, in spite of all these and similar dire examples, you rarely find anyone who declines a gift or who refrains from praying for what he hopes to be granted. Most people, if given the chance to become a ruler or a general, or any of the other things which bring more harm than good, will not hesitate to take the opportunity; and they will even pray for such things before they are on offer. After a while, however, they change their tune and pray away their former prayers.

I wonder, then, if humans are not wrong in "placing the blame" for their ills on the gods, when "they themselves by their own presumption"—or stupidity, should we say?—"have brought sorrows on themselves beyond their destined lot." There was a poet who composed a prayer for all his friends to say in common, more or less like this:

King Zeus, whether we pray or not, give us what is good for us What is bad for us, give us not, however hard we pray for it.

He certainly seems to have been a wise man: I expect he had stupid friends whom he had seen working and praying for things that it was better for them not to have, no matter what they thought. That is what he recommended, and in my view he spoke well and soundly; but if you have anything against what he said, speak up.

Alcibiades:: It is hard, Socrates, to speak against what has been well spoken. One thing I do observe is that the cause of very many human evils is ignorance: it is ignorance which deceives us into doing and—what is worse—praying for the greatest evils. No one, however, thinks thus about himself; each of us thinks himself quite capable of praying not for the worst but for the best. For such a prayer would really seem to be more like a curse than a prayer!

Socrates:: Well said! But perhaps someone even wiser than you and I might say that we were wrong to blame ignorance in such general terms; we should specify what it is ignorance of. Indeed, just as ignorance is an evil to some people, there are other people, in certain states, to whom it is a good.

Alcibiades:: How do you mean? Can there be anything of which it is better for people to have ignorance than knowledge, no matter what state they are in?

Socrates:: I think there can; don’t you?

Alcibiades:: No, I don’t; not on your life.

Socrates:: But surely I am not to judge that you would ever want to commit against your mother crimes like those of Orestes and Alcmaeon and anyone else like them?

Alcibiades:: Spare me, for God’s sake, Socrates!

Socrates:: It isn’t the person who says that you would not ever want to behave like that whom you should ask to spare you, but rather anyone who contradicted him; for the act seems to you so horrendous that you do not like to hear it spoken of even by way of example. But do you think that Orestes, if he had been of sound mind and known what was best for him to do, would have dared to commit any such crime?

Alcibiades:: No, I don’t.

Socrates:: Nor, I think, would anyone else.

Alcibiades:: Certainly not.

Socrates:: It seems then that it is ignorance of the best, failing to know what is best, that is a bad thing.

Alcibiades:: So it seems.

Socrates:: And not only for the person himself, but also for everyone else?

Alcibiades:: I agree.

Socrates:: Let’s consider a further point. Suppose the thought sprang into your mind that it would be an excellent thing to kill your friend and mentor Pericles, and you took a dagger and went to his door and asked if he were at home, with the intention of killing him and him alone, and they said he was at home. I don’t mean to say that you would wish to do any such thing; but just suppose that you were to think that the worst thing was the best thing—that’s a thought that might at any time occur to someone who is ignorant of what is really best—or don’t you think so?

Alcibiades:: Absolutely.

Socrates:: Well then, if you went inside and saw Pericles, but did not recognize him and thought he was someone else, would you still go on to kill him?

Alcibiades:: I should think not, in God’s name.

Socrates:: For your intention surely was to kill not just anyone you came across, but only that particular person. Isn’t that right?

Alcibiades:: Yes.

Socrates:: And if, having tried several times, you always failed, when it came to the point, to recognize Pericles, you would never lay a hand on him.

Alcibiades:: Certainly not.

Socrates:: Well then, do you think that Orestes would ever have laid a hand on his mother if he had failed to recognize her?

Alcibiades:: I don’t think so.

Socrates:: For presumably he too had no intention of killing the first woman he came across, or killing just anyone’s mother, but only his own.

Alcibiades:: That’s right.

Socrates:: Then for those in that state, with such intentions, these are things which it is better not to know.

Alcibiades:: Very likely.

Socrates:: So you see that there are some things which, for certain people in certain states, it is better not to know than to know.

Alcibiades:: So it seems.

Socrates:: Now if you care to look at what follows from this, you may find that you’re in for a surprise.

Alcibiades:: What surprise, Socrates?

Socrates:: I mean that, in general, it seems that if someone lacks knowledge of what is best, the possession of other skills will only rarely help, but in most cases will harm, their possessor. Consider it this way. When we are about to say or do something, mustn’t we first of all know, or at least believe we know, what we are so keen to say and do?

Alcibiades:: I believe so.

Socrates:: Orators, for instance, are bound to know, or at least to think they know, how to give us advice on various topics—whether it is about war and peace, or about the construction of walls or the equipment of harbors. Altogether, whatever a state does in foreign or domestic matters is done on the advice of the orators.

Alcibiades:: As you say.

Socrates:: See then what follows.

Alcibiades:: If I can.

Socrates:: You call some people wise and others stupid?

Alcibiades:: I do.

Socrates:: And you call most people stupid, and a few wise?

Alcibiades:: Exactly.

Socrates:: In each case you make use of a criterion?

Alcibiades:: Yes.

Socrates:: Well, do you call a man wise who knows how to give advice, but not what advice is best to give or when it is best to give it?

Alcibiades:: Certainly not.

Socrates:: Nor, I imagine, a man who knows how to make war, without knowing when or for how long war should best be made? Isn’t that right?

Alcibiades:: Yes.

Socrates:: Nor again a man who knows how to kill or steal or banish people without knowing when it is better to do this, or to whom?

Alcibiades:: No.

Socrates:: So what we want is the person who knows one or other of these things but also has the knowledge of what is best—which no doubt is the same as knowledge of utility.

Alcibiades:: Yes.

Socrates:: And this is the person whom we shall call wise, a reliable counselor for himself and for the state. But someone who is not like this we shall call the opposite. What do you think?

Alcibiades:: I agree.

Socrates:: Now suppose we have a person who knows how to ride or shoot, or box, or wrestle, or compete in any other sport or exhibit any other skill. What do you call the person who knows how best to exercise a particular skill? If it is the skill of riding, I expect you will call him a good rider.

Alcibiades:: I will.

Socrates:: And if it is boxing, you will call him a good boxer, and if it is flute-playing you will call him a good flute-player, and so in other cases. Or do you disagree?

Alcibiades:: No, not at all.

Socrates:: Now do you think that knowing about these things suffices to make a person wise, or is more needed?

Alcibiades:: Much more, upon my life.

Socrates:: Suppose there were a state in which there were good archers and flute-players, good athletes and craftsmen, and among them the kind of people we have been talking about, who know only how to make war and only how to kill, and also fine orators who know how to sound off about politics, but none of them had the knowledge of what is best, and none of them knew when or on whom it was better for them to exercise their skills—what sort of state do you think that would be?

Alcibiades:: A miserable one, Socrates.

Socrates:: I'm sure you would if you saw them all competing with each other for honors, "each one assigning precedence in political matters to his own sphere of excellence"—I mean, what is best according to the scope of his own skill—while he may be much mistaken about what is best for the state and for himself, since he has not used his intelligence but put his trust in mere seeming. If that's the situation, wouldn't we be right to describe such a state as a hotbed of dissension and lawlessness?

Alcibiades:: Indeed we would.

Socrates:: Did we not think that if you are on the point of saying or doing something, you must first know, or at least think you know what you are doing or saying?

Alcibiades:: We did.

Socrates:: So if someone does what he knows, or thinks he knows, and has in addition knowledge of utility, we will judge him a boon both to the state and to himself?

Alcibiades:: Absolutely.

Socrates:: But if he does the contrary, he will be no good to the state or to himself?

Alcibiades:: No good.

Socrates:: Well, then: are you still of the same mind, or have you changed it?

Alcibiades:: Still the same.

Socrates:: You said that you called most people stupid, and only a few wise?

Alcibiades:: I did.

Socrates:: So, to repeat, most people have been mistaken about what is best because they have not used their intelligence but put their trust in mere seeming.

Alcibiades:: Yes.

Socrates:: For most people, then, it is an advantage neither to know nor to think they know anything, if they are going to do themselves more harm than good by rushing to do what they know or think they know.

Alcibiades:: Very true.

Socrates:: So you see it seems that I was quite right when I said that it looked as if other skills, if not combined with the knowledge of what is best, are more often than not harmful to their possessors.

Alcibiades:: I may not have thought so then, but I do now, Socrates.

Socrates:: So if the life of a soul or a state is to go aright, this knowledge of what is best must be embraced with exactly the kind of trust a patient has in his doctor or a seafarer in his good ship's captain. For without this, the stronger the winds of fortune blow towards the acquisition of wealth or health and strength or anything else of that kind, the greater the errors to which these things will necessarily lead. Someone may have acquired so many skills as to deserve the name of polymath, but if he lets himself be led by one or other of these skills and lacks this true knowledge he will, as he indeed deserves, run into very rough weather, "alone on the high seas with no helmsman and with not long to live." There is a verse which fits his case, where the poet complains of someone that "he knew a lot of things but knew them all wrong."

Alcibiades:: Whatever has that verse got to do with the matter, Socrates? It does not seem at all to the point.

Socrates:: It is very much to the point; but you are right that he speaks enigmatically, just like a poet. All poetry, by its nature, is enigmatic, and not everyone can take it in; but when, in addition, it is housed in a poet who is miserly and wishes so far as possible to conceal rather than exhibit his wisdom, it may be quite remarkably difficult to find out what each of them might mean. For you don't think that Homer, the divinest and wisest of poets—for it is he who says that Margites knew a lot of things but knew them all wrong—didn't know that it was impossible to know a thing wrong. He is riddling, I think; he meant "wrong" as an adjective, not as an adverb; and he meant "to know" rather than "knew." So, if we forget about the original meter we can put together his meaning as this: he knew a lot of things, but it was wrong for him to know them all. Clearly, if it was wrong for him to know a lot of things, he must have been a bad man, if we are to trust our previous arguments.

Alcibiades:: I agree Socrates; if we cannot trust these arguments I really don't know which ones we can trust.

Socrates:: You are right to think so.

Alcibiades:: But perhaps I should think again.

Socrates:: Oh, for God's sake! You see what a terrible great muddle we are in, and it is partly your fault; for you change incessantly from side to side. No sooner are you convinced of something than you give it up again and change your mind. Well, if the god to whom you are on your way should appear to you at this very moment, before you start praying, and ask whether you would be happy to get one of the things we spoke of earlier, or whether he should leave the choice of prayer to you, which do you think offers the best prospect: accepting his offers or making your own prayer?

Alcibiades:: By the gods, Socrates, I would have to take time to answer your question; an impromptu response would be folly. You really have to take a great deal of care to make sure that you are not, all unawares, praying for evil in the belief that it is good, and that after a little while you won't, as you said a moment ago, change your tune and call back all your prayers.

Socrates:: That poet I mentioned at the beginning of our discussion, who told us to pray to be saved from the evils we pray for—he was wiser than us, wasn't he?

Alcibiades:: I guess so.

Socrates:: Whether in admiration of this poet, or because they have worked it out for themselves, the Spartans take the same course in their public and private prayers. They pray the gods to give them first what is good and then what is noble; no one ever hears them asking anything more. They have not, so far, been any less fortunate in consequence than any other people; and even if they have not invariably enjoyed good fortune it has not been because of their prayers. Whether we are given what we pray for or the reverse is in the lap of the gods.

I would like to tell you another story which I once heard from some of my elders. There was a quarrel between the Athenians and the Spartans, and whenever there was a battle, whether by land or sea, our city always came off worse and could never win a victory. The Athenians took this hard, and cast about to discover how they could find relief from their troubles. After discussion they decided to send a delegation to consult Ammon, to ask in particular why the gods granted victory to the Spartans rather than themselves. "We" they said "offer more and finer sacrifices than the rest of the Greeks, and we surpass all others in adorning the temples with emblems, and every year we organize for the gods' benefit the most solemn and sumptuous processions, spending more money than all the other Greeks put together. But the Spartans have never taken any such pains, and they are so mean to the gods that they regularly sacrifice blemished animals and fall well behind us in the quality of their worship, in spite of being no less wealthy than ourselves." Having said that, they also asked what they should do to be relieved from the evils that beset them. The prophet, no doubt under divine instruction, called them to him and said simply this. "Thus saith Ammon to the Athenians: I prefer the terse Laconic utterance to all the sacrifices of the Greeks." That was all he said; not a word more. By their "terse utterance" I expect the god meant their prayer, for it is indeed very different from other prayers. Other Greeks offer bulls with gilded horns, and others present the gods with votive emblems, and pray for whatever comes into their heads, good or bad. But when the gods hear their profanities they scorn these magnificent processions and sacrifices. We should, I believe, be very careful and cautious when we consider what should be said and what should not.

In Homer you will find other similar stories. He tells how the Trojans, when they pitched camp, "sacrificed to the immortals perfect hecatombs" and how;

> The winds carried the delicious smell from the plain up to heaven.
> But the blessed gods took none of it, and had no pleasure in it;
> So deep was their hatred of holy Ilium, and Priam,
> And the people of Priam of the ashen spear.

So it was no help to them to sacrifice and offer vain gifts, when they were out of favor with the gods. For I don't imagine that it is like the gods to be swayed by gifts, like some low moneylender; we make ourselves sound very silly when we boast that we do better than the Spartans on this score.

It would be a strange and sorry thing if the gods took more account of our gifts and sacrifices than of our souls and whether there is holiness and justice to be found in them. Yes, that is what they care about, I believe, far more than about these extravagant processions and sacrifices offered year by year by states and individuals who may, for all we know, have sinned greatly against gods and men. The gods are not venal, and scorn all these things, as Ammon and his prophet told us. Gods and men of sound mind are more likely to hold justice and wisdom in especial honor; and none are wise and just but those who know how to behave and speak to gods and men. But now I would like to hear what your opinion may be about all this.

Alcibiades:: No different from yours and the god's, Socrates; it would hardly be fitting for me to take sides against the god.

Socrates:: But you remember that you said you were very worried that without knowing it you might pray for evil, thinking it to be good?

Alcibiades:: I do.

Socrates:: You see, then, how dangerous it is for you to go to pray to the god, in case he hears you speaking amiss, rejects your sacrifice altogether, and perhaps adds some further penalty. I think you would do best to hold your peace; for I expect you are rather too big-hearted (to use the favorite euphemism for stupidity) to be willing to use the Laconian prayer. It takes time to learn how to behave towards gods and men.

Alcibiades:: How long will it take, Socrates, and who will teach me? I would very much like to see the man who could do it.

Socrates:: It is the man who has his eye on you. But you remember how Homer says that Athena took away the fog from the eyes of Diomedes, "so that he could clearly see both god and man." You too need to get rid of the fog which is wrapped around your soul, so as to prepare you to receive the means of telling good from evil. At present I don't think you could do so.

Alcibiades:: Let him remove the fog, or whatever else it is; I am prepared to do whatever he tells me, whoever he may be, so long as it will make me better.

Socrates:: He too is more than anxious to help.

Alcibiades:: Then I think it is better to put off the sacrifice for the time being.

Socrates:: You're quite right; it is much safer than running such a big risk.

Alcibiades:: Here's an idea, Socrates; I'll put this garland on your head, for giving me such good advice. Only when there comes the day of which you have spoken will we give the gods their garlands and their customary dues. God willing, that day will not be too far off.

Socrates:: I am glad to accept, and I look forward to seeing myself receiving other gifts from you. In Euripides' play, when Creon sees Tiresias crowned with garlands and learns that he has been given them by the enemy as trophies to reward his skill, he says

> Good as an omen are your victor's wreaths
> For we, you know, are battered by the waves.

Just so, I regard the honor you have paid me as a good omen. For I am just as tempest-tossed as Creon, and I look forward to victory over your lovers.

# Alcibiades II

Translated by Lamb.

[or ON PRAYER: “OBSTETRIC”]

CHARACTERS

Socrates, Alcibiades

---

Socrates:: Alcibiades, are you on your way to offer a prayer to the god?

Alcibiades:: I am, certainly, Socrates.

Socrates:: You seem, let me say, to have a gloomy look, and to keep your eyes on the ground, as though you were pondering something.

Alcibiades:: And what might one ponder, Socrates?

Socrates:: The greatest of questions, Alcibiades, as I believe. For tell me, in Heaven’s name, do you not think that the gods sometimes grant in part, but in part refuse, what we ask of them in our private and public prayers, and gratify some people, but not others?

Alcibiades:: I do, certainly.

Socrates:: Then you would agree that one should take great precautions against falling unawares into the error of praying for great evils in the belief that they are good, while the gods happen to be disposed to grant freely what one is praying for? Just as Oedipus, they say, suddenly prayed that his sons might divide their patrimony with the sword: it was open to him to pray that his present evils might by some means be averted, but he invoked others in addition to those which he had already. Wherefore not only were those words of his accomplished, but many other dread results therefrom, which I think there is no need to recount in detail.

Alcibiades:: But you have instanced a madman, Socrates: why, do you suppose that anyone could bring himself, while he was in a sound state, to utter such a prayer?

Socrates:: Do you regard madness as the opposite of wisdom?

Alcibiades:: Certainly I do.

Socrates:: And there are some men whom you regard as unwise, and others as wise?

Alcibiades:: Why, yes.

Socrates:: Come then, let us consider who these people are. We have admitted that some are unwise, some wise, and others mad.

Alcibiades:: Yes, we have.

Socrates:: And again, there are some in sound health?

Alcibiades:: There are.

Socrates:: And others also who are in ill-health?

Alcibiades:: Quite so.

Socrates:: And they are not the same?

Alcibiades:: No, indeed.

Socrates:: And are there any others besides, who are found to be in neither state?

Alcibiades:: No, to be sure.

Socrates:: For a human being must needs be either sick or not sick.

Alcibiades:: I agree.

Socrates:: Well then, do you hold the same view about wisdom and unwisdom?

Alcibiades:: How do you mean?

Socrates:: Tell me, do you think it is only possible to be either wise or unwise, or is there some third condition between these, which makes a man neither wise nor unwise?

Alcibiades:: No, there is not.

Socrates:: So he must needs be in one or the other of these two conditions.

Alcibiades:: I agree.

Socrates:: And you remember that you admitted that madness is the opposite of wisdom?

Alcibiades:: I do.

Socrates:: And further, that there is no third condition between these, which makes a man neither wise nor unwise?

Alcibiades:: Yes, I admitted that.

Socrates:: Well now, can there possibly be two opposites of one thing?

Alcibiades:: By no means.

Socrates:: Then it looks as though unwisdom and madness were the same.

Alcibiades:: Yes, apparently.

Socrates:: So we shall be right, Alcibiades, in saying that all unwise persons are mad; for example, such of your contemporaries as happen to be unwise— some such there are—and of your elders, even: for tell me, in Heaven's name, do you not think that in our city the wise people are but few, whereas the majority are unwise, and these you call mad?

Alcibiades:: I do.

Socrates:: Well, do you suppose we could safely live with so many madmen as our fellow-citizens, and should not long ago have paid the penalty for it in knocks and blows at their hands, and all the usual proceedings of madmen? Consider now, my wonderful friend, whether the case is not quite different?

Alcibiades:: Well, it must be, Socrates. For it looks as though it were not as I thought.

Socrates:: And I think so too. But there is another way of regarding it.

Alcibiades:: I wonder what way you mean.

Socrates:: Well, I will tell you. We conceive there are some who are sick, do we not?

Alcibiades:: We do, to be sure.

Socrates:: And do you believe that a sick man must necessarily have the gout, or a fever, or ophthalmia? Do you not think that, although he may be afflicted in none of these ways, he may be suffering from some other disease? For surely there are many of them: these are not the only ones.

Alcibiades:: I agree.

Socrates:: And is every ophthalmia, in your opinion, a disease?

Alcibiades:: Yes.

Socrates:: And is every disease also ophthalmia?

Alcibiades:: No, I should think not: still, I am in doubt as to my meaning.

Socrates:: Well, if you will attend to me, “two together” will be searching, and so mayhap we shall find what we seek.

Alcibiades:: Nay, but I am attending, Socrates, to the best of my power.

Socrates:: Then we have admitted that while every ophthalmia is a disease, every disease, on the other hand, is not ophthalmia?

Alcibiades:: We have.

Socrates:: And our admission seems to me quite right. For everyone in a fever is sick, but yet not everyone who is sick has a fever or the gout or ophthalmia, I take it; though everything of the sort is a disease, but differs—to quote those whom we call doctors— in its manifestation. For they are not all alike, nor of like effect, but each works according to its own faculty, and yet all are diseases. In the same way, we conceive of some men as artisans, do we not?

Alcibiades:: Certainly.

Socrates:: That is, cobblers and carpenters and statuaries and a host of others, whom we need not mention in particular; but any way, they have their several departments of craft, and all of them are craftsmen; yet they are not all carpenters or cobblers or statuaries, though these taken together are craftsmen.

Alcibiades:: No, indeed.

Socrates:: In the same way, then, have men divided unwisdom also among them, and those who have the largest share of it we call "mad," and those who have a little less, "dolts" and "idiots"; though people who prefer to use the mildest language term them sometimes "romantic," sometimes "simple-minded," or again "innocent," "inexperienced," or "obtuse"; and many another name will you find if you look for more. But all these things are unwisdom, though they differ, as we observed that one art or one disease differs from another. Or how does it strike you?

Alcibiades:: That is my view.

Socrates:: Then let us turn at this point and retrace our steps. For we said, you know, at the beginning that we must consider who the unwise can be, and who the wise: for we had admitted that there are such persons, had we not?

Alcibiades:: Yes, we have admitted it.

Socrates:: Then you conceive those to be wise who know what one ought to do and say?

Alcibiades:: I do.

Socrates:: And which are the unwise? Those who know neither of these things?

Alcibiades:: The same.

Socrates:: And those who know neither of these things will say and do unawares what one ought not?

Alcibiades:: Apparently.

Socrates:: Well, just such a person, as I was saying, Alcibiades, was Oedipus; and even in our time you will find many who do the same, not in a fit of anger, as he was: they think they pray not for something evil, but for something good. He neither prayed for that, nor thought he did, but there are others who are in the opposite case. For I imagine that if the god to whom you are now going should appear to you and first ask you, before you made any prayer, whether you would be content to become sovereign of the Athenian state and, on your accounting this as something poor and unimportant, should add "and of all the Greeks also"; and if he saw you were still unsatisfied unless he promised you besides the mastery of all Europe, and should not merely promise you that, but on the self-same day a recognition by all men, if you so desired, of Alcibiades, son of Cleinias, as their sovereign—I imagine you would actually depart in a transport of delight, as having secured the greatest of goods.

Alcibiades:: So would anybody else, I imagine, Socrates, at such a stroke of luck!

Socrates:: But still you would not wish to sacrifice your life even for the territory and sovereignty of all the Greeks and barbarians together.

Alcibiades:: I should think not. How could I, without a prospect of making any use of them?

Socrates:: And what if you had a prospect of making an evil and injurious use of them? Not in this case either?

Alcibiades:: No, indeed.

Socrates:: So you see it is not safe either to accept casually what one is given, or to pray for one's own advancement, if one is going to be injured in consequence, or deprived of one’s life altogether. Yet we could tell of many ere now who, having desired sovereignty, and endeavored to secure it, with the idea of working for their good, have lost their lives by plots which their sovereignty has provoked. And V expect you are not unacquainted with certain events “of a day or two ago,” when Archelaus, the monarch of Macedonia, was slain by his favourite, who was as much in love with the monarchy as Archelaus was with him, and who killed his lover with the expectation of being not only the monarch, but also a happy man: but after holding the monarchy for three or four days he was plotted against by others in his turn, and perished. You have only to look at some of our own citizens—and these are examples that we know, not by hearsay, but by personal observation—who in their time have desired to hold military command and have obtained it, and see how some to this very day are exiles from our city, while others have lost their lives. And even those who are deemed to be faring best have not only gone through many dangers and terrors in holding their command, but on returning home have continued to be as sorely besieged by informers as they were by the enemy, so that some of them wished to heaven that they had been anything but commanders rather than have held such appointments. Of course, if these dangers and toils were conducive to our advantage, there would be some reason for them; but the case is quite the contrary. And you will find it is just the same in regard to children: some people have been known to pray that they might have them, and when they have got them have fallen into the greatest disasters and pains. For some have had children that were utterly bad, and have spent their whole lives in vexation; while others, though they had good ones, were bereft of them by disasters that overtook them, and thus were cast into as great misfortune as the others, and wished that no children at all had been born to them. But nevertheless, with all this plain evidence, and a great deal more of a similar kind, before men's eyes, it is rare to find anyone who has either declined what was offered to him or, when he was likely to gain something by prayer, refrained from praying. Most men would not decline the offer of either a monarchy or a generalship or any of the various other things which bring with them harm rather than benefit, but would even pray to be granted them in cases where they were lacking: but after a little while they often change their tune, and retract all their former prayers. I question therefore if men are not really wrong in blaming the gods as the authors of their ills, when "they themselves by their own presumption"—or unwisdom, shall we say?—"have gotten them more than destined sorrows." It would seem, at any rate, Alcibiades, that one old poet had some wisdom; for I conceive it was because he had some foolish friends, whom he saw working and praying for things that were not for their advantage, though supposed to be by them, that he made a common prayer on behalf of them all, in terms something like these:

> King Zeus, give unto us what is good, whether we pray or pray not;
> But what is grievous, even if we pray for it, do thou avert.

So then, to my mind the poet spoke well and soundly; but if you have thought of an answer to his words, do not be silent.

Alcibiades:: It is difficult, Socrates, to gainsay what has been well spoken: one thing, however, I do observe —how many evils are caused to men by ignorance, when, as it seems, we are beguiled by her not only into doing, but—worst of all—into praying to be granted the greatest evils. Now that is a thing that no one would suppose of himself; each of us Mould rather suppose he was competent to pray for his own greatest good, not his greatest evil. Why, that would seem, in truth, more like some sort of curse than a prayer!

Socrates:: But perhaps, my excellent friend, some person who is wiser than either you or I may say we are wrong to be so free with our abuse of ignorance, unless we can add that it is ignorance of certain things, and is a good to certain persons in certain conditions, as to those others it is an evil.

Alcibiades:: How do you mean? Can there be anything of which it is better for anybody, in any condition whatsoever, to be ignorant than cognizant?

Socrates:: I believe so; and do not you?

Alcibiades:: No, indeed, upon my word.

Socrates:: But surely I shall not have to tax you with an inclination to commit such an act against your own mother as Orestes and Alcmaeon, and any others who have followed their example, are said to have committed against theirs.

Alcibiades:: No unlucky words, in Heaven's name, Socrates!

Socrates:: Why, it is not the person who says, Alcibiades, that you would not like to be guilty of such an act, whom you should bid avoid unlucky words, but much rather him who might say the contrary; since the act seems to you so very dreadful as to be unfit even for such casual mention. But do you think that Orestes, if he had had all his wits about him and had known what was best for him to do, would have brought himself to commit any act of the sort?

Alcibiades:: No, indeed.

Socrates:: Nor would anyone else, I imagine.

Alcibiades:: No.

Socrates:: Then it seems that ignorance of what is best, and to be ignorant of the best, is a bad thing.

Alcibiades:: I agree.

Socrates:: And not only for the person himself, but for everyone else?

Alcibiades:: Yes.

Socrates:: Then let us consider this further case. Suppose it should quite suddenly occur to your mind that you had better take a dagger and go to the door of Pericles, your own guardian and friend, and ask if he were at home, with the design of killing just him and no one else, and his servants said he was at home: now, I do not say you would be inclined to do any such thing, but I suppose, if you are under the impression which at some moment may well be present, surely, to the mind of a man who is ignorant of the best—that what is really the worst is best at some moment—or do you not agree?

Alcibiades:: Quite so.

Socrates:: Well then, if you went indoors and saw Pericles himself, but did not know him, and thought he was somebody else, would you still venture to kill him?

Alcibiades:: No, upon my word, I should think not.

Socrates:: For your man was, I presume, not anyone you met, but that particular person whom you wished to kill?

Alcibiades:: Yes.

Socrates:: And although you might make a number of attempts, if you always failed to know Pericles when you were about to commit the act, you would never attack him.

Alcibiades:: No, indeed.

Socrates:: Well now, do you suppose that Orestes would ever have attacked his mother if he had similarly failed to know her?

Alcibiades:: I do not think he would.

Socrates:: For presumably he, too, had no intention of killing the first woman he met, or anybody else’s mother, but only his own.

Alcibiades:: That is so.

Socrates:: Then to be ignorant in such matters is better for those who are so disposed and have formed such resolves.

Alcibiades:: Apparently.

Socrates:: So you see that ignorance of certain things is for certain persons in certain states a good, not an evil, as you supposed just now.

Alcibiades:: It seems to be.

Socrates:: Then if you care to consider the sequel of this, I daresay it will surprise you.

Alcibiades:: What may that be, Socrates?

Socrates:: I mean that, generally speaking, it rather looks as though the possession of the sciences as a whole, if it does not include possession of the science of the best, will in a few instances help, but in most will harm, the owner. Consider it this way: must it not be the case, in your opinion, that when we are about to do or say anything, we first suppose that we know, or do really know, the thing we so confidently intend to say or do?

Alcibiades:: I think so.

Socrates:: Well, take the orators, for example: they either know, or think they know, how to advise us on various occasions—some about war and peace, and others about building walls or fitting up harbours; and in a word, whatever the city does to another city or within herself, all comes about by the advice of the orators.

Alcibiades:: That is true.

Socrates:: Then observe the consequence.

Alcibiades:: If I am able.

Socrates:: Why, surely you call men either wise or unwise?

Alcibiades:: I do.

Socrates:: And the many unwise, and the few wise?

Alcibiades:: Precisely.

Socrates:: And in either case you name them in reference to something?

Alcibiades:: Yes.

Socrates:: Then do you call a man wise who knows how to give advice, without knowing whether and when it is better to act upon it?

Alcibiades:: No, indeed.

Socrates:: Nor, I conceive, a man who knows what war is in itself, without knowing when or for how long a time it is better to make war?

Alcibiades:: Agreed.

Socrates:: Nor, again, a man who knows how to kill another, or seize his property, or make him an exile from his native land, without knowing when or to whom it is better so to behave?

Alcibiades:: No, to be sure.

Socrates:: Then it is a man who knows something of this sort, and is assisted by knowledge of what is best,—and this is surely the same as knowledge of the beneficial, is it not?

Alcibiades:: Yes.

Socrates:: And we shall call him wise, and a competent adviser both of the city and of his own self; but a man not so qualified we shall call the opposite of these. How do you think?

Alcibiades:: I agree.

Socrates:: And what of a man who knows how to ride or shoot, or else to box or wrestle or contend in any other sport, or do anything that we know by rule of art? What do you call him who knows what is better done by rule of that particular art? Do you not say that he who goes by the rules of riding is a good rider?

Alcibiades:: I do.

Socrates:: And the rules of boxing, I suppose, make a good boxer, and those of flute-playing a good flute-player, and so, on the same lines, I presume, with the rest; or is there any difference?

Alcibiades:: No, it is as you say.

Socrates:: Then do you think it inevitable that he who has some knowledge about these things should also be a wise man, or shall we say he comes far short of it?

Alcibiades:: Far short of it, I declare.

Socrates:: Then what sort of state do you suppose it would be, where the people were good bowmen and flute-players, together with athletes and artists in general, and mingled with these the men whom we have just mentioned as knowing war in itself and slaughter in itself, and orator-windbags too with their political bluster, but all of them lacked this knowledge of the best, and none knew when or upon whom it was better to employ their respective arts?

Alcibiades:: A paltry one, I should call it, Socrates.

Socrates:: Yes, you would, I expect, when you saw each one of them vying with the other and assigning the largest part in the conduct of the state to that;

> Wherein himself is found most excellent.

I mean, what is done best by rule of his particular art—while he is generally off the track of what is best for the state and for himself, because, I conceive, he has put his trust in opinion apart from intelligence. In these circumstances, should we not be right in saying that such a state is one great mass of turmoil and lawlessness?

Alcibiades:: We should, upon my word.

Socrates:: And we took it to be necessary that we should first think we know, or really know, anything that we intend either to do or to say with facility?

Alcibiades:: We did.

Socrates:: And if a man does what he knows or thinks he knows, and is assisted by knowing how to make it beneficial, we shall find him profitable both to the city and to himself?

Alcibiades:: Certainly.

Socrates:: But if, I suppose, he does the contrary, he will not be so either to the city or to himself?

Alcibiades:: No, indeed.

Socrates:: Well then, do you still take the same view now as before, or do you think differently?

Alcibiades:: No, I take the same view.

Socrates:: And you said you called the many unwise, and the few wise?

Alcibiades:: I did.

Socrates:: So now we repeat our statement that the many have missed getting the best because in most cases, I conceive, they have put their trust in opinion apart from intelligence.

Alcibiades:: Yes.

Socrates:: Then it is an advantage to the many neither to know nor to think they know anything, if they are going to be specially eager to do what they know or think they know, but are likely on the whole, in doing it, to be injured rather than benefited.

Alcibiades:: That is very true.

Socrates:: So you see that when I said it looked as though the possession of the sciences as a whole, where it did not include the science of the best, in a few cases helped, but in most harmed the owner, I was evidently right in very truth, was I not?

Alcibiades:: Though I did not then, I think so now, Socrates.

Socrates:: Hence the state or soul that is to live aright must hold fast to this knowledge, exactly as a sick man does to a doctor, or as he who would voyage safely does to a pilot. For without this,' the more briskly it is wafted by fortune either to the acquisition of wealth or to bodily strength or aught else of the sort, the greater will be the mistakes in which these things, it would seem, must needs involve it. And he who has acquired the so-called mastery of learning and arts, but is destitute of this knowledge and impelled by this or that one among those others, is sure to meet with much rough weather, as he truly deserves; since, I imagine, he must continue without a pilot on the high seas, and has only the brief span of his life in which to run his course. So that his case aptly fits the saying of the poet, in which he complains of somebody or other that

Full many crafts he knew: but still
He knew them all so very ill.

Alcibiades:: Why, how on earth is the poet's saying apposite, Socrates? For to my mind it has nothing to do with the point.

Socrates:: It is very much to the point: but he, good sir, like almost every other poet, speaks in riddles. For poetry as a whole is by nature inclined to riddling, and it is not every man who can apprehend it. And furthermore, besides having this natural tendency, when it gets hold of a grudging person who wishes not to show forth to us his own wisdom but to conceal it as much as possible, we find it an extraordinarily difficult matter to make out whatever this or that one of them may mean. For surely you do not suppose that Homer, divinest and wisest of poets, did not know it was impossible to know ill; for it is he who says of Margites that he knew many things, but knew them all ill: but it is a riddle, I think, in which he has made “ill” stand for " evil,” and “knew” for “to know.” So if we put it together, letting the metre go, indeed, but grasping his meaning, we get this: “Full many crafts he knew, but it was evil for him to know them all.” Then clearly, if it was evil for him to know many things, he was in fact a paltry fellow, assuming we are to believe what we have previously argued.

Alcibiades:: But I think we may, Socrates: at least, if I cannot believe those arguments of ours, I shall find it hard to trust any others.

Socrates:: And you are right in so thinking.

Alcibiades:: Then again, I think not.

Socrates:: But come now, in Heaven’s name—for I suppose you see how great and strange is our perplexity, in which you, as it seems to me, have your share; for you change about from this side to that without settling down for a moment, but as soon as you are firmly convinced of a thing you seem to slip out of it again and cease to hold the same view—well, if the god to whom you are going should even now appear to you and ask, before you uttered any prayer, whether you would be content to obtain one of those things which were mentioned at the beginning, or whether he should leave you to pray as you were, how do you suppose you would make the best of your chance—by accepting his offer, or by praying for something on your own account?

Alcibiades:: Well, by the gods, I could not answer your question, Socrates, offhand. Why, I take it to be a fatuous request, when it is really a case for great caution lest one pray unawares for what is evil while thinking it to be one's good, and then after a little while, as you were saying, one change one's tune and retract all one's former prayers.

Socrates:: And did not the poet whom I quoted at the beginning of our discussion  know more than we, when he bade us pray for the averting of what is grievous, even though we pray for it?

Alcibiades:: I think so.

Socrates:: Then it is their admiration of this poet, Alcibiades, or perhaps the result of their own study, that causes the Spartans to offer a similar prayer whether the occasion be private or public—that the gods will give them for their own benefit the beautiful as well as the good: more than this no one can ever hear them pray for. The consequence is that to the present time they have been just as fortunate as any other people; and if it has befallen them to be not invariably fortunate, it was anyhow not owing to their prayer. It rests with the gods, I conceive, to give us either what we may pray for or the reverse.

And I would like to give you an account of something else, which I once heard from some of my seniors. A quarrel having arisen between the Athenians and the Spartans, it befell our city to be always unsuccessful in every battle by land and sea, and she could never win a victory. So the Athenians, in their annoyance at this result, and at a loss for some means of finding a deliverance from the trouble they were in, took counsel together and decided that the best thing they could do was to send and inquire of Ammon; and moreover, to ask also for what reason the gods granted victory to the Spartans rather than to themselves: "for we"—such was the message—"offer up to them more and finer sacrifices than any of the Greeks, and have adorned their temples with votive emblems as no other people have done, and presented to the gods the costliest and stateliest processions year by year, and spent more money thus than all the rest of the Greeks together. But the Spartans have never taken any such pains, and indeed are so neglectful in their behaviour to the gods, that they make a practice of sacrificing defective victims, and generally are very much behind us in the honours that they pay, though the wealth they possess is quite equal to that of our city." When they had so spoken, and added the question, what they should do in order to find a deliverance from the trouble they were in, the prophet's only answer—evidently it was all that the god allowed—was to call them to him and say: "Thus saith Ammon to the Athenians: I would rather have the reverent reserve of the Spartans than all the ritual of the Greeks." So much he said, and not a word further. Now by "reverent reserve" I suppose the god could only mean their prayer, since in fact it differs greatly from those that are generally offered. For the Greeks in general either lead up bulls with gilded horns, or else present the gods with votive emblems, and pray for any odd thing, whether it be good or bad: so when the gods hear their irreverent speech they reject all these costly processions and sacrifices. Whereas I think we ought to be very cautious, and fully consider what is to be said and what is not.

And in Homer too you will find other tales of a similar sort. For he relates how the Trojans, in making their bivouac;

> Sacrificed to the immortals perfect hecatombs.

and how the winds bore the sweet savour from the plain into heaven:

> But the blessed gods partook not of it, nor would have it,
> For deep was their hate against holy Ilium,

> And Priam, and the folk of Priam of the good ashen spear.

So it was nothing to their purpose to sacrifice and pay tribute of gifts in vain, when they were hated by the gods. For it is not, I imagine, the way of the gods to be seduced with gifts, like a base usurer. And indeed it is but silly talk of ours, if we claim to surpass the Spartans on this score. For it would be a strange thing if the gods had regard to our gifts and sacrifices instead of our souls, and the piety and justice that may be found in any of us. Far rather at these, I believe, do they look than at those costly processions and sacrifices which are offered, it well may be, by individual and state, year in, year out, though they may have offended greatly against the gods, or as greatly against their neighbours. But the gods are not to be won by bribes, and so they despise all these things, as Ammon and the holy prophet say. Certainly it would seem that justice and wisdom are held in especial honour both by the gods and by men of intelligence; and wise and just are they alone who know what acts and words to use towards gods and men. But I should like now to hear what may be your opinion on the subject.

Alcibiades:: Why, Socrates, it in no wise differs from yours and the god's; for indeed it would not be fitting for me to record my vote against the god.

Socrates:: And you remember you professed to be in great perplexity lest you should pray unawares for evil, while supposing it to be good?

Alcibiades:: I do.

Socrates:: You see, then, how unsafe it is for you to approach the god with your prayers, for it may chance that when he hears your irreverent speech he will reject your sacrifice altogether, and you may perhaps be accorded some other bad thing as well. In my opinion, therefore, it is best to hold your peace: for I expect you will not consent to use the Spartan's prayer, you have such a romantic spirit—to give it the fairest of folly's names. It is necessary, therefore, to bide one's time until one can learn how one should behave towards gods and men.

Alcibiades:: Well, when will that time arrive, Socrates, and who is to be my instructor? For I feel I should very much like to see who the man is.

Socrates:: It is he who is concerned about you. But I think, as Homer relates how Athena removed the mist from the eyes of Diomede;

> That he might well discern both god and man.

so you too must first have the mist removed which now enwraps your soul, and then you will be ready to receive the means whereby you will discern both evil and good. For at present I do not think you could do so.

Alcibiades:: Let him remove the mist or whatever else he likes to call it: for I am prepared to obey every one of his commands, without shirking, whoever the man may be, so long as I am to be the better for them.

Socrates:: I tell you, he on his part is prodigiously anxious to help you.

Alcibiades:: Then I think it best to defer the sacrifice also till the time comes.

Socrates:: And you are quite right: for that is safer than running so serious a risk.

Alcibiades:: But how say you, Socrates? Look now, I will crown you with this garland, as I consider you have given me such good advice; and to the gods we shall offer both garlands and all the other customary things when I see that day has come. And come it will ere long, if they are willing.

Socrates:: Well, I accept this gift; and anything else besides, that you may give me, I shall be only too happy to accept. And as Euripides has made Creon say when he sees Teiresias wearing his wreaths, and hears that he has obtained them, on account of his art, as first-fruits of the spoils of war:

> As omen good I take thy victor’s wreaths;
> For in the waves we labour, as thou knowest,—

so do I take this opinion of yours as a good omen. For I consider I am no less wave-tossed than Creon, and would like to come off victorious over your lovers.

## The Second Alcibiades.

Translated by Mr. Sydenham.

PERSONS OF THE DIALOGUE.

SOCRATES, ALCIBIADES.

SCENE.—The Way to the TEMPLE of JUPITER.

---

Socrates:: Alcibiades! are you going to the temple to make your petitions to the God?

Alcibiades:: Your conjecture is perfectly right, Socrates.

Socrates:: Indeed your countenance appears close and cloudy; and your eyes are turned toward the ground, as if you were wrapped in some profound thought.

Alcibiades:: What profound thoughts could a man have at such a time, Socrates?

Socrates:: Thoughts, Alcibiades, such as seem to me of the highest importance. For tell me, in the name of Zeus, do you not think, when we happen, whether in private or in public, to be making our petitions to the Gods, that sometimes they grant a part of those petitions, and reject the rest; and that to some of their petitioners they hearken, but are deaf to others?

Alcibiades:: No doubt of it.

Socrates:: Do you not think, then, that much previous consideration is requisite to prevent a man from praying unwittingly for things which are very evil, but which he imagines very good; if the Gods at that time when he is praying to them should happen to be disposed to grant whatever prayers he happens to make? As Œdipus, they say, inconsiderately prayed the Gods that his sons might divide their patrimony between them by the sword. Instead, therefore, of praying for his family, as he might have done, that the evils which it then suffered might be averted, he cursed it by praying that more might be superadded. The event of which curse was this, that not only what he prayed for was accomplished, but from that accomplishment followed other evils, many and terrible, which there is no need to enumerate.

Alcibiades:: But, Socrates, you have now spoken of a man who was insane, for who, think you, in his sound mind would venture to make such sort of prayers?

Socrates:: Whether is it your opinion, that to be insane is to be in a state of mind contrary to that which is sound?

Alcibiades:: I am quite of opinion that it is.

Socrates:: And are you not of opinion, too, that there are men who want understanding, and men who have not that want?

Alcibiades:: I am.

Socrates:: Come, then, let us consider what sort of men these are. You have admitted, that men there are who want understanding, men who do not want it, and other men, you say, who are insane.

Alcibiades:: True.

Socrates:: Further now; are there not some men in a good state of health?

Alcibiades:: There are.

Socrates:: And are there not others in a bad state of health?

Alcibiades:: Certainly.

Socrates:: These, then, are not the same men with those.

Alcibiades:: By no means.

Socrates:: Whether now are there any men who are in neither of those states?

Alcibiades:: Certainly, none.

Socrates:: For every man must of necessity either have good health, or want good health.

Alcibiades:: I think so too.

Socrates:: Well: do you think after the same manner with regard to the having of understanding and the want of understanding?

Alcibiades:: How do you mean?

Socrates:: Do you think it to be necessary, that a man should either have or want a good understanding? Or is there, besides, some third and middle state, in which a man neither has nor wants a good understanding?

Alcibiades:: There certainly is not.

Socrates:: Every man, then, of necessity must be either in the one or in the other of those two conditions.

Alcibiades:: So it seems to me.

Socrates:: Do you not remember that you admitted this, that insanity was contrary to soundness of understanding?

Alcibiades:: I do.

Socrates:: And do you not remember that you admitted this also, that there was no middle or third state, in which a man neither has nor wants a good understanding?

Alcibiades:: I admitted this too.

Socrates:: But how can two different things be contrary to one and the same thing?

Alcibiades:: It is by no means possible.

Socrates:: Want of understanding, therefore, and insanity, are likely to be found the same, thing.

Alcibiades:: It appears so.

Socrates:: If then we should pronounce that all fools were madmen, we should pronounce rightly, Alcibiades.

Alcibiades:: We should.

Socrates:: In the first place, your equals in age, if any of them happen to be fools, as indeed they are, and some of your elders too, all these we must pronounce mad-men. For consider, are you not of opinion, that in this city there are few wise men, but a multitude of fools, whom you call mad-men?

Alcibiades:: I am of that opinion.

Socrates:: Can you imagine then, that, living in the same city with so many mad-men, we should live with any ease or comfort? or that we should not have suffered from them long ago, have been buffeted, and pelted, and have met with all other mischiefs which mad-men are wont to perpetrate? But consider, my good sir, whether we live not here in a different state of things.

Alcibiades:: What is then the truth of the case, Socrates, with respect to the multitude? For it is not likely to be what I just now imagined.

Socrates:: Neither do I think it is so myself. But we should consider it in some such way as this.

Alcibiades:: In what way do you mean?

Socrates:: I will tell you. We presume that some men there are who are ill in health: do we not?

Alcibiades:: Certainly we do.

Socrates:: Do you think it necessary then that every man, who is ill in health, should have the gout, or a fever, or an ophthalmy? do you not think that a man, without suffering from any of these diseases, may be ill of some other? For diseases, we suppose, are of many various kinds, and not of those only.

Alcibiades:: I suppose they are.

Socrates:: Do you not think that every ophthalmy is a disease?

Alcibiades:: I do.

Socrates:: And do you think that every disease, therefore, is an ophthalmy?

Alcibiades:: By no means, not I. Yet still I am at a loss about your meaning.

Socrates:: But if you will give me your attention, in considering the matter, both of us together, we shall go near to find the truth of it.

Alcibiades:: I give you, Socrates, all the attention I am master of.

Socrates:: Was it not agreed by us, that every ophthalmy was a disease; though not every disease an ophthalmy?

Alcibiades:: It was agreed so.

Socrates:: And I think it was rightly so agreed. For all persons who have a fever have a disease; not all, however, who have a disease have a fever; neither have they all of them the gout, nor all of them an ophthalmy. Every thing indeed of this kind is a disease; but they whom we call physicians say that diseases differ in their effects on the human body. For all diseases are not alike, neither are they all attended with like symptoms; but each of them operates with a power peculiar to itself, and yet diseases are they all. Just as it is with respect to workmen; for workmen we suppose some men are, do we not?

Alcibiades:: Certainly we do.

Socrates:: Such as shoe-makers, smiths, statuaries, and a great multitude of others, whom it is needless to enumerate distinctly. All these have different parts of workmanship divided amongst them; and they all are workmen. They are not, however, smiths, nor shoe-makers, nor statuaries, indiscriminately all of them together. Just so folly is divided amongst men. And those who have the largest share of it, we call mad-men; such as have a portion somewhat less, we call senseless and stupified: but if we choose to speak of these in gentler terms, some of us say they are magnanimous; others call them simpletons; and others again, harmless and inexperienced in the world and speechless. You will also find, if you reflect, many other names given them beside these. But they are all comprised under the general term, folly or want of understanding. There is, however, a difference between them as one art differs from another, one disease from another. Or how otherwise doth the case seem to you?

Alcibiades:: To me exactly as you represent it.

Socrates:: This point, therefore, being settled, let us from hence return back again. For it was proposed, I think, in the beginning of our inquiry, to be considered by us what sort of men wanted understanding, and what sort were men of good understanding. For it was agreed that some there were of each sort. Was it not?

Alcibiades:: It was so agreed.

Socrates:: Whether then do you suppose, that such persons have a good understanding who know how they ought to act, and what they ought to say?

Alcibiades:: I do.

Socrates:: And what persons do you apprehend to be wanting in understanding? are they not such as are ignorant in both those cases?

Alcibiades:: These very persons.

Socrates:: Will not these persons then, who are ignorant of what they ought to do and to say, both say and do what they ought not without being sensible of it?

Alcibiades:: It appears so.

Socrates:: Well then, Alcibiades, of this sort of persons, I said, was Œdipus. And you may find many in our own times, who, though they are not seized with sudden anger, as he was, yet pray for things hurtful to themselves; not suspecting evil in them and imagining nought but good. Œdipus indeed, as he did not wish for any thing good, so neither did he imagine the thing he prayed for to be good. But some others there are, whose minds are in a disposition quite contrary to that of Œdipus. For you yourself, in my opinion, if the God to whom you are going to offer your petitions should appear to you, and, before you had made any petition to him, should ask you, “whether your desires would be satisfied with your becoming tyrant of Athens;” and (if you held this favour cheap, and no mighty grant) should add further, “and tyrant of all Greece and, if he should perceive that you deemed it still too little for you, unless you were tyrant of all Europe, should promise you that also; and not merely promise, but make you so immediately on the spot, if you were in haste to have all the Europeans acknowledge Alcibiades, the son of Clinias, for their lord and master; in this case, it is my opinion, that you yourself would march away full of joy, as if the greatest good had befallen you.

Alcibiades:: I believe, Socrates, that I should; and that so would any other man whatever, had he met with such an adventure.

Socrates:: You would not, however, accept of absolute dominion over the estates and persons of all the Grecians and Barbarians together, on condition of giving your life in exchange for it.

Alcibiades:: I suppose not. For why should I, when it could be of no use to me?

Socrates:: And, if you knew that you should make an ill use of it to your own detriment, would you not also in such a case refuse it?

Alcibiades:: Certainly I should.

Socrates:: You see, then, how dangerous it is, either inconsiderately to accept of it when offered, or to wish and pray for it of yourself; since a man, by having it, may suffer great detriment, if not the total loss of his life. In confirmation of this, we could mention many persons who longed after tyranny, and laboured to obtain it, as if some mighty good were to be enjoyed from it; but having obtained it, were, from plots and conspiracies to deprive them of it, forced to part with their very lives. Nay, it cannot, I suppose, have escaped your own hearing, what happened as it were but yesterday, that Archelaus, tyrant of the Macedonians, was murdered by his favourite; for this favourite was no less fond of the tyranny, than the tyrant was of him; and imagined that, by obtaining the tyranny himself, he should be made a happy man; but that, after he had held the tyranny three or four days, he himself was, in his turn, secretly murdered by some others, who had conspired against him. Amongst our own fellow citizens, also, you see, (for this we have not from the report of others, but have been eye-witnesses of it ourselves,) that of those who succeeded in their ambition to command our armies, some were banished, and still at this day live in exile from the city; others lost their lives; and such as seem to have fared the best, such as had gone through many terrifying dangers in their campaigns, and were returned to their own country, have ever afterwards suffered at home, from sycophants and detractors, a siege as fierce and as dangerous as any from open enemies in the field, so that some of them at length wished they had never known how to command an army, much rather than ever to have born the burden of that command. Indeed if the dangers and toils, which they underwent, had tended to their advantage, they would have had something plausible to plead in behalf of their ambition: but their case is quite the reverse of that. In the same manner, with respect to the having of children, you will find many men who wish and pray for them; but after they have them are brought, on that very account, into the greatest calamities and griefs: for some, whose children were incurably wicked, have spent all their after days in sorrow; and some, who had good children, but lost them by some bad accident, have been reduced to a state of mind no less miserable than the others, and, like them have wished that their children never had been born. And yet, notwithstanding the evidence of these and many other cases of like kind, it is rare to find a man who would refuse those gifts of fortune, were they offered to him; or who, could he obtain them by his prayers, would forbear to pray for them. Few men would reject even a tyranny, if offered them; or the chief command of an army; or many other things, which often bring more mischief than benefit to the possessor. Nay, there are few men, of those who happen not to have them at present, who would not be glad if ever they came into their possession. And yet such, as obtain them every now and then recant their wishes, and pray to be disencumbered of what they before prayed to have. I suspect, therefore, that in reality men accuse the Gods unjustly, in saying, that the evils which they suffer come from them:

> For on themselves they draw, through their own crimes.

(or follies should we say?)

> More griefs than fate allots to human life.

And to me, Alcibiades, it seems probable, that some wise man or other, happening to be connected with certain persons void of understanding, and observing them to pursue and to pray for things, which it were better for them still to be without, but which appeared to them good, composed for their use a common prayer; the words of which are nearly these—

Sov’reign of Nature! grant us what s good,
Be it, or not, the subject of our pray’rs;
And from thy supplicants, whate’er is ill,
Tho’ supplicating For it, still avert.

Now in this prayer, it seems to me, that the poet says what is right; and that whoever makes use of it, incurs no danger. But if you have any thing to say against it, speak your mind.

Alcibiades:: It is a difficult matter, Socrates, to speak against any thing which is rightly said. But what I am thinking of is, how many evils are brought on men by ignorance: since to this it seems owing, that we labour to procure for ourselves the greatest mischiefs, without knowing what we are about; and how extreme our ignorance is, appears in our praying for them. And yet no man would imagine that to be his own case; and every one supposes himself sufficiently knowing, to pray for things the most advantageous to himself, and to avoid praying for things the most mischievous: for to pray for these things would in reality be like a curse, and not a prayer.

Socrates:: But perhaps, my good friend, some man or other, who happens to be wiser than you or I, might say, that we are wrong, in laying the blame so rashly on ignorance, unless we proceed to specify what things we mean the ignorance of. To some persons also, in certain conditions and circumstances, ignorance is a good; though it be an evil to those others we have been speaking of.

Alcibiades:: How say you? Is it possible there should be any thing, which it is better for any person in any condition whatever to be ignorant of than to know?

Socrates:: I think it is: are not you of the same opinion?

Alcibiades:: Not I, by Zeus.

Socrates:: Well now;—but observe, I am not going to charge you with having a will, disposed to have ever perpetrated a deed, like that of Orestes, upon his own mother, as it is reported; or like that of Alcmæon, or whoever else happened to act in the same manner.

Alcibiades:: Mention not such a horrid deed, I beseech you, Socrates.

Socrates:: The man, who acquits you of a disposition to have acted in that manner, you ought not, Alcibiades, to bid him avoid the mention of such a deed; but much rather ought you to lay that injunction on a man who should express a contrary opinion of you; since the deed appears to you so horrid, as not to admit a casual mention of it in conversation. But do you think that Orestes, had he been a wise and prudent man, and had he known how it was best for him to act, would have dared to be guilty of any such action?

Alcibiades:: By no means.

Socrates:: Nor, I suppose, would any other man.

Alcibiades:: Certainly, not.

Socrates:: The ignorance therefore of what is best is an evil thing; and whoever is ignorant of that best will always suffer evil.

Alcibiades:: So I think.

Socrates:: And did not he think so too? and do not all other men think the same?

Alcibiades:: I cannot deny it.

Socrates:: Further then, let us consider this also. Supposing, that it should come into your head all at once, from a sudden fancy of its being the best thing you can do, to take a dagger with you, and go to the house of Pericles, your guardian and your friend; and supposing that, when you came there, upon your asking if Pericles was within, with intention to kill him only and no other person, you should receive this answer, He is within;—I do not say, that you have a will or inclination to verify any of these suppositions; I say no more than this—supposing you should be seized with such a fancy, and nothing, I think, hinders a man, who is ignorant of what is best, from being at some time or other so seized, in that case an opinion might be conceived, that the worst thing a man can do is, in some circumstances, the best: do not you think it might?

Alcibiades:: Certainly so.

Socrates:: If then, upon being admitted to his presence, you should see and yet not know him, but should mistake him for some other person, I ask you, whether you would, notwithstanding that, be so furious as to kill him?

Alcibiades:: No, by Zeus; I do not imagine that I should.

Socrates:: For you would not be so furious as to kill any person, whom chance threw in your way; but him only at whom you aimed. Is it not for this reason that you would not kill him?

Alcibiades:: Without doubt.

Socrates:: And if you attempted the same thing ever so often, and still mistook Pericles, whenever you were about to execute your design, you never would lay violent hands on him.

Alcibiades:: Certainly I should not.

Socrates:: Well; and can you think that Orestes would ever have laid violent hands on his mother, if in like manner he had mistaken her for some other person?

Alcibiades:: I think he would not.

Socrates:: For he too had it not in his mind to kill any woman he should chance to meet with, nor the mother of any man whatever, but his own mother only.

Alcibiades:: It is true.

Socrates:: To mistake therefore, and not to know things of that kind, is better for men who are in such dispositions, and who are seized with such imaginations.

Alcibiades:: It appears so to be.

Socrates:: Do you now perceive, that for some persons, in some circumstances, to be ignorant of some things, is a good, and not, as you just now imagined it, an evil?

Alcibiades:: It seems to me probable.

Socrates:: Further; if you are willing to consider what follows after this, though it be strange and paradoxical, you may perhaps be of opinion that there is some truth in it.

Alcibiades:: Above all things, Socrates, tell me what.

Socrates:: That the acquisition of other sciences, without the science of what is best, is, I may venture to say, likely to be found rarely beneficial, and generally hurtful to the person who has acquired them. And consider it in this way: do you not think it necessary that, when we are about to engage in any affair, or to speak on any subject, we should really know, or at least should fancy that we know, the subject we are about to speak on, or the affair we are going so readily to engage in?

Alcibiades:: I do think it is.

Socrates:: And do not our public orators, either knowing, or fancying that they know, what the city ought to do, give us accordingly their counsel offhand on every occasion? Some of them on the subject of war and peace; others, when the affair of building walls, or that of furnishing the port-towns with proper stores, is in debate. In a word, all the negotiations between our city and any other, and all our domestic concerns, are they not conducted just as these orators advise?

Alcibiades:: True.

Socrates:: Observe then, how we proceed in this argument, if possible, Some men you call wise, and others you call foolish.

Alcibiades:: I do.

Socrates:: Foolish do you not call the many, and wise the few?

Alcibiades:: Just so.

Socrates:: And do you not give those different epithets to those two sorts of persons, in consideration of something in which they differ?

Alcibiades:: I do.

Socrates:: Whether do you call him a wise man, who knows how to harangue the people on those subjects of debate we mentioned, without knowing what advice is the best in general, and what on the present occasion?

Alcibiades:: Certainly not.

Socrates:: Nor him neither, I suppose, who hath the knowledge of military affairs, but knows not when it is best to go to war, nor how long a time to continue it. Is not my supposition just?

Alcibiades:: It is.

Socrates:: Neither then do you call him a wise man, who knows how to procure another man's death, or the confiscation of his estate, or the banishment of him from his country, without knowing on what occasion, or what person, it is best so to persecute.

Alcibiades:: Indeed I do not.

Socrates:: The man, therefore, who possesses any knowledge of such a kind, if that knowledge of his be attended with the knowledge also of what is best, and this I presume to be the same with the knowledge of what is beneficial; Is it so?

Alcibiades:: Certainly it is.

Socrates:: We shall say, that he is a wise man, and sufficiently well able to judge for himself, and to be also a counsellor to the city. But of the man who has not the knowledge of what is beneficial, we shall say the contrary. Or what is your opinion that we ought to say?

Alcibiades:: Mine agrees with yours.

Socrates:: Well now; let us suppose a man skilled in horsemanship, or in shooting with a bow, or in wrestling, or boxing, or other combat; or in any thing else which art teaches: what do you say concerning him who knows what is executed best, in that art which he has learnt? The man, for instance, who knows what is performed best in horsemanship, do you not say of him, that he is skilled in the horseman's art?

Alcibiades:: I do.

Socrates:: And the man who knows what is performed best in wrestling, I presume you say of him, that he is skilled in the wrestler's art. Of a man who has the like knowledge in music, you say, that he is skilled in the musician's art. And of men who have the like knowledge in the performances of other arts, you speak after a like manner: or how otherwise?

Alcibiades:: No otherwise than just as you say.

Socrates:: Do you think now, that a man, skilled in any of these arts, must of necessity be a wise man? or shall we say, that he wants much of being so?

Alcibiades:: Much indeed does he, by Zeus.

Socrates:: Suppose then a commonwealth, composed of good bowmen and musicians, of wrestlers too and other artists; and mixed with these, such persons as we just now mentioned, such as understand military affairs, and such as know how to persecute a man to death; and superadded to them, your politicians, swollen with the pride of managing state-affairs; all these people void of the science of what is best; and not a man of them knowing when, or in what case, it is best to exercise the particular skill or knowledge that each man is master of; what sort of a commonwealth do you think this would prove?

Alcibiades:: But a bad one, Socrates, I think for my part.

Socrates:: Neither would you, I suppose, hesitate to pronounce it so, when you saw every one of these men ambitious of being honoured, and making it his chief business in the commonwealth;

To attain to more, and still more, excellence.

(by excellence I mean that which is the best in his own art,) but in what is best for the public, and best also for himself, generally mistaken; as being, I suppose, without rational principles, and governed only by opinion. In this case, should we not be right in pronouncing that such a commonwealth was full of great disorder and of lawless doings?

Alcibiades:: Right indeed, by Zeus.

Socrates:: Did we not think it necessary for us, either to fancy that we know, or really to know previously, the business we are going to engage in, or offhand to speak upon?

Alcibiades:: We did.

Socrates:: And did we not also think, that if a man engages in any business which he knows, and his knowledge of it be attended with the knowledge of what is beneficial, he will be in a way of profiting both the public and himself?

Alcibiades:: How could we think otherwise?

Socrates:: But that if it be attended with ignorance of what is beneficial, the contrary will happen; he will neither profit the public nor himself?

Alcibiades:: Certainly we thought he would not.

Socrates:: And what? are you still of the same opinion? or have you in any respect altered your way of thinking about these matters?

Alcibiades:: Not at all: I think as I did still.

Socrates:: Let me ask you then, whether you did not say that you called the many fools, and the few wise men?

Alcibiades:: I acknowledge it.

Socrates:: And do we not still say, that the many are mistaken in their opinion of what is best, for that they are generally, I suppose, without rational principles, and only governed by opinion?

Alcibiades:: We still say the same.

Socrates:: It is the interest, therefore, of the many not to be knowing in any affairs, nor to conceit themselves knowing; if what affairs they know, or conceit they know, they will be the more forward to engage in; and, engaging in them will receive more harm than benefit.

Alcibiades:: What you say is very true.

Socrates:: Do you see then; do I not appear to have been actually in the right, when I said, that the acquisition of other sciences, without the science of what is best, is rarely beneficial, and generally hurtful, to the person who has acquired them?

Alcibiades:: If I did not think so at that time, yet now, Socrates, I do.

Socrates:: It is incumbent therefore on every civil state, and every private person, if they would manage their affairs rightly, to depend absolutely on this science; just as the sick patient depends on his physician; or as the mariner, who would escape the dangers of the voyage, depends on the commander of the vessel. For without this science, the more vehemently an inward gale impels a man, whether it arise from the consideration of his wealth, or bodily strength, or some other advantage of the same kind with either of those, so much the greater miscarriages will of necessity it seems befall him, from those very advantages. And, in like manner, the man who has acquired what is called much learning, and many arts, but is destitute of this science, and is driven along by each of the others, will not he meet with, and justly too indeed, a very tempestuous voyage? and supposing him to continue still at sea, without a commander of the vessel in which he sails, it will not be long before he perishes. So that to such a man very applicable, I think, is that verse where the poet says of some person, in dispraise of him.

Much knew he, and in many things had skill;
But whate’er things he knew, he knew them ill.

Alcibiades:: How, Socrates, doth this verse of the poet fall in with what we are speaking of? for to me it seems nothing to the purpose.

Socrates:: Very much to the purpose is it. But poets, you must know, write enigmatically almost all of them but this poet more especially. For it is the genius of poetry in general to use an enigmatical language; and it is not for any ordinary person to understand it. But when, besides this difficulty, the poetical genius, so enigmatical in itself, seizes a man who is backward in communicating his knowledge, unwilling to tell us plainly what he means, and desirous to conceal his wisdom as much as possible from the world, it appears in the highest degree difficult to find out the real meaning of any such poet. For you can by no means think that Homer, so very divine a poet as he was, could be ignorant, how impossible it was for a man, who possessed any science whatever, not to know it well. But he expresses himself enigmatically, I suppose, by using, instead of the words *evil*, and *to know*, the derivative words, *ill*, and he knew. If then we use the two proper words, there is formed this sentence, in plain prose indeed, but expressive of the poet's meaning,—*He was knowing and skilled in many things, but to know all those things was to him an evil.*—It is evident then, that if much knowledge was to him an evil, what knowledge he had was worthless, and he himself was some worthless fellow; supposing any credit to be due to the conclusions from our past reasonings.

Alcibiades:: And I think, Socrates, it is their due: for I should hardly give credit to any other rational conclusions, if I denied it to those.

Socrates:: And you think rightly too. But in the name of Zeus, let us proceed. For you see, how great are the perplexities attending the subject in which we are engaged; you see also, what the nature is of those perplexities. And you seem to me to have a share in them yourself; as you never rest from changing your thoughts over and over again upon this subject; discarding the opinions, which you had before so ardently embraced, and continuing no longer in the same mind. Should the God then, to whom you are going to make your prayers, appear to you, now after all our conclusions; and should he ask you, before you had presented any petition whatever to him—whether or no your desires would be satisfied, if you obtained any of those dominions mentioned in the beginning of our argument;—or should he leave to yourself the naming of what you wished for;—in which way, think you, could you best avail yourself of this opportunity? whether in accepting any of the grants offered you, or in naming some other thing you wished for?

Alcibiades:: Now, by the gods, Socrates, I should not know what to say to such a proposal. Indeed, I think, that it would be rash in me to make any decisive answer at all; and that great caution is absolutely requisite in such a case; to prevent a man from praying unwarily for things evil, while he imagines them to be good; and from doing as you said, soon afterwards recanting his choice, and praying to be delivered from what he had before prayed to have.

Socrates:: Did not then the poet, whom I cited in the beginning of this argument, know somewhat more than we do, in supplicating Zeus to avert from us what is evil, even though we prayed For it?

Alcibiades:: Indeed I think so.
